Had the Allied force been normally constituted, Prince Menschikoff would have been left by nightfall without one soldier of all those on whom he had counted in the morning to arrest the march of the invaders. But, as we just now hinted, there was one serious particular in which the expeditionary army was weak—it was that of cavalry. No effective pursuit of a beaten army is possible unless the victors possess a sufficient body of horse to cope with that of the enemy. This is a simple principle, which a civilian can understand as well as a soldier. We had only about 1000 cavalry, and the Russians had more than 6000, with no fewer protecting their own flank and rear of their retreating columns. This body of horse had not been engaged any more than our smaller complement of the same arm, the nature of the engagement allowing no opportunity—Dragoons, Lancers, Cossacs, and Hussars, they were all alike. Their infantry attempted to press upon the mass of fugitives, such a cloud of cavalry immediately menaced a charge as would compel the pursuers to form squares, or, at the least, to halt three deep. Time was thus regularly and repeatedly gained, during which the enemy continued his retreat. As to any chance of overtaking the fugitives by cavalry by dint of pursuit out of the question, the numerical disproportion being too great. At all events the attempt was not made; and we took hardly any unwounded prisoners, and no guns (except the two mentioned), nor anything save the tents, the field of battle, and its ruinous heaps of the foreign carnage—the bodies of the dead and the dying. These were numerous indeed; and especially on the left wing of the late Russian position, and all along the track which the French had pursued—their fire-arms, and their use of them having proved peculiarly efficient. Thus, if a common soldier in the Allied army—whether a French or an English one—matters not—were asked which part of the field had been the bloodiest, he would answer the English part, the east; but, if a Russian soldier were asked the same question, he would say the very contrary, the west. We not only suffered more from the very nature of the battle than the French suffered, but the Russians opposed to us suffered less than those opposed to the French. It is actually deposed by eye-witnesses that, where the French riflemen were first engaged, and along the whole extent of the heights overlooking the sea, there were generally four or five Russians dead for one dead Frenchman; and that the average, even round the foot of the great western redoubt, and in it, was not less than three to one. On the whole, computing the wounded as well as the killed (the latter being about 800), the loss of the Allies was not 3000 men. They, on the other hand, the very evening of the battle, or next morning, buried 4000 Russians, and counted on the bodies, and several piles of wood as many, still awaited sepulture; while it is known that, owing to his preponderance in cavalry (so often mentioned), the enemy carried away many of his wounded—perhaps even some of his dead. In short, for our 800 killed, and 1800 wounded (including the losses of our allies with our own), we could certainly fairly reckon 8000 of the enemy slain and disabled for action. On our side, the Light Division suffered, beyond all comparison, the most. Sir George Brown's conduct was equal to anything ever seen on a battle-field.

The demoralisation of the Russians was tremendous. It was so profound that the Russian Commanders could not hope again to engage the Allied forces until certain reinforcements from Odessa had reached them, putting it in their power to confront their invaders with men who had not yet experienced their prowess. Now, therefore, was apparently the time to have entered Sebastopol. But one French writer who do not think conclusive and the caution arising from our weakness in cavalry, and from our comparative ignorance of the Crimean topography, decided the Allied generals—if not rightly, yet justifiably—to take advantage of the enemy's panic in order to push completely round the north of the inlet, and upon the fleets to the south of Sebastopol, seizing several harbours, which, on that side, offered all the conveniences requisite for their ulterior plans. The reader perceives that we rather regret that this measure was not followed up in a different manner than censure those who adopted it. A better course, we may now say, was doubtless open to them for a short time; suddenly presented, and suddenly withdrawn. To have seized it would have been a happy inspiration rather than the dictate of a more common-place prudence; and the very knowledge, which at present looks back with sorrow to a disregarded chance, is unavailing. *L'esprit de salon*, as our neighbours say, is one thing; and *l'esprit de l'escalier* quite another.

In the battle of the Alma, the force with which the Allies actually engaged the enemy, was numerically weaker than that with which he defended his intrenchments—for we must bear in mind the fact that the Turkish contingent of ten thousand men took no part in the action, and that the Fourth Division, assigned to General Sir G. Cathcart, was scarcely engaged. Accordingly, all circumstances duly considered, we may justly pronounce this combat to be as great a feat of arms as modern times had witnessed. The mere preponderance of numbers against the Swedes at Narva was indeed greater; but then the resistance of the Russians was on that occasion much more feeble and barbaric.

### PECULIAR FATE OF MARSHAL DE ST. ARNAUD.

Marshal de St. Arnaud had been literally dying for two years, doomed by his physicians. He was incurable, and he was worn out. He suffered uninterrupted anguish from the moment when he embarked at Balta-

chik, to the moment when he landed at Old Fort, and to the moment of his death. Most men in his circumstances would have considered exemption from the duties of the field a right—release from the responsibility of command a necessity. He undertook those duties, and demanded the entire weight of that responsibility; promising the French Emperor, on the word of a soldier and man of honour, that the moment which should find him inadequate to his post should see him resign it. A man whom the physicians had long since pronounced fit only for his bed was scarcely fit to lead in person the greatest expedition which France had undertaken within living memory. But he was believed and he was trusted. He in no respect disappointed the trust. He fulfilled all his duties with sustained in their discharge; and the instant that he found he was no longer, by any contrivance, equal to his functions, he transferred them to another. But that transfer was not made till every resource was exhausted. The afflicted man, who had been told that his bed was the proper place for him, and had gradually sunk still deeper under his infirmities for two years after that sentence—so terrible to a soldier—could still remain, for fourteen hours a day, in the saddle. On the 20th Sept., 1854, every remnant of personal health was spent and gone; yet, even on that memorable day he was thirteen hours on horseback. Unable to stand, unable even to sit erect in a chair, he had, from early morning, two dragoons to support him—one on each side; and thus, making the preparatory inspections, and thus present under fire, he gave his orders with the same spirit, the same self-possession, the same lively attention to every contingency, as of old—the same martial spirit still burning brightly in the ruined lamp, amid the gusts which were soon to extinguish its light for ever. He desired, ere he should die, to send home news of some great victory, and he sent the intelligence from the very pavilion of the hostile Commander-in-Chief, dated it from his tent, and wrote it at his desk. Prince Menschikoff's carriage and private papers were captured. The Emperor of the French afterwards addressed an autograph letter to the widow of the Marshal, whose last despatches, and whose farewell to his soldiers in resigning the command at the very moment of victory, are perhaps the most affecting and pathetic documents in the military annals of the modern world. This brief tribute will not be deemed out of place to the memory of a valiant and devoted soldier. When he rode slowly, after the conclusion of the battle of the Alma, towards the tent of Prince Menschikoff—now his—tears rolled down the faces of his soldiery who saw the dying victor supported by the two attendant troopers. A public funeral was decreed to his remains, in the capital of his own country, at the national expense; and, in due time, his body was laid in the Invalides, amid general manifestations of emotion, and with great solemnity, not far from the ashes of Napoleon, whose glory he had loved so dearly, and whose successor on the Imperial throne he had served so well. The story of this man's life is interesting, but his life is nothing compared to his death; he was a true soldier, who left to his profession all over the world—its devotedness, at least—an imperishable remembrance and an illustrious example.

## FLANK MARCH TO BALACLAVA.

Of the imperturbable coolness and gallantry of Lord Raglan in the first battle fought by the army, we need only say that his conduct excited the liveliest admiration on the part of our martial allies. And now the Allied forces, instead of pressing on the track of the beaten troops, determined to make a semicircular flank movement by the east, and thus take up a position to the south of Sebastopol. That splendid spectacle on which the contemporary reports expatiated—the spectacle of the fleets steaming slowly in majestic strength along the coast while the allied soldiery marched, as it were, under their wings, in a parallel direction—ceased. A meeting was appointed at Balaclava, and the military separated from the naval forces.

Through a woodland country, unknown in its peculiarities to the adventurous invaders, a winding march of considerable length, by compass as the sole guide, was undertaken. It was safely accomplished. The British forces, passing the Katscha and the Belbec, arrived first,—and at the Tchernaia formed detachments on the flank of the enemy—indeed, the flank and rear of a Russian division on the march for Bagtcheserai; they took some prisoners and a considerable quantity of ammunition. They then proceeded, debouching upon the valley of the Tchernaya, and around the heights of Inkerman, south of Sebastopol. A little further marching—a few days—and a harbour was gained, while the flags of the invaders waved over the buildings of Balaclava. The Eagish left the Alma on the 26th, and arrived on the evening of the next day. The French, pursuing one day later the track of this flank march, halted, at first, Inkerman, which they exchanged with us for the ridge overlooking Kamiesch Bay*. The English took the road to Kazatchia, of Kamiesh, of Pekshana, and of the "*Arrow*," much closer to the great stronghold. They, formerly on our right (even after the march to the south of Sebastopol), were now on our left, and inverting their position, they retained the first peculiarity, and stood with one flank resting upon the sea. The reason of this movement was purely because their transports were smaller than ours, and partly because they expected their supplies both earlier and in greater number. General Canrobert had now succeeded to the command-in-chief of the French army.

Here commences the second stage of the Anglo-French campaign, the actual attempt to attack, without investing, Sebastopol. On the banks of the Alma we had left Doctor James Ferguson and his servant to tend 600 wounded Russians. Of these, by his heroic, devoted, and indefatigable exertions, that excellent man saved some 250, at the least. After the Doctor had for five days supported this extraordinary toil, Captain Lushington, of her Majesty's ship *Albion*, came to the aid of his humane exertions, taking the convalescents on board. We regret to say, that Dr James Ferguson died of the effects of this charitable effort.

Meantime, negotiations at Vienna, though languid, had not been suspended. The grand difficulty felt by Austria was the Anti-German and anti-unational spirit of the Prussian Cabinet, which, but so short a time since, had presumptuously aspired to the political primacy of Central Europe. At this very epoch, one more of the illusory protocols to which Prussia delights to be a party, promising a legal and sincere co-operation with Austria for the maintenance of German interests, and the protection of civilisation, "satisfied" Europe, and excited the joy of all who did not understand the Court of Berlin.

## GROUND BROKEN BEFORE SEBASTOPOL—ACTIVITY OF THE RUSSIANS.

It was on the 26th of September that the British army obtained possession of Balaclava—a very small port, with a long narrow entrance, in which all the supplies of our troops were soon allowed to accumulate to such an extent, that it became almost impossible to find at the right moment any articles needed, or, if they were found, to disinter many of them from the piles of other articles which might happen to lie above them. Some of the most necessary things were landed the first, and stored under mountains of shot, shell, and powder. Other mishaps occurred of a similar kind.

A thousand marines (and these formed but an instalment) were lent by the fleet to guard the eminences which command Balaclava, and thus to set free an equal number of soldiers for the work of the siege. Some heavy ship's-guns were also landed and dragged seven miles up the steep overlooking Sebastopol, a most laborious operation. Sailors to work these guns were formed into a brigade, and placed under Lord Raglan's command. General Canrobert borrowed a similar corps from the French fleet. The sanitary condition of the two armies began to give much uneasiness again, the men having immoderately gratified their palates upon the grapes and other fruit which they had gathered in their march from the field of Alma. The consequence was that cases of cholera grew again frequent, while diarrhœa and dysentery claimed many victims.

The Generals having resolved to make regular approaches to Sebastopol, and to endeavour to subdue the fire of the place, if possible, at long range, all the first endeavours were directed to the construction of sufficient batteries, and to the opening of such trenches as would bring the assailants within the proper distance.

On his side, Prince Menschikoff, being now certain of the nature of the operations against which he should have to contend, had sunk six men of war across the mouth of the harbour, to exclude the Allied fleets. Their stores, guns, and ammunition having been previously landed, swelled the material defences of the place, and their crews formed a valuable addition to the garrison, which was, indeed, rather a great army than a garrison, and an army recruited at will from the exterior by the northern access to the fortress. Nor was it true that the obstructions sunk at the mouth of the harbour offered, as the Allies supposed, such a barrier to the egress of the remainder of the Russian fleet, as to imprison it permanently. A narrow passage, which those who contrived it could alone use, and which could give no facilities to the Allies, ignorant of its exact pilotage, and even of its precise locality, was left; and by this passage, if the blockading fleets had been too much weakened, the Russian men-of-war could have one by one emerged, and perhaps, then have inflicted some great disaster upon the remnant of our squadrons, or on the Turkish seaports. Indeed, one of the enemy's steamers did thus make its way out to reconnoitre; and, being chased, re-entered the port in a calm and leisurely style; while the celebrated *Vladimir* performed more than such a feat, twice effecting a daring cruise to the far shores of Bulgaria, and safely eluding, on its return, the vigilance of our first-rates. But though this was after the naval blockade, it was before the military leaguer, and too much weakened, had been sunk. These circumstances led to greater stringency in the blockade; and the enemy's squadrons were thenceforth, for all warlike purposes, close enough confined in the basin of Sebastopol. But they were not by this rendered wholly unserviceable to Prince Menschikoff. Their crews and munitions were used in the siege from the moment when he perceived that they could never more venture seaward; and even some of the most appropriately armed vessels were brought to the inner extremity of the Bay, or rather Harbour, of Inkerman, making at their moorings batteries of a truly formidable character, which raked the right of the English position, and, at the same time, could so easily shift their own point of action, as to perplex our artillerymen, while opposing our artillery. The shape of the Bay of Inkerman, which girds within the small segment of a large circle all the north of the town, will show any reader who throws his eye on the map the whole nature of this skilful disposition.

## TRUE CHARACTER OF THE UNDERTAKING.

Simultaneously with these internal arrangements, the most strenuous exertions were prosecuted in other quarters by the Russians, who were bent on defending their great southern arsenal and seaport to the very last. Enormous convoys, bearing provisions and supplies of every description, were, from even very distant points, directed with expedition into the Crimea. They came chiefly from the country between the Don and the Volga, south-west of Astracan, and from the eastern parts of Taurida. Many of these supplies, for the sake of greater speed, were embarked in lighters of shallow draught, on the further shore of the Sea of Azof, and were conveyed across to the Putrid Sea; then along the causeways—many years since begun by the Russian Government, and rendered by the late Emperor excellent and firm roads—they were forwarded rapidly into the heart of the Crimea; and finally thrown safely, by way of Simpheropol, into the stronghold for which they were originally destined. Other stores, coming from Kuban, were passed across the Strait of Yanikale, which connects the Sea of Azof with the Black Sea, and then swiftly carted to Kafa, and so due west almost in a direct line, leaving the river Saigin to the right, brought on, to the north of Tchorgoun, to Bagtcheserai, to the Belbec, and thus into Sebastopol. On the other hand, and in the opposite quarter, division after division—and, in truth, if numbers be considered, army after army—of combatants were hurried from Odessa and Bessarabia, and precipitated, through the Isthmus of Perekop, into the new and great arena of conflict. Several Government foundries in Katerinoslav and the Don Cossacks were meanwhile incessantly busy in augmenting the artillery and the fire-arms, the ammunition and other materials, which these convoys were intended to carry to the defenders of the Crimea, in addition to an incredible quantity of food, *raki*, and clothing. Moreover, the factories of Simpheropol itself were busy.

The Allies had obtained command of none of these vital lines of communication when they established a maritime blockade, which was far as regarded the resistance of the Russians—thus profusely supported from the mainland—may be termed ludicrously unpractical; and we can safely say that, as no opposition like that which ensued was at first anticipated, the whole expedition was, in the beginning, improvident, and, in its further marching—a few days—was gained, before the first serious advance of the Confederate army; and we must add to this gratuitous conclusion that, when a regular siege was acknowledged to be necessary, that operation itself was suddenly undertaken in a form which was no siege at all, according to any military idea ever yet current. Only one frontage of the place was besiegered, because, confessedly, our force sufficed for no more, and not very abundantly for that; and when we make this remark we mean that the exploit to be accomplished was too much, putting aside moral differences, such as courage and skill, between the contending parties—was, we say, too much for our then disposable strength and materials, even supposing that the only enemies to be vanquished were those actually behind the ramparts of the town, one face of which we thus invested, and that there were no complete armies, loose in the field, whose operations might alone task the utmost energies of the besiegers.

Little thought, besides, was given to the various far vaster communications, which we have mentioned, and by which new garrisons for Sebastopol, and new armies for the Crimea, might rapidly and almost incessantly succeed to those with which we had, in the first instance, to engage. By such strategy we left the enemy so circumstanced, that he could command not only inexhaustible supplies, but inexhaustible forces: the first, a great means of indefinitely prolonging his resistance; the second, a serious chance in his hands of ultimately achieving our own destruction. In short, the Allied army, instead of isolating the object of its attack, assailed at one and the same time, a powerful fortress, supported by the resources of a peninsula—and a peninsula supported by those of an empire. We had to accomplish in invasion as well as a siege;—yet our means were found to be so insufficient, even for the minor part of this duplicate operation, that the siege itself was but the imperfect beleaguerment of one side of the town destined to be taken.

Again: several of the Russian lines of communication to which we have adverted, attracted our attention for months; but had they been fully appreciated, our land forces could not have intercepted any, nor our fleets all, of them. So far from being able to paralyze the enemy's movements all through the Crimean peninsula, and forcibly to hold that province aloof from its bans, the Allied army was itself precluded from freedom of motion. Only the ground on which it stood was its own; and even for that ground it depended on not losing the assistance of the fleets. It was stopped in front by the fortress which it could not blockade, and menanced in flank and rear by armies more numerous than itself.

To sum up the various conditions of our enterprise at this time, we need only say that the expeditionary force went, and arrived, and had been victorious,—as assailants; yet found itself suddenly and violently placed upon its defence;—went as a besieging army, and found itself most effectually besieged. Nothing more is needed to demonstrate the deficiency of that information upon which the undertaking was planned.

## DIFFICULTIES OF THE ALLIED COMMANDERS.

Having sat down before this colossal stronghold, from which, as from an impregnable eyrie, the Russian eagle was ready to swoop upon the richest and choicest dominions of three continents, the Allies found themselves retarded by an unexpected difficulty.

They were on a ridge of rocky cliffs, and in the depth of precipitous ravines, which all pointed in their length towards the fortress. The soil, accordingly, in which the works must be made was full of stones, and frequently presented a solid mass of nothing else. The pickaxes which the French had brought, were good, well-shaped, and well-made; while those in the hands of the English were often broken to pieces at the first stroke, so inferior were in general our implements. Here, again, we behold what will for five months, at every second step claim, to a distressing degree, our remembrance—the fundamental improvidence which, to a certain extent, vitiated the very nature of the expedition—once we suppose that the chance of rushing fairly into Sebastopol after the victory of the Alma had been rightly rejected as too hazardous an experiment. To make our meaning more clear, and to obviate the imputation of a gratuitous criticism, we will content ourselves with asking this one question: If the Allied force in number and equipment was not strong enough for *a coup de main*, was it strong enough for the much heavier regular operations which were preferred? In other words, if, with no army in its rear, and a beaten army in its front, the Allied force, assaulting a comparatively undefended and comparatively unfortified city, in a state of panic, must have been inevitably beaten back, what are we to think of the determination to make the very same assault upon the very same city, only when its fortifications and defences and garrison should be all placed on the most perfect footing, and when two fresh and powerful Russian armies outside should, at the same moment, be engaged in pinning us to the earth the rear and right flank of the assailing force? This seems to have been the only true alternative; but it was not examined, because it was not foreseen. Nothing that has occurred, except the first combat, was foreseen. A regular siege was not foreseen;—nay, there has been no regular siege since; and even the implements then in hand were found unfit for the effective trenching of the ground before a single face of a stupendous polygon. A winter campaign was not foreseen; for no suitable preparations existed. All these cases and situations were not only unforeseen as probabilities, but unexamined and disregarded as possibilities. Yet they have all taken place—these impossibilities have all become facts; and they now form the actual history of what ensued. The army had a sufficient number of mules and a very considerable organization of land transport at Varna; these things were all left behind. They would not have been needed if the expedition could have burst at once into Sebastopol; and, as it was this very exploit which was in view, the incumbrances in question were not brought. Nothing else could excuse the abandonment of those appliances. The strange point is the abrupt change of plan the moment the battle which it was known must be fought, was gained. What better could have been expected than victory? Was it only in the event of their own defeat that the Allied Generals had determined to march at once on Sebastopol, and were they suddenly deterred because they were conquerors? There might have been great loss of life in such an assault. Perhaps a very small loss; but it could not have been a sixth, a tenth, a twentieth part of the loss of life which afterwards ensued—and yet the same assault still remained to be made; or rather an assault, to have averted which, fitly, such as then offered, might probably have been purchased with sound economy of blood. And if we could thus have seized this giant's cave, this lair of the Northern Cacus, the carnage of the Inkerman battle, of trench fighting, with the hundredfold worse mortality of the protracted Inkerman encampment, would never have covered with mourning unnumbered families.

## THE ACTUAL BELEAGUERMENT OF SEBASTOPOL.

When the Allies had taken their stand at Balaclava, Pekshana, and Inkerman, their plans still betrayed defective information; they imagined that from the heights which are within cannon range of the Sebastopol suburbs, they would be enabled to command the town in their possession, successfully to bombard the place, and to subdue its fire.

Reinforcements might make the Allies positively, but could not make them relatively, stronger. The enemy also received reinforcements,—nay, received them more rapidly than we—as, in less than two months, the events at Inkerman proved. And, whatever the final issue might be, after those torrents of blood and piles of carnage, which are the peculiar and invariable attendants of the milder and more prudent style of warlike operations, it was not likely that a smaller disparity could be established between the contending sides, than any which might have subsisted, if any did subsist, during the first fortnight after debarkation. It might occur that, in the end, Sebastopol would be taken when the odds of all kinds against the assailants had increased, and when the bloody and terrible interval would be found to have been surplusage. But, be this as it may, we were not the quicker, nor safer to Varna, for the very moment the plans had been fundamentally altered? We are about to see the later consequence of this omission. Meantime, owing to the want of the mules, human beings were immediately turned into beasts of burden; the ranks of the actual combatants were practically diminished, and the labours of all the forces gratuitously increased. It was by the sinews of our sailors and soldiers, yoked in long teams, that some of the heaviest guns were dragged up the hills which commanded the hostile city. Three weeks were spent in such labours—in tracing the line of circumvallation which was established at the distance of 1200 yards from the exterior ramparts of the place—in building up the gabions, sand-bags, and fascines into batteries, and then arming the embrasures of these with the position guns and mortars—in repulsing sorties, in taking defensive precautions towards the rear—and in straitening the town by every means of privation which the besiegers had it in their power to employ.

Among the latter measures was one which the French adopted before they had exchanged positions with us and gone to the left next the sea, viz., the cutting of a fine aqueduct, some four miles long, which was in one place tunnelled through the limestone-rock for three hundred yards, and which conveyed water from the Black River to Karabelnaya (the south-east suburb of Sebastopol). Among the defensive measures was the fortification of Balaclava by intrenchments, which were entrusted to the 93rd, now retained, under Sir Colin Campbell. (We may here remind the public, in passing, that our military nomenclature has ceased to be, if it ever was, a perfectly exact guide to the exclusive nationality, or rather the geographical origin, of our various regiments—many Irish soldiers serving in the ranks termed Scottish; though, indeed, no more really *unionor* (or national) regiments exist than those known, on the other hand, as of Irish composition—the 88th (the Connaught Rangers), for instance, and others—which are, in fact, almost purely constituted of the race amongst whom they are supposed to be raised.

## EFFECTS PRODUCED IN EUROPE.

While these proceedings were in progress at the seat of war a shameful fraud was practised on the credulity of the public. On the 3rd of October the capture of Sebastopol was announced. Nevertheless, the intelligence of the Alma achievement and the subsequent movements elated the Western Powers with a less unfounded sentiment of exultation, and highly produced a very observable influence upon the policy of Austria. The Austrian Court sent a special mission of congratulation to London and to Paris; and the instructions which had been given to the Austrian General in the Danubian Principalities were modified. The allied infantry proved to be our best diplomatists; they stormed Vienna on the heights of the Alma, and closely dictated to Berlin when they laid sieges to Sebastopol. The Prussian Court was in consternation, but the Prussian people were supposed to feel very differently.

Napoleon the Third, whose position on the Continent was steadily rising in dignity, perceived the certainty of a winter campaign, and now occupied himself incessantly in preparations to strengthen, support, feed, clothe, lodge, arm, and comfort his gallant troops before Sebastopol. Our Government was apparently busy in the same cares for the British soldiers; but the execution of the details was not the same; and the result was therefore doomed to present an awful contrast. But we will proceed according to dates. About the 11th of October four thousand five hundred French troops were dispatched from Athens to the Crimea as a ready-handed reinforcement, while twice that number were hurried eastward from Algiers and France.

On his side, the Emperor Nicholas, aware of the new inclinations of Austria, endeavoured to retain by terror the hold which he owed originally to gratitude; and directed a large part of his Imperial Guards towards Poland.

The Baltic fleet was at this date returning home. Orders of recall had been sent, in September, but countermanded early in October, for the purpose of allowing the squadrons once more to examine Sveaborg, and see whether an exploit was still practicable before the ice should have covered all those northern seas. The fleets accordingly fluttered hesitatingly for a few days longer in the neighbourhood of Sveaborg; but then, deciding that it was too late to attempt anything in the current year, began to retire. Thus, before the middle of October, terminated that vast naval expedition, after having done good public service and excited much public disappointment. Sir Charles Napier, on arriving in England, openly proclaimed that he had been thwarted in the most flagitious manner by the Government and the Admiralty, whose instructions, he declared, had contravened his own judgment, and had frustrated the exploits which it had else been in his power to accomplish.

We must not omit to record the unanimity and fervour with which the population of the three kingdoms, to a degree quite unparalleled in their history, testified their sympathy for our brave soldiers, and lavished contributions for their comfort and the support of their families. Not only an immense increase of taxation was borne with unusual alacrity, but the country was far from being content with the

LEAD MINE AND CRYOLITE, IN ARKSUL FIORD.

## MINING AND MINERALOGICAL EXPLORING EXPEDITIONS IN GREENLAND.

In the year 1850 the Danish Government, ever ready to encourage commercial enterprise and scientific pursuits, granted permission to a Danish Association (which has since become Anglo-Danish), to explore and work mines in Greenland, giving them the monopoly of all mines and mineral wealth they should discover for a term of years. Accordingly an expedition was fitted out in the spring of 1850, engaging the professional services of Mr. J. W. Tayler, mineralogist and analytical chemist, and son of Admiral J. N. Tayler, C.B. The object of this expedition was to examine those localities in which mineral wealth was known to exist, and ascertain how far they might be profitably worked. Omenak, in lat. 71° N., was the first place examined. Here black-lead, of extraordinarily good quality, was found in great abundance. On the south coast of Omenak Fiord, there is a great quantity of sandstone, containing beds of coal and slate. At one part of this fiord, named Karsonak, much trap has been ejected, carrying up the sandstone about 1000 feet: here, instead of coal, plumbago is found, in one large continuous bed. Westward of this the plumbago passes into coal, having the same foliated appearance, and occupying the same position in the sandstone. Eastward, occurs lignite in great abundance; whole trunks of trees and masses of carbonised wood may be found; some of them retaining traces of the bark and measuring from two to three feet in diameter. At present, in this part of Greenland, it is not possible to find any plant exceeding a foot in height, or measuring more than the thickness of the little finger in diameter; so that if this lignite be not transported woods, a vast change in the climate must have taken place since these fine trees were flourishing. Even in the South of Greenland, and in the most favoured spots, it is rare to find a bush exceeding a man's height, or thicker than the wrist, and these consist of *Salix Arctica*.

When the climate of North Greenland was such as to allow the growth of such trees as are here found carbonised, we may naturally conclude that animal life was more abundant—birds roosting on the branches, and quadrupeds roaming through the shady forests. All have disappeared; and the only land animals to be found wild in Greenland are the reindeer, fox, hare, and dormouse, and the ice bear, belonging more to the sea than the land; of birds, the ptarmigan, raven, falcon, owl, and one or two other small birds. Whilst at Omenak the ship was dangerously beset with ice—a strong gale of wind blowing many large icebergs into the small bay in which the vessel was anchored, and packing and piling the smaller masses of ice high up on the beach. For three days the ship was in a very critical position; but with a change of wind the ice soon cleared out again; and, with the exception of a few strong nips and much chafing, the ship escaped, thanks to a large iceberg which grounded a short distance ahead of her. Leaving Omenak, they sailed southward, and, after putting into Frederickshaab, visited Arksuk, lat 61 deg. 20m., where they examined the vein of lead ore there (of which we shall speak further on), and found promising traces of copper and tin ores; after which a boat expedition visited the island of Storoe, lat. 60 deg. 30m., upon which was found variegated copper (con-

LOSS OF THE SCHOONER "ARCHUUS," LOADED WITH SILVER-LEAD ORE, ON THE COAST OF GREENLAND.

taining 60 per cent of copper), and detached pieces of native silver scattered through the soil. By this time winter had begun to give evidence of its approach, and they sailed from Arksuk in the end of September, and reached London after a voyage of six weeks; bringing rich specimens of plumbago, silver, lead, copper, and tin ores, and native silver.

Another expedition sailed the next year, and on its return, with some tons of rich copper ore and more satisfactory proofs of the ultimate success of mining operations in that country, an Anglo-Danish Association was formed, consisting of five persons, possessed of capital and commercial and scientific knowledge. A third expedition then sailed, conducted by one of the members of the association, taking out miners to work a copper mine discovered at Naunrsoit. They commenced on a rich part of the vein, and procured a cargo of copper ore containing over sixty per cent of pure copper, which will be brought home by the next vessel. Whilst this mine was being worked, another expedition was sent out in 1854, under the charge of Mr. Tayler, who reached Greenland in June, and commenced working the vein of silver-lead ore in Arkauk Fiord, situated in the cryolite. Arkauk Fiord is well known to mineralogists as being the only spot in the world in which the mineral cryolite has been found. It is described as a white mineral, consisting of sodium aluminum and fluorine, and will probably be extensively used in the manufacture of the new and beautiful metal aluminium so soon as a practical method of obtaining this metal shall have been discovered.

The lead vein at Arksuk is situated between the bed of cryolite and the gneisrock in which the latter occurs, and is remarkably rich in silver, containing not less than 43 ounces of silver in the ton of ore. A vessel with provisions arrived at Arksuk in December, 1854, and, being frozen in, a cargo of this lead ore was wheeled in barrows over the ice to her. After running many risks by being carried away by the ice breaking up in a storm, her loading was completed, and she sailed on her passage home; but, night coming on before she could get out of the fiord and stand out to sea, she put into the harbour of Kajartik, a small opening in an island of Arksuk Fiord. A gale of wind came on, blowing into the harbour; and this increased with such force that the ship's cables and hawsers were unable to hold her, and she was dashed with great violence against the rocks, knocking off her rudder, her false keel, and making her so leaky that she was obliged to be abandoned. The crew and miners worked all day, saving all the provisions and rigging, &c., they were able to get at, and landing them on the rocks. None of the cargo could be saved, but it was insured. The cold at this time was very severe. The Sketch represents the loss of the schooner *Archuus* in the harbour of Kajartalik. On the morning after abandoning her she was nowhere to be seen, and it is supposed she sunk at the entrance of the harbour. The working of the lead vein was continued, and more ores obtained. In sinking into the cryolite, Mr. Tayler found it gradually become darker in colour, and at a depth of fifteen feet the cryolite was nearly black; but this black cryolite, when heated, becomes perfectly white; and as two trap veins occur at each end of the cryolite it is probable that they have overlied the surface of the cryolite, and by heating it caused the superficial whiteness which it has at present. He also found imbedded in the cryolite fine crystals, of a variety of tantalite, which has not been hitherto seen. In the cryolite, besides the silver lead ore, are also found yellow copper ore, blende sparry iron ore, molybdenum tin stone in fine crystals, arsenical pyrites, fluor-spar, felspar, and quartz.

INTERIOR OF A GREENLANDER'S HUT.

One of the accompanying Sketches represents Evigtok, the locality of the lead mine in Arkauk Fiord, with the miners' houses, smithy, store-house, &c., in the month of December, and the lead ore being wheeled over the ice to the ship. (*Continued on page 143.*)

RUINS OF CHURCH, IN THE FIORD OF IGALIKO.

(Continued from page 139.)

amount thus awarded. Voluntary funds of every kind were raised and organised—the Hospital Fund, the Sailors' and Soldiers' Fund, the Sick and Wounded Fund, the Royal Patriotic Fund. Hundreds of thousands of pounds were poured out in a torrent of generous gratitude. On the 13th of October appeared in the *Gazette*, a notification under the Queen's sign manual of the preceding 7th, appointing a commission for the collection and appropriation of subscriptions to support the widows and orphans of our defenders. Among the Commissioners were, his Royal Highness Prince Albert, the Dukes of Newcastle and Wellington, Lord Seymour, the Earls of Derby, Aberdeen, Hardwicke, Chichester, and Shaftesbury, Earls Grey and Nelson, Viscounts Hardinge, Palmerston, and Combermere; Lords Hokeby, Colchester, Panmure, Raglan, and St. Leonards, with many others. Private yachts sailed, laden with provisions, for the Crimea. Private packages, by myriads, filled all the receiving-houses for the East. Ladies sent stores of clothing; poor women offered each, for instance, a pair of mittens knitted by themselves; girls learned how to make a flannel shirt, and then dispatched it to the unknown wearer: articles the most miscellaneous tided East ward with inexhaustible profusion. The *Times* undertook to administer a portion of the universal and still-continuing bounties, and did so with usefulness and ability.

In France—where the war, as forming part of the policy of the Emperor, was accepted and supported with profound confidence, but where in itself, and as a conflict presenting not one of the traditionary objects of national ambition, it would not have found direct or spontaneous popularity—the public co-operation was less noisily and less readily, yet at length, perhaps, even more remarkably, evinced. It was felt that the operations of the Government (as distinguished from the strategy in Crim Tartary) were conducted with silent but matchless vigour and ability; therefore, so far from wishing to intrude their help, private persons all over the nation feared that help might be hindrance, knew that their exertions, to produce the right effect, should come off at the right moment, that there was a spirit then swaying the sceptre who was well able to judge of that moment, and, with implicit reliance on his genius, awaited the signal. But when, in due time, the Emperor appealed to the great mass of the people, exciting the capitalists, and inviting the hosts of comparatively poor proprietors to show the world, whether they, the very body of France, were able to support the policy of the State by a fundible subscription of 500,000,000 francs, then, we say, a financial prodigy was exhibited of which the annals of the world contained no precedent. It is not that in nine days, wonderful as this is, the 500,000,000 francs were in the hands of the Government, but that Government had, in nine days, to return an excess of 2,500,000,000 to the people. Precisely the same zeal was manifested in the recruiting of the army—the conscription becoming practically null, the entire eligible mass of the French youth vying, volunteering, and competing to be sent to the scene of the conflict.

Such being the remoter events connected with the war, and such the general state of the world at the date which we have now reached, let us return to the more immediate theatre of action.

## FIRST ATTACKS ON SEBASTOPOL.

We must premise that the first loan of men from the fleets to the land force had been quadrupled, and there were now as many as four thousand sailors and marines on shore, a detachment which left the ships grievously underhanded. On the evening of the 16th of October Lord Raglan requested Admiral Dundas to be ready with the artillery of the fleet, to second the land batteries on the following day, when the general bombardment was to be opened. A similar demand for the services of the French fleet was sent by General Canrobert to Admiral Hamelin. We may remark that the entrance of the Sebastopol harbour being obstructed by the sunken Russian ships, the Anglo-French squadrons could really now render no effective assistance of the kind required of them. Had it been possible to penetrate, even with great loss at first, into the harbour, a position could have been taken in rear of the casemated batteries of Fort Constantine, Fort Alexander, and the other forts, where their fire would have been eluded, and the town destroyed in forty-eight hours. But, under existing circumstances, the fleet were compelled to remain too far off to produce much effect, yet, they would themselves suffer from the full action of the Russian artillery, while they were bombarding the forts. Nor was even the diversion thus to be created likely to prove very important, as the fixed seaward tiers of the enemy's cannon almost sufficed alone to keep the ships at a distance. Nevertheless, the two Admirals agreed to make the experiment.

Accordingly, about half-past one o'clock, the English and Turkish fleets (the latter to occupy the space between the English and French lines), came down the north shore of the Quarantine Bay, between Constantine, the Wasp Fort, and the Telegraph Batteries; while the French fleet, in motion about the same time, ascended from the opposite direction to assail the Quarantine and Alexander Forts, forming line partly across the mouth of the harbour, on the south side. The *Napoleon* was the first of the British ships to come into fire; but many of her shots fell short. Somewhat to her left, and ahead of her, the *Britannia* (Admiral Dundas) dropped anchor, and, just before the English flagship, the *Queen*. Still closer in were our steamers *Samson* and *Terrible*, with the *Rodney* and Sir E. Lyons' ship, the *Agamemnon*. Other vessels were engaged—the *Albion*, *Sanspareil*, *Spiteful*, *Tribune*, *London*, *Retribution*, and *Trafalgar*. The *Retribution*'s mainmast and that of the *London* were shot away; the *Britannia*'s poop netting took fire from a red-hot shot, but the flames were quickly extinguished. The *Rodney* grounded, and was shot to be blown up, when the *Spiteful* "jerked her away." The *Queen* was sat on fire by a red-hot shot. The *Agamemnon* suffered severely. At sunset the ships hove up their anchors and were hauled off. In this action, the sailing vessels were managed by steamers lashed to their sides, not towing, and most cumbrous method to the motive power obtained. We had in all forty-five men killed, among whom were two officers; and 163 wounded, sixteen of the latter being officers. The only visible damage done by this naval bombardment to the enemy, consisted of an explosion in Fort Constantine, caused by a shell which proceeded, it is supposed, from the *Tribune*. In a few minutes the batteries of that fort were as actively manned and worked as before. Having dispatched, thus briefly, the maritime portion of the attack, we turn landward.

A little before the ships began to move, on the 17th October, the general attack was opened from the English and French batteries on shore; and, at the time, a confident hope and belief were entertained that the town could not withstand for more than two days so terrific a hurricane of fire; another proof of the complete ignorance which existed respecting the armaments of the enemy. At that date the Russians had but a very small portion of their guns mounted; nevertheless, they replied to the cannonade of the Allies, the very first day, with upwards of 200 large pieces, which discharged, for the most part, metal of greater weight than our own; and we, thus overweighted in metal, were also outnumbered in guns, including those of the French, we could then bring only about 130 to bear upon the place. The French batteries were armed with about fifty-four pieces. We had in the right attack, against the eastern Redan Fort of the Russians, and the Garden Battery, twenty-two guns; between left and right only one of the Lancaster guns as yet in the attack, forty guns; and we had also a few mortars. There were four sixty-eights, which had not yet been brought into position.

We cannot divide the bombardment into days, and give a diary of the small occurrences which were spread through the period. This method, unfortunately, is more favourable to a history of the part of the Campaign in question than would a separate pause upon the first, second, third, fourth, and each remaining step taken by an individual in a walk from one mile-stone to another. On the contrary, we must consider the whole bombardment, from the 17th till the 24th of October, as what it really was—one great experiment.

Sebastopol had been supposed far weaker in all respects than it was found to be; but in scarcely any particular was it discovered better prepared for our attack than in its enormous supply of heavy guns. It is but truth and justice to add that the Russian artillerymen displayed both skill in pointing their pieces and courage in standing to them; while the engineers employed in the defences augmented the fortifications by every species of outwork which military art could devise, and an almost unlimited command of labour could execute. The result of the first day's bombardment—the naval share in which we have fully described—was such as to surprise the Allies. Although three hundred of the guns of the place were pointed towards the Euxine, and replied with spirit and effect to the fire of the fleets, this immense allotment of ordnance seemed in no respect to have impoverished the remaining artillery resources destined to encounter the Allies by land; and the ultimate consequence was, that more tores in this arm would be absolutely needed ere we could so far disarm the batteries of the defenders as to render an assault practicable.

It is with satisfaction that we commemorate the circumstance that, in this stupendous conflict of fire, in which heavier pieces were profusely employed than had ever been concentrated in quantity mingled among the breaching machines of any former siege, and in which the number of projectile instruments, though their power was so unprecedented, exceeded that of the smaller pieces at any time used from the beginning to the end of the greatest wars hitherto recorded—in this altogether unexampled encounter of artillery, the English side of the field, for a time, exercised over the efforts of the defenders a visible preponderance, which our allies, unhappily, were not able to estab lish or to emulate. Indeed, the French fire was actually crushed, along the most important part of their line, in less than three hours; and the light batteries with which they had armed their batteries were found to be no match for the pieces which hurled upon them from the town a hurricane of far heavier metal. The English batteries, though thus bereft of the assistance on which they had reckoned, to divert a large portion of the hostile discharges, maintained their ground

squadron of the Chasseurs d'Afrique, supported by artillery, hurried forwards. Beyond the road which, with its convex bend eastward, winding from the north-west, enters Balaclava, Sir Colin Campbell drew up the 93rd. On the heights, behind their right shoulders, over Balaclava, the seamen and marines were respectively at the batteries, and in array as infantry. On every side within the immense theatre which the various mountain ranges bounded, warlike activity was visible. In the east, the Russians had now fairly debouched from the mountains, and, preceded first by two batteries of Horse Artillery, and then by a line of some twenty pieces, an immense force of cavalry, and last of all their main body of foot, in six dense masses of about five thousand each, were advancing like a dark tide to envelop the redoubts. The batteries thrown forward were firing with steadiness and effect; and in the clear and beautiful light, the grey smoke was seen at every discharge, from the most distant points. Like the Russian foot, the Russian horse came on in six masses, three to the front of each flank, and the three on both sides were in that oblique succession which soldiers term *echelon*. They seemed in splendid appointment, and their sabres, lances, and Cossack spears, under the rays of the sun, formed a sea of waving light. Their skirmishers pressed the Turks from the abandoned redoubt, out of which the light guns had driven them. The mortars behind were shelling the other redoubts. Below our circumvallation, between the Camp and the ground occupied by the Highlanders, but more forward than that ground, Lord Cardigan was in the saddle with the Light Brigade, and General Scarrett, before these, with the Heavy Brigade—both concealed by an interposing ridge from the enemy. The guns of the redoubts were now turned upon the Highlanders, to whom the guard of the same redoubts, the Turks (who happened not to be overtaken and killed) came flying. Sir Colin Campbell withdrew out of reach, and re-formed his men. The first redoubt taken had its cannon turned on the second, the second on the third;—when all three fell, the Russian cavalry, in part, advanced by their right towards the little undulation which concealed ours, and in part by their left towards that at the foot of which now stood the Highlanders. Each of these bodies of horse mustered about fifteen hundred sabres and lances. That in front of the Highlanders formed a long line, and, after a pause, descended the slope at a gallop. They had about 1000 yards to ride and. The Highlanders, disdaining to form square, or even four deep, awaited the charge in two ranks, the fugitive Turks being on their flanks. These fired at once, and fled. The second volley was from the Highlanders, at some 800 yards. The Russian charge exhibited no check or wavering on the reception of either, though many saddles were emptied and many horses ran wild after the last. On the main body came, the ground trembling beneath their rush as they gained in velocity. When they were within 150 yards the British front rank knelt; and from the muzzles of both ranks poured a volley so precise and deadly, that the enemy pulled up at once, amidst carnage and in confusion. They were completed that charge at all, but, opening files right and left, cantered up the hill again.

## CHARGE OF THE HEAVY BRIGADE.

The first portions of the Balaclava engagement having thus illustrated the reality of a British Infantry defence, the next incident in it illustrated still more strikingly that of a British Cavalry attack. The reader will remember that half the Russian force had advanced by their right, whilst the other half, whose proceedings we have just delineated, moved by their left. The former, therefore, arriving much more westward, and more nearly under the circumvallation of the Allies, came face to face with our own cavalry, by surmounting an undulation of the valley already mentioned. The two Commanders-in-Chief from the Camp, and the whole Allied Camp, were witnesses of what ensued. The Russian Hussars, in brilliant costume—their jackets of sky-blue, richly laced—rode first, glittering and gallant, up the hill, Lancers and Dragoons galloping from behind to enforce their attack. Towards our Heavy Brigade, among which the clang of the trumpets ordering readiness for immediate action had ceased, this formidable cavalry was now in motion—two lines of horse. That of the Heavy Brigade was but half the length, and a third of the depth, of the first of these lines of the hostile legions, which was not stronger or more numerous than their second. Such was the mass of cavalry which now began at a canter to descend the eminence. They moved, however, with some uncertainty, and then halted for a moment, not irresolute, but as if to be sure of their eyes that the handful of cavaliers before them meant to await their onset, and on favourable calculation? At that moment our bugles gave out the signal to charge; and as the Inniskillingers on the right and the Scots Greys on the left, seemed suddenly to flash up the intervening part of the hill, with a cry that thrilled through the hearts of the British and French hosts alike, the immense force of the enemy curved itself like a crescent to receive and enfold them—the wings advancing, and the centre line remaining firm. The brief shock was distinctly heard by the world of armed spectators on the plateau, as the sabres clashed and the horses met; but in an instant it was over. Right through the first line of the hostile enemy, without having been even detained, the Greys and Inniskillingers had passed, and were then seen with sabres on high, and reddened, riding at tremendous speed towards the very heart of the second Russian line. All behind them was ruin, and they broke what was still before them with the same irresistible violence. But the wings of the enemy's cavalry were closing in tenfold numbers around the diminished band of heroes, whose rear and flanks they overlapped, when the 1st Royals and 4th and 5th Dragoon Guards charged with equal splendour, impetuosity, and effect, making the victory complete. This whole equestrian conflict lasted but five minutes, cost us only about half-a-dozen killed, was sustained by our part with no greater body than we have mentioned, and utterly shattered and dispersed a force of the enemy which beyond doubt nearly trebled the numbers of the victors.

## THE CHARGE OF THE LIGHT BRIGADE.

It was a short time after this, when the enemy were drawing together in a direction more in accordance with their previous position, that Captain Nolan brought to the Earl of Lucan the celebrated order proceeding from Lord Raglan, but passing through the hands of Quarter-master-General Brigadier Airey. It is not our part to pretend to adjudicate upon the interpretation which the Cavalry Commander made of that order—an interpretation which became afterwards the subject of serious dispute, if not dissension, and led to the Earl of Lucan's resignation of his command. It is sufficient to state on the one side what Lord Raglan subsequently declared in the most formal manner that he *meant* by the order, and, on the other side, what the Earl of Lucan, with equal solemnity, declared he *understood* from it. Lord Raglan's intention, as he explained, was that the Light Cavalry should take up a more advanced position, and, with the aid of a field battery and of a squadron of the French Chasseurs, who were hovering on their left, should endeavour to prevent the Russians from carrying off the guns of the captured redoubts. But the Lieutenant-General in command of the Cavalry being puzzled by the terms of the order, and conceiving that the Russians could not be *prevented* from carrying off the redoubt guns (which operation he understood them to have performed already), concluded that, if anything was designated beyond a mere demonstration respecting those guns, it was to recapture them by a charge, which, nevertheless, appeared a very wild proposal, and was pronounced an insensate attempt by his second in command, Lord Cardigan. Being thus perplexed, he appealed, as he afterwards averred from his place in the House of Peers—he appealed, we say to the bearer of the order (Captain Nolan) to throw some degree of light upon the true purport; whereupon the latter—according to the same authority—said that, beyond question, Lord Raglan wished the Brigade to charge. The Earl of Lucan, after this short interval of hesitation, gave the signal, and the trumpets sounded for perhaps the most extraordinary equestrian onset in the remembrance of the human race. It was just about this moment that Captain Nolan—who was galloping backwards and forwards transversely, a little in front of the fated Brigade, uttered a loud cry—he had received full in a chest the stroke of a bursting shell, which rend ng him to pieces, thus on the spot closed the career of one of the most brilliant cavalry officers in the British service. His horse, freeing the reins relax, wheel-d, and trotted back with its dead rider many yards before he fell. He had formerly been in the Austrian army.

Meanwhile, the business which the 600 sabres of the Light Brigade were undertaking, excited the bewilderment of the French and English armies on the plateau, who noted the ominous bugles. All eyes were turned in breathless suspense upon the scene. The Russians had retrograded into a less sparse and expansive order—their skirmishers, the waving lines of their Light Horse, and a double horn of advanced field-batteries forming, as it were, an immensely wide gallery, within which the British Cavaliers, on their magnificent horses, were preparing to rush. To the left front of the Light Brigade there was hostile artillery; to their right front there was hostile artillery; and they would have to sweep along the rifle range of three of the redoubts still in the hands of the enemy. But this is nothing. Straight before them 600 devoted riders the whole of the Russ an cavalry, now re-united "in six massive divisions," and pausing upon their own reserves (altogether at least 3000 strong) were drawn up diagonally across the great gallery of raking fire which we have described—across it diagonally, but far down. Would any of the daring assailants ever even reach them? But this, again, was nothing. Behind frowned ("square tr their front," as Lord Cardigan says) thirty heavy guns along a regular line of six enormous battalions of infantry, over whose heads the three thousand chief great pavilion batteries from the hills out of which the assailants had originally debouched, and on which they were now resting again in complete ba tle array; a whole army, in short, of 30,000 men impregnably posted, and holding perfectly in hand everything which our glorious Six Hundred could attempt either to take away or to assail. One word more remains to be said, before the little band who had to make their desperate onset amid the centripetal blaze of these progressively-increasing discharges of artillery could come to one stroke of the sabre or one thrust of the lance, *they had to clear a mile and a half of ground.* The immortal regiments, whose lot it was thus, in all the pomp of war, but without one of the military chances of victory, to ride rejoicing like bridegrooms, into the embrace of death, were the 4th and 13th Light Dragoons, the 17th Lancers, the 11th, Prince Albert's Hussars, and the 8th (the King's Royal) Irish Hussars. Their task, it will b thus understood, formed a melancholy contrast to that just undertaken and accomplished by their comrades.

Swerving a little to their own left to get clearer space, this handful of horsemen broke away superbly upon their appalling errand, their comrades and allies on the heights, watching the movement, first with wonder and even incredulity, then with absolute consternation and boundless horror. The field-battery which Lord Raglan had mentioned in his order, was not visible near them, nor behind them; they were the victims of astonishment and dismay rose throughout the whole camp—the two Commanders-in Chief were lost in awe—not a man to co-operate with those horsemen or protect them now; they were past help. Let us follow them. First, the redoubts opened with rifles and musketry upon their right; but, not turning a glance either to one side or to the other, they were soon borne past by their speed, which visibly increased as they advanced. Every plume streaming back, every head bent slightly forward, every right arm aloft, every horse at grand racing stride, swift as a meteor, the pageant of real battle, flew onwards.

When they had cleared more than half the distance which had separated them from the huge columns of Russian cavalry forming the nearest portion of the enemy before them, and when, of the mile and a half, much less than three-quarters of a mile intervened, a blaze of light burst along the front, faint bluish wreaths of smoke rose into the air behind the intervals in the Russian squadrons, obscuring the view of the Russian infantry masses, and at the same moment the first line of the careering brigade, so regular before, appeared like a line no longer, but all ravaged with gaps: men were seen lying on the ground while their horses wheeled and fled back; others, on the contrary, extricating themselves from the chargers which had fallen; a moment more and the thunders of the artillery which had made this devastation were borne to the ears of the excited Camp. But still the charge was not checked, and on rode the survivors straight upon those murderous Russian guns, into the very eyes of a storm of musketry from the army of foot behind them, and amid another but now double cannonade on both sides of their advance—from the position batteries of the hills. Different, indeed, was this manner of executing a charge; different, indeed, was this style of cavalry fighting, from that of the fifteen hundred Russian horse, who on that very morning had declined to meet the same force in a single regiment of Highlanders in a single line, unsupported, and only two deep! How truly startling the contrast—how unspeakable the difference! A whole army, in battle array, 30,000 strong, all arms being reciprocally supported with the most perfect effect—an unassailable position—redoubts, batteries, skirmishers, and, finally, twelve times their own number of cavalry alone, could neither deter the British Light Brigade from attempting, nor hinder them from carrying, a charge which swept through or swept down the whole of these defences, and fell like a spent thunderbolt on the farther side, shaking the enemy's united and entire force to such a degree that, had this wild swoop of our lost light cavalry been but made as a calculated sacrifice, instead of an inexplicable mistake, and had it been supported by anything approaching to a regular or co-ordinated movement, General Liprandi's fine host would have been annihilated that very day. Such was the opinion of those who beheld the effect, too late to profit by it; amongst others of Prince Napoleon, who was as much amazed and thunderstruck as anybody. They *saw*, but they had not *foreseen*; nor would such a holocaust, if foreseen, have been permitted.

After riding beyond the guns, cutting down the gunners, breaking and shattering a column of infantry, and dispersing the cavalry that rode to the rescue, the heroes turned to charge home again, their gory and streaming sabres no longer giving back the same flashes to the sun, and they themselves showing but one man to every three who had galloped, five minutes before, from beneath the heights of the Allied circumvallation. Alas! dreadful as appeared such a change of numbers, the full alteration was not yet. Another tremendous double hurricane of shot, which, coming from opposite quarters, seemed to meet in their persons, passed among them as they turned, and whirled their remaining force v nished on the spot. Then part of the Russian horse—a cloud of Cossack lances—closed in, and interposing on their road, not only seemed to bar it, but helped with the smoke to hide them completely from the anxious gaze of their comrades in the Camp.

Among these it was a solemn moment when they took their sadly small farewell to every remnant of the noble Light Brigade! But a strange interest riveted every look still upon the blocked-up plain, and a stranger spectacle rewarded that interest. Swift, sudden, strong, and mighty was that pounding crash, which—as with a battering-ram—swung open the centre of the Cossack line, and flung its fifties in shivered fragments on either hand, as the Light Brigade came charging back and cleaving their terrible avenue home. It was indeed a remnant of the British corps which had looked so magnificent and so glittering a few short minutes since. Ah! *quam mutatus!* Bloody, lacerated, grim with the sweat and smoke of battle, about a hundred were seen together; and nearly as many more straggled into the Camp before evening. These were the survivors of the 607! Lord Cardigan led this unparalleled charge, and escaped from it with a few slight wounds; and even among those heroes he was conspicuous for the serenity of his courage, his feats of horsemanship, his personal prowess, and the impassive audacity with which he conducted the most desperate, probably, of all recorded military exploits. The Earl of Lucan was also wounded, while undauntedly superintending the movement We ought to mention that, much as the conduct of the men exceeds the limits of eulogy, the conduct of the officers, one and all, was more wonderful still. There were nineteen in the first two regiments, and but three returned; junior captains and even lieutenants became suddenly commanding officers—with but little, alas! to command. It is melancholy to think how few emerged from this action; but none would have survived it, only for an achievement of the French; and it remains but to record this. Lord Raglan's order had contained the words "*French cavalry on your left*" The cavalry here signified were a squadron of that splendid corps which the Algerine war has called into existence in the French service, the Chasseurs d'Afrique. They were but 200 in number. Fortunately, their commanding officer had received no order analogous to that which had the effect of shooting our little column of Light Horse, like a shaft from a bow, into the m dst of an entire army in position. Had the French, indeed, accompanied that fatal charge, neither any of our own Dragoons, Hussars, and Lancers, nor those gallant Chasseurs themselves, would have ever more been seen. But, on the edge of the maelstrom, they could render rescue which, once in it, they could not have received. As the remnant of the British corps was bursting home, and (in about a quarter of its original strength) had overcome nearly every other obstacle, a large field-battery was harassing their passage on the right hand of the return path. The French horse feeling that this battery, if not immediately silenced, would annihilate the heroic horsemen, charged at it, and killed the gunners to a man; they even were near carrying off the gun, but that was to o slow an operation for so small a body unsupported, and having incurred the loss of one man killed or wounded out of every four of their 200, they returned with the survivors of our own brigade. These had now mingled with the advanced columns of the Heavy Cavalry, which received them into its openings—and then all retrograded a little.

Such was the course, and such was the close of that extraordinary charge, which, as General Sir William Napier afterwards justly remarked, was undertaken with so much thorough *good will*, that "a doubtful sign, rather than a clear and unmistakeable order," had sufficed to set it in motion. Our allies were lost in mingled sorrow and amazement; and General Canrobert declared that the feat, if it transgressed all the great rules of warlike prudence, also transcended all the conceivable limits of warlike heroism:—"*Ce n'était plus la guerre, c'était un spectacle,*" was his exclamation.

M. G. K.

(*To be continued.*)

## MINING AND MINERALOGICAL EXPLORING EXPEDITIONS IN GREENLAND.

(*Continued from page* 141.)

The east coast of Greenland is said to have been discovered about the year 980, by Eric the red, an Icelandic chieftain of Norwegian descent, who fled from the vengeance due to a murder he had committed in Iceland. After two years' residence there, having paid blood-money for his crime, Eric returned, and by describing the land as rich and fertile, and naming it Greenland, induced many Icelanders to settle on the east coast. About twenty years after this his son embraced Christianity, and, accompanied by priests and missionaries, went over, converted his father and the settlers, and established twelve different churches on the coast—this was about the year 1000. As a Papal Bull, however, of A.D. 855 mentions Greenland, it is probable that it was discovered some years prior to this. These settlers were succeeded by many descendants, who explored more of the coast southward and westward, and found among the rocks and icy mountains some sheltered spots, which afforded pasturage and allowed some little cultivation; they also built a small town, called Gardr, in which resided a bishop

Owing to the black plague of 1348, which ravaged the north of Europe, and the war of Denmark and Norway with Sweden, the colony of Greenland was left to its fate, and the route thither and its position on the Arctic forgotten. In 1406 Bishop Andrew sailed for Greenland, but was never again heard of, and no further intercourse took place with the east coast; and it was not until 1576 that the west coast of the lost land was again discovered by Sir Martin Frobisher. Subsequently, the Danish Admiral Lonchman, and Sir John Knight, an English Captain, made the coast and landed in one of the bays. There was found ore yielding 26 oz. of silver in the ewt, but no traces of the old Icelanders and Norwegians could be found. Other attempts were made, but the barrier of ice which had wonderfully increased since the first settlement of Greenland prevented anyone from reaching the eastern coast, so that the fate of the early Icelandic settlers still remains in obscurity. On the west coast, however, many ruins have been found: the most remarkable for its preservation occurs in the Fiord of Igaliko, about lat. 60 deg. It consists of the ruins of a cathedral, a small church or cloister, having no traces of mortar or cement being used in its construction, and ten or twelve indistinct ruins of houses and other buildings. Catholic relics, crosses, and stones engraved with Runic characters, and with coats made of coarse hair, have been found in several places.

The Greenlanders have a tradition relative to the destruction of the Christian settlers—the latter had gradually oppressed and ill treated them, and one particular injury inducing one of them to engage the rest in the act of vengeance, they came up the Fiords in their large skin boats, whitened, to represent pieces of ice, fell upon the Norwegians unawares, and succeeded in exterminating the colony after another. The particulars of this may be read in the Danish Chronicles, as this first took place on the west coast. The inhabitants of the east coast may have preserved themselves; but in the modern exposition of Captain Graah, in which he explored part of the east coast, no traces of them were to be found. Probably a remnant of these Christians may yet be found; but the difficulties of exploring the east coast are very insuperable.

In 1636 a Greenland Company fitted out two ships and commenced the Greenland trade, which is now carried on by Denmark as a Royal monopoly. Seven or eight ships annually go out to the west coast of Greenland, principally supplying the natives with European productions, and bringing home valuable cargoes of oil and skins. Factories have been established along the coast, and missionaries sent out, who have succeeded in converting the natives to Christianity without oppressing them. Among themselves the Greenlanders have no chiefs or laws, unrestrained freedom exists. Wars and quarrels are unknown amongst them, and even the children, as soon as they can walk, have perfect liberty to act as they like, and what is more remarkable this general liberty is not accompanied by license. More peaceable people cannot any where be found.

The seal supplies them with food, raiment, and covering for their skin-boats. In the winter they live in huts built of stones and turf, lined inside with old skins. These huts are lighted and warmed by a lamp placed in front of each sleeping bench, of which there are from three to six or more in each hut. Our Sketches represent the exterior and interior of one of these huts. In summer they pitch their skin-tents in some spot up the fiords where fish is abundant: here they dry their fish and seal flesh for their winter provision.

Greenland may be considered as a continent of ice, the sea-coast of which thaws only in the summer. The appearance of the coast and fiords is one of sublime desolation: icebergs in vast numbers surround it, and make the temperature exceedingly cold, even in the summer. In this season myriads of mosquitoes cause a severe annoyance. Mr Taylor states, for the benefit of travellers who may be subjected to their truly maddening bites, that all the irritation may be speedily removed by washing the bite with a lotion composed of two grains of bichloride of mercury to the ounce of water.

Boat travelling among the icebergs is not without danger; rotten icebergs frequently fall in pieces with the slightest concussion. One of the native boats, some years since, was passing one of these, when a child merely trusting against the side of an iceberg with a stick; this slight blow was sufficient, the loose masses became detached, the iceberg lost its balance, toppled over, fell into pieces, and destroyed the boat and its hapless crew, composed of women, by whom only these large boats are rowed; a Greenlander, in his kajak (canoe) alone escaped to relate the tragic occurrence. We engrave the Fiord of Kangerlussuak, as interesting to mineralogists, and being the locality in which the rare minerals eudialite, sodalite, and arfvedsonite are found.

Mr. Taylor (to whom we are indebted for the Sketches) will probably conduct another exploring expedition in this interesting country, in the ensuing summer.

## REVAL.

THE view of this important city of Esthonia, engraved upon the front page of our Narrative of the War, is from one of Mr. Carmichael's spirited Sketches. The port and town is situated at the south entrance to the Gulf of Finland, at a short distance from where our Fleet lay at Nargen. Reval is a very rich trading place, having a very fine harbour, and is well fortified. It is much frequented by the wealthy Russians, in summers as a bathing place.

Reval or Revel is divided into the upper and lower town; the former, perched upon a rocky cliff, within its walls incloses the Dom, the Castle, the residence of the Governor, the Commandant's house, the gymnasium, and the houses of the nobility. The whole of this quarter is called the Dom, and no plebeian is permitted to possess ground on this proud reef of rocks.

The lower town, the descent to which is very steep, is of considerable extent, has many broad streets, stretching to the flat sandy shore of the harbour. Here are the dwellings and warehouses of the merchants, the rath-house, the guild-house, the bank, the barracks, and the theatre. The churches include five Russian, one Swedish, one Danish, and four German. The Lutheran are of great antiquity. The Olai Kirche, originally built in 1229, was burnt and partially consumed by lightning eight times—the last catastrophe being 1820. The lofty spire, shown somewhat left-ward of the centre of the View, is that of St. Olai, about 250 English feet high, and serving as a landmark in navigation. This edifice, the cathedral church of the lower town, is in pure early Gothic style, with lancet windows of great beauty.

Reval is entered by seven picturesque gates, which are decorated with interesting historic sculpture. It has an arsenal, and the fleet from Cronstadt sometimes winters here at times. The passage by steamer from here to St. Petersburg usually occupies twenty-four hours. The harbour has been materially improved, and its road-stead is well sheltered by islands. Large quantities of corn, spirits, hemp, flax, timber, and other Baltic goods, are exported in exchange for colonial produce, salt, cheese, wine, tobacco, fruits, dye-stuffs, cotton yarn, and other manufactured goods, with herrings from Holland and Norway. The Russians took Reval from the Swedes in 1710: it was formerly the great emporium of the Hanseatic league for the trade of Novogorod. The population is about 18,000, which number is, however, much increased by summer visitors.

*NEW BOOKS, &c*

BRADBURY and EVANS, 11, Bouverie-street.

Just published, price 2s., the Second Edition of the
**AUTOBIOGRAPHY of a BEGGAR-BOY.**—"In this little volume there is much that is really new to the general reader, and great food for instructive and entertaining." "Here is the story of what the writer truly calls a chequered life told in simple but almost graphic style, by a modest young man of the cold in simple but almost graphic style, by a modest young man of the humblest origin, but not less honourable to the laudable peculiar ordeal—alas! for the many but not less honourable to the laudable though often misdirected ambition of the man."—Glimpses of real feeling and earnest thought are to be found in this singular story."
"It is written in a series of letters, and this gives a freedom to the style which the writer evidently knows how to appreciate."
London: W. TWEEDIE, 337, Strand.

LOWE'S FOREIGN FERNS.
Now publishing, in Monthly Parts, 2s. 6d. each Part containing Four Coloured Plates, and numerous Wood Engravings,
**A NATURAL HISTORY of FERNS.**—Exotic and British. By E. J. LOWE, Esq., F.L.S., F.G.S., M.M.S., Hon. Memb. Dublin Nat. Hist. Soc., Mem. Geolog. Soc. Edinb. &c
"A book which should contain ample means of studying and identifying the exotic species, accessible to persons of moderate means, has hitherto been a desideratum. The want the present work promises most hopefully to fill. It is admirably 'got up;' the plates, four in each number, are carefully and prettily executed, there is also a neat illustrative woodcut at the head of each description; and the letterpress is full and lively without being deficient in scientific accuracy. It is really the cheapest work for its excellence we have ever seen."—Athenæum
London: GROOMBRIDGE and SONS, Paternoster-row.

AMUSEMENT FOR CHRISTMAS PARTIES.
Price 3s., by post, 3s. 3d.
**SHAKSPEARIAN CHARACTER CARDS,** provided an intellectual and withal merry game for the social circle. "Truly, Master Holdfurth, you have studied the world."—Lord Morley.
London: READ and POWELL, Arcade, London-bridge.

Now ready, price 2s.,
**NEW READING-CASES for PROTECTING** the ILLUSTRATED LONDON NEWS during perusal.
PORTFOLIOS to contain Six Months Numbers, 4s each.
CASES for BINDING the Volumes, 2s. 6d each.
May be obtained at the Office, 198, Strand; and of all Booksellers.

**LITERARY NOTICE.**—Book Collectors will find some very curious and interesting Articles in WALLER and SON'S Periodical Old Book Catalogues, at the Temple Book Warehouse, 186, Fleet-street. Part XVIII. now ready gratis. Also, a Select Catalogue of the important Books published by the late William Pickering, at very low prices.

**GOOD WRITING.**—Twelve excellent GOLD AMALGAM PENS sent free, sealed in a neat box, to any part of the kingdom by return of post, on receipt of one dozen postage-stamps. Address, Mr. HERBERT, 5, Cotton-place, Mall, Clifton, Bristol.
"The pens you sent were really first-rate."—C. D.
"I am greatly pleased with the pens. Send me three dozen more of the same."—J. S.
"I never wrote with any so good."—M.

**A GENTLEMAN of Public School Education,** not in Orders, residing in the south of England, is desirous of undertaking, with the assistance of his wife, the entire charge and education of three or four little boys of six or seven years of age, sons of gentlemen whose parents may value for them the advantages of careful training and a comfortable home in a mild and healthy climate. Terms moderate. High references will be given. Address G. H., Mr. Nutts, Bookseller, College-street, Winchester.

**NOTICE.**—Mr. FUTVOYE begs to acquaint his friends and the public generally that he has no longer any connection with his late partner Mr. Ribman Bicknell, Sperm Oil Merchant, of Newington Butts and Herne Hill, and that he has not any interest in the business at the corner of Bank-side, Lambeth, as it carried on solely by Mr. Rhanan Bicknell, under the original name of Futvoye and Co.
Mr. Futvoye embraces this opportunity of announcing his correct address, namely, 192, Regent-street, which premises he has recently opened with an entirely new and choice selection of Jewellery, Watches, Clocks, Bronzes, Dressing-cases, Ormolu Ornaments, &c., and where he trusts, from his long experience, admitted good taste, and by devoting his entire personal attention, to merit a continuance of that support so liberally bestowed upon him for so many years.
Watches, Clocks, and every description of Plate and Jewellery repaired by experienced workpeople on the premises, 192, Regent-street, eleven doors from Oxford-street-circus.
Diamonds, Pearls, Plate, &c., purchased for cash, or taken in exchange.

List of Prices, with Drawings of the Instruments, may be had on application.—JULLIEN and CO., 214, Regent-street.

**D'ALMAINE and CO.'s PIANOFORTES,** 25 Guineas each.—D'ALMAINE and CO., 20, Soho-square (established 1710), submit for inspection a large and elegant STOCK of their ROYAL PIANOFORTES at 25 Guineas each, which, from the combination of elegance with accuracy, the high quality of the materials employed, and the unceasing care devoted to all branches of the manufacture, they have selected the highest priced only in Great Britain, but throughout the whole civilised world. Every instrument warranted.—D'Almaine and Co.'s Warehouses, 20, Soho-square.

**MUSICAL BOX DEPOT, 54, Cornhill,** London, for the sale of SWISS MUSICAL INSTRUMENTS, made by the celebrated Messrs. NICOLE, Freres, of Geneva.—Large Size, four airs, 8 in. long, £4; six airs, 10 in. long, £6; eight airs, 12 in. long, £8; 20 in. long, £8; and twelve airs, 30½ in. long, £12 12s. Containing selections from the most eminent composers, including popular, national, and operatic airs, together with hymns and other sacred music, and the celebrated Swiss Musical Bird Cage. Every size and tune, 14s. 6d. and 18s.; three tunes, 30s.; and four tunes, 40s. each. Printed lists of tunes, &c., may be had gratis and post-free on application

**CHAPPELL'S FOREIGN MODEL PIANO-FORTE,** Price Fifty Guineas.—This Instrument has (unlike the ordinary Cottage Pianofortes) Three Strings, and the tallest Grand compass of Seven Octaves. It is strengthened by every possible means to endure the greatest amount of wear, and to stand perfectly in any climate. The workmanship is of the first description, the tone is round, full, and rich, and the power equal to that of a Richard Grand. The case is of the most elegant construction, in rosewood, the touch elastic, and the repetition very rapid. Every possible precaution has been taken to ensure its standing well in any part of the world. Chappell especially invites the attention of the public, the profession, and merchants to the Foreign Model, feeling assured that no Pianoforte, in all respects comparable, has hitherto been made in England at the same price. Every instrument will be packed (if required) and arranged within twelve months of the purchase.—50, New Bond-street, London.

**HARMONIUMS at CHAPPELL'S.**—The HARMONIUM by ALEXANDRE is the only instrument of the kind that remains in tune from the simplicity of its construction; is but slightly affected by changes of weather, and is alike occasional or for the Church, Chapel, School, or Drawing-room.

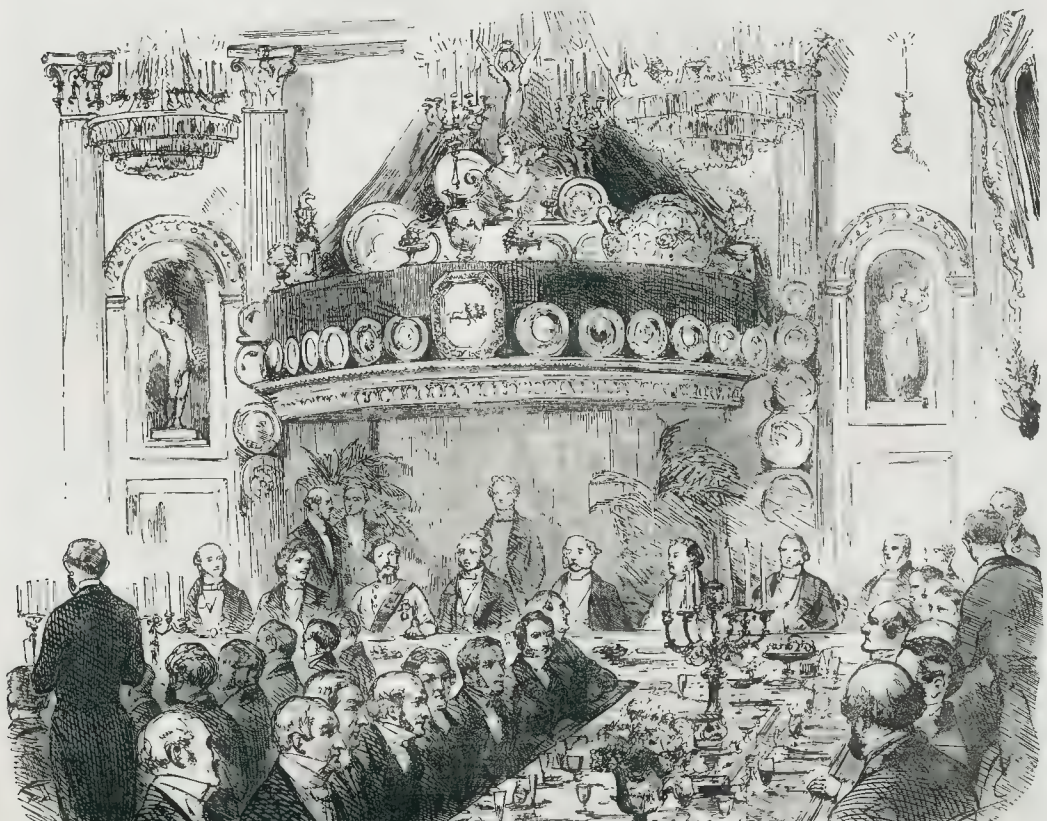
No. 784—VOL. XXVIII.] SATURDAY, FEBRUARY 9, 1856. [WITH A SUPPLEMENT, FIVEPENCE.

## OUR RELATIONS WITH AMERICA.

SOME people, not usually deficient in worldly shrewdness or common sense, still profess to be ignorant of the causes of the war against Russia. The old proverb that "there are none so blind as those who will not see" sufficiently explains their state of mind. But this class of persons—of whom Mr. Bright may be considered the leader and spokesman—does not suffer from the same infirmity of temper in the case of the untoward quarrel which has sprung up betwixt this country and the United States. They know all about it, and share the opinions of their countrymen—that a war, if it unfortunately arise, will not be one of England's seeking; and that the guilt and shame of it will be upon the heads of those officials in the United States who do everything to provoke and nothing to prevent it.

The causes of difference are so simple that all the world can appreciate them. Great Britain is accused by a party in the interest of the actual President, and by the principal law-officer of that great magistrate, of an infraction of the laws of the United States, in having encouraged, through the agency of the British Minister at Washington, the enlistment of American citizens for the British Foreign Legion. The British Government did not seek to defend its ill-advised and useless act. It ceased the enlistment immediately that complaint was made, and offered an apology more than sufficient to satisfy the greatest of European Powers which might, under similar circumstances, have felt itself aggrieved. If Great Britain and the United States could have been personified as two honest, sensible, high-minded, chivalrous, Christian gentlemen, the apology tendered by this country would not only have been deemed sufficient, but would have strengthened between the two, the friendship that had been threatened with interruption. The plaintiff in the cause would have felt esteem as well as admiration for the ready courtesy and manly bearing of the defendant; and would have confessed in his secret heart that one who could afford to be so just was a friend worth having. May not this yet be the turn which events will take on the other side of the Atlantic? We sincerely trust that it will. Even Mr. Bright, whom the prospects of peace with Russia have inclined to be reasonable, takes pains to declare before the Manchester Chamber of Commerce, and before the world, that on this question he is "as much against doing anything that could bring humiliation on his country as any man can be." But President Pierce, and those who share with him the honours and emoluments of office, appear to desire nothing so much as to humiliate this country. We do not believe that this gentleman and his party truly represent the feeling of the United States in this matter. Whether they do, or not, Great Britain will not inflict humiliation upon herself to please his vanity, or to further his supposed interests, or the necessities of his ambition. Strong in the consciousness both of Might and of Right, this nation may afford to forgive an insult wantonly inflicted; but it will not inflict degradation upon itself by dishonourable and pusillanimous acquiescence in demands that ought never to have been made. If the Government of Mr. Pierce have determined not to tolerate the presence of Mr. Crampton as British Representative in Washington, so be it. Let Mr. Pierce request that Minister, if he pleases, to pack up his goods and chattels and



THE HON. EAST INDIA COMPANY'S BANQUET AT THE LONDON TAVERN TO LIEUTENANT-GENERAL PATRICK GRANT, C.B., THE NEW COMMANDER-IN-CHIEF OF MADRAS.—(SEE NEXT PAGE.)

return to London; and it is highly probable that this country will be magnanimous enough to forgive the discourtesy, and to endeavour to find consolation for the want of a representative at the White House. The heavens will not crack; the sun will not cease to shine, or the earth to yield its harvests, because there is "an Excellency" the less on the other side of the Atlantic, or because Mr. Pierce has behaved in his public capacity in a manner which in his private capacity as a gentleman he would neither have imitated nor recommended.

The other cause of dispute—that relative to the worthless islands of Belize, is quite as simple, and of as little importance to this country. A gentleman, if we appeal to his generosity, will often give away a thousand pounds, and be glad of the opportunity, but he will not be bullied out of a farthing. Whether, under the Clayton-Bulwer treaty, these islands ought or ought not to be considered under the protectorate of Great Britain, is not of the slightest consequence to this nation, except in so far as a great principle is concerned. The British Government has offered to submit the case to arbitration, and to abide by the award. What more can honest America desire? There is not a man in these islands who would not rather give the United States the town and dependencies of Belize—were they a thousand times more valuable than they are—than waste a pound of powder or singe the hair of an Englishman's or American's head in the quarrel to retain them. If the "bumptious" Mr. Pierce will not submit to arbitration, he is condemned beforehand in the great tribunal of civilisation; and forces the sympathy and the conscience of the world to declare themselves against him.

We have no fear, as some of our contemporaries have, of wounding what is called the "susceptibility" of the United States. It is enough that this nation should apologise for an unintentional wrong; and submit its real or assumed rights to the arbitration of any State or Sovereign that the Americans themselves will name; but that Englishmen should speak with "bated breath," lest their too-jealous and thin-skinned cousins should take offence, is too much. This country is not afraid of America; and will not yield to mere bullying, come whence it may. Englishmen will speak their mind on this question as on every other. Their mind is that a war with the United States would be a most deplorable calamity—a scandal to our blood, our civilisation, and our religion a horror too great to be adequately designated—and a catastrophe that they would do anything to avoid consistent with the honour which makes the character of nations as well as of individuals. If misjudging or passionate men in America shall force us into such a war—in spite of warning—in spite of apology in spite of justice;—on their heads will be the penalty and the shame. Great Britain, washing her hands of the guilt and the responsibility, will go into the struggle with a sorrowful but a resolute heart; and it will be strange indeed if America do not get the worst of it.

## BANQUET TO LIEUT.-GENERAL PATRICK GRANT, C.B., BY THE EAST INDIA COMPANY.

A GRAND banquet was given by the Directors of the East India Company, at the London Tavern, on Saturday last, to Lieut.-General Patrick Grant, C.B., on the appointment of that distinguished officer as Commander-in-Chief of the Madras Army, and his approaching departure from England for the purpose of taking possession of that high and important post. These valedictory entertainments have at all times their own especial points of interest; but the present more than usually so, for it was inaugurative as it were of a new era in the history of the Company's service, and served to celebrate the abolition of the distinction which has so long and invidiously existed between the gold and the silver epaulets—the Queen's and the Company's troops in India. That distinction has now literally, "by force of circumstances," at length disappeared, and General Grant is the first officer in the military service of the Company who has been selected by the Crown to take command of an Indian presidency.

The banquet was given upon a scale of splendour in all points worthy of the wealthiest and most powerful corporation in the world. The spacious hall was magnificently decorated. A fine collection of costly articles of plate and vertu adorned an elevated buffet at the back of the chairman. The buffet called "St. George's," was nearly twenty feet in height, and, the background, being formed of rich crimson velvet, produced a gorgeous effect. The supporters of the Royal arms, in white and gold, were placed on each side, while on the top stood a figure of Victory holding a jewelled crown of gold over a bust of her Majesty. The various compartments were filled with numerous tasteful specimens of art in the precious metals, and the whole was brilliantly lighted up with a large number of wax lights. At the centre of the head table, and in front of the chairman, was an elegantly-designed plateau in solid silver, representing the Sikh chiefs delivering up their arms at the close of the campaign in 1849. It was presented as a testimonial to the late Lieutenant-General Sir Walter Raleigh Gilbert by the officers of the Indian army engaged with that gallant General in the Sikh campaign. The other tables were decorated with gilt candelabra, vases, baskets, and other articles of vertu, purchased by Messrs. Bathe and Co., from the collection at Stowe, of the Duke of Sussex, Lord Ashfield, and other eminent collectors. The company present numbered nearly 200 persons.

The usual loyal toasts having been given, the Chairman, in proposing the health of Lieut.-General Grant, said they had met that evening on a novel and interesting occasion—

We now for the first time welcome an officer of the Company's service as Commander-in-Chief of the Madras Army (Cheers). The Court of Directors have long and sincerely striven for the accomplishment of this object now so happily attained, and we have ever felt that our failure hitherto has not been attributable to any want of officers in the Company's army in all respects qualified for such commands (Hear, hear). The names of Malcolm, Ochterlony, Pollock, Nott, and many others, forbid such a supposition (Loud cheers). The wall of partition, however, between the Queen's and the Company's army has now been thrown down (Cries of "Hear"); the system of exclusion no longer obtains; and, as I believe to the entire and cordial satisfaction of the Government and to the officers generally of both armies, the field of selection is now thrown freely open (Great cheering). We feel deeply grateful to her Majesty, to her Majesty's Ministers, and to all those who have assisted in bringing about this long-desired and happy consummation. General Grant was born in the Company's army for some thirty-five or thirty-six years (Cheers). He has fought, and has bled in our service, and he bears on his person the decorations for the several battles of Maharajpore, of Moodkee, of Ferozeshah, of Chilianwalah, and of Goozerat (Loud cheers). He has also, and for many years, filled the responsible office of Adjutant-General of the Bengal Army, and he has thus had the opportunity of acquiring precisely that kind of experience in the discipline and management of troops, both in quarters and in the field, which is of inestimable value in a commander-in-chief. In the conduct of his several duties he has manifested all those qualities of firmness, impartiality, evenness of temper, and zeal for the public service, which are so essentially necessary in the position to which he has been raised. We fully anticipate that his command will be attended with the best results.

Lieutenant-General Patrick Grant, in returning thanks, said he would take upon himself to assure all who had aided in these results that their generous exertions were fully appreciated by every member of the vast army of India, whose loyalty, fidelity, and attachment to their Sovereign and their country, had never been called into question. He should go to India unfettered by pledge or promise of any kind, resolved to devote every energy he possessed to the discharge of the important duties that devolved upon him, and thinking only of the public service, its efficiency, and well-being (Loud cheers). He felt that he was undertaking a very great responsibility, in a state peculiarly so, and he trusted he should be enabled to acquit himself of it to the satisfaction of the high authorities who had done him the honour to select him for the proud position of Commander-in-Chief of the Army of Madras, the first officer of the Company's service on whom that proud distinction had been conferred. In conclusion, he said they would not expect a lengthened speech from an old soldier of thirty-five years' standing, who commenced his military career at fifteen years of age, and who now, for the first time in his life, addressed a public assembly (Loud cheers).

Rear-Admiral Sir Stephen Lushington, in returning thanks for the navy, stated that he believed he fairly represented the feelings of the navy when he stated that they were greatly disappointed that the Russian ships had never come out of the harbour to give us a chance, and he assured the company that it was a mistake to suppose that the English navy was at all times a superior force to that of the enemy, for he had the command of one of thirteen ships, under Admiral Dundas, which were off the port of Sebastopol for twenty-four hours, when the Russians had seventeen ships lying behind their fortifications, and if all was gold that glittered, they even had nineteen vessels of war (A laugh) But the enemy never came out, and after they had sunk their ships and had blocked up their harbour, we had no further chance at sea, and some portion of our naval force was landed to assist at the work in the trenches, where he hoped the blue-jackets had distinguished themselves. If peace should be concluded, the navy of this country might take care of the colonies, or of whatever else might require their attention; but, if the war should be continued, he felt justified in saying that never before in the history of this country was the British navy better prepared for it, and never felt more powerful than it did at present; for, before the spring arrived, there would not be less than 400 gun-boats ready to attack the Russians in the Baltic, or defend our own island (Loud cheers).

Several other toasts were given in the course of the evening—including "Her Majesty's Ministers," to which the Duke of Argyll responded; and the "Houses of Parliament," which was acknowledged by Lord Campbell and the Hon. Edward Ellice, M.P.

Mr. Toole was the very efficient toastmaster of the evening.

## FOREIGN AND COLONIAL NEWS.

### FRANCE.

*(From our own Correspondent.)*

PARIS, Thursday.

THE carnival has wound up much as usual. Out of doors, the same procession of the *bœuf gras*, the same masks, the same ceaseless blowing of horns through all the streets during three mortal days; the same number of women catching, literally, their deaths of cold, by exposing bare heads, necks, and arms to a wintry atmosphere, perched on triumphal chariots, without even the power of giving by movement a little circulation to their benumbed members. Indoors have been feasts, balls, receptions, rejoicings of all sorts; more, indeed, than usually occur even at this season, so general is the feeling of satisfaction and confidence established by the prospect, not regarded as a certain one, of peace.

At the Court has been another ball, but quite of an intimate character, in the Empress's private apartments; and a few days previously was given a family dinner, to celebrate the anniversary of the marriage of the Emperor and Empress. The ball at the *présidence* of the Corps Législatif was extremely brilliant. The Princess Mathilde, the Queen Christine, with the Duc de Rianzares, and her third daughter, were, with innumerable other distinguished personages, present at the fête. There was a question of arranging that the accouchear of the Empress (Dr. Paul Dubois) should remain altogether at the Tuileries until the arrival of the event, expected within the next four or five weeks. The Emperor, however, has decided that he should continue his visits to the hospital of the Hôtel Dieu; but that he should, as a precautionary measure, take possession of the apartments arranged for his reception at the Tuileries.

It is proposed that chloroform shall be adopted on the occasion of the Empress's confinement. Certain members of the faculty object to the employment of this means; but the example of the Queen of England (whose advice on the subject is said to have considerable weight with the Emperor and Empress) is cited in favour of its adoption; and it appears highly probable that the question will be decided in the affirmative. It is reported that, in case this decision is adopted, Mr. Leslie, Surgeon Accoucheur to the Queen, will be present on the occasion.

So far have the expectations relative to the conclusion of peace been carried that the names of some of the Sovereigns of Europe are already cited as about to visit Paris on the signature of the treaty. Among these figures that of the Emperor Alexander. There seems a certain probability that the Emperor of Austria will fulfil this rumour; his conduct during the progress of the arrangements with Russia having strongly cemented the friendship and confidence existing between him and the Emperor of the French.

Nothing is as yet decided relative to the important question of the Polytechnic School. Some years back the Maréchal St. Arnaud drew up the plan of a new organisation for this institution entirely as a military establishment. This project is at present under examination; but there is no doubt that, whatever be the system adopted, the arrangements will be, if not entirely new, a series of most important modifications on the present system.

The Schools of Law and Medicine are also about to undergo very considerable alterations: It is even reported that they will be removed from Paris, and Orleans is one of the localities named for the eir establishment. The turbulence manifested by the students on certain late occasions, especially at the lectures of M. Nisard, and on the representation of the piece of M. Charles Edmond, "La Florentine" (to which, as the author was known to be a friend and protégé of the Prince Napoléon, a certain political feeling was attached), has particularly directed the attention of Government to these establishments, and more than ever disposed it to the adoption of new measures, which for some time were vaguely contemplated. Great difficulties, however, exist in the realisation of any projects on these subjects; and, until the complete re-establishment of peace, it is little likely any important measures will be decided upon.

The third and fourth volumes of the works of the Emperor Napoleon III. have just appeared.

It appears that M. Clesinger does not intend to establish himself in England, and that, though his statue of François I. has been refused, a fresh order has been given him by the Minister of State. In the present statue the faults chiefly observable are rather in the choice of the position than in a want of skill or talent. The horse, being pulled up short, has the hind legs gathered so much under him as to give an idea of a want of sufficient base to support the body and the rider; whose position, moreover, though in strict accordance with the mode of the time—being upright in the stirrups—throws him forward on the horse's shoulders, and gives a stiff and awkward appearance to the whole group.

At the Tuileries has been solemnised the marriage of the daughter of the Prince Lucien Bonaparte with the Comte Gabrielli.

Nothing can exceed the magnificence and the elegance of the cradle, or rather cot, prepared by the Ville de Paris as an offering to the Empress. The form is that of a vessel (the principal emblem of the city's arms). At the prow a silver eagle stands with outspread wings; on the stern, a figure representing the city of Paris wearing a mural crown, bears an Imperial crown, from which fall the curtains of point d'Alençon and blue silk, embroidered with gold. On each side of the principal figure stands that of a child, one wearing a helmet, the other an olive-wreath, representative of Peace and War. On the sides are plates of bloodstone, richly framed in silver, and destined to receive emblematic figures; the initials of the Emperor and Empress are placed on each side of the railing which runs round the top; and from the cartouche, on which they are engraved, fall wreaths of silver, depending on both ends of the cradle, the body of which is composed of tulip-wood. At the back of the stern, the angles of which are decorated with winged syrens in silver, a rich silver shield bears the arms of the city, surrounded with wreaths of laurel and olive, among which is twined a scroll, with the motto in enamel. A variety of other decorations enriches the whole. The figures, all in silver, are the work of some of the first artists of the day; and the ornamentation has been executed by Froment Meurice, Gallois, and Grobé, whose productions were among those most admired at the Exhibition of industry.

At the Opéra "Le Corsaire," the new ballet of MM. St. Georges and A. Adam, has a magnificent success. M. Edmond About, the young author—whose Roman story, "Tolla," excited so much attention, partly on its own merits, and partly on account of the question of plagiarism to which its appearance gave rise—has produced an unsuccessful piece at the Français, which he withdrew after the second representation. Mdlle. Rachel is returned to Paris. When is her first reappearance to take place? M. Arsène Houssaye has left the management of the Théâtre Français to M. Empis, having obtained an appointment under Government.

## THE WAR IN THE CRIMEA.

*(From our Artist and Special Correspondent.)*

CAMP, SEBASTOPOL, Jan. 26, 1856.

THE engrossing topic of the moment is peace; and, although the subject is involved in a maze of conflicting opinions and doubts, it very naturally occupies every mind to the exclusion of all else. Subalterns groan over the prospect of remaining at the lowest stage of the regimental ladder for twenty years to come; whilst old campaigners who have shed their blood freely on Crimean battle-fields welcome the news with joy, and look on peace with the eyes of men who are alive to its salutary influences and the prospects of coming rest. The majority, both in the English and French armies, I believe, rejoice at being relieved from the further prosecution of a war so far distant from home and civilisation. These feelings, however, are not without a certain alloy from the doubts which still obscure the real state of negotiations between the contending parties: whilst a considerable number are confident as to the truth of the rumours respecting a speedy pacification, others are to be found whose incredulity is proof against all but the positive and public declaration of peace. Marshal Pelissier, it is affirmed on the one hand, has received certain information from the French Ambassador at Constantinople that Count Esterhazy for Austria, and Herr Von Seebach for Bavaria and Saxony, presented the proposals of peace agreed to by the Western Powers, which were accepted after much hesitation by the Emperor Alexander on the night of the 17th-18th of January. Even certain conversations alleged to have passed between the Emperor and the bearers of the ultimatum are mentioned. Again it is affirmed by well-informed persons that Lord Stratford de Redcliffe has had a personal interview with the Sultan Abdul Medjid, to inform him of the joyful tidings. Notwithstanding these positive affirmations, the less sanguine continue to doubt valiantly, affirming that they cannot conceive the sudden yielding of the Czar on all the points submitted to him, nor his resignation to surrender not only the mastery of the Black Sea and the protection of the Christian subjects of the Porte, but the most important part of Bessarabia and the mouths of the Danube. In Russia, they say, so beaten as to be forced to consent to the ruin of Odessa and the cessation of her southern trade? Such are the arguments of those who disbelieve in peace. Their adversaries, in the mean while, are discussing the probabilities of Russia indemnifying us for the expense of laying down a railway from Balaclava to the Camp; and pleasant jokes are abroad as to whether the Czar will not think it necessary to preserve in the Crimea so useful a person as Mrs. Seacole.

To return to serious matters. It is affirmed to-day that Mr. Power, of the Commissariat, has been forwarded to Constantinople, to learn of the Porte whether it will consent to take at a valuation the stores of all kinds accumulated here and in Asia for the use of the armies—these stores amounting, as I am informed, to a total sufficient for the consumption of 70,000 men for eight months. It is difficult to conceive that the Sultan would consent to pay for that large item in the British stores—salt pork; but there seems no reason why he should not purchase other articles, although I can conceive his refusal to accept of them, except at a considerable reduction. In the midst of the obscurity which, no doubt, still hangs over the future prospects of the army, it is not a little amusing for us to learn that General Codrington has received an important despatch from home, of which the cipher is so ingenious that the General has been as yet unable to read it. Whilst peace thus absorbs our attention, the Russians appear to think of very little else but war. I allude more particularly to the forces encamped on the north side of Sebastopol. They pour in their shells and cannon-balls with unflagging energy every day, and are not impeded in their proceedings even by these nights of thick fogs. On Sunday night (the 20th) we were astonished at about 10 p.m. by a rapid succession of discharges of heavy ordnance from the batteries of the Inkerman heights. It seemed as if the Russians were endeavouring to repulse an attempt at storming their position. Staff-officers donned their uniform and ordered their horses to be in readiness. The French on Kedoukhine heights were on the alert, and ready for action; but, after firing away for half-an-hour, the enemy became convinced that he was making a fool of himself, and ceased to deafen us with his artillery. This is what the French call *une école de nuit*.

A short time ago orders were issued by General Codrington to all officers to prepare for the ensuing campaign by the purchase of mules and baggage harness. Baggage animals were suddenly at a premium, and ponies as well as chargers rose to fabulous prices. A military Tattersall's was founded, and a regular auction-mart created. After the return of peace were prevalent in these places, and prices are fifty per cent lower than they were a week ago. Traders at Balaclava and Donnybrook, at Kamiesch and Woronzoff, are aghast at the idea of a sudden departure from the Crimea. As these gentlemen, however, have made fabulous profits, we are not sorry to find them obliged to come down in their charges; and the fluctuations of the commercial world are not a source of pity. A serious loss to some of them was entailed a few days ago by a fire which broke out in one of the stores at Kadikoi. The flames broke out at three in the morning in a block of wooden buildings at no great distance from Balaclava; and before any efficient means could be taken to subdue them the fire had spread to adjacent stores, and threatened the destruction of Kadikoi. The first measures taken were judicious. It was deemed necessary to effect a breach in the chain of buildings by the destruction of two or three stores in the vicinity of those that were rapidly being consumed. The 82nd Regiment was speedily marched to the spot to assist in this operation and the extinguishing of the fire. The Sardinians came quickly to the scene of the disaster with a couple of fire-engines. The Tcherasya, which runs close by the camp-followers' huts, was drawn upon for the needful water; but, unfortunately, the water-carts were, I grieve to say, indefatigable in their efforts to maintain order and quell the destructive element, and after a few hours all danger to the body of the place had ceased. The damage done is valued at no less than £5000.

Captain Shervinton, acting for some time as Provost Marshal at Balaclava, has accepted a Majority in the Land Transport Corps, and is succeeded by Captain Carmichael, of the 95th, whose ability in the discharge of his duties as Provost of the 2nd Division pointed him out as fitter for the more important post at our port of discharge.

The destruction of Sebastopol docks will be complete in the course of the ensuing week, and nothing will then remain of a Russian work which cost the Exchequer of the Czar upwards of five millions sterling. The work of carrying off our prize guns from Sebastopol has commenced in earnest, and is carried on rapidly. We now hear that the Redan is to be rapidly dismantled. The platforms will go to the lines of Kamiesch, which are now in an advanced state of forwardness.

The weather, which has been mild, has alternated between rain and fogs, and the roads continue to be in a bad state for traffic. The plains around are sloughs of mud. Yesterday was a beautiful sunshiny day; but last night it rained again heavily.

## THE WAR IN THE EAST.

By the *Euphrate* steam-ship, which arrived at Marseilles on Tuesday, we have news from Constantinople to the 26th ult. The Government of the Porte do not appear to believe much in the sincerity of Russia, and preparations for the Asiatic campaign went on as usual. The Allied Generals did not hear of the probabilities of peace before the 16th of last month, and then by Russian channels, owing to the failure of the telegraph. The news was officially known to the Allied Generals on the 22nd. The Turkish Envoy, Aali Pacha, was to leave immediately for Paris. The latest news from the Crimea stated that the Allies had for some days expected an attack on their advanced lines.

The Sardinian Ambassador had an audience of the Sultan prior to leaving for Turin. General Vivian has had 2000 horses purchased at Bucharest for the Anglo-Turkish Contingent. Accounts from Sebastopol to the 22nd state that the news of the acceptance of the Austrian propositions by Russia was at first disbelieved, but, when doubt was no longer possible, it caused a feeling of complete stupefaction. The northern forts had almost ceased their fire. Trade at Kamiesch is suffering severely.

The excess of supplies has caused a great reduction in prices, and led to several failures. Accounts have been received from Kertch to the 20th, but they are without interest.

Conferences were held daily at the Seraskierate on the question of the situation of the Christian subjects of the Ottoman empire. The Grand Vizier takes part in them, as also do the French and English Ambassadors and Prince Callimaki. The Turkish Government seems most favourable to reform, and the most satisfactory results are expected.

## THE PEACE CONGRESS—THE VIENNA PROTOCOL.

The French and British Ministers at Vienna received instructions on Thursday, the 31st ult., to sign the so-often mentioned protocol. Immediately after the receipt of the despatches, Sir Hamilton Seymour and M. de Bourqueney communicated their contents to the Austrian Minister for Foreign Affairs and to the Turkish Embassy. In the course of the evening it was settled that the Representatives of England, France, Turkey, and Russia should meet at the Foreign Office at twelve next day, and then and there sign the important document in question. At the appointed hour the four foreign diplomatists had assembled, and they and Count Buol attached their signatures to the subjoined protocol:—

In consequence of the acceptance by their respective Courts of the five propositions contained in the document hereunto annexed, under the title of Draught of Preliminaries, the undersigned, after having comprehensed it, conformably to authority received to that effect, have agreed that their Governments shall each nominate Plenipotentiaries, who, furnished with the full powers necessary for proceeding to the signature of formal preliminaries of peace, shall conclude an armistice and a definite treaty of peace. The said Plenipotentiaries shall have to assemble at Paris within the term of three weeks dating from this day, or sooner if it can be done.

Done at Vienna this 1st day of February, 1856.

Prince Gortschakoff, when signing the protocol, asked that Prussia might be invited to take part in the Conferences, in which request he was supported by Count Buol. M. de Bourqueney and Sir Hamilton Seymour said they must refer to their Governments on that point.

M. de Bourqueney, who received his official nomination as Plenipotentiary to the Conferences on the 31st ult., was expected at Paris about the latter end of this week. The following list of Plenipotentiaries is now given as authentic and definitive:—For France, Count Colonna Walewski and Baron de Bourqueney; for England, the Earl of Clarendon and Lord Cowley; for Austria, Count Buol-Schauenstein and Baron Hubner; for Turkey, Aali Pachas and Mehemed-Djemil Bey; for Sardinia, the Chevalier Messimo d'Azeglio, and for Russia, Count Orloff and Baron Brunnow. The arrangements at present existing are that the Plenipotentiaries are to take up their quarters at their respective Embassies. Instructions have been received by M. Seebach, who is charged with the affairs of the Russian residents, to prepare the Hotel of the Russian Embassy for Count Orloff and Baron Brunnow.

The Earl of Clarendon will leave London on the 16th or 17th inst. for Paris. The noble Secretary of State will be accompanied by Mr. Edmund Hammond, the permanent Under Secretary of State (who, it will be recollected, assisted Lord John Russell on his mission to Vienna last year), and by the Hon. Spencer Cowper and Mr. Thomas Villiers Lister, private and assistant secretaries to the noble Earl; and by Mr. Francis W. H. Cavendish, precis-writer. Lord Wodehouse will discharge the duties of the Foreign Office during the temporary absence of the Earl of Clarendon in Paris.

Count Walewski as Minister for Foreign Affairs, will preside over the Conference, according to established etiquette, as Lord Clarendon would had London been the seat of the Congress. It is calculated that the sittings will last a month or six weeks.

## THE NEW ORDER OF VALOUR.

*(From Tuesday Night's Gazette.)*

War Department, Feb. 5, 1856.

The Queen has been pleased, by an instrument under her Royal Sign Manual, of which the following is a copy, to institute and create a new naval and military decoration, to be styled and designated "The Victoria Cross," and to make the rules and regulations therein set forth under which the said decoration shall be conferred.

VICTORIA, by the grace of God of the United Kingdom of Great Britain and Ireland, Queen, Defender of the Faith, &c.,

To all to whom these presents shall come, greeting,

Whereas, we, taking into our Royal consideration that there exists no means of adequately rewarding the individual gallant services either of officers of the lower grades of our naval and military services, or of warrant and petty officers, seamen, and marines in our Navy, and non-commissioned officers and soldiers in our Army: and whereas the third class of our Most Honourable Order of the Bath is limited, except in very rare cases, to the higher ranks of both services, and the granting of medals, both in our Navy and Army, is only awarded for long service or meritorious conduct, rather than for bravery in action or distinction before the enemy, in each case exceptional, for a general medal is granted for a particular action or campaign, or a clasp added to the medal for some special engagement; in both of which cases all share equally in the boon, and those humbler but equally signalised themselves remain undistinguished from their comrades: Now, for the purpose of attaining an end so desirable as that of rewarding individual instances of merit and valour, we have instituted, created, and by these presents, for us, our heirs and successors, institute and create, a new Naval and Military decoration, which we are desirous should be highly prized and eagerly sought after by the officers and men of our Naval and Military services, and are graciously pleased to make, ordain, and establish the following rules and ordinances for the government of the same, which shall from henceforth be inviolably observed and kept:—

*Firstly.* It is ordained, that the decoration shall be styled and designated "The Victoria Cross," and shall consist of a Maltese cross of bronze, with our Royal crest in the centre, and underneath which an escroll bearing this inscription, "For Valour."

*Secondly.* It is ordained, that the cross shall be suspended from the left breast, by a blue ribbon for the Navy, and by a red ribbon for the Army.

*Thirdly.* It is ordained, that the names of those upon whom or may be pleased to confer the decoration shall be published in the *London Gazette*, and a registry thereof kept in the office of our Secretary of State for War.

*Fourthly.* It is ordained, that any one who, after having received the cross, shall again perform an act of bravery which, if he had not received such cross, would have entitled him to it, such further act shall be recorded by a bar attached to the ribbon by which the cross is suspended; and for every additional act of bravery an additional bar may be added.

*Fifthly.* It is ordained, that the cross shall only be awarded to those officers or men who have served us in the presence of the enemy, and such shall have then performed some signal act of valour or devotion to their country.

*Sixthly.* It is ordained, with a view to place all persons on a perfectly equal footing in relation to eligibility for the decoration, that neither rank, nor long service, nor wounds, nor any other circumstance or condition whatsoever, save the merit of conspicuous bravery, shall be held to establish a sufficient claim to the honour.

*Seventhly* It is ordained, that the decoration may be conferred on the spot where the act to be rewarded by the grant of such decoration has been performed, under the following circumstances:

I. When the fleet or army, in which such act has been performed, is under the eye and command of an Admiral or general officer commanding the forces.

II. When a naval or military force is under the command of a Vice-Admiral of an Admiral or Commodore commanding a squadron or detached naval force, or of a General commanding a corps, or division, or brigade on a distinct and detached service, when such Admiral, Commodore, or general officer shall have the power of conferring the decoration on the spot, subject to confirmation by us.

*Eighthly.* It is ordained, where such act shall not have been performed in sight of a commanding officer as aforesaid, then the claimant for the honour shall prove the act to the satisfaction of the captain or officer commanding his ship, or to the officer commanding the regiment to which the claimant belongs, and such captain or such commanding officer shall report the same through the usual channel to the Admiral or Commodore commanding the force employed on the service, or to the officer commanding the forces in the field, who shall call for a similar description and attestation of the act as he may think requisite, and on approval shall recommend the grant of the decoration.

*Ninthly* It is ordained, that every person selected for the cross, under Rule 7, shall be publicly decorated before the naval or military force or body to which he belongs, and with which the act of bravery for which he is to be rewarded shall have been performed, and his name shall be recorded in a general order, together with the cause of his especial distinction.

*Tenthly.* It is ordained, that every person selected under Rule 8 shall receive his decoration as soon as possible, and his name shall likewise appear in a general order as above required, such general order to be issued by the naval or military commander of the forces employed on the service.

*Eleventhly.* It is ordained, that the general orders above referred to shall from time to time be transmitted to our Secretary of State for War, to be laid before us, and shall be by him registered.

*Twelfthly.* It is ordained that as cases may arise not falling within the rules above specified, or in which a claim, though well founded, may not have been established on the spot, we will, on the joint submission of our Secretary of State for War and of our Commander-in-Chief of our army, or on that of our Lord High Admiral or Lords Commissioners of the Admiralty in the case of the Navy, confer the decoration, but never without conclusive proof of the performance of the act of bravery for which the claim is made.

*Thirteenthly* It is ordained, that in the event of a gallant and daring act having been performed by a squadron, ship's company, a detached body of seamen and marines, not under fifty in number, or by a brigade, regiment, troop, or company, in which the Admiral, General, or other officer commanding such forces, may deem that all are equally brave and distinguished, and that no special selection can be made by them; then, in such case, the Admiral, General, or other officer commanding, may direct, that for any such body of seamen or marines, or for every troop or company of soldiers, one officer shall be selected by the officers engaged for the decoration; and in like manner one petty officer or non-commissioned officer shall be selected by the petty officers and non-commissioned officers engaged; and two seamen or private soldiers or marines shall be elected by the seamen, or private soldiers, or marines, engaged respectively, for the decoration; and the names of those selected shall be transmitted by the senior officer in command of the naval force, brigade, regiment, troop, or company, to the Admiral or general officer commanding, who shall in due manner confer the decoration as if the acts were done under his own eye.

*Fourteenthly.* It is ordained, that every warrant officer, petty officer, seaman, or marine, or non-commissioned officer or soldier, who shall have received the cross, shall, from the date of the act by which the decoration has been gained, be entitled to a special pension of £10 a year, and each additional bar conferred under Rule 4 on such warrant or petty officers, or non-commissioned officers or men, shall carry with it an additional pension of £5 per annum.

*Fifteenthly.* In order to make such additional provision as shall effectually preserve pure this most honourable distinction, it is ordained that if any person on whom such distinction shall be conferred, be convicted of treason, cowardice, felony, or of any infamous crime, or if he be accused of any such offence, and doth not after a reasonable time surrender himself to be tried for the same, his name shall forthwith be erased from the registry of individuals upon whom the said decoration shall have been conferred by an especial warrant under our Royal sign manual, and the pension conferred under Rule 14 shall cease and determine from the date of the said warrant. It is hereby further declared that we, our heirs and successors, shall be the sole judges of the circumstance demanding such expulsion; moreover, we shall at all times have power to restore such persons as may at any time have been expelled, both to the enjoyment of the decoration and pension.

Given at our Court at Buckingham Palace, this 29th day of January, in the nineteenth year of our reign, and in the year of our Lord, 1856.

By her Majesty's command, (Signed) PALMERSTON.

To our Principal Secretary of State for War.

## NOTES OF THE WEEK.

THE names of the negotiators at the approaching Paris Conference are formally given. There are eleven in all. Count Walewski and Baron de Bourqueney represent France; Lords Clarendon and Cowley, England; Count de Buol-Schauenstein and Baron de Hubner, Austria; Aali Pacha and Mehemed Djemil Bey, Turkey; the Chevalier d'Azeglio, Sardinia; and Count Orloff and Baron Brunnow, Russia. Lord Palmerston has announced that there will be an armistice, but declines to say anything of its terms; though it is to be hoped that a point very properly raised by Sir De Lacy Evans—namely, whether Russia is to use the sea, during the armistice, for fetching and carrying soldiers and stores—has not escaped attention. It is rumoured that the period will reach to the 31st March. By that time the ice in the Baltic will not be a "material guarantee" for the safety of Russia, so, that if the negotiations should be juggled into a sham, our fleet may yet distinguish itself. The Sebastopol docks are, it is stated, now utterly destroyed; so, with the ships at the bottom of the sea, and the means of reproducing them taken away, the limitation of the Russian fleet is temporarily complete. Such a humiliation has never been inflicted since gunpowder was invented. It can never be forgiven, and the certainty that it will not should make the Allies doubly careful to "take such order" that the revenge of the chastised enemy may never be formidable.

"The Victoria Cross" is the name of the new order of merit which her Majesty has been pleased to create for the reward of military and naval valour. It is avowedly instituted to remedy the defect of means to do honour to the exploits of the common soldier and sailor, and the officers honour to the exploits of the common soldier and sailor, and the officers honour of the lower grades. Thus, it is a signal evidence that the illustrious ruler of these realms comprehends the true strength of her throne. While its foundations ramify among the homes of the people, she may defy the shocks that set tottering the seats held up by bayonets or gilt sticks. The details of this wise and graceful institution will be read with interest. The cross is to be of bronze, with the inscription "For Valour." A blue ribbon marks the Navy, and a red the Army. Additional bars are to be added where the wearer performs a new act that would have given him the cross had he been undecorated. "Conspicuous bravery" alone entitles to the honour. Objection might be made to this rule, as a man in the mere deed of gallantry; but it must be remembered that other distinctions are in the gift of the Queen; and indeed the Victoria Cross would hardly be an adequate recompense for the first-mentioned act. The decoration is to be publicly given, and the name of the recipient is to be recorded in a general order. With the cross is conferred a special pension of £10 a year, and each additional bar brings an additional annual £5. We trust that the institution will be as successful as the intention of its founder and head deserves it should be. Some day, perhaps, we shall hear of a Legion of Honour for those who save life, teach men how to spend it, and aid them to enjoy it nobly and wisely.

The struggle for Cambridge will be half-way through before these lines appear. It may be protracted until Tuesday next. A question on which it may turn is, whether a candidate is at liberty to pay the travelling expenses of his voters without committing bribery? This question is already, *sub lite*, in the Exchequer Chamber, and the Court is taking time for consideration. Mr. Walpole's committee decide that they will pay; Mr. Denman's, that they will not. The strength of the former is among the non-residents, especially the country clergy, with whom the expense of a journey is a consideration. Mr. Denman's force is among the residents. Chief Baron Pollock, Mr. Justice Cresswell, and Mr. Baron Alderson, are on Mr. Walpole's committee; so that the views of the latter would seem to be backed by high authority,—and the two latter Judges are among those who are "considering" the question in the Exchequer. Mr. Walpole has accepted the Chiltern Hundreds, and Mr. Samuel Warren has been elected for Midhurst in his stead. Light-hearted people exult in his return, for the mantle of Colonel Sibthorp lies unappropriated, and will hang gracefully upon the shoulders of the author of "The Lily and the Bee." *Punch* ought to subscribe handsomely towards the return of a member who will be invaluable to him.

Twelve clergymen, besides some other persons, have been imposed upon by one little wretch of an Italian image-vender, a youth named Marioni, "an artless, simple boy," who captivated these gentlemen with the story that he had been converted from the Roman Catholic faith, as had his father, by means of a single Bible, and who feigned great distress because his "dear Bible" had been taken from him by a fellow lodger. The twelve clergymen could not resist the tale of the conversion, and were very kind to him, and one was about to procure him a situation in the Christian Young Men's Association (the one that lectured the King of Sardinia the other day), but it turns out that this Christian young man's associations were of a character to which we must not even allude, and that the police had been keeping a "suspicious" eye on the young Protestant for two years. Mr. Jardine remarked that the evidence almost raised a smile at the credulity which had been evinced. But almost anything in the shape of a convert is welcome to religionists of a certain class, people whom it would be very difficult to dupe without a previous obfuscating appeal to their theological prejudices.

We deplore to have again to record a hideous murder, a case in which a sleeping wife and three children, one a baby, are died by the hand of the husband and father, a supernumerary at one of the London theatres. Want had nothing to do with the deed, but it is said that much ill-feeling had existed between the wretched pair, and that "jealousy"—or whatever madness may be simplified in a vulgar word—was the final incentive to the slaughter. In England we proclaim all crimes with sound of trumpet, lay every mischievous and disgusting detail upon the table of every household, elevate a ruffian into a notoriety, and it may be spread the contagion of example. In France such matters are dealt with more silently. Yet one of the very last heads that fell from the guillotine was that of an assassin, who, driven in an instant into ferocity by some word from his mistress, fell on her and stabbed her with eighty-two wounds. We are not alone in our records of blood, though the heads of the priesthood in Ireland, where unoffending persons are murdered at noonday from behind a hedge, return Pharisaical thanks that Roman Catholic countries are not so criminal as Protestant ones.

## *METROPOLITAN NEWS.*

METROPOLITAN BOARD OF WORKS.—A meeting of the Board of Commissioners took place on Monday in the Council Chamber, Guildhall, for the purpose of the election of an architect, when Mr. Marrable was declared duly elected.

THE SOCIETY OF ARTS.—The Council of the Society of Arts propose to hold, at their house in the Adelphi, an examination of candidates, from classes of mechanics' institutions, during the week commencing the 9th of June next. The subjects of examination will be—mathematics, mechanics, chemistry, physiology, botany, geography, English history, English composition, the Latin, French, and German languages.

RAGGED SCHOOLS IN SOUTHWARK.—On Monday night the annual meeting of the promoters of ragged schools in the parish of St. George the Martyr, Southwark, was held at the Literary Institution, Borough-road, and was very numerously attended. The Earl of Shaftesbury presided. From the report it appears that in the seven schools no less than 1500 children are under actual training, there being 2000 names entered on the books. Although there are 140 voluntary teachers engaged in the work of tuition, more are wanted. The present annual cost of the seven schools is £600. St. George the Martyr is upwards of £300.

ST. MARYLEBONE BANK FOR SAVINGS.—The twenty-sixth annual general meeting of this institution was held on Thursday.—Sir James John Hamilton, Bart., in the chair. The several reports stated that the progress of the bank during the past year had been of a satisfactory description, no less than 2952 new deposits having been made in the last year. 23,398 deposit accounts remained open on the 20th November last, of which 15,192 held balances averaging less than £2 18s. 8d. each.

PRESERVATION OF LIFE FROM SHIPWRECK.—On Thursday a meeting of the Royal National Life-boat Institution was held at its house in John-street, Adelphi, his Grace the Duke of Northumberland in the chair. The silver medal of the Institution was respectively voted to Henry Smyth, John Ahern, Donald Gray, Daniel Regan, William Cox, and Denis Donovan, of the Kilmore Coast-guard Station, in testimony of their very gallant conduct in a boat in rescuing, at the imminent peril of their lives, six hands of the brigantine *Exile*, of New Ross. Rewards to the amount of £89 11s. 8d. were also voted to the crews of the life-boats of the Institution stationed at Barmouth, Portmadoc, Moelfre, Dungeness, and Pakefield, in consideration of their laudable exertions in putting off in the said life-boats with the view of rescuing the crews of stranded vessels. Other rewards were given. Some applications for new life-boats were postponed, the funds of the institution being greatly inadequate at present to comply with the same, its liabilities for life-boats and their appurtenances being more than £2000.

REMOVAL OF NEWGATE AND LEADENHALL MARKETS.—A public meeting was held at the London Coffee-house, Ludgate-hill, on Wednesday—Sir J. Duke, Bart., M.P., in the chair—to consider the necessity and advantage of establishing a central metropolitan market on the site of Smithfield, and to prevent the attempted removal of existing markets to a distant suburb, by which the cost of food would be greatly increased to the whole body of consumers. Mr. Ross moved the first resolution, to the effect that, as the Chairman of the Board of Works had been authorised to consider the best site for the removal of Newgate and Leadenhall Markets, it was resolved that, as the question affected the interests of two and a half millions of people, and it being desirable to establish a market where people could obtain food in the best condition, and at the lowest possible rate, the site of Smithfield was adapted to that purpose. It was also resolved that a memorial be presented to Sir G. Grey, stating the wishes of the meeting, and that a petition to the House of Commons in favour of the movement be presented by Sir J. Duke and Mr. Masterman, two of the City members.

HEALTH OF LONDON.—949 deaths were registered in London in the week that ended on Saturday, Feb 2. In the corresponding week of last year the mortality was 1094. The difference is 655. The average corrected number of deaths, derived from the mean mortality for the ten corresponding weeks in the preceding ten years, is 1279, and this number, compared with this week's return, shows a decrease in the latter of 330 deaths. The state of the public health may, therefore, be considered as remarkably good. Last week the births of 830 boys and 816 girls, in all 1726 children, were registered in London. In the ten corresponding weeks of the years 1846-55 the average number was 1630. A triple birth (two girls and one boy) is recorded.—*Registrar-General's Return.*

TWO EXTENSIVE BURGLARIES IN THE CITY.—On Tuesday morning the City police received information of two burglaries. The first was at Mr. Charles Peasnett's, silk plush manufacturer, No. 15, Bow-lane, Cheapside, and within a very few yards of Bow-lane Police Station-house, when the thieves carried away Bank-notes, and a variety of other articles. It is rather surprising that the thieves were not detected, as the police pass at the house every ten minutes. The second burglary was committed at Mr. Dutton's, woollen-factor, Goldsmith-street, near the General Post-office, when upwards of thirty pieces of cashmere cloth and other property was carried away.

THE MURDER IN THE MINORIES.—At the Central Criminal Court, on Wednesday last, John Corrigan, charged with the wilful murder of his wife on the 26th of January, during a fit of *delirium tremens*, was found guilty and sentenced to death.

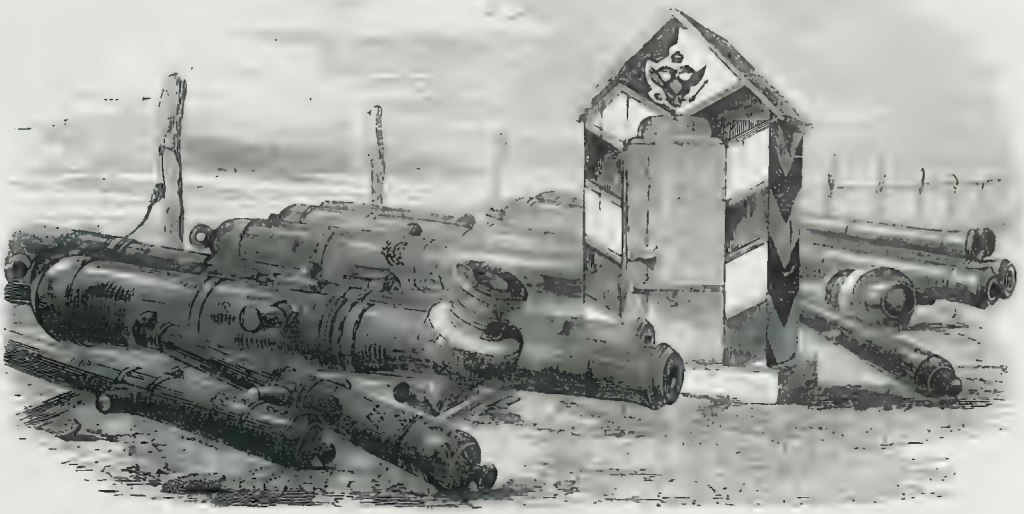
THE MURDER IN BEDFORD-ROW.—On Thursday, in the Central Criminal Court, Charles Broadfoot Westron was tried for the murder of Mr. Waugh. The Jury returned a verdict of "Wilful Murder," but recommended the prisoner to mercy on account of predisposition to insanity. Mr. Justice Wightman, after comparing with a physician Willes, said he should abstain from passing sentence of death, and merely order judgment of death to be recorded.

MURDER OF A WIFE AND THREE CHILDREN.—On Sunday morning last, William Bousfield, a newsvender and tobacconist at No. 4, Portland-street, Soho-square, murdered his wife and three children, aged respectively six years, four years, and eight months. Everyone who is acquainted with the family is at a loss to account for the motive which prompted the brutal murder, as there was no poverty, and the murderer never evinced the slightest indications of mental aberration. It appears that after committing the murders he locked the parlour door and put the key in his pocket, where it was found on his arrival at the station. He has for some time been engaged at various theatres as an "extra." His idleness and neglect of his business led to frequent disputes with his wife, who was often heard designating him a worthless idle fellow. It was stated at the inquest that he had not earned a shilling for the support of his family for the last seven years. After it he said, he had been jealous of his wife, accusing her of being too familiar with the customers who came to the cigar-shop.

## SNOWSTORM IN ARMENIA.

WE are indebted to Dr. Sandwith, who has just returned to England from KARS, for the accompanying Sketch of his perilous adventure on the Allah Akbar mountain, together with the following extract from his "Narrative of the Siege of Kars," &c., a review of which will be found elsewhere in the present Number. The details are quoted from the Extracts from Dr. Sandwith's Diary kept during his travels in Armenia. They minutely describe his terrific adventure in the passage of the mountain, in which we regret to learn that the Doctor lost some valuable papers relative to scientific observations on the atmosphere, the plants, birds, and fauna, of that elevated region:—

Dec. 2.—We leave Kerjik this morning about eight a.m., and direct our course towards a lofty mountain, whose summit is invisible, being lost in snow and mist. The name of this mountain is Allah Akbar (God is great). The old postman is our guide, and, as he professes to know each rock and stone throughout the country, I consider myself lucky in having secured him. As we advance the track becomes invisible and the snow deeper; my horses begin to flounder, so I congratulate myself that I yesterday exchanged one of my baggage. Our ascent, however, becomes more and more difficult, and we are detained from time to time in dragging our horses out of holes and drifts into which they fall. All this is most fatiguing, but there is no help for it. Our guide marches steadily forward, looking on the right and left of him undismayed. As we pass onwards the wind arises, blowing the snow in all directions and almost blinding us; so we begin to fear for our safety. At length, to our great delight, we come upon a Kurdish yaïlk, or summer station, near where the remains of huts are visible, and which, of course, serve as a landmark for our guide. After this our road becomes a steeper ascent, and we are embarrassed in some terrible snowdrifts, killing work for both man and horse; the wind, too, grows stronger and stronger, and the snow in consequence more blinding. I begin to fear the guide is embarrassed, so I ask him if he knows the way. "Inshallah! Please God, I can find it!" is the answer: we again push on. Presently I am convinced he is lost, so I sternly put him to the test and confess if he has lost the line he owns that he is quite lost; but, "Inshallah! please God!" he will find the road. I now give the order at once to turn back while yet we may find our tracks. We forthwith face about, after having been nearly two hours in the snow. Our horses are sadly fatigued, but the descent is now comparatively easy, in spite of a fierce wind blowing the snow in our faces. We had perhaps accomplished about half the descent, when my servant reports the loss of one of my loads; but no attempt at recovering it is now possible, so I continue my journey downward. We pass the yaïlk on our way back, and presently through the snowstorm the forms of three horsemen appear. "Machaba! (good morning!) nereye neréye!" (Where, where are you going!) they asked. My questioners were two fine-looking Kurds, followed by a woman and a young girl, together mounted on one stout horse, and en-



HANGO TROPHIES AT WOOLWICH ARSENAL.

veloped in warm cloaks. I tell them that I am an English Boy who has lost his road, and I promise to reward them handsomely if they can help me. "Gidelh Bakakh, let us go to see!" exclaims Mollah Hussein, the first speaker; "I know the road well. Come along; Inshallah. I will set you right;" once more we turn, and again face the terrible mountain. We have of course to encounter the biting snow-drifts, but I observe that the Kurd takes quite another road, thus proving that we should assuredly have been lost had we followed our first guide. We at last reach the highest plateau of the mountain; our horses are staggering; each man has been rolling over and over in gullies, and dragging his horse through drifts during the last three hours; we none of us have much strength left, but we all feel it is truly a battle for life. We then come to the worst drift of all; it is a valley in which the snow has accumulated. A perfect hurricane arises, blinding man and horse, and teaching us too well the meaning of the word *tépé*—a word which freezes travellers with horror, since every winter hundreds of people are lost in these *tépés*, or snowstorms.

I am scarce able to fight my way through this horrible gulf, and have still more difficulty in saving my horse, which lies helpless on his back, having ceased for a time even to struggle. My left hand and left cheek are dead, apparently; and I sink down gasping and exhausted in the snow by the side of my faithful steed, who has given up the game as lost. A little reflection, and a little recovered breath, however, teach me that life is worth one more effort. At last I rise, and myself and horse are fairly landed on the opposite bank, which, being swept by a fierce wind, is almost bare of snow; and here I lie down again. In five minutes, however, I scramble into my saddle, and turn to look at my followers. My own servant Ismael has escaped, and is standing at my side. He reports that all my baggage is lost, and that one of my horses is perfectly helpless. Some of the other people are still struggling in the snow, but Khurshid Effendi is fairly buried in the drift, and has lost all power of saving himself; he raises his arms like a drowning man, and cries feebly "*aman, aman*" (mercy, mercy). Mehemed, a muleteer, asks permission to try and recover one of the loads, but I tell him to look first to Khurshid Effendi. A stout soldier now rushes forward, and by immense effort drags the poor man out of the snow, more dead than alive. I direct some men to tie him on the packsaddle of a horse, which had been saved at the expense of its load. Khurshid's own horse has strayed down the mountain, and is irrecoverable.

We now reassemble ourselves and turn to face the most frightful barrier one. We ride on over the crest of a trackless mountain blinded by snow, and half-frozen by cold. After some time our stout Kurd, Mollah Hussein, suddenly pulls up, tells me he is lost, and asks me if he should turn, and try to find the road back again. This I know to be a matter of much greater difficulty than it would have been an hour ago. Some of the people cry out, "Go on," others, "Turn back;" but I soon silence this clamour, and tell Mollah Hussein to reflect well for five minutes, and then act for the best, as he is the only man who knows anything of the country. On this the Mollah pushes on, and we follow, hoping to escape, yet fearing that our destruction is still far from improbable. The cold is terrible, and my servant Ismael very drowsy, which disagreeable symptom I never felt. After an hour's ride we at length find landmarks; the Kurd exclaims, "Khamdu-li-'llah (Praise be to God), the road is clear;" and the words are echoed through the group, and most fervently responded to by myself. We presently reach a half-deserted village, where we light a fire and attend to poor Khurshid Effend., whose recovery is doubtful. We now count our party and the question arises, "Where is Hassan?" but he is nowhere to be found. "Va, va!" exclaims Mollah Hussein, "he has found a cold grave; it is *kismet* (fate), there is no help for it." Hassan was a groom of General Williams. We soon leave this village, and, continuing our descent, we reach a valley, where the snow has become rain, and the road clear. Tired and jaded we arrived at Duraskur, a Kurdish village, where we find good quarters

## HANGO TROPHIES AT WOOLWICH ARSENAL.

On the occasion of the last visit of her Majesty's ship *Blenheim* to Hango Captain Hall, C.B., with the gun-boats *Snap*, *Stork*, and *Lark*, under his orders, landed in the ships' boats, and brought away various mementoes in the shape of cannon and mortars, a Russian sentry-box, &c., which we have engraved, as memorials of the war. The cannon, consisting of nine large and four smaller guns, had been sunk by the Russians in about three fathoms and a half of water, when the fort was dismantled in the previous year. They were very quietly and safely recovered by a boat's crew from the *Blenheim*. A body of Russian troops on shore looked on during the operation, but were kept from interfering by a wholesome fear of the *Blenheim's* guns. The sentry-box is painted in alternate stripes of black and white—having, of course, the Imperial eagle over the door. Its ultimate destination is the residence of Sir James Matheson, in Sussex. At present it may be seen at Woolwich Arsenal, among the Crimean trophies, in the Dial-square.

SNOWSTORM IN ARMENIA.—DR. SANDWITH AND HIS PARTY CROSSING THE ALLAH-AKBAR MOUNTAIN, ON THEIR WAY FROM KARS.

WORONZOFF, OR LITTLE KAMIESCH.—FROM A SKETCH BY J. A. CROWE.—(SEE PAGE 160.)

### CALENDAR FOR THE WEEK.

SUNDAY, Feb. 10.—Quadragesima, 1st Sunday in Lent.
MONDAY, 11.—Washington born, 1732. Shenstone died, 1763.
TUESDAY, 12.—Lady Jane Grey and her husband beheaded, 1554.
WEDNESDAY, 13.—Ember Week. Massacre of Glencoe, 1691.
THURSDAY, 14.—St. Valentine. Captain Cook killed, 1779.
FRIDAY, 15.—National Debt commenced, 1600.
SATURDAY, 16.—Philip Melancthon born, 1497.

### TIMES OF HIGH WATER AT LONDON-BRIDGE,

*** WE are informed by several Correspondents at Bristol that the Post-office authorities of that city made a charge of three shillings postage for every copy of the ILLUSTRATED LONDON NEWS of Saturday last addressed to our subscribers in that neighbourhood. We are given to understand that the Bristol officials acted on their own authority in this matter. We have memorialised the Post-office on the subject, and remonstrated against what we consider to be a gross and unwarranted exaction on our subscribers, and injustice to ourselves, but have received no answer in time for our publication of this day. Next week we shall, doubtless, have more to say upon the subject.

ALPHA, near Taunton, is requested to favour us with his full address.

## THE ILLUSTRATED LONDON NEWS.

*LONDON, SATURDAY, FEBRUARY 9, 1856.*

IT is expected that in a fortnight from this day the Conferences of Paris will be formally opened. If the adhesion of Russia to the terms proposed by Austria, and approved by Great Britain and France, be as "pure and simple" as represented, the work to be performed by this illustrious assembly will be "simple" also. Yet we cannot but suspect, however complete may be the agreement between the European Powers as to the Four Points which relate more particularly to the Turkish part of the question, that long debates, if not differences, will arise on the vague Fifth Point. That point may include stipulations to which Russia may not feel bound to accede. It has been purposely left elastic; and may comprise more or less, as Russia shows herself to be more or less sincerely desirous to keep the peace of Europe. The treaty concluded between Great Britain and France on the one side, and Sweden and Norway on the other, binds the Allies to insist that Bomarsund shall never be rebuilt as fortress or arsenal,—in either of which characters it could serve no purposes but those of aggression. Russia had no necessity for such an arsenal, in such a position; and if she insist upon rebuilding it, or forming any other within the same proximity to Sweden, the Allies will be justified in interpreting her desire in a sense adverse to the independence of Sweden, and as a menace to Europe. The Allies, it appears, have tacitly, or perhaps more authoritatively, allowed Russia to understand that no demand will be made upon her for the expenses to which she has put them in resisting her unjust agression; but, if such nations as Great Britain and France can afford to be generous towards a foe who throws herself upon their merciful consideration, it still remains a question whether they will do justice to Turkey if they do not insist that she at least shall be repaid for the enormous outlay she has been obliged to incur, and for the barbarous and treacherous destruction of her fleet at Sinope. It does not meet the justice of the case to allege that Russia is too impoverished and exhausted by the war to be able to pay an indemnity. We do not believe in the permanent exhaustion of a great nation. If Russia cannot pay now, she may pledge herself to pay at some future day. She may, in commercial phrase, give her bills, not at two or three months', but at two or three years', date; and Turkey will no doubt be glad to grant her the time and the accommodation requisite.

Whatever may be thought in Prussia, or even in Austria, of such a proposal, we do not think there are many men in France or England, unless they be Greeks of Manchester or Liverpool, who would think that a hard measure was thus meted out to a gross offender, or that unnecessary or impolitic humiliation was inflicted. Russia would neither be ruined nor very seriously incommoded by being compelled to pay to Turkey the sum of ten or twenty millions sterling. At the close of the war in 1815 France was forced to pay upwards of £60,000,000 as indemnity; and, moreover, to maintain an army of occupation of 150,000 men for three years after the peace. And yet France was not ruined by this severity of exaction, but, on the contrary, gained strength from the efforts that were rendered necessary to meet it. And why should a different measure be dealt out to Russia? A pecuniary fine of this amount would not only be an act of pure justice to Turkey, but would in all probability tend to the development of the industrial and commercial resources of Russia herself, and prove to the present and to future Czars how much wiser, safer, and more profitable it is to grow wealthy by the sure arts of peace than by insecure conquests or continual warfare and aggression against her neighbours.

COULD we believe that Parliament would act through the Session as wisely as at its commencement, its proceedings, as far as yet known, would be most hopeful. Several bills of a very valuable character have been introduced by the Government; and though the representatives of "local interests" have protested on behalf of monopoly, and the lawyers have opposed legal reform; the House of Commons has received the measures in a fitting spirit. When these bills come to be discussed on their principle, will be the time to notice the character and motives of the treatment they experience; but it may be well to enumerate them. On Friday week Mr. Lowe brought in two bills—one to amend the law of Partnership, the other for the incorporation and regulation of Joint-stock Companies. On Monday the same member of the Government brought in a bill for the abolition of Passing Tolls on Shipping; and the Solicitor-General for Ireland introduced a bill for abolishing the Encumbered Estates Court, and for Improving the Irish Court of Chancery. Some important commercial and domestic measures for Scotland were brought forward by Lord Duncan. And on Tuesday the Home Secretary brought in a bill for providing an efficient County and Borough Police for England. Not one of these measures but is entitled to the name of a reform; and such of them as have a commercial and financial bearing appear to be based on sound principles of political economy. We are also promised an Ecclesiastical Courts Reform, in which we shall believe when *la Reine le veut* is pronounced over it, and not before. Sir George Grey declines to give the magistrates new powers in the case of wife-beating, stating, with the authority of an omniscient Whig official, that no law will put a stop to the practice. There has been nothing of any great interest as yet brought forward in the House of Lords, except that a bill (evidently the result of the recent application in Palmer's case) has been introduced for enabling the Queen's Bench at once to send a case for trial to the Central Criminal Court, instead of the expensive and inconvenient trial "at bar." This useful measure is mainly due to Mr. Huddlestone's able opposition to the motion in Palmer's case, and to the array of reasons he assigned why the course proposed was objectionable. We must add that another bill has been introduced with the harmless title of the Leases and Sales of Settled Estates Bill; but the significant name of Sir T. M. Wilson is connected with it, and those who love Hampstead-heath will require no other admonition to be on the alert.

THE finances of the State, whether we have peace or continue at war, will necessarily occupy much of the attention of Parliament during the present session. Already several important questions have been asked on the subject, and some movements are noticeable amongst the people. We all feel, in fact, the influence of taxation: it makes comparative scarcity. The hand of the Government is in the sugar-basin and the tea-caddy. It lessens the income of every man, except, perhaps, that of domestic servants. It puts a check on marriage, the proportion of which to the population was less in 1855 than in any year since 1849. Through it we all suffer irksome restraint, and all are anxious to make the burden as light as possible—to shift it from ourselves to others, or to get rid of it altogether. Without taxation, however, the nation can have no Government; and, accordingly, the great political problem that politicians are always trying to solve is how to secure the most efficient Government with the least taxation?

We have for a long period taken a deep interest in this subject; and on June 16th last year we published a paper on "Administrative Reform—The Remedial Measure," in which we pointed out that the most important duty which the House of Commons has to perform—"the control of the finances"—"the basis of all administration"—is actually left by the House "to be performed by the Ministers and their clerks;" and in which we suggested that, at the beginning of every Session, the House should "appoint a Financial Committee," and should "vote no money whatever" till the public expenditure and the estimates had been examined by this Committee. We can, therefore, applaud that watchful body, the Liverpool Financial Reform Association, for having taken up the same idea, and for using its funds and its influence to urge the members of the Legislature to exert themselves to secure the appointment every Session of such a Committee. In a circular, dated January 19th, which has just fallen into our hands, it solicits attention to two tracts one "*recently published*" by it, the other now in the press—which have for their object exclusively to promote this necessary step to reach anything like good husbandry in the national finances.

In its tract already published the Association recommends, as we recommended in June, that the House of Commons, without waiting for Parliamentary Reform, should at once "appoint a permanent Finance Committee, composed of men of practical business habits, with power to appoint and employ experienced accountants, and to summon before it all persons from whom necessary information might be required." The Association refers to Town-councils, Boards of Guardians, Parish Vestries, and other similar bodies intrusted with the administration of public funds, all of which find it necessary to appoint financial committees to supervise their monetary affairs, while the House of Commons intrusts both the imposition of taxes and the distribution of the proceeds to paid functionaries, over whom it exercises merely a nominal control. The Association elaborates the idea through the two tracts, and concludes the last by this adjuration to the Financial Reformers already in the House of Commons:—

> Let them insist that the House, in addition to the bodies to whom it deputes a portion of its powers advantageously, for purposes infinitely less important, shall also have a standing Finance Committee invested with all the powers necessary to make it an efficient check on the Government itself, and also on its subordinate functionaries, to whom the spending of the public money is really intrusted. If they succeed in this endeavour, and an efficient Finance Committee be appointed, they will have rendered a service to the nation of which the value and importance can hardly be overrated. If they be opposed (as they will be by all who flourish, or hope to flourish, under the present system, and who laugh at the shallow farce of existing Parliamentary control), and if they fail in their first attempt (as they probably may), they will, at all events, have discharged their own consciences from any complicity in systematic waste; and they will also have had an opportunity of demonstrating to the constituencies the necessity of demanding at least one pledge from Parliamentary candidates at the next general election—viz., that they will advocate and vote for the appointment of a permanent Finance Committee of the House of Commons, and never desist from demanding it until that restraint upon Government extravagance is obtained.

The Association, therefore, would convert the recommendation to have a Finance Committee into a test for candidates, and make them pledge themselves to procure the appointment of such a Committee. We cordially support its views. We believe now, as we stated eight months ago, that "a financial reform must be the basis of all other reforms," "not to stint the public service, but to make it efficient." We require not "penny-wise and pound-foolish" economy, but a judicious and carefully-framed system of finance. It is practicable, we are sure, to have such a system, which should provide liberally for every essential public service, and at the same time lighten the burdens on industry. A committee of a few resolute clever men would soon find out a means of simplifying our taxation, reducing it to one or two heads, and collecting it at a very small expense by means of the banks which have grown up naturally in society, and only require freedom, with a judicious law of partnership, to become universal. Politicians cannot better employ their energies in peace than in making preparations for war, and every nation has learned from experience that all other preparations are utterly insignificant compared to a skilfully-devised system of finance which husbands the national resources, and provides the means of maintaining armies and navies. Such a system would place at the disposal of an enlightened and popular Government the largest portion it can require of the vast resources of the nation, with the least degree of suffering and injury to a patriotic people. The Executive Government owes such a system to the people. It is bound to provide for the national safety and the national honour at the smallest cost; and it should not wait for the action of associations and the victories of reforming members of the House of Commons to appoint a standing Finance Committee. It should take the initiative on itself, and make the appointment of such a Committee one of the chief means of providing effectually for the means of future defence.

### *THE COURT.*

The Queen has given audiences respectively to Earl Spencer, Lord Steward, and Viscount Drumlanrig, Comptroller of the Household, introduced with the presentation of the Lords' and Commons' Addresses in answer to her Majesty's Speech from the throne.

The first note of preparation for the coming season is the announcement, on authority, of three levees, to be held by her Majesty at St. James's Palace, on the following days:—Wednesday, the 20th inst. Wednesday, the 27th inst.; Wednesday, the 12th of March next.

The Court will arrive at Buckingham Palace from Windsor Castle on Monday next.

The only guests of note at the Royal table during the week have been Captain the Hon. H. Keppel, R.N., and Colonel Simmons, R.E., the Queen's Commissioners at the Head quarters of the Ottoman army.

On Tuesday her Majesty and Prince Albert and the Royal family passed the evening at Frogmore House, where her Royal Highness the Duchess of Kent gave a children's ball.

The Hon. Beatrice Byng and the Hon. Mary Bulteel have succeeded the Hon. Mary Seymour and the Hon. Emily Cathcart, as Maids of Honour in Waiting. Major-General Bouverie and Captain Du Plat have succeeded Lord Charles Fitzroy and Colonel F. H. Seymour, as Equerries in Waiting to the Queen and Prince.

His Royal Highness the Duke of Cambridge had a dinner party on Saturday evening, at his Royal Highness's residence at St. James's Palace. Their Royal Highnesses the Duchess of Cambridge and Princess Mary were among the guests.

The Countess Persigny, wife of the Ambassador of France, had a *thé dansant* on Tuesday evening, at Albert-gate House, which was very fashionably attended.

Earl Fitzwilliam has, we regret to learn, been suffering from severe illness, with which he was seized on Saturday last.

Viscount and Viscountess Palmerston had a dinner and evening party on Saturday last, at their mansion on Piccadilly-terrace.

### *CHURCH, UNIVERSITIES, &c.*

APPOINTMENTS. *Rectories*: The Rev. H. C. Glanville to Shavrocke, Cornwall; the Rev E. L. Wilmot to All Souls', Marylebone; the Rev. W. G. Holmes to Littlehampton, Sussex; the Rev J. Griffith to Neath with Llanrhet, Glamorganshire; the Rev J. Holley to St Barton Andrew, near Stokes Ferry, Norfolk; the Rev. J. Nesbit to Deal, Kent. *Vicarages* The Rev J W Goldsworth to Linton, near Staplehurst; the Rev. J. Hales to St. Giles's, Colchester, and to the Second Mastership of the Royal Grammar School of that town; the Rev J. Hilbert to Cardington, near Bedford; the Rev. G. T. Sharland to Hyde, Devonshire, the Rev. W. F. Hickmore to Kenilworth, Warwickshire. *Incumbency*: The Rev. J. H. Thompson to Cradley, near Stourbridge.

THE ceremony of consecrating St. Albans Church, the erection of which has recently been completed, at Pinfold, Rochdale, was performed on Saturday last, by the Lord Bishop of Manchester. The total cost of the erection has been between £4000 and £5000.

ERRATUM.—In our notice of a Testimonial presented to the Rev. Daniel Butler it should have been stated that he had officiated *ten years* (not fifteen) at St. John's Chapel, St. John's Wood.

TESTIMONIAL TO THE MEMORY OF THE LATE MR. JOSEPH HUME.—Last Saturday afternoon a preliminary meeting of noblemen and gentlemen interested in the proposed testimonial to be erected, in the shape of a colossal monument or statue, to the memory of Mr. Joseph Hume, M.P., met at Willis's Rooms, King-street, St. James's, for the purpose of considering the best means of carrying out that object. The Right Hon. Earl Fortescue occupied the chair. The company present included the Earl of Bessborough, Lord Broughton, Lord Hatherton, Lord Panmure, Lord Stanley of Alderley, Lord Ebrington, M.P.; Lord Robert Grosvenor, M.P.; Sir B. Hall, Bart., M.P.; the Right Hon. T. F. Kennedy, the Hon. F. Byng, Sir James Duke, M.P.; Sir Joshua Walmsley, M.P.; Mr. Hutchinson, M.P.; Mr. Duncan, M.P.; Mr. Gore Langton, M.P.; Mr. Gregson, M.P.; Mr. Walter Milnes, M.P.; Mr. Thornely, M.P.; Mr. Williams, M.P.; Colonel Romilly, Mr. Nicholay, Mr. John Wood, and Mr. Thomas Wall, secretary to the Working Men's Association. After some discussion, the Right Hon. Lord Panmure moved—"That a general meeting of the friends and supporters of the late Mr. J. Hume, M.P., be called at Willis's Rooms, on Saturday, the 16th inst., at one o'clock precisely, for the purpose of considering the erection of a monument to the memory of Mr. Hume." (Applause.) The Right Hon. Lord Grosvenor, M.P., seconded the motion, amidst renewed acclamations, and it was carried *nem. con.* A strong committee was then formed, empowering the above noblemen and gentlemen to take the necessary steps for promoting the object of the meeting, and the proceedings closed with a warm vote of thanks to the chairman, who complied with the request made that he should preside at the demonstration on Saturday next.

WE are requested by Mr. Carmichael to correct a mistake made in the title of the Illustration, "Sunday Morning Prayers," which appeared in our last week's impression. It should have been the "Daily Morning Prayers of H.M.S. the *Blenheim*." The people of England and the world ought to know (adds our Artist) that British sailors attend prayers every day in the week.

CAMBRIDGE ASYLUM FOR WIDOWS OF BRITISH SOLDIERS.—A Correspondent informs us that this excellent establishment, for the benefit of which the concert described in our last Number was given by the Amateur Musical Society, originated with the Committee for erecting a Monument to the late Duke of Cambridge. The fund raised not having been sufficient to accomplish the original design, it was resolved that the money should be devoted to the establishment of a charitable institution; and a plan of an Asylum for the Widows of Non-commissioned Officers and Soldiers of the British Army having been submitted to the committee by one of its members (Mr. Charlton, of the Commissariat), was approved of by the subscribers. The building at Kingston, now being erected on a site liberally granted by the present Duke of Cambridge, already affords accommodation to twenty-one widows of deserving veterans, and the number will be progressively increased.

The duty on railways in the year ended the 31st March last amounted to £309,195.

## TOWN AND TABLE TALK ON LITERATURE, ART, &c.

THE amount of the purchase-money of the new acquisition to the National Gallery, the "Adoration of the Magi," has just transpired. Sir C. Eastlake, Director of the Gallery, gave for it £1977. It was bought through Signor Angelo Toffoli, of Venice. We may add, as a piece of artistic gossip, that Sir Charles travelled into Italy with powers from the Treasury to draw on the paymaster-general for £3000 for purchases. He has returned (like a careful caterer as he is) with money in hand—ready in the spring, if necessary, to run anywhere to secure a really first-rate picture for the National Gallery.

Our great Indian antiquary, Lieut.-Colonel Rawlinson (better known as Major Rawlinson), is among the recent promotions in the Order of the Bath. He is now a K.C.B., and, consequently, Sir Henry Creswicke Rawlinson. This well-merited honour will be received everywhere as a just tribute to a scholar, a diplomatist, and a soldier.

The new Burford Panorama for the spring will be the "Interior of Sebastopol." Who has forgotten the exquisite view of the exterior of the far-famed city—one of the leading attractions of the last London season?

So very little is known of a truly English painter, Thomas Gainsborough, that we are glad to observe an advertisement from Mr. Fulcher, of Sudbury, asking assistance towards a new and enlarged life of the great painter. As Gainsborough was a Sudbury man himself, Mr. Fulcher has doubtless all the local traditions about him. His ask for letters. There is not a rarer autograph than that of Gainsborough. Both, where Gainsborough lived so long, should be well hunted up for materials; and Mr. Fulcher should give us a careful catalogue of his works—arranged under these headings:—1, Subject; 2, When painted; 3, Where exhibited; 4, For whom painted; 5, Size; 6, Canvas or panel; 7, Price paid to the painter; 8, Price for which it has since sold; 9, Present possessor; 10, Engraver and date of engraving.

Our friend Sylvanus Urban has printed a letter from the Rev. John Mitford to himself about Rogers the poet. Sylvanus has been properly anxious to obtain full and faithful particulars of the poet's life, and, hearing (we know not whence) that the late Mr. Samuel Phillips had been requested by the poet to write his life, he naturally asks of the poet's old and much-valued friend, Mr. Mitford, "Was this the case?" Mr. Mitford replies that he does not believe that any such request was made by Mr. Rogers. To which we will add, that Mr. Phillips never saw Mr. Rogers above half-a-dozen times in his life, that their knowledge of one another never amounted to intimacy, and that the story has its origin in a piece of gossip current in Mr. Rogers's lifetime. Mr. Phillips, it was said, had written a memoir of Mr. Rogers for a daily newspaper, and that the memoir was in type and ready to be inserted the moment the venerable poet died. The able biographer, unfortunately for his friends and the public, died in the prime of life, before the subject of his biography. As for the request from the poet, the whole story is "fudge."

Collectors and dealers conversant with the value of works of art, and of curious things, such as Horace Walpole and Mr. Bernal loved to collect, are speculating respecting the amount that the Rogers collection is likely to realise. Everything will be sold, and the probate is sworn under £40,000. "Too small a sum!" exclaims a sagacious observer, "I know the collection well. The executors, you will see, will have to take out a fresh probate for £15,000 additional."

There is a pleasant rumour which we trust is true. Her Majesty, it is said, has granted a pension of £100 a year to Samuel Lover—poet, musician, novelist, and painter, and clever in all. Some of Mr. Lover's songs will live as long as the language they adorn. His "Angels' whisper," his "Rory O'More," and some twenty others form that neat pyramid of white marble which Cowley was so solicitous to see erected to his own memory.

The acknowledged insecurity of gummed envelopes to letters has given an impetus to the suffering sealing-wax trade. There are people who profess to see the revival of the old graceful practice of attaching seals and silk to a letter—those pretty appendages which so much please the collectors of autographs. We have seen some graceful specimens of the kind transmitted by post since Dr. Taylor's exposure of the Rugeley postmaster. Occasional correspondents, and men whose time is their own, may indulge in the tasteful trappings of seals and silk; but the labour is too great for prolific correspondents like Joseph Ady and men of real business transactions.

Saturday, the 1st of March, is to witness the revival of our old friend the *Literary Gazette*—now, if we remember rightly, fast approaching his fortieth year of public instruction. We are to have (so runs the talk) at least a brace of editors, and certainly a woodcut, in the manner and style of our friend the *Builder*. Then we are to have "Notes and Queries," and other attractions to "hook the reader;" and if done well, as we trust they will be, hook him among constant subscribers.

Leicestershire has awakened to the public value of the "Roach Smith Museum," and has shown its ardour in the cause by a public petition to the Lords of the Treasury for its purchase at the reduced price of £2500. Lords Howe and Ferrers lead off the petition. We have on other occasions recommended the purchase of this museum, so we shall now content ourselves by this simple record of what is doing in the matter.

Complaints are made, and with justice, of the vile rough treatment which books of value receive from some of the rough readers (we had nearly written riders) who frequent and pester the Reading-room of the British Museum. There are men who think that national property is not to be treated like other property. They tear, dog's-ear, and dirt some of the best books which the nation possesses. Mr. Panizzi's binders cannot keep pace with the mob who dirt books with ease. What cure can be suggested? A correspondent (certainly not an ill-natured one) half hints to us that a compulsory probationary process of soap and water (at the expense of the nation) would prove a national saving. An immediate withdrawal of the national privilege of reading in a national library would, this failing, be another course of cure which we would immediately recommend.

METEOR.—(*From a Correspondent.*)—The following is an account of a meteor which I witnessed from Foot's Cray, Kent, in the evening of Sunday last, February 3rd, 1856, about 7.35 in the south-east:—"I first attracted my notice as a large star, increasing in brightness, and with a somewhat tremulous movement, and at an altitude of about 30°. In a few seconds it spread out into a mass of orange-coloured fire, in an oval form, probably the size of five or six full moons long, and two broad; it then began to descend obliquely, at an angle of about 80°, towards the east. In a short time it changed instantly to a brilliant green, then again to an equally brilliant red; but throughout it was tinted around the edges with orange, and the head did not change its colour. On its arrival at the point at which it was hid from my view by a hill an apparent explosion took place, lighting up the country like day, but unaccompanied by any noise: altogether it lasted about twenty seconds. I can only compare it to a magnificent rocket, apparently about half a mile distant, illuminating the country with its varying colours with beautiful effect. The night was bright and starlight, with 15° of frost."—Y. SKINNER.—(*From a Correspondent at Burbage, Marlborough.*)—Being out for a walk on Sunday evening, the 3rd inst., about eight o'clock, with nearly due east, stars shining brightly, with frosty air, my attention was arrested by a vivid flash of light, illuming the whole firmament; and, turning suddenly to the east, I saw a magnificent meteor, quite as large as the one described in your columns a few weeks since. The size was about twice that of the full moon, when near the zenith; the time of its duration two or three seconds. The globular portion was of a bright copper colour—the tail of a pale hue, and forming a cone twice the length of the body itself. The position, E.S.E.; its elevation 9 or 10 degrees above the horizon, its direction an acute angle with the same, eastward; its motion apparently intermittent; at each plunge, as it might be termed, the flashes were produced, seemingly without explosion, and were thrice repeated, revealing a line of clouds on the horizon, beneath which it disappeared; the distance traversed at each progression about twice the length of the body and tail. It was witnessed by many persons in this neighbourhood.—E. NEW.

The Government of Victoria have acquiesced in a proposal emanating from the Governor of New South Wales, that all frontier custom-houses between these two colonies shall be abolished, and henceforth duties will be collected only on the seaboard.

## *COUNTRY NEWS.*

### METEOROLOGICAL OBSERVATIONS AT THE HIGHFIELD HOUSE OBSERVATORY, NEAR NOTTINGHAM.

FOR THE WEEK ENDING FEBRUARY 5, 1856

*The range of temperature during the week* was 19°.

*The weather* frosty till the 4th, rain on the evening of the 4th.

*The direction of the wind* was—31st. W., became N.W. at 2h. 30m. a.m., N.N.W. 11½ a.m., N. at 2½ p.m.; moved to W.N.W. at 12h. 30m. a.m. Feb. 1st, and at 6 a.m. to W.; in which quarter it remained till 8 a.m. of 2rd, when it moved through S. to E.S.E., 1 p.m.; became S.S.E. and at 7 a.m. of 4th S., at 11½ a.m. S.S.W., and at 11½ p.m. W.S.W.; became S.W. at 11½ a.m. of 5th, and S.S.W. at 4h. 45m. p.m.; in which quarter it remained, and blowing a gale from 7 p.m. of 5th.

E. J. LOWE.

Large meteor on the 3rd, at 7h. 55m. p.m.

THE TOWN DUES OF LIVERPOOL.—The bill introduced into the House of Commons by Mr. Lowe, on Monday night, for the relief of the mercantile shipping from local tolls and dues is by no means popular in Liverpool, the prevailing belief being that the Corporation of that town have a right and title to those dues beyond dispute. The right of the Corporation was tried before Lord Chief Justice Denman, in 1833, on which occasion the decision was in their favour. The gross revenue of the Corporation of Liverpool for the year ending August the 31st, 1850, was £176,807; of which £110,071 were received from town-dues, and to maintain the present expenditure of the Corporation (should the town dues be abolished) a borough-rate of £78,226 would be required.

REPRESENTATION OF TAUNTON.—The election for this borough, rendered necessary by the appointment of the Right Hon. Henry Labouchere to the office of Colonial Secretary, vacant by the death of Sir William Molesworth, took place on Tuesday, when Mr. Labouchere was returned without opposition.

REPRESENTATION OF NEWCASTLE.—The election of a member for the borough of Newcastle-on-Tyne took place on Tuesday last, when Mr. George Ridley was elected without opposition. A Mr. Richard Hort was brought forward by the Urquhart party; but the encouragement he received was not sufficient to make his friends support him in a contest.

LEEDS ELECTION.—On Wednesday last the Right Hon. M. T. Baines, who had vacated his seat on accepting the office of Chancellor of the Duchy of Lancaster, was re-elected for Leeds without opposition.

MIDHURST ELECTION.—On Thursday last Mr. Samuel Warren, Q.C., was elected without opposition to represent the borough of Midhurst in Parliament

TAMWORTH ELECTION.—The election of a representative for the borough of Tamworth, to supply the vacancy occasioned by the elevation of Captain Townshend to the House of Peers, took place on Thursday, when Lord Raynham, son of the Marquis Townshend, was elected without opposition

MR. BRIGHT ON THE AMERICAN QUARREL. At the annual meeting of the Manchester Chamber of Commerce, on Monday last, Mr. Bright, M.P., made a long speech on our relations with America. As regarded the question about Central America he did not see that England was in the wrong; but, let that be as it may, it was clear that the United States would obtain possession of that country. As to the difficulties arising out of the Foreign Enlistment Bill, they were only what had been predicted when that measure was proposed. He did not think our Government had made a sufficient apology to the United States Government for the blunder they had made. A resolution was passed by the Chamber expressing regret that such difficulties had occurred, and urging upon our Government the propriety of considering the questions at issue in a conciliatory spirit.

WHAT NEXT? AND WHO NEXT?—Last night was the annual election for honorary officers of the Manchester Athenæum. The election is by ballot; and at least four-fifths of the members who voted (and hundreds did so) have votes for Manchester. Mr. Richard Cobden was proposed and seconded as one of the vice-presidents, and he was blackballed! What a change! But two or three short years ago and he would have been elected with acclamations. Such circumstances as these, rather than packed meetings, got up with all the influence of the League to back them (and those resident in Manchester know what that influence is), show in what estimation the Peace-at-any-price party is held in Manchester.—*Manchester Guardian, Feb. 5.*

THE WILL FORGERY AND POISONING AT MANCHESTER.—James Monaghan, George Batty, and Edmund Dunn, now in custody on a charge of administering poison to the late John Monaghan in August last, were brought before the magistrates at Manchester on Tuesday last, August 3rd, 1855, a will had been made at John Monaghan's dictation, in which he bequeathed the sum of £10 10s. sterling, the sum due on a policy of the Wellington Reversionary Annuity and Life Assurance Society, to pay his debts and all claims after his decease. The forged will was a copy of the original, with this difference, that in it he was made to bequeath to his son James £200 due at his death on a policy from the Baden Insurance Company. From what was stated on a previous examination it appeared that the old man was not aware of his life having been insured in the Baden Company for £200. That had been done by his son James and other parties, apparently for their own ends. James Monaghan, Edmund Dunn, and two other men named Keefe and M'Loughlin, were committed for trial at next assizes on the charge of forgery.

THE RECENT CHARGE OF PASSING FORGED CHEQUES.—The *Cambridge Chronicle* contains the following particulars respecting George Patman, who was charged a few days ago in the Guildhall police court with passing forged cheques to a large amount: Patman came to Cambridge about twelve months ago. He took lodgings at the house of a lady in New-square, and, considering himself with great propriety, was in course of time introduced to several respectable families. He had previously, we should observe, made the acquaintance of some ladies connected with one of these families at Berkhampstead, in Hertfordshire, where he was residing. He was very regular in his habits, remarkably quiet, a constant attendant at church, and professed to entertain serious religious convictions. He entered Clare College last October having previously, we understand, been reading with a member of the University. In college, as elsewhere, his outward demeanour was irreproachable. He paid his addresses to one of the ladies he had met in Hertfordshire, and prosecuted his suit with such success that in December last he was united to her. This event did not take place without the father of the lady having made due inquiries as to Patman's standing in society and means, and he was so convinced, from the representations made to him that Patman was possessed of a moderate competency that he cheerfully gave his consent to the union. One of these representations was that an uncle had placed £4000 in the Funds, the interest of which was to be his, and documents were produced in proof of this statement. These, it now turns out, were forged. Everything went on harmoniously till Friday, the 25th ult., five short weeks after his marriage, when intelligence was received in this town that Patman, who was in London transacting some business for his father-in-law, had been arrested, in Hertfordshire, for forgery. The news was so astounding that at first it was not credited; but it unfortunately turned out to be too true. We leave it to the imagination of our readers to picture the state of distress which such intelligence produced in the family with which he had become connected. There is apparently some mystery in the case, no adequate motives for his conduct having been discovered.

COLLISION IN THE CHANNEL AND LOSS OF LIFE.—On Sunday evening last a collision took place off Folkestone between the *Mangerton* screw steam-ship, from Limerick, and the *Josephine Wilks*, a New Zealand packet-ship. The latter vessel, which had sailed from St. Katharine Docks on the Friday, was about that she went down in a few minutes. There were upwards of a hundred persons on board, including ten first-class and sixty steerage passengers. About thirty were taken on board the *Mangerton* steamer, and it is said that many more might have been saved had the Captain of that vessel made any attempt to go after the ship. A boat containing several of the crew of the *Josephine Wilks* reached Folkestone at midnight.

The Spanish papers state that the inundations at Seville are so great that the Governor has been rowed through the streets in a boat, in order to convey assistance to the inhabitants.

The *Patrie* of Thursday evening says it is the intention of the Emperor of Russia to visit Paris next May—that is, immediately after his coronation

We regret to state that the Bishop of Carlisle died suddenly at Rose Castle on Tuesday evening.

## *EPITOME OF NEWS—FOREIGN AND DOMESTIC.*

Lord Dalhousie will leave India on the 5th or 6th of March. Lord Canning is expected in Calcutta on the 26th of February.

The Queen of Spain has presented a cloak ornamented with garnets, of the value of 200,000 reals, to a statue of the Virgin of Sorrows, in one of the churches.

Captain Lord Edward Russell is appointed to be paid Aide-de-Camp, and Captain George Elliot to be Aide-de-Camp, to her Majesty.

On the 21st ult. the Pope gave his benediction to the lambs, which were to be afterwards shorn, in order to furnish wool for the pallium which Rome sends to each of the new Bishops.

Her Majesty has been pleased to appoint the Rev. George Robinson Mencrief, M.A., to be an Inspector of Schools.

The King of Denmark has refused to receive the resolution come to by the Holstein Diet for the impeachment of M. Scheel the Minister for that Duchy.

The youthful Lord Montgomerie is doing duty on board of her Majesty's gun-ship *Conqueror*

In the Belgian Chamber of Representatives, on the 1st instant, the Minister of finance presented a bill granting an annual allowance of 150,000f. to the Count de Flandre, second son of King Leopold.

The Archbishop of Canterbury has appointed the Right Hon. Spencer Horatio Walpole to be a Church Estates Commissioner, in the place of the Right Hon. Henry Goulburn, deceased.

A demand has been presented to the Congregation of Rites at Rome for the beatification of Queen Maria Christian of Naples, daughter of King Victor Emmanuel I. of Sardinia, and first wife of the reigning King of Naples. Her Majesty died in 1836.

The Hôtel Cooper, in the Avenue des Champs Elysées, Paris, has been taken by Lord Clarendon, who is expected there with a very numerous suite. The hotel of the Russian Embassy, in the Rue du Faubourg St. Honoré, is being made ready for the reception of Count Orloff and Baron de Brunow.

A private telegraphic despatch announces that Count Orloff and M. de Brunnow left St. Petersburg for Paris on Monday.

The Earl of Caithness will be the new Lord-Lieutenant of Caithness, in the room of his father, the late Earl.

Count Charles Bjernstjerna, Chamberlain of the King of Sweden, left Stockholm for London on Monday last, to invest Prince Albert with the Seraphim order.

The rumour which has been prevalent in certain circles, that the Speaker of the House of Commons contemplated retiring very shortly, has been contradicted on authority.

The Pope has received from the Czar an autograph letter which announces the restoration of four Roman Catholic Bishoprics in Poland, and the establishment of six others in Russia.

The Marquis of Clanricarde, as Colonel of the Galway Militia, gave a grand entertainment to the officers of that regiment, at Aldershott, on Tuesday evening.

There was a "Te Deum" at the church of St. Irene, Athens, on the 13th ult. (New-Year's-day, according to Greek computation), and a ball in the evening at the Court. Mr. Wyse was absent, being in mourning. It was much remarked that the Queen danced for a long time with the French Ambassador.

The Queen has been pleased to grant an annual pension of £50 to Mr. John D'Alton, the author of several works on Irish history—the most recent of which is a list of the officers in King James's Irish army, with notes and biographical sketches.

A letter from Schwerin, of the 24th ult., announces the death of the young Prince Nicholas, infant son of the reigning Duke of Mecklenburg.

Amongst the passengers by the *Sultan*, which arrived at Southampton the other day, was George Rennie, Esq., late Governor of the Falkland Islands. He applied to be superseded, and left the Falkland Islands four months since, having been all that time on the passage home.

M. F. de Lesseps has advertised that the "International Commission" for the construction of a canal through the Isthmus of Suez will meet two months hence in London.

Sir Andrew Agnew intends to start for Wigton, on Liberal principles. The seat is rendered vacant by Lord Dalrymple's retirement.

A letter from Warsaw, of the 23rd ult., announces the arrival in that city of the daughter of Prince Paskiewitsch. Her father died on the 1st inst.

Mr. Archibold, an extensive landed proprietor of Nova Scotia, having discovered a valuable iron mine on one of his estates in that country, has resolved to appropriate its proceeds to the purposes of the War Department.

The valuable estate of Crimond, in the Buchan district of Aberdeenshire, has been purchased by Sir Alexander Bannerman, Bart., of Crimondmogate, for the sum of £48,500.

The Saxon Minister, M. de Beust, left Berlin, on Monday. His mission to the Prussian Court is understood to have been unsuccessful.

Early in March Mr. E. Miall, M.P., will move that the House of Commons resolve itself into a Committee, to "consider the temporal provisions made by the law for religious teaching and worship in Ireland."

At the annual general meeting of the Hamburg Free-Trade Association, held on Saturday last, a valuable piece of plate was voted to Mr. Hagreaves, who was for many years secretary of the association, and who has been appointed Vice-Consul at Hamburg.

Advices from Havannah of the 13th ult. state that Rachel was there. Her sisters had gone to Charleston, and a portion of her *troupe* sailed in the last British steamer for Southampton.

R. H. Horne, the author of "Orion," lately in the Gold Commission, is now engaged as dramatic critic to the *Melbourne Herald*.

On the 25th ult. a party of gentlemen from Ayr celebrated the anniversary of Burns' natal day in the cottage where he was born.

The pretended Prince of Armenia has been handed over by the Berlin authorities to those of Belgium, who will continue the investigation of the charges brought against him.

Madame Goldschmidt gave a concert at Norwich on Tuesday, when the "Messiah" was performed in St. Andrew's-hall.

The responsible editor of the *Diritto* of Turin has just been condemned, at the suit of the French Ambassador, to fifteen days' imprisonment and 300f. fine for an article considered insulting to the Emperor of the French.

Professor Taylor recommends, as the most effectual security for letters sent by post, the free use of sealing-wax to an envelope already well secured by the common adhesive material.

All the presents, trinkets, costly furniture, albums, &c., presented to the French Emperor by exhibitors, are to be displayed in the Palais de l'Industrie, and disposed of by lottery. It is said there will be one million of tickets, at five francs each.

A Greek merchant was rather roughly handled at a concert at Liverpool, the other day, on account of not having taken off his hat during the playing of "God Save the Queen" and "Partant pour la Syrie."

At a very considerable sale of autographs, which terminated on Saturday, in Paris, a letter from Michael Angelo went up 281f.; one of Henry VIII. of England to Anna Bullen, 262f.; Talma to Duchâ, relative to Mdlle. Georges in the forthcoming piece of "Macbeth," 80f.

It is rather surprising that so many of the population die "not in their own homes." For every five persons, or rather more, who died in London last year, one died in a workhouse, hospital, or other public institution.

The Archbishop of Paris has issued a proclamation to the faithful of his diocese concerning their duties during the ensuing Lent, in which he gives them *carte blanche* not to fast more than they like, for this very cogent reason, that he knows it would be useless to exhort them to the contrary.

The polling for the election of a member for Cambridge University, which commenced on Thursday, will finally close on Tuesday, the 12th, at two o'clock.

The present population of the Australian gold-fields is said to be about 180,000, of which number 100,000 are male adults, 30,000 females, and from 20,000 to 30,000 children. Of the men, about 70,000 are diggers, and the remainder of ordinary trading professions and avocations.

At a recent trial in Paris, between a steel-pen dealer of that city and Messrs. Hinks and Wells, the manufacturers, of Birmingham, it was stated that in the whole world there are but fourteen manufactories of steel-pens; and that nine of them are at Birmingham, four at Boulogne-sur-Mer, and one at Paris.

The *Ballina Herald* mentions, among the many signs of returning Irish prosperity, as not the least significant, the unprecedentedly great number of marriages which are taking place previous to the commencement of Lent and the temporary close of the wedlock season.

During the twelve months just past 2023 men and 428 apprentices, making in all 2051 inmates, boarded in the Liverpool Sailors' Home.

The Russian Government have advertised for bar iron for overlaying the sides of floating-batteries.

THE NEW PICTURE FOR THE NATIONAL GALLERY.—"THE ADORATION OF THE MAGI," PAINTED BY PAUL VERONESE.

The first great purchase made by Sir Charles Eastlake, in his new office of Director of the National Gallery, is one that will give full satisfaction to the public. What little reputation Sir Charles lost as Keeper, by silently lending his name to the purchase of the supposititious Holbein, will be blotted from remembrance by this new acquisition as Director.

It has been known for some time past that Sir Charles Eastlake spent last autumn in his beloved Italy, travelling partly for his own pleasure, and partly in his paid position as Director of the National Gallery. Nay, it was privately known that he was not fettered as to funds, and that his return with a grand Gallery picture of the Italian school—even at a Christie and Manson price—was what was looked for by the Trustees, his masters. The "Travelling Agent" of the Gallery, Mr. Otto Mundler, accompanied Sir Charles.

Sir Charles returned with a prize in his landing-net—so he alleged—and so the prize has turned out. He did not risk his reputation in pursuit of early German art, which some affect to think he does not understand, but went in pursuit of a fine specimen either of Paul Veronese or Tintoret, whose genius and touch he understands so thoroughly. He returned with a Paul Veronese.

We have scarcely one good specimen in England of this great master of scenic and decorative representations of historical and sacred subjects. The largest specimen till this present in the National Gallery (a present from the Directors of the British Institution) does not represent the great painter of the "Marriage at Cana." But "The Consecration of St. Nicholas" does not render justice to the characteristic excellence of the master—magnificence. There is nothing in it of his luxury of fancy in design and colour. The Gallery required a better specimen, and has now obtained it.

The leading examples in England or "Paulo's free stroke" till the arrival of this real accession to our treasures of art in England were the two allegorical pictures at Mr. Hope's and the four allegorical pictures (from the Orleans Gallery) at Lord Darnley's, at Cobham. These, however, while they delighted the untravelled spectator, failed to delight the critic who has seen the great Venetian in the Louvre, or in his own beloved Venice. They exhibited, it is true, this earlier Rubens in a new light, but in that light the peculiar beauties of his ornamental style were but imperfectly represented.

After the Hope and Darnley examples, we would mention, as amongst the best existing specimens of Veronese in England, the fine example in Mr. Rogers's collection of "Mary Magdalene Anointing the Feet of our Saviour"—a study for the picture, in the Durazzo Palace at Genoa. Here the great Venetian is seen as a great colourist and largely ornamental artist on a small scale. The large and choice example of this master which Sir Charles Eastlake has secured to the British nation is called "The Adoration of the Magi." It is a square-shaped Gallery sized picture, and occupies as large a space on the wall as the famous Sebastian del Piombo—"The Raising of Lazarus." It is the triumph of art in a man who scorns to be tied by the costume of the time, or by antiquarian proprieties. The Saviour (the new-born babe) is seen in the arms of his Virgin Mother. The Virgin herself has not much divinity of look: the race of Virgin-Mary painters had passed by the time the great Venetian began to flourish. The rude manger is lost in a Palmyra of columns; and the child to whom the offering is made, in a picturesque confusion of richly-dressed men, caparisoned camels and horses, and noble dogs and gold cups. A ray of Divine light is thrown from heaven on the Divine child: and Cupids (may we call them such?) sport in thin air very picturesquely—in a style better fitted for St. Cecilia than the Saviour.

It is well known that Paul Veronese never put the really leading figures of his subject into the foreground of his pictures. In the "Marriage at Cana" the principal personages are the musicians and the menials. The Saviour is lost in a background of people present. So in the "Adoration of the Magi"—that richly-robed Venetian senator is the principal personage of the picture. Rembrandt would have made the Saviour all in all; but this did not suit the great ornamental painter of the picture under consideration. There is always a passing cloud putting into shadow the very persons who should have been in sunshine had the painter been equal to other work than that he excelled in.

This fine picture is dated MDLXXIII., when the painter was about forty-five. It was painted for the church of St. Silvestro, in Venice: is noticed by Sansovino, in his "Venetia Descritta," published in 1581, and is described by Ridolphi, Boschini, and Lavetti, in terms of the highest praise. Its genealogy would satisfy the Jockey Club. Will its condition satisfy the carpers at the recent cleaning? We think not.

We may add that the reduced copy of the same picture, by Carlo Cagliari, at Hampton Court, has been engraved by Gribelin.

THE ROYAL BRITISH AND NORTH AMERICAN MAIL-PACKET COMPANY'S NEW STEAM-SHIP "PERSIA."

THIS leviathan vessel, the largest steam-ship afloat in the world—far exceeding in length, strength, tonnage, and steam-power the *Great Britain* or the *Himalaya* and exceeding also by no less than 1200 tons the internal capacity of the largest of the present splendid Cunard liners—left Liverpool on the 26th ult., commanded by Captain Judkins, the respected Commodore of the Cunard Company's mail packets, on her first voyage across the Atlantic.

Stupendous as the *Persia* is, the lines of beauty have been so well worked out in the preparation of her model that her appearance is singularly graceful and light. Yet this mighty fabric—so beautiful as a whole, is made up of innumerable pieces of ponderous metal, welded, jointed, and riveted into each other with exceeding deftness. The framing of the ship is very heavy. The space between each frame is only 10 inches, and the powerful frames, or ribs, are themselves 10 inches deep, with double angle irons at the outer and inner edges. The bow is constructed in a manner at once peculiar and affording the greatest possible strength to this important part of the ship. The framing is so placed to the stern that the effect is that, in the case of collision with other ships, or with rocks or icebergs, the strain would fall upon the very strongest material within the structure, and the *Persia* would have a good chance of safety and successful resistance while ordinary vessels would be in great peril. She is not slighter built, as some ships have been constructed of late. The plates or outer planking of the ship, so to speak, are laid alternately, so that one aids strength to the other, and they form a whole of wonderful compactness and solidity. The keel plates are 11-16ths of an inch in thickness, at the bottom of the ship the plates are 10-16ths of an inch in thickness; from this section to the load water line they are  of an inch; and above this they are 11-16ths of an inch in thickness. The plates round the gunwale are  of an inch in thickness.

The *Persia* has seven water tight compartments. The goods are stowed in two of these divisions—each about 90 feet long by 16 in breadth and 20 feet in height. These goods stores, or rather tanks, are placed in the centre line of the ship, with the coal-cellars, or bunkers, on each side of them. At the same time the vessel is so constructed as to have in reality a double bottom under these goods chambers, so that if the outer were beat in or injured the inner would, in all likelihood, protect the cargo dry and intact. The chambers are perfectly water tight, and in the event of accident to the hull these tanks would of themselves float the ship. This liner has two engines and eight large tubular boilers and two funnels; and we need only speak of her machinery in general as being first class. The fine space for the boilers is placed in the fore and aft line, instead of across the ship as is usually the case with smaller vessels.

She has separate sleeping accommodation for 260 passengers, disposed along what may be called the main deck, lying immediately above the goods and coal stores. These cabins have each 6 feet 6 inches of head room; and, coupled with the excellent system of ventilation introduced into all the Cunard liners, we need scarcely say that they will be alike pleasant, airy, and healthful. Exclusively of the wholesome accommodation for the officers and engineers, there are in the forward part of the ship about 120 berths for the sailing crew, firemen, and stokers. The total number of persons employed in working the ship, from the captain downwards, is 150. Above the main deck there is a deck house covered in, the roof of which affords a promenade from stem to stern. It contains the main dining saloon, about 60 feet in length by 30 feet in width and 8 feet in height. It is copiously lighted from the sides by plates of glass placed in the alternate panels. In front is that important adjunct the pantry, which has about 300 square feet of area; and before the funnels is the kitchen, of equal size with its cooking ranges exceeding most, and equalling any of the culinary establishments of the most extensive and noted hotels in the kingdom. But we have not space to enter further into detail than to say that on this deck and below it are also to be found the bakery, the butcher's shambles, the carpenter's workshop, the lamp-house, the doctor's shop, the ice-houses, the bath-rooms, &c.

The weight of the iron in the *Persia*, when launched, was 2200 tons; with the engines and fully loaded the weight of the immense mass will be 7400 tons, at which time she will draw 24 feet of water. Her coal cellars are constructed to receive 1400 tons of coal—an ample supply to carry her on her voyage across the Atlantic as fast as she can burn them. She has also accommodation for about 1200 tons measurement of goods.

In the ILLUSTRATED LONDON NEWS of the 14th of July last we gave a sketch of the launch of this vessel; and the intervening period has been fully occupied in laying her machinery, and fitting her out as the most magnificent floating hotel and goods-transport that have ever breasted the waters. Her chief proportions are as follow:—

| | |
|---|---|
| Length from figure head to taffrail ... ... | 390 feet. |
| Length on the water | 340 ,, |
| Breadth of the hull | 45 ,, |
| Breadth over all | 71 ,, |
| Depth | 32 ,, |
| Burden | 3,600 tons. |
| Diameter of paddle wheels | 40 feet. |

According to the strict rules of Government admeasurement, her power is equal to that of 800 horses, according to the plan laid down in the Earl of Hardwicke's bill, her power is equal to that of 1200 horses, and, according to James Watt's old established rule of 33,000 lb. to the horse, she is expected to work up to the pitch of between 4000 and 5000 horses.

The *Persia* has been constructed entirely by Messrs. Robert Napier and Sons, of Glasgow, and in the trip from Greenock to Liverpool her performance gave the greatest satisfaction. With from 20 lb. to 21 lb. of pressure upon the square inch, she easily made 18½ statute miles an hour, while the paddles gave 17½ to 18 revolutions in the minute. She accomplished the distance from the Clook Lighthouse to the Bell Buoy, a distance of 175 knots, or 203 miles, in 10 hours and 43 minutes, making an average speed of 16 knots, or 19 miles an hour.

## IMPERIAL PARLIAMENT.

### HOUSE OF LORDS.—MONDAY.

THE GREAT CLOCK OF WESTMINSTER PALACE.

In reply to the Marquis of Clanricarde, Earl GRANVILLE said the clock for the clock-tower was finished, and would be erected as soon as the room was ready to receive it; and he hoped they would be able to hear its chimes before the end of the year, if not before the end of the Session.

THE FALL OF KARS.

In answer to the Earl of Ellesborough, Earl GRANVILLE said he was not able, in the absence of the noble Earl the Minister for Foreign Affairs, to state the exact day on which the papers relating to Kars would be laid upon their Lordships' table.

The Earl of DERBY expressed a hope that the papers would be published in a separate form, and that they would not be mixed up with other documents relating to affairs in the East.

### HOUSE OF COMMONS.—MONDAY.

Mr. M'Evoy took the oaths and his seat for the county of Meath, in the place of the late Mr. Lucas.

In answer to Mr. Hutchins, Sir G. GREY said it was intended to refer the question of a public road between Pimlico and Pall-mall through St. James's-park to a Select Committee.

Sir G. GREY said it was not the intention of Government to introduce any bill for altering the law relating to ticket-of-leave convicts.

NEW BILLS.

Mr. LOWE, in moving for leave to bring in a bill for removing the passing tolls and local charges paid by the merchant shipping, enumerated the benefits which had resulted from the consolidation into one act of the laws relating to navigation, and explained that the bill which he wished to introduce would relieve our shipping from passing tolls, town dues, charitable charges, and special taxes, and that its provisions would apply to all the ports of the United Kingdom, with the exception of that of London. In altogether sweeping away the passing tolls, the only difficulty which was met with was the debt which some of the ports entitled to them owed, and which they had contracted on the security of such tolls. To get rid of this difficulty, it was intended in some instances to pay the debt out of the Consolidated Fund, and in others that the Admiralty should take the ports, with all their responsibilities, into its own hands.

After a short conversation leave was granted to bring in the bill.

Sir G. GREY moved for leave to bring in a bill to amend the Acts relating to the Metropolitan police so as to place them on the same footing as the Irish constabulary. The right hon. Baronet entered at some length into the details of his proposed bill, showing that the business would be more efficiently done, and at less expense, than by the present mode.

The Marquis of BLANDFORD obtained leave to bring in a bill to make better provision for the management of episcopal and capitular property; and also a bill to facilitate the formation and endowment of separate and distinct parishes.

Mr. WHITESIDE obtained leave to introduce five bills for Chancery reform in Ireland.

The SOLICITOR-GENERAL for IRELAND obtained leave to bring in a bill to abolish the Encumbered Estates Court (Ireland); enlarge the jurisdiction of the Court of Chancery (Ireland), to increase its powers, and reform its procedure. The bill provided for simplifying and cheapening the proceedings in the Court of Chancery, and abolishing certain stamps and fees; and, to make up the deficiency of the court fees, a charge of 2 per cent would be placed on the amount of all property sold.

Mr. WHITESIDE objected to the abolition of stamps and fees in the chief court, unless the Government were prepared to do away with them in every other court in Ireland, and also to apply the same principle in England.

Mr. CAIRNS, though he approved of the measure, could not consent to the anticipated deficiency, arising from the reduction in stamps and fees, be made up from the Consolidated Fund.

Mr. MALINS deprecated the measure, which he thought impracticable.

Mr. GEORGE objected to pensioning the senior officers in the Court of Chancery, as they were perfectly capable of good service.

Mr. V. SCULLY supported the measure.

Mr. PELLATT obtained leave to bring in a bill to amend the law relating to draughts on bankers.

### HOUSE OF LORDS.—TUESDAY.

The Leases and Sales of Settled Estates Bill was read a second time, on the motion of the Lord CHANCELLOR, after a brief discussion, in which Lord Campbell, the Earl of Derby, and Lord Brougham took part.

The Lord CHANCELLOR introduced a bill designed to remove the doubts which he considered at present existed respecting the authority of the Court of Queen's Bench to order the removal of trials under criminal indictments from the provincial assizes to the Central Criminal Court. The bill was read a first time.

### HOUSE OF COMMONS.—TUESDAY.

In answer to Mr. Elliot, the Lord ADVOCATE announced his intention to bring in a bill for the extension of National Education in Scotland.

Lord PALMERSTON, in reply to Mr. H. Phillmore, promised, on behalf of the Government, a measure on the subject of Ecclesiastical Courts.

BANK OF ENGLAND.

To questions from Mr. Glyn, the CHANCELLOR OF THE EXCHEQUER replied that there was no present intention either to interfere with the existing privileges of the Bank of England, or to institute any inquiry into the effect of the exercise of those privileges by the Bank exercised its functions in relation to the monetary system and circulating medium of the country. Admitting that a time of war was least fit for the commencement of such an investigation, he was satisfied that no opposition would be offered by the Government to any independent motion for a committee of inquiry, should the House consider that step expedient.

RUMOURED ARMISTICE.

In reply to Colonel Dunne, Lord PALMERSTON said, one of the arrangements agreed to at Vienna was that, first of all, preliminaries of peace should be negotiated and signed, and that after that an armistice should be concluded between the parties. The preliminaries have not yet been signed. The terms to be discussed and signed by the Plenipotentiaries when they next met, and it is not until after that that the question of an armistice can be taken into consideration. Of course, until the terms of that armistice are discussed and considered, it would be quite premature for me to state anything about them (Hear, hear).

PUBLIC INCOME AND EXPENDITURE.

Mr. W. WILLIAMS moved for an account of the public income and expenditure, urging many complaints against the Government, who, he declared, still withheld a multitude of details respecting various charges incurred in the collection of the revenue.

After some explanations from Mr. Wilson, followed by a few remarks from Sir H. Willoughby and the Chancellor of the Exchequer, the motion was withdrawn.

COUNTY AND BOROUGH POLICE.

Sir G. GREY moved for leave to bring in a bill to render more efficient the police force in counties and boroughs of England and Wales. By this measure, as the Home Secretary explained, it was not intended to remove the jurisdiction of the county and borough police from the hands in which it was now lodged, the object, however, to render compulsory the establishment of an efficient police force in counties, and to assign authority for the division of counties into districts for police purposes to the Queen in Council.

Sir J. PAKINGTON expressed a general approval of the measure.

Approving opin ons respecting the bill, accompanied by some slight alterations on matters of detail, were after wards expressed by Mr. Hamilton-Nisbet, Mr. Deedes, Mr. Rice, Mr. Buck, Lord Lovaine, and several other members. Leave was then given to bring in the bill.

MIDNIGHT LEGISLATION.

Mr. BROTHERTON moved a series of resolutions providing that pending the debate on any stated adjourn at at midnight, and that no opposed business should be entered upon after midnight, and that no opposed business should be entered upon and no committee work proceed after that hour. Remarking upon the injury to health sustained by members from the recent late sitting, accompanied, as he believed, with no benefit to the public, he suggested some regulations for the more speedy dispatch of business, and, among other contrivances, recommended some distribution of public time for the omission of useless speeches.

The motion was seconded by Mr. Ewart

Lord PALMERSTON recognised the benevolent intention which had prompted the motion, but thought that its adoption would seriously hamper the transaction of legislative business.

Mr. WILLIAMS and Mr. Bass having briefly supported the motion, the House divided:—For the motion, 90; against it, 111: majority, 21.

CHURCH-RATES.

Mr. PACKE sought leave to introduce a bill abolishing Church-rates, except for certain specified purposes, making provision for the maintenance of the fabric and necessary fittings of parish churches, enabling persons to redeem their liability to Church-rates; and, otherwise amending the law respecting the assessment, levy, and collection of the rate throughout England and Wales. After remarking upon some previous attempts at legislation on this important subject, the hon. member described the provisions of his present measure. The Church-rate hitherto required for the performances of Divine service was to be wholly abolished, and all occupiers were to be exempted from paying the rate, which was to fall on the owners, these also being allowed to redeem their liability on the payment of a reasonable sum.

Sir W. CLAY, while assenting to the motion, intimated his intention himself to propose, in a few days, a bill for the total abolition of Church-rates.

After a few words from Mr. E. BALL, leave was given to bring in the bill.

The ATTORNEY-GENERAL for IRELAND obtained leave to bring in two bills respecting Juries and Common Law Courts in Ireland.

### HOUSE OF COMMONS.—WEDNESDAY.

Mr. Labouchere took the oaths and his seat for the borough of Taunton, on his re-election on his appointment to the office of Secretary of State for the Colonies.

PARTNERSHIP AMENDMENT BILL AND JOINT-STOCK COMPANIES BILL.

On the motion of Mr. LOWE, the second reading of these bills was fixed for Friday.

Mr. HASTIE trusted that a longer postponement would take place. When the bill came to be fully understood the country would be found to be perfectly unanimous against it.

Several other members spoke in favour of postponement.

Mr. MUNTZ believed that the bill, if passed, would be a complete delusion on the commercial interests, and would be as great a failure as the bill of last year. There was nothing commercial in the bill: it was nothing but a philosophical scheme.

After some further discussion, it was arranged that the second reading should be taken on Friday of that evening.

METROPOLITAN POLICE BILL.

Sir G. GREY moved the second reading of this bill.

In reply to some questions put by Sir H. Willoughby, Sir G. GREY stated that the bill would involve no increase of charge to the public, and that the Chief Commissioner would act under the same authority as was defined under the existing Acts of Parliament. The present bill would in no way interfere with the authority under which the Commissioners would act.

The bill was then read a second time.

SUPPLY.

Mr. WILSON brought up the report of the Committee of Supply; and stated, in reply to a question put by Sir H. Willoughby, that it was not the intention of the Chancellor of the Exchequer to make any Financial Statement with respect to the past year before proceeding with the Estimates.

### HOUSE OF LORDS.—THURSDAY.

LIFE PEERAGES.

The House was crowded in every part by persons anxious to hear Lord Lyndhurst's speech upon the Wensleydale peerage.

Lord LYNDHURST rose to question that the following motion, viz —

That the patent for creating the Right Hon. Sir James Parke, Knight, a Baron of the United Kingdom, and laid upon the table of this House, be referred to the Committee for Privileges, to consider and to report thereon.

The noble and learned Lord said the subject which he was about to bring under the notice of their Lordships was one of the utmost importance, as it related to the composition of their Lordships' House. It must not be supposed that he had any personal objection to the elevation of his noble friend to the peerage; he only objected to the manner of his elevation. He had been strongly urged by his friends to bring this subject under the consideration of their Lordships. He did not mean to call in question the prerogative of the Crown, but only the mode in which the responsible advisers of the Sovereign had recommended her Majesty to exercise it. For a period of 460 years no similar tenure of a peerage for life had been conferred; it had a tendency to destroy the peculiar character of that House, and he contended that it was a gross violation of the principles of the Constitution. The first patent for the creation of a Peer, which was cited in justification of the late creation, was issued in the reign of Richard II.; but so strong was the feeling upon this subject that in the following year the patent was abolished, and a pension granted as an equivalent. The noble Lord went on to quote other supposed precedents, particularly life peerages conferred by Queen Anne on her brothers in the beginning of his reign, but which he subsequently revoked, granting in their stead corresponding dignities to descend on their male heirs The reason assigned for this reversion was that it was necessary to add to the judicial strength of the House. He, however, contended that there never was a time at which the House was distinguished by more judicial strength and ability than the present. No such necessity could, therefore, be considered a justification for so palpable an encroachment on their Lordships' privileges. The noble and learned Lord, after an eloquent peroration, considered by the reception of which he had given notice, and resumed his seat amid loud cheers.

Earl GRANVILLE paid a high compliment to the speech just delivered by Lord Lyndhurst, but contended that it was absolutely necessary to keep up the judicial strength of that House, at a period when so many important questions turning upon law were brought under their consideration. This was the principle on which the creation had been effected by the Crown to add to the judicial strength of the House. In 1851 an offer of a life peerage was made to a learned Judge, but declined from personal motives—that was the individual referred to disapproved of this act of the Crown, but rather that it would be in discreet in him to be the first instrument of the innovation from ordinary practice. The case must be mixed up with the legal, constitutional, and expedient questions together; but he shrunk from asserting that the creation was not legal. He (Earl Granville) contended that it was legal (and constitutional), and, being so, it followed easily that it was expedient.

Lord St. LEONARDS supported the views taken by Lord Lyndhurst.

The Lord CHANCELLOR opposed the motion, contending that the creation of a life peerage was perfectly constitutional.

Lord CAMPBELL gave it as his opinion that the creation was illegal.

Earl GREY supported the motion.

After a lengthened discussion, which lasted until half-past two, their Lordships divided, when the numbers were—

For Lord Lyndhurst's motion:—

### HOUSE OF COMMONS.—THURSDAY.

Mr. BAINES took the oaths and his seat upon his re-election for Leeds.

IMPRISONMENT OF THE BRITISH CONSUL AT COLOGNE.

Lord PALMERSTON, in reply to Mr. Baillie, said he did not think it would be expedient to lay upon the table of the House the correspondence which had taken place between the Government of this country and that of Prussia upon the subject of the imprisonment of the British Consul at Cologne, for an alleged violation of the Prussian law in connection with the conscription. The King of Prussia, out of respect to her Majesty, had caused Mr. Curtis to be discharged from prison, and the question might, therefore, be considered as settled.

REFORM OF THE ECCLESIASTICAL COURTS.

Mr. COLLIER applied for leave to introduce a Bill for the Reform of the Ecclesiastical Courts, its principal object being to transfer the administration of property to County Courts when the amount was under £300, and to the superior courts when the property bequeathed was beneath that amount. Mr. Bass opposed the motion. After some discussion, leave was given to bring in the bill.

ADMINISTRATION OF THE NAVY.

Captain SCOBELL moved for a Select Committee to inquire into the Naval administration; and the state of officers, patronage, promotions, and retirements, and to the efficiency of the service in all the grades belonging to it. The hon. and gallant gentleman strongly condemned the system of patronage exercised, by which aristocratic influences and family connections were allowed to predominate over ability and merit.

Admiral WALCOTT seconded the motion.

Sir C. WOOD defended the Admiralty from the charges brought against it, and specified the promotions that had taken place. He denied that there was any undue favouritism exercised; in proof of which he stated that out of 144 promotions of Lieutenants to Commanders, 101 were made by the Board for acts of service, while only 34 were made by the First Lord of the Admiralty, and some of them were for length of service.

After a long discussion, the House divided, when the numbers were—For the motion, 80; against it, 171: majority in favour of the Government, 91.

### HOUSE OF LORDS.—FRIDAY.

Earl GREY asked Lord Campbell what advice he would be disposed to recommend in the event of the Committee of Privileges concurring in his views in regard to the Wensleydale peerage?

Lord CAMPBELL said, on the advice of Lord Lyndhurst, he was not prepared to say; but he hoped that the Government would take such a step as would render any further measure upon the subject unnecessary, namely, by conferring the peerage upon the Right Hon. Sir James Parke and his heirs male.

The Earl of DERBY concurred in the suggestion.

Earl GRANVILLE said on the table a Bill creating a Vice-President of the Council of Education. The intention was to select a member of the House of Commons for the office.

### HOUSE OF COMMONS.—FRIDAY.

NEW MEMBERS.

Lord Raynham and Mr. Warren took the oaths and their seats for the boroughs of Tamworth and Midhurst.

Sir C. Wood, in reply to Admiral Walcott, stated that it was intended to confer a medal on the officers and men of the Arctic Expedition as soon as possible.

Mr. PEEL announced, in reply to Lord W Graham, that Sir R Airey and Lord Lucan were about to issue statements in their own defence against the animadversions made on them in the Report of the Crimean Army Commission.

ESCAPE OF THE RUSSIAN SQUADRON IN THE CHINA SEAS.

Mr. H. BAILLIE drew attention to the circumstances under which the Russian squadron had escaped from the China Seas, by way of the river Amoor, and asked whether the Government had received any official communication on the subject; and also whether they were satisfied with the conduct of Admiral Seymour and Captain Elliot; or, if not, did they intend to submit the conduct of those officers to the judgment of a court-martial?

Sir C. WOOD admitted that, owing to the want of strength of the English squadron itself, and the ignorance of its officers as to the existence of a northern outlet to the Bay of Amoor, there could have been no help for it but to let the Russians escape. The strength of the Russians was vastly superior to that of the force under Captain Elliot, yet the gallant Captain challenged the enemy to come out to fight. The enemy, however, refused the challenge, preferring rather to escape by an unknown channel. This was the best answer he could make to the question impugning the conduct of the English Commanders (Hear).

THE DISPUTE BETWEEN ENGLAND AND AMERICA.

Mr. COBDEN complained of the delay which had taken place in the production of the correspondence relative to the Central American question. That correspondence had already been published in London from an American source; but, because it had not been regularly produced by the Government, it could not be referred to in Parliament. It was also time to produce the correspondence relative to the enlistment question; and he, for one, wanted to know why the men who could have advised enlistment in America, where common labourers were paid 4s. a day, while our soldiers got only 1s. a day. He called upon the House not to be led astray by the secrecy of the Government or the extravagance of the English press, but boldly to grapple with the two questions in dispute, and save this country from a war with America.

Lord PALMERSTON explained that the Government terminate of this country and America differed altogether in the interpretation which they put upon the Clayton-Bulwer Treaty in reference to Central America. The British Government had, however, agreed to refer the subject for the arbitration of any third disinterested Power; and, although no reply to the offer had yet been received, he hoped the good temper and common sense of both countries would tend to the preservation of peace. With regard to the enlistment question, he contended that the British Government had a perfect right to enlist persons who had emigrated to America, whether English, Irish, or Germans, and who might have become desirous of returning home; and, it was to such persons the attempt to enlist was made. At the same time, strict injunctions were given that nothing should be done in violation of American law or international law generally. If any breach of such law had taken place, or any offence been given to America, her Majesty's Government had expressed their sorrow, and desired from the attempt. He thought that in so doing they had gone as far as could be expected (Hear, hear). As for the correspondence, as soon as it was concluded, it should be produced, and every thing the House would then be in possession of all the facts of the case, and able to judge of the conduct of her Majesty's Ministers in connection with it (Hear, hear).

Sir DE LACY EVANS condemned the exaggerated statements of the members of the Peace party and of others as to our relations with the United States; and expressed his opinion that their conduct was more likely to embroil the two countries than to heal the existing wounds.

The subject then dropped.

The METROPOLITAN POLICE BILL was read a third time and passed.

PARTNERSHIP AMENDMENT BILL.

The order of the day for the second reading of this bill was read.

After considerable discussion the bill was read a second time.

The Joint-stock Companies Bill, the Burial of the Dead (Ireland) Bill, the Youthful Offenders (Ireland) Bill, were severally read a second time.

The Poor Law Commons Officers Bill passed through Committee.

Sir W. CLAY obtained leave to introduce a bill for the abolition of Church Rates.

Mr. HEADLAM obtained leave to introduce a bill to amend the laws relating to the Medical Profession.

Lord PALMERSTON said he would give the measure all the assistance in his power.

## OBITUARY OF EMINENT PERSONS.

### THE EARL OF LISTOWEL.

THE RIGHT HON. WILLIAM HARE, K.P., second Earl of Listowel, Viscount Ennismore and Listowel and Baron Ennismore in the Peerage of Ireland, whose death from paralysis occurred at Morrison's Hotel, Dublin, on the 3rd instant, was the grandson of the first Earl of Listowel, being the eldest son of that Peer's elder son Richard Viscount Ennismore, M.P. for the county of Cork, who died, *vitâ patris*, the 24th September, 1827. William, second Earl of Listowel, succeeded to the family honours the 13th July, 1837, on the decease of his grandfather. He was (being an Irish Peer only) elected member of Parliament for the lately-disfranchised borough of St. Albans, in February, 1841, and again at the general election in that year; and continued to represent the place in the House until the dissolution in 1847. It is true that his Lordship took little or no part in politics, but has held the office of a Lord in Waiting to the Queen. He was also a Deputy-Lieutenant and magistrate for the county of Cork, and Vice-Admiral of the province of Munster. He married, the 23rd July, 1831, Maria, daughter of the late Vice-Admiral William Windham, of Felbrigg, Norfolk, and leaves issue four sons and six daughters. Of the latter, one is Mrs. Granville Leveson Proby; and another, the Lady Victoria, had the honour of her present Majesty for godmother. The Earl is succeeded by his eldest son, William Viscount Ennismore, now the third Earl, who became Lieutenant and Captain in the Scots Fusilier Guards in 1854, and was severely wounded at the battle of the Alma. His Lordship was born the 30th May, 1832, and is unmarried. His mother, the Countess of Listowel—the daughter, as stated above, of the late Vice-Admiral William Windham, of Felbrigg, Norfolk—was first married to the late George Thomas Windham, Esq., of Cromer Hall, Norfolk, a near relative of the gallant General Windham whose name is so nobly associated with the last and successful assault on Sebastopol.

### SIR THOMAS L. MITCHELL.

COLONEL SIR THOMAS LIVINGSTONE MITCHELL, K.C., D.C.L., a distinguished Australian colonist, died at Sydney on the 5th of October last, of bronchitis. Sir Thomas Mitchel, was a D.C.L. of Oxford, as well as one of the War A.D.C's of the Duke of Wellington, and it might be truly said that he was "Tam Marti quam Musis dilectus." Entering the Army at a very early age, he passed through the most active period of the Peninsular campaigns, as the five clasps on his war medal sufficiently testify. At the close of the war he was sent into Spain and Portugal to survey the different fields of service in which he had been engaged, and several of his models may be seen in the United Service Institution; but, though sent out under the direct auspices of the Duke of Wellington, and introduced by Mr. Canning, the then Ambassador at Lisbon, to the immediate protection of Ballasteros, the Spanish Prime Minister, such was the jealousy of his surveys entertained in Spain, and so vengeful its expression, that he often worked at the hazard of his life with a theodolite in one hand and a rifle in the other. The interesting survey was, however, at length accomplished, and remains a palpable proof of Colonel Mitchell's talents, perseverance, and courage. On his return to England Captain Mitchell was employed, under the late Sir Henry Torrens, in drawing the manœuvres of the Army, according to a plan of his own invention, by which accuracy could be tested on emergencies, and under which test many old errors of movement in echelon and wheeling were exploded, and new methods of forming squares were introduced from his drawings. Shortly after this work was completed Sir Thomas Mitchell received from George IV. the commission of Surveyor-General of New South Wales. On this arduous service Sir Thomas Mitchell expended the last twenty-eight years of his life. He cut all the passes which lead now through the mountains to the interior of the Australian continent; laid out upwards of two hundred towns and villages; conducted four expeditions of discovery, during one of which he conquered from the aborigines, and surveyed at the same time, Australia Felix, in which is now the auriferous region, and he has been deservedly styled as the "Cook of the Australian interior." In the year 1839 Sir Thomas Mitchell received the honour of Knighthood at the hands of her Majesty, in appreciation of the benefits he had rendered to the colonists. About this time he published his "Three Expeditions into the Interior of Eastern Australia;" and in 1848 he brought out a second work on his Australian discoveries, "A Journal of an Expedition into the Interior of Tropical Australia, in Search of a Route from Sydney to the Gulph of Carpentaria." Besides these, Sir Thomas was the author of several other works. His "Manual" and "Platoon Exercises" have for upwards of thirty years formed part of the requisite equipment of young officers joining the Army, as his plans of battles, drawn at the Royal Military College, have been for many years the studies for the military students of the Senior Department at Sandhurst. When last in England he published a beautiful Trigonometrical Survey of Port Jackson on a large scale, and a translation of the "Lusiad" of Camoens. At the same time he introduced into England his invention of the boomerang weather, which is patronised in England and America, and adopted in many vessels plying between Liverpool and the United States. Sir Thomas represented Melbourne for some years in the Legislative Assembly of New South Wales. He was a Fellow of the Royal, Geographical, and Geological Societies, and other learned bodies. He was the eldest son of John Mitchell, Esq., of Carron Works; was born 1792; and married, in 1815, the eldest daughter of General Blunt. He was chief of the Mitchells of Craigend, which family took the name of Livingstone on a marriage with the sole heir of J. Livingstone, Esq., of Halning, brother to Viscount Kilsyth (attainted 1716).

## MUSIC.

The anniversary meeting of the Purcell Club was held on Tuesday at the Albion Tavern in Aldersgate-street. A numerous assemblage of members and visitors, among whom were many of our most eminent professional musicians and amateurs, sat down to dinner; the chair being occupied by Professor Edward Taylor, of Gresham College, the founder and president of the club. Mr. Taylor was supported in the chair by Mr. Evans, the president of the Western Madrigal Society; Mr. Dixon, the President of the Glee Club; and several other distinguished lovers of English music. The entertainments of the evening were of the highest interest. They included specimens of Purcell's genius in every style; several of his most sublime anthems written for the choir of Westminster Abbey when he was at its head; a selection from the music in "The Tempest;" and some of his finest songs, concerted pieces, and choruses from his other dramatic works. Mr. Turle, Purcell's worthy successor as organist of Westminster Abbey, conducted the performances. Mr. Benson, Mr. Lawler, and Mr. Montem Smith sang the principal solos; and the concerted pieces and choruses were sustained by a number of admirable singers—the *élite* of the various cathedral choirs, especially that of Westminster Abbey. Every piece had been carefully studied and rehearsed under Mr. Turle's superintendence; and the result was a performance which, for precision, purity, and expression, could scarcely have been surpassed. The company—all of them conversant with Purcell's works, and intelligent admirers of his music—were delighted; and some of the most exquisite gems of his genius—particularly the lovely song of *Ariel*, "Come unto these yellow sands," accompanied by its aerial chorus; the music of laviable spirits announcing *Ferdinand* the death of his father, "Full fathom five thy father lies;" and the fresh and charming chorus, "The Nereids and Tritons"—were re ived with bursts of enthusiasm. The celebrated duet, "Haste, my Deridar," was admirably sung by Messrs. Smith and Lawler. We have never been able, by the way, to discover how the soft and musical name "Damilcar," which is found in every edition of Dryden, has been corrupted into so harsh and uncouth a word as *Daridear*. It is evidently a mere blunder in printing Purcell's music, and the singers ought to correct it. The song "I attempt from Love's sickness to fly," one of the most graceful and expressive melodies ever imagined, was sung by Mr. Benson with exquisite taste and feeling, and encored with acclamations. There cannot be a better president of a musical institution than the Professor of Music in Gresham College. Though old in years, knowledge, and experience, Mr. Taylor retains all his youthful ardour and devotion to his art. He has converted his professional chair, which for more than a century had been a mere sinecure, into a most efficient and important School of Music. His lectures—in which learning, research, and solid information, are adorned and made attrac ive by the graces of eloquence and fancy—are constantly attended by eager audiences, who crowd his lecture-room to the doors; and it may be truly said that no one man has ever done so much for the diffusion of sound musical knowledge and pure taste among the people of London. The Purcell Club owes to him its existence: it was founded by him, with the aid of a few kindred spirits, twenty years ago; and so judiciously was it planned, and so ably has it been carried on, that its progress has been regular and uninterrupted, till it has become one of the most prosperous and important musical associations in England. The works of the most illustrious of English musicians, though they are, through foreign influences, at present too much neglected by his countrymen, are daily becoming known to a wider and wider circle, which the Purcell Club mainly contributes to extend, and which will one day embrace every English amateur worthy of the name.

Mrs. T. German Reed (late Miss P. Horton) has removed her very agreeable and popular Musical Entertainment to the Gallery of Illustration, in Regent-street, where it was given for the first time on Monday evening; the room having been fitted up and elegantly decorated expressly for it. The performances are substantially the same as before, though the musical delineation have been introduced. The most remarkable feature of the entertainment, "The Enraged Musician," is as clever and attractive as ever. It is Hogarth's famous picture put in action. Mr. Reed personates the unfortunate virtuoso distracted by a series of annoyances, in all of which Mrs. Reed is the agent—being at one time an Italian organ-grinder, at another a noisy maid-of-all-work, and again a French cantatrice applying for an engagement. Mrs. Reed sings beautifully throughout the entertainment; her performances of "Robert, toi que j'aime," in the character of the French prima donna, Madame Cassandre Chanterie, though slightly burlesqued, is really a very finished and beautiful piece of vocalisation. It is a sad thing that, while we have such admirable dramatic singers as Miss P. Horton, we have not a single musical theatre where they can appear.

Beaumont Institution.—A grand concert (the second of the season) took place at this Assembly-room on Monday evening last; the vocalists being Miss Dolby, Miss Lucy Escott, Miss H. Stage, Mr. Sims Reeves, Mr. Winn, and Mr. J. L. Hatton. The instrumentalists included numerous amateurs, and was in every respect successful. In securing the services of Mr. Sims Reeves to their series of concerts the managers display both taste and foresight. The name of our great tenor, at the same time that it is certain to "draw a good house," elevates the character of the concert with which it may be connected. On the present occasion Mr. Sims Reeves did full justice to his fame. In the song of "Di Peccatore," from the opera of "Lucrezia Borgia," and the ballad of "Good Sorrow" by Charles Mackay and Frank Mori, he was most vigorously applauded and sang for an encore of the former Hatton's popular song of "Good bye, Sweetheart." For the second encore he repeated the graceful little ballad itself, rendering it with a pathos and a gallantry combined which gave it an indescribable charm. Miss Dolby, who contributed to the evening's entertainment no less than four songs, was received with that honour which is due to her high position among English vocalists. Of the other performers we will merely mention Miss Lucy Escott, who sang with remarkable power and feeling, and Mr. J. L. Hatton, who accompanied himself to a new comic song, of his own composing, called "Kit the Cobbler."

On Ash Wednesday all the Theatres were closed except Covent Garden, where a "monster concert" was given. There was an army of performers, including upwards of a hundred names; among the singers, Madame Carafori, Miss Escott, Madame Amsdel, Miss Stabbach, the Messrs. Braham, and some others; among the instrumentalists, Mr Collins, Mr Case, and M. Billet. The concert was of enormous length, the programme containing between forty and fifty pieces; but there was nothing new or interesting to the musical amateur. The theatre was well filled, but by no means crowded.

Sacred Harmonic Society.—Mr. Costa's oratorio, "Eli," which created so much interest at the last Birmingham Festival, will be performed for the first time in London at Exeter Hall on Friday next.

## THE THEATRES, &c.

Adelphi.—Various works of Mr. Dickens, like several of Sir Walter Scott, have been adapted to the boards, with more or less success; and this year the minor and remote theatres have been diligent in manufacturing versions of "The Holly-Tree Inn," and digesting its many stories into one amalgam, or drama, containing the characters of each connected by such threads of association as might prove available for the purpose. One story, that of "Boots at the Inn," containing the narrative of the Indian Elopement to Gretna, tempting as it is, has proved too delicate for general manipulation. Mr. Webster, however, has undertaken the difficult task with his accustomed courage; and, in our opinion, has come out of it triumphantly. He perceived at once that it was necessary to make *Cobbe* the central figure; and, therefore, undertook himself the delineation of that master of the ceremonies, who was to introduce the snowed-up traveller of the inn to the delicious pair of little lovers with whose strange secret he had become acquainted. The piece commences with the exterior of the inn, the arrival of the coachman and guard with their inside passenger, cleverly individualised by Mr. Parselle; the interior of the inn, however, is soon presented, with its large room and dark red curtains, and comfortable screen, with *Cobbe* in extreme (he lonely and modest guest with the tale of the preliminary love-makings of the infant Henry Walmer and his attached Norah. So much for the needful proem of the little pastoral, when, some expedient stage-business having been dispatched, the tiny hero and heroine themselves enter, their appearance being the signal for the exterior of the inn, Manning and Miss Craddock both capital representatives, the hero in particular being admirably impersonated. Mr. Webster here manifests with the most minute care the sympathetic feelings with which *Cobbe* regards the affianced children, the perplexity of his moral judgments, and the necessity to which he submits in acting for the best. The truth and nature manifested by the actor entitle him to the highest possible praise. But the delineation is not of a kind to compel noisy demonstrations from the pit; nevertheless, it cannot fail of being appreciated by great numbers; and Mr. Webster must not be discouraged by the coolness of its first reception. Ere long it will be thoroughly and generally understood, and then cannot fail of securing a permanent acceptance.

Covent Garden.—Mr. Jerrold's nautical drama of "Black-eyed Susan" was revived on Monday, and the part of the sailor (*William*) performed by Professor Anderson. His assumption of the character was marked by the qualities that gained acceptance for his *Rob Roy*—a roughness and rackness of execution, the sincerity of which atoned for the want of refinement. Miss Harriet Gordon in the part of the heroine acted with good intentions; but her pathos was not powerful enough for so large a house. However, the play on the whole was adequately represented, and the applause of a very numerous audience was exceedingly demonstrative as the curtain fell.

Sadler's Wells.—"The City Madam" was revived on Friday week, when Mrs. Marston enacted the part of *Lady Frugal* for the first time, and performed it in a manner which must decidedly be pronounced the character. The part of *Luke* was powerfully acted by Mr. Phelps; and this fine old play, which commanded a full house, was throughout greatly applauded.

On Tuesday Mr. C. Charles gave, for the first time, a most amusing lecture to the Camberwell Literary and Scientific Institution on "The Ludicrous and Farical Literature of Love," in which the lecturer gave illustrations, from different authors, of love in its different phases, both cheerful and lugubrious. Mr. Charles's sketch of an excited Frenchman and a wide-awake Yankee was most amusing, and showed that he possessed great versatility of talent. The lecture, which bristled with *bon-mots* and clever sayings, was enlivened with several songs, and gave great satisfaction to a large audience.

## NATIONAL SPORTS.

With the publication of the acceptances for the Chester Cup, racing speculation for the coming season may be said to have fairly set in. Only 89 out of the 196 weighted have had the pen drawn through their names, while 45 out of 85, headed by the evergreen Rataplan, 9 st. 7 lb., stand in for the Great Northern Handicap. The steeplechase horses have also accepted in great force for the Liverpool National, Bourton and ten others being the only recusants out of 61. Sir Peter Laurie is, oddly enough, kept at the head of the betting for it, "solely by the City men." Enchanter, the winner of the Molecomb Stakes, and one of Mr. A. Johnstone's Annandale blood, has been backed for the 2000 guineas, for which race, as well as the Chester Cup, Yellow Jack is first favourite. Every effort is being made by the Findon party to induce the public to believe that this very fourth-rate performer has bloomed into a second Teddington during the last three months, but we believe, to get among out of him for one race only, and to let them get quietly on to Scythian, at long odds for the other. Mr. Morris's almost-forgotten Artillery is once more brought into strong play for the Derby at Tattersall's, and 100 to 7 were the latest quotations.

Orestes and Snowdon Dunhill have both gone to the shed: Wild Dayrell's dam has returned to Sweetmeat's paddocks; and Blue Bonnet, who is now the property of Mr. Crawfurd, has had a fine colt foal to Flying Dutchman. Although his friends have watched with sorrow the gradual decline of his health for nearly two years, the racing world were not a little shocked to hear that their favourite, Frank Butler, was no more. Severe lung disease had prevented him from riding in public since the Houghton Saturday of 1853; but he buoyed himself up almost to the last with the prospect of other Derbies yet in store for him, in hope which all who knew his real state felt to be a mere dream. He had been confined to the house about ten days when his last three days of serious illness set in, and he expired quite painlessly about half-past five o'clock on Friday afternoon, in the thirty-ninth year of his age. We have heard that in early life he was destined for the Church, but the ruling passion for the saddle was not to be quenched in a nephew of the brothers Chifney; and hence, beginning at sixteen, he went through nine years of adversity, succeeded by eleven of almost unparalleled triumph. Although he had not, perhaps, the quickness and intuitive genius for riding of Job Marson and Sam Rogers, he was a first-class horseman, and excelled especially in the coolness and elegance of his finishes, which were not inferior to Robinson's in his best days. Much riding was what he loved best, and the extent of his general practice may be judged from the fact that in 1850-53 he rode 234 races at Newmarket, and won 89 of them. During the same period he rode in no less than 324 races, and was successful in 143! As a trier and judge of the qualities and shape of a race-horse he was almost unrivalled, and, notwithstanding a certain reserve in his manner, except to his very intimate friends, no one was more popular in his native Newmarket. Two St. Legers, two Derbys, and six Oaks fell to his share in eleven seasons; and, though West Australian was the horse of his heart, his doings on Ingo, Canezou, Longbow, and a host of others, principally from the Whitewall or Bedford stables, will quite entitle him to a place by Sam Chifney and Frank Buckle in the memory of turfites. He only survived his wife, by whom he had no family, thirteen months. He left no will; but, although he was liberal to a degree, and would have everything of the very best, both in his house and stable, he is supposed to have died worth upwards of £10,000.

The Pembroke Hunt Meeting comes off on Tuesday, and has four steep chases on its list; Narbeth, near Haverfordwest, is fixed for the same day; and the Ilinois a "mixed meeting" for Tuesday and Wednesday. The principal steeplechase here, for which eleven pair of foes, teen accept, is on the list for the first of these days, as well as the Trial and Two-Year-Old Stakes, each of which has nine subscribers. The hanging Way with its sixteen acceptances, and the handicap hurdle race, are the leading items of the second day; and as, owing to the open weather, the thoroughbreds are very forward in their work, we may look for a highly suspicious opening of the racing season.

The frozen-out Sexhunters, who were beginning to dot Pall-Mall and Piccadilly, have once more disappeared to the cover-side; and we hear that their Dorsetshire brethren, yeomen as well as "scarlets," have subscribed £1800 towards erecting a column in the most elevated part of the county, to commemorate Mr. Farquharson's fifty years' mastership. The complaint of a want of foxes in the Pytchley country has been lately aggravated by the rumour that an enormous vixen, evidently one of the Highland breed introduced by the late Lord Alford, was wantonly killed by the keepers on the Duke of Buccleuch's property.

The Court of Exchequer has, after two very elaborate arguments, decided that grouse are, legally speaking, "game," and that trover will lie for them when they are dead. It was, however, equally divided upon the point as to whether the owners of cattle-gates on a grouse-moor could shoot over them without the consent of the Lord of the manor.

The coursing meetings of the ensuing week are arranged as follows:—The Admirable (Hampton Park), on Tuesday; Coquetdale, on Tuesday and Wednesday; and Biggar Common (Open), on those two days and Thursday; Amesbury (open) comes off on Tuesday, &c.; Hewell, on Wednesday; Knipescar, on Thursday; Baldock Club on the same two days; and Sundorne Spring, on Thursday and Friday.

## NATIONAL AFFAIRS.

The Sea of Azoff.—It is said that the Allies do not intend to insist on the neutralisation of the Sea of Azoff; but the newspaper *German*, Allies ought positively to insist on being permitted to trade with the mountaineers on the eastern coast of the Black Sea, who, being in open defiance with their brethren on the western coast of the Caspian, will always be able to give them a hint of what Russia is about on her south and south-western frontier.

Wills.—The will of the Right Hon. Thomas Baron Truro was sworn under £20,000 person alty; the widow is sole executrix and universal legatee by a codicil.—William Mountford Nurse, Esq., of Regent's-park and Brighton, Deputy-Governor of the Union Bank of London, £50,000 personalty.—Admiral Richard Curry, £8000.—Colonel J. Trelawney, H.E.I.C., £60,000.—Captain Rooke, R.N., £40,000.—Captain W. H. Henderson, R.N., £4000.—Captain F. S. Attree, 31st Foot, Crimea, £2000.—A. E. K. Hamilton, Esq., Ogwell House, Newton Abbott, £35,000. C. A. Partridge, Esq., Horsedon, £20,000.—F. W. Urwin, Esq., Camberwell, £14,000. Samuel Stanton, maltster, Northampton, £9000.—G. C. Redman, shipowner, Poplar, £1000.—W. Field, Redditch, needle-manufacturer, £6000.—W. Fuller, Sussex, farmer, died intestate, personalty £14,000.

## NAVAL AND MILITARY INTELLIGENCE.

Orders have been received at Portsmouth to fit out thirty mortar-vessels.

Half-a-dozen of the old hulks in Portsmouth harbour are to be fitted as powder-magazines, for the more immediate supply of our war-steamers.

Several schooners have been loaded with 68-pounder guns at the Arsenal wharf, Woolwich, and will proceed to Portsmouth and Plymouth, the cargo being for the service of the gun-boat fleet now forming at those ports.

Her Majesty has been pleased to confer a Baronetcy upon Lieutenant-General Sir J. Burgoyne, K.C.B., in consideration of the long and faithful services which from an early period in the late war down to the siege of Sebastopol have connected his name with the principal achievements of the British army.

Captain Earlow's company of the Suffolk Artillery marched into Ipswich on Tuesday, from Landguard Fort, to relieve No. 5 company, now under orders for that destination. They have been greatly improved during their nine months' sojourn at Landguard Fort, and their conduct has been indicative of the sound discipline enforced by their commanding officer. Such men are, indeed, a credit to the service. Their appearance and soldierly deportment, as they marched through the streets, afforded matter for general observation.

The iron mortar-float, No. 1, which sustained considerable damage under the experiments at Shoeburyness, has, with No. 2 of the same series, been repaired in Woolwich Dockyard, and they are again ready for service. Some alterations have been considered necessary in the rigging of these boats, which has been changed for a standing lug and fore and sail, the cutter-rigging preventing them from answering the helm. They again bent sail on Tuesday morning. These are to be speedily followed by thirty-two others of the same construction:—viz., twenty from Messrs. Scott Russell's, and twelve from Mare's, the whole to be fitted out and manned at Woolwich.

The Earl of Glasgow has offered to pay an additional bounty of £3 to recruits for the Prince of Wales Royal Regiment of Militia, of the standard height of five feet five inches.

Six sample rockets were fired for experimental purposes from the Arsenal Marshes at Woolwich, on Saturday, with a view of testing the efficiency of an improvement brought out by Captain Boxer on the old Congreve system. The experiment turned out very satisfactorily. It is, therefore, intended to introduce this improved principle in the future manufacture of rockets.

Orders have been issued from the Horse Guards for 260 of the Coldstream Guards and 224 of the Scots Fusilier Guards, with the customary complement of officers, to hold themselves in readiness to embark early in next week on board the *Indus*, at Portsmouth, for active service in the Crimea.

During the last few days a considerable increase has been made in the number of labourers employed in the various departments of the Arsenal at Woolwich. Some idea of the vast amount of labour performed in that establishment, where 5000 hands are constantly employed, may be formed by stating that the consumption of powder on Wednesday last in preparing ammunition for cannon, independently of small-arm cartridges, exceeded 40,000lb. Besides the large number of shells executed in this establishment, contracts with the Scotch, Carlisle, Liverpool, and other foundries are on a very extensive scale: 2000 of these shells are loaded and prepared daily, and 200,000 musket cartridges.

Loss of the War-steamer "Polyphemus."—A telegraphic message from Copenhagen states that the *Polyphemus* was totally lost on the 29th ult., south of Hanstholm Light, north-west coast of Jutland. The master and fourteen hands were drowned. A strong current and fog were the cause of the accident.

The Trade in Contraband of War.—Plentiful cargoes, contraband of war, we continue to be supplied with, arriving in the Elbe without let or hindrance, although a few days ago the arrival of a British war-steamer at Cuxhaven was announced. In less than a week we have received no less than eleven cargoes of sulphur, three of saltpetre, and two of lead, and several of them were brought in British vessels.—*Letter from Hamburg, Feb. 3.*

Private John Penn, 17th Lancers. A penny subscription has been started at Shoeburyness for the purpose of rewarding the Crimean hero with a sum of money for his service. Mr. W. Randall, of the New Inn, Maidstone, who has been appointed treasurer of the fund, will gladly receive subscriptions from the public.

## THE PUBLIC RECEPTION OF ADMIRAL SIR EDMUND LYONS AT CHRISTCHURCH, HANTS.

At an early hour on Monday, the 28th ult., the streets of Christchurch were filled with visitors from the entire neighbourhood for miles round, assembled to do honour to its illustrious townsman. At a quarter to twelve o'clock Sir Edmund Lyons and his gallant relative, Admiral Walcott, with Mrs. Walcott, the two Misses Walcott, Miss Pearson, Mr. Bickerton Lyons, Mr. Algernon Lyons, Flag Lieutenant to Sir Edmund; his son-in-law, the Earl of Arundel and Surrey; his grandson, Lord Maltravers, and the Rev. Mackenzie Walcott, left Winkton House, escorted by a guard of honour furnished by the Royal Horse Artillery, under the command of Lieut. Torriano, the godson of Sir Edmund. The route lay through the hamlet of Burton, where, at White Hayes, on November 25, 1790, he was born; and, at intervals, demonstrations of respect and gratification were exhibited by the erection of wreaths, flags, and arch.

At Purewell Cross the ovation commenced. Three smaller arches led towards a grand triumphal arch, on which was elevated a boat representing the famous *Agamemnon*, filled with boys as seamen; and, on the adjacent house spy-eared the motto "Three cheers for brave Admiral Lyons," and a device at Mr. Newman's, representing a lion crushing an expiring bear. At this point the military were relieved by a party of coast-guardsmen with their own cutlasses, under the command of Lieutenant Burslem, R.N; the horses were removed from the carriage, and about thirty stout blue-jackets harnessed themselves with ropes and drew it onward. A deputation of the inhabitants, preceded by Mr. Aldridge and a band of music, led the way. On passing Stony-lane, the salute of seventeen guns, fired by the Artillery, announced the entrance of the honoured guest of the day. The windows of every house along the crowded road, upwards of a mile in extent, were filled with happy faces, smiling a greeting, every front was decorated; and the air rent with continuous acclamations. On Waterloo bridge, beneath a triumphal arch, appropriately inscribed, a pause was made, while the band played the air of "Cheer, boys, cheer." On the High bridge again there was a halt beneath a turreted arch, which bore the words:—"To the age a defence, to posterity an honourable name."

At the entrance of the High-street, draped with flags, a triumphal arch bore the names of the scene of Sir Edmund's more eminent actions —"Mangick, Constantine, Kinburn, Azoff." Slowly the procession wound its way through the masses which accompanied or was awaiting it. A platform, wreathed with laurel and bearing a standards of the Allied forces had been erected for the accommodation of the chief families of distinction in the neighbourhood, among whom were observable the Earl and Countess of Malmesbury, Colonel Athol Lyons, Admiral Sir Thomas Pasley, Sir Percy and Lady Shelley, Colonel Cameron, Mr. Entwistle, Admiral Dashwood, Sir George and Lady Gervis, Hon Grantley Berkeley, and Major Wadmott, R.M.A. Near the platform, Admiral Walcott, presented to Sir Edmund Lyons the congratulatory address of the inhabitants of Christchurch and its vicinity. The gallant Admiral, who made some 1 ble extemporaneous reply, returned his sincere thanks, and pronounced conscientiously say that the proud gratification which he experienced would be shared by thousands now under his command in the Mediterranean. The people there were now great friends, and he would be reflected in every man in the fleet; and he was quite sure that on that day when they received the news of the welcome given by the people of Christchurch to himself and to the noble sentiments of gratitude would animate the whole of them (Cheers). [The emotion of the gallant Admiral for a moment stifled his utterance.] Recovering himself, he remarked, that he was not ashamed to be thus publicly and adequately thanked at home; and he could

RECEPTION OF ADMIRAL SIR EDMUND LYONS AT CHRISTCHURCH.

Mackenzie Walcott. The usual loyal toasts having been drunk with all the honours, the noble Chairman next proposed "The Navy and the Army."

Admiral Walcott, M.P., acknowledged the compliment paid to the Navy; and Colonel Cameron returned thanks on behalf of the Army.

The Chairman then gave "The Health of Admiral Sir Edmund Lyons, and the heroes of the Crimea and the Black Sea."

The toast was drunk with acclamation.

Admiral Sir Edmund Lyons said: My lords, ladies, and gentlemen—You have done me the honour of associating my name with the names of those who have distinguished themselves in the Crimean campaign. I only wish that I felt myself deserving the praise you have so kindly bestowed upon me. But all I pretend to is an honest and earnest desire to do my duty to my Sovereign and my country to the best of my humble ability (Cheers). The nature of the present war is such as to afford but few opportunities to fleets or large ships to take any prominent or distinguished part. In the Black Sea the Russian fleet has been self-annihilated, and we had the mortification of seeing their ships of war sunk beneath the waves by their own hands instead of by our broadsides. In the Baltic, again, the enemy's fleet has lain at anchor, secure, under the shadow of their own granite walls and stupendous batteries. The Commanders-in-Chief in the Baltic have had to report many daring and successful exploits performed by the officers and men under their command; and I have had the satisfaction of reporting what has taken place in the Sea of Azoff, where I think I may say, without any fear of contradiction, and with perfect safety, that the exertions of the Commanders-in-Chief have been seconded by as gallant a band of young officers as ever went forth in the service of their country (Cheers). I hope you will do me the justice to believe that it is impossible for any man to feel more sensible than I do of the honour which has been paid to me, not only in this room, but out of doors; and I shall return to my command with an increased desire, if that be possible, to do my duty. (The gallant Admiral was loudly cheered on resuming his seat.)

A number of other toasts were given, including "The Ladies" and "The Officers of the Royal Artillery;" after which the party broke up, highly delighted with the proceedings of the day. At five o'clock Sir Edmund Lyons returned with Admiral Walcott to Winkton. The gallant officer was accompanied to the outskirts of the town by an enthusiastic multitude.

## NAVIGATION OF THE RIVER ELBE.

A novel and important experiment has just been made on the Elbe, with a view to ascertain how far it is practicable to keep the navigation of that river open during the winter.

At present all communication by sea between this country and Hamburg is completely stopped during a considerable portion of the winter months, or is only partially carried on at irregular intervals as far as Gluckstadt, thence by railway to Hamburg.

The rapidly-increasing traffic has forced on the attention of the Hamburg authorities the vast importance of an uninterrupted navigation; and the owners of the screw-steamer *Pollux* undertook the apparently dangerous task of proving that so desirable a result may be attained without much difficulty, and at a cost trifling compared to the very tedious process now adopted to break the ice and clear the navigation.

The *Pollux* is the property of Hamburg owners, and was built by Messrs. C. Mitchell and Co., of Newcastle-on-Tyne, for the London and Hamburg trade. The vessel, having discharged her cargo at Gluckstadt, was trimmed by the stern, in order to bring her fore foot up, and present an inclined plane to the action of the ice.

The passage up the river, through the drift ice, was accomplished without danger. The fast ice, commencing in the neighbourhood of Blankenese, was about nine inches in thickness; and, when attacked by the steamer, was broken with perfect ease, and to a considerable distance on each side of the vessel, leaving a free channel of about sixty or seventy feet in width. The process was only conducted during ebb tide, so that as the pieces became detached they floated away with the current, freeing the vessel from impediments in her upward course, which she steadily pursued at the rate of about a mile per hour. The only difficulty encountered was opposite Altona, where the branch of the Elbe had caused an accumulation of ice, in many places five feet in thickness; yet even this compact mass yielded to the repeated attacks of the *Pollux*'s iron stem: and, so far as could be seen, without injury to the vessel—another proof of the great strength afforded by iron as a shipbuilding material. Our Illustration is taken at this point in the experiment, and gives a very just idea of the situation. If, then, so much can be accomplished in a few hours by a vessel in no way peculiarly adapted for the work, we may reasonably expect that a vessel constructed for the purpose, and plying constantly during the formation of the ice, will be able to keep the river sufficiently free to allow an uninterrupted communication with Hamburg during the winter. Messrs. Mitchell were present at the experiment, and are preparing designs for an iron steamer to meet the circumstances of the case; and the Hamburg authorities will, no doubt, gladly avail themselves of the experience so liberally afforded them by the owners of the steamer *Pollux*.

NAVIGATION OF THE ELBE.—THE STEAMER "POLLUX" CUTTING THROUGH THE ICE AT ALTONA.

MR. W. H. WOODIN'S ENTERTAINMENT, "THE OLIO OF ODDITIES."—SCENE, "THE LAKES."—(SEE NEXT PAGE.)

## PARIS FASHIONS FOR FEBRUARY.

Since the 1st of January we have seen at balls and soirées several splendid articles offered as presents to ladies and little girls. At the Théâtre des Italiens, the place where the greatest luxury is displayed, some charming ball-dresses have appeared. Flowers *for coiffures*, which were last year somewhat laid aside, seem in greater favour this year; although some persons still prefer gold and silver ornaments. Thus at the last ball at the Tuileries an English lady of great beauty wore a magnificent robe of purple *moiré antique*, sprinkled with bouquets of gold. The skirt had two tunics, trimmed with black lace, the upper part with gold binding. The corsage was similarly ornamented. A dress of gold filigree, trimmed with pearls and ribbons, completed this splendid toilet. Another robe was of white *moiré antique*, with the upper part of tulle *en point d'Angleterre*, upon which were arranged fine purple cactuses, with brilliant leaves of red and green shades. The head-dresses matched.

Another favourite fashion this year is that of feather trimmings. A robe of rose-coloured tulle, for instance, has four flounces, upon which little white blondes, rose-coloured satin ribbon, and marabout fringes alternate. Marabout is preferred to ostrich feathers for ball ornaments, as being much lighter. Ostrich feathers are, however, worn as beadings to lace flounces *for costumes de ville*.

As to fans, it will be remembered that Gavarni designed the one chosen by the Empress. This fashion continues; and it is from Gavarni's graceful pencil we derive a charming water-colour in the delicate border of Duvelleroy.

Some days since, at the marriage of Mdlle. Cruvelli and M. le Baron Vinier, the bride's dress was the latest and most splendid of this kind of toilet. The robe was of white *moiré antique*, the skirt of which had two tunics of English point lace, each fringed with white marabout. The corsage was of the same material, high, and *à basques*. It was inclosed in front by a series of little bows upon which was placed a bouquet of orange, lilac, and white oak flower-buds, the lower part being finished by delicately thin streamers running in the space between the *basques*: the latter were ornamented with two rows of English point lace and marabouts. Above the sleeves was a bracelet of orange-blossoms; above, a *bouffant en noire*, with marabouts; and below, two rows of English point lace. The whole of this splendid toilet was covered with a lace scarf coming from out the back hair and falling over the shoulders.

Another charming novelty already in fashion is the *Bretelle Napolitaine*. It forms a low corsage, cut square upon the breast and thrown back: it is made of black lace alternately with *treillis de jais* and of velvet; it finishes off *en pointe*, and floating bows before and behind. It is worn with a low corsage, and replaces the berthe and other ornaments. With a high corsage it serves for an ornament, and completes the toilet.

### THE ILLUSTRATIONS.

Robe of white *moiré antique*; skirt without flounces; covered with a tunic of English point. Low corsage, *à bretelles*; short sleeves, *à bouillon*, closed by a wristband, whence comes a small lace flounce *ruché*. Coiffure as *cache peigne*, with ends hanging over the shoulders and forming a *bandeau* upon the hair.

Robe of white crape with seven *bouillons* of black crape

PARIS FASHIONS FOR FEBRUARY.

ACONITE (ACONITUM NAPELLUS), MONKSHOOD, OR WOLFSBANE.—(SEE NEXT PAGE.)

ornamented with small *choux en violettes de Parme*, with half the skirt raised on each side by two bouquets, forming a hook. The edge of the half-skirt is trimmed with three rows of white crisped silken fringe. No. 4.

*Corsage decolleté*, with a berthe falling upon the arm. The front of the corsage is formed of a square of white velvet *épinglé*. Short sleeves, bouillons trimmed with fringe, lower than those of the half-skirt. Head dress: two ostrich feathers, crisped, placed behind the bands, and turning round the comb.

Robe of tulle, with three flounces; the corsage *en draperie*. Head-dresses, of *bleuets bleus*, and forming a kind of diadem upon the *bandeau*.

Robe of black velvet, with a *draperie à berthe*, trimmed with a small black silken fringe. Head-dress of ribbons *Algériens*, mixed with gold and silver threads.

Gentlemen's dresses are still the same: white waistcoat and cravat, black trousers, and black coat with loose sleeves.

## MR. W. S. WOODIN IN HIS "OLIO OF ODDITIES."

No one who has traversed the streets of the metropolis during the last three or four years can have failed to observe this now familiar name, magnified by letters of formidable proportions on broadsides of all hues and sizes, craving attention at every place available for mural advertising. It is entirely within the above period that Mr. W. S. Woodin has attained, as a "Polygraphist," a popularity scarcely second to any in the wide range of metropolitan entertainers, though he emerged at once upon the world as a caterer for their amusement, without going through more than a preliminary course of private practice to qualify himself for such an arduous undertaking. Since then he has given one thousand representations of his two famous entertainments, the "Carpet Bag" and the "Olio of Oddities," and has become a universal favourite. Occupying that neutral ground which lies beyond the province of the drawing room, and stops short on the verge of the department of the stage, Mr. Woodin united, with that framework of the monologist which the late Charles Mathews had first essayed, the attractions of superior costumes, more refined literature, and quicker transitions of dress, together with the valuable additions of music and painting, which till then had never been comprised with the rest in one entertainment. His success was at once immediate and genuine. From his first appearance at the Marionette Theatre in October, 1852, he fairly carried the public with him. Not only did he find admirers of his finished vivacity and his extraordinary metamorphoses of voice, figure, and costume among those accustomed to the glamour of theatrical illusion, but he became at once the popular favourite of that very large section of the community that, discountenancing stage entertainments, are yet appreciating auditors of a representation where the highest amusement is associated with the strictest propriety. This, which may be partly construed into the reason of Mr. Woodin's great success, forms at the same time his highest eulogium. There is no vulgarity in what he does, and you see the artist in his assumptions.

But is allied with refinement, and good humour with good taste. The building in King William-street, Strand, which he has fitted up in the most costly and elegant fashion, and at which, under his own designation of "The Polygraphic Hall," he has for nearly a twelvemonth been giving his last production, "The Olio of Oddities," was only known, before it came into his possession, by a series of failures. To him, and the celebrity he brought with him, is due the fact of this being now one of the best-attended places of amusement in London. A whole page of critical eulogy lies condensed in this brief statement. Of the talent Mr. Woodin has shown in here sustaining, night after night, some fifty distinct characters, embodied by himself with wonderful rapidity of contrast, our readers have already had, or they soon may have, an opportunity of judging. It is very rarely we find so many varied qualifications united in one individual; and with these elements of success, combined with the great advantage of youth, there is some certainty in prophesying for Mr. Woodin a long and triumphant career in the vocation he has adopted. Our illustration exhibits the polygraphist in his own person—the most difficult achievement for the artist, as he is somebody else every three minutes—and at the same time indicates one of those beautiful views which pass before the eye of the spectator in Mr. Woodin's admirably-painted panorama of the lakes of Cumberland and Westmorland.

## CASE OF POISONING WITH MONKSHOOD

*(Aconitum Napellus).*

WE have been favoured by Mr. G. Lawson, Demonstrator of Botany and Vegetable Histology to the Edinburgh University, with the following account of the case of poisoning with Monkshood at Dingwall, briefly recorded in the ILLUSTRATED LONDON NEWS of last week, together with details of the natural economy of the plant.

A gloom has been cast over Ross-shire and other counties in the north of Scotland by a calamitous occurrence which has led to the death of three gentlemen—two of them Roman Catholic priests. Mr. Maciver, Provost of Dingwall, had a private dinner party, consisting of Lewis M. Macken-ie Esq., of Findon; the Rev. Messrs. Mackenzie, of this town, and Chisholm, Beauly; John McDonald, Esq., Torridon, and several ladies. After dinner Mr. Gordon complained of a parched mouth, and he and Mr. McDonald, who felt the same inconvenience, retired to the drawing-room. The other gentlemen successively became ill, and medical aid was called in; but the two priests, after violent vomiting and other painful symptoms of poisoning, expired. Mr. Mackenzie, of Findon, also died; the others recovered.

This calamity is attributed to the ignorance of a servant. It appears that the cook had had orders to serve up horseradish with the roast beef at dinner, and directed a young man-servant where to find the root in the garden. Instead of bringing horseradish, however, he had dug up the root of monkshood—a most poisonous herb, which was thus incautiously grated down and added to the sauce used with the roast beef. That such a mistake should occur will surprise our English readers; and we may, therefore mention that although roast beef is greatly relished in Scotland, horseradish is very rarely used. All those who partook of the roast beef appear to have suffered; but the ladies escaped, not having tasted the fatal dish. The servant also suffered.

It may be added that Mr. Mackenzie, deceased, occupied a conspicuous and useful position in advancing the public interests of the locality, while the two clergymen were greatly respected by their people. There appears to be no reason to suspect intentional administration of the drug; the cook (a Roman Catholic) had obtained her situation through the recommendation of one of the priests.

Numerous cases of poisoning with aconite having occurred at different times, under a variety of circumstances, it appears desirable to guard the public against it. With the view of more fully accomplishing this object we have engraved the plant, and add a few particulars of its scientific and general history of the plant.

The Wolfsbane, or Aconite (the latter is its more ancient and classical name, as readers of Ovid will know), is one of those plants now so common in a wild state in Britain, from which appear to have been originally introduced from other countries, and disseminated from the gardens attached to religious houses in early times. Its name of monkshood, by which it is most familiarly known, no doubt originated in this circumstance, conduced from other countries, and disseminated from the gardens attached to religious houses in early times. Its name of monkshood, by which it is most familiarly known, no doubt originated in this circumstance, conferred from other countries, and disseminated from the gardens attached to religious houses in early times. Its name of monkshood, by which it is most familiarly known, no doubt originated in this circumstance, conferred from other countries, and disseminated from the gardens attached to religious houses in early times. Its name of monkshood, by which it is most familiarly known, no doubt originated in this circumstance, conferred by the singular construction of the upper part of the flower blined with the singular construction of the upper part of the flower blined with the singular construction of the upper part of the flower bloined with the singular construction of the upper part of the flower bloined with the singular construction of the upper part of the flower blo

*AMUSEMENTS, &c.*

THEATRE ROYAL, HAYMARKET.—The brilliant Pantomime of THE BUTTERFLY'S BALL every evening preceded on Monday, Wednesday, and Thursday by THE QUEEN'S SHILLYSHALLY; on Tuesday by THE STRANGER (The Younger—Mr. W. H. SIMPSON, his first appearance in London), and on Friday and Saturday by THE LITTLE TREASURE. The entertainments second. Concluding with ONLY A HALFPENNY, as performed at Windsor Castle.

ROYAL PRINCESS' THEATRE.—Monday, the MERCHANT of VENICE; Tuesday and Friday, HENRY VIII.; Wednesday, HAMLET; Thursday, EVERY ONE HAS HIS FAULT; Saturday, the CORSICAN BROTHERS, and the POLICE-TIME Every Evening

GREAT NATIONAL STANDARD THEATRE, Shoreditch.—Proprietor, Mr. JOHN DOUGLASS. Last season but a few nights, and must return without the slightest delay, as great National Work for the best Pantomime of the season is nightly played by Paul Kellner and the most wonderful Pantomimists in the world. Twenty-five scenes, forty-four tricks, and eight mutations

THE SISTERS SOPHIA and ANNIE, in their celebrated Entertainment, entitled SKETCHES FROM NATURE, on MONDAY, FEB. 11th, and every evening during the week, at the MUSIC HALL, LEEDS.

MR. W. S. WOODIN as BASHEL IN "LES HORACES." MR. S. WOODIN'S OLIO of ODDITIES EVERY EVENING at Eight, at the POLYGRAPHIC HALL, King William-street, Strand. Box-office open from Eleven to Five

LOVE, the FIRST DRAMATIC VENTRILOQUIST in EUROPE, UPPER HALL, REGENT GALLERY, 69, Quadrant Regent-street. Every Evening at Eight, and Saturday Saturday at Three. Stalls, 3s.; Area, 2s.; Gallery, 1s. Tickets at all Stalls, 23, Old Bond-street, and at the Box-office.

THE LION-SLAYER AT HOME, 232, Piccadilly.—Mr GORDON CUMMING DESCRIBES every night except Saturday, at 8, what HE SAW and DID in SOUTH AFRICA. Interesting Illustrations every Saturday at 3 o'clock. The Pictures are painted by Messrs Richard Leitch, Harrison Weir, George Thomas, Wolf, Charles Hagley, and Phillips. The music conducted by Mr. J. Odell. Admission 1s., and 2s. The Collection on Saturday Afternoons (Includes from 11 to 4. Children Half-price to the reserved Seats and Stalls.

DR. KAHN'S ANATOMICAL MUSEUM, consisting of 1000 highly interesting Models, representing every part of the Human Frame in health and disease, is NOW OPEN at 5, Coventry-street, Leicester-square.

ROYAL POLYTECHNIC.—The POISON of STRYCHNINE. Lecture on the above by J. H. Pepper, Esq., at 4 and 8. The Poison and the Tests used for its Detection exhibited in the Oxy-Hydrogen Microscope. All the other Lectures, and the New and Beautiful Dissolving Views, Illustrated the Guide, as usual. Admission 1s. Children and Schools half-price. Juvenile Morning every Wednesday.

ROYAL PANOPTICON.—The Council of Management of the above Establishment have much pleasure in announcing to the Nobility, Gentry, and Public generally, that the Lessee Buckingham, and Proprietor of the splendid Panorama of the Nile, illustrated and explained by Mr. J. D. Malcolm, Chemistry, Mr. G. B. Ansell, John Chinaman at Home, Performances on the Great Organ, by E. T. Chipp, &c. Each Morning and Evening, at the Panopticon, the Colossus fountains, &c. Open—Morning, Twelve to Five; Evening, Seven to Ten. Admission, 1s., Schools and Children, Half-price

SACRED HARMONIC SOCIETY.—EXETER HALL. Conductor Mr. COSTA. [illegible] Oratorio, composed by Mr. COSTA. Vocalists: Madame Rudersdorff, Miss Dolby, Mr. Sims Reeves, Mr. Montem Smith, and Herr Weiss; with orchestra of nearly 150 performers. A few reserved Stalls, at 7s., and Stalls, at 5s., may be obtained at the Hall. The Oratorio will be repeated on the following Friday, February 22nd. Tickets, 5s., 3s., and 10s. 6d.; now on hand. The selected Choruses in Haydn's Nos. Seven or Three Guineas per annum. For Tickets or Subscriptions apply (at the Society's Office, No. 8 room within Exeter Hall, or Subscriptions to records to be made payable at the Chairman's-office to Robert Bowly.

CRYSTAL PALACE MUSEUM of NAVAL ARCHITECTURE.—T. Shipowners, Shipbuilders, Engineers and Companies, and others.—The Directors of the Crystal Palace Company, being about to form in the Palace a Museum of Naval Architecture, to contain examples of the most remarkable progress of the art from an early period to the present day, with models of the most recent improvements, are respectfully invited to assist in having the means to assist them in this object by contributing exhibition Models of Boats, Marine Engines, Screw Propellers, &c. A general plan of the proposed Museum (for which a considerable number of models has been already collected) may be obtained from the Secretary, to whom all communications should be addressed.

By order, G. GROVE, Crystal Palace, February 9, 1856. Secretary.

SPRING GROVE STATION, on the Windsor Line, 8 miles from Hyde-park-corner. Trains every hour and from Waterloo Terminus. SUBSTANTIAL VILLA RESIDENCES are erected and elegantly finished and replete with the Spring Grove Estate, which is delightfully situate on a spill of gravel between Osterley-park and Richmond. These houses have good Gardens attached to them, and additional land may be obtained if wanted. Particulars for Rent or Lease, on the Estate, may had from the Manager, at the Estate Office, opposite the Station in Town, at 17, Warwick-street, Regent-street.

THE STAUNTON CHESS-MEN in Ebony and Boxwood, from 18s. per set; African Ivory, £3 13s. 6d. to £10 10s. Staunton's Chess Treatise, 5s. A PAPER HUNT—THE FIND—BEFORE SEBASTOPOL.—SKETCHED BY J. A. CROWE.—(SEE PAGE 156)

WINTER IN NORWAY.—FROM A PICTURE BY ADOLPH TIDEMAND.—(SEE NEXT PAGE.)

## WINTER IN NORWAY.

WITH Christmas begin the national festivals in the mountains of Norway, which are observed by the poorest labourer as well as by the rich proprietor. During this season all work is stopped; the cloth is laid all day for every comer, and the feasts are celebrated with the hospitality and simplicity of the olden time.

It is also an old custom that even the phantoms of superstition must share in these winter fêtes, as well as the animals of the earth and the birds of the air. A dishful of oatmeal-porridge is placed by the women of the house under the steps of the staircase, to regale the goblin (or brownie) of the farm.

Out of doors, a long pole is set up in front of the house, with a bunch of oats at the top, to serve as fare for the little birds. While the old man fixes the pole, with the help of his little son, two boys play in the snow with the "*ski*," or snow-skates; and the woman on the right is strewing pineleaves at the entrance of the gallery, or "*Stovlgang*." This strewing of leaves is also a sign of feasting and rejoicing.

The accompanying illustration has been engraved from a picture by Adolphe Tidemand, the most celebrated of the Norwegian painters.

## ANALYSIS OF SOME REMARKABLE CASES OF POISONING, OCCURRING IN ENGLAND DURING THE LAST CENTURY. BY J. G. B.

IT has long been the fashion in England to ignore gross crime. "I never read the murders" is a phrase commonly uttered with an affectation of pity and contempt for those who, by conviction or duty, are compelled to scan narrowly that dark and often-recurring page in the history of man which bids one hand trace in his brother's blood. Happily for the safety of society, others less morbidly fastidious, who deem that to be forewarned is to be forearmed, have recorded the traces by which an avenging Providence has followed, and at last overtaken such criminals; and such writers have shown that wondrous and subtle as may be the depraved intelligence of man, there is an invisible and far greater power watching its every suggestion, either to baffle, or to avenge *here*, or (religion adds) to record for a yet more damning conviction *hereafter*. It was a deep sense of this eternal truth which drew from the present Lord High Chancellor of England, the avowal that the protracted trial of Rush, had given him the profound conviction that a providential supervision was visible throughout its painful details.

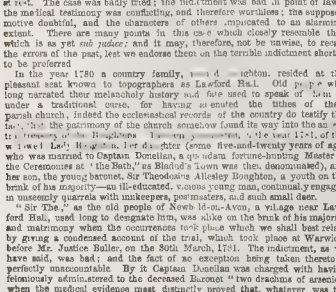
As well then may the morbid sentimentalists who affect to shrink from narratives such as these complain at once of that book, one of whose earlier records is of the destruction of human life by human agency; and ever that to narrate the stratagems of the murderer, their detection and punishment, is rather to encourage than to arrest the same path, than to debort them from it, by pointing out the tremendous forces they challenge to their destruction, when they plot against the life of a fellow-creature.

Much of course must ever depend on the spirit and manner in which such deadly details are given; but he must indeed be unfortunate in his treatment of the subject who does not succeed in making his work conducive to the good and safety of his fellow-men; and, by a parity of reasoning, subservient to the honour of that Divine Legislator, who has fenced in the life he has bestowed with the most severe enactments, and reserved, and that for ever, to himself, the time and manner of its withdrawal.

In fine, of one thing we may be assured, whatever the progress made by science, it will always be overruled, to the certain detection of any perversion its false votaries may seek to make of its powers. Of this consolatory truth we have abundant evidence, in the cases of Donellan, Rush, &c., in this country; and of Webster, in the annals of American jurisprudence. Too true it is, that where an avenging Providence has laid bare the springs of evil action, and followed the tracks of the criminal even to his very lair, human justice has too often shrunk from its duties, and weakly permitted the culprit to escape; but this fatal negligence and culpable remissness have to be accounted for elsewhere. It is enough for us (and especially in these latter days, when we have been doomed to witness so many and such signal instances of conviction gathering themselves out of long-closed graves, to confront one individual) that the eye which never slumbers, and a finger which traces the guilty with unerring accuracy.

In this and following articles we shall present our readers with a collection of remarkable trials of great interest, and now, too, of considerable rarity. None but a book collector will have observed a blank in the narrative, which for a little season excites and absorbs the attention of the whole community. Superseded by some newer subject of interest, it is soon forgotten, and its details speedily lost. The cunning of the villain remains in the lawyer, his words in the *sub rosa* memoranda of the surgeon or a note of watchfulness to the analytical chemist. But the great bulk of mankind are little benefited by the lesson. They are as open as before to the evil agency, and thousands had been poisoned by the operation of that one drug arsenic, before common sense suggested the simple colouring of the mineral, and at once terminated the crime of poisoning thereby. So it may be with other agencies. Let but the man who purposes assassination know that it is next to impossible to avoid detection and punishment, and he will pause, we may be assured, before he goes on to its perpetration.

### NO I.—THE CASE OF CAPTAIN DONELLAN. 1780.



LAWFORD HALL, THE SEAT OF SIR THEODOSIUS BOUGHTON.

The first instance which occurred in this country of anything approaching to [illegible] poisoning is the notorious case of Donellan, respecting which the [illegible] will it ever be, set right. The case was badly tried; the indictment was bad in point of law; the medical testimony was conflicting, and therefore worthless; the supposed motive doubtful, and the characters of others implicated to an alarming extent. There are many points in this case which closely resemble that which is as yet *sub judice*; and it may, therefore, not be unwise, to recall the errors of the past, lest we endorse them on the terrible indictment shortly to be preferred

In the year 1780 a country family, named Boughton, resided at the pleasant seat known to topographers as Lawford Hall. Old people who long narrated their melancholy history and fate used to speak of him as under a traditional curse, for having assumed the tithes of their parish church, indeed the greater portion of the property do testify this fact. But the testimony of the church somehow found its way into the annals [illegible] of the Boughtons. Their possessions, at the year 1781, of the widowed Lady Boughton, her daughter (some five-and-twenty years of age, who was married to Captain Donellan, a quondam fortune-hunting Master of the Ceremonies at "the Bath," as Bladud's Town was then denominated), and her son, the young baronet, Sir Theodosius Allesley Boughton, a youth on the brink of his majority—an ill-educated, vicious young man, continually engaged in unseemly brawls and disputes, particularly with his small dependants.

"Sir The," as the old people of Newb [illegible]-on-Avon, a village near Lawford Hall, used long to designate him, was alike on the brink of his majority and matrimony when the occurrences took place which we shall best relate by giving a condensed account of the trial, which took place at Warwick, before Mr. Justice Buller, on the 30th March, 1781. The indictment, as we have said, was bad; and the fact of no exception being taken thereto is perfectly unaccountable. By it Captain Donellan was charged with having feloniously administered to the deceased Baronet "two drachms of arsenic, when the medical evidence most distinctly proved that, whatever was the deleterious agent employed, it was most certainly not that mineral. Mr Dighy opened the indictment; after which Mr. Howarth proceeded to examine the following witnesses:

Mr. Powell, apothecary, of Rugby, deposed that he had attended Sir T. Boughton for two months before his death on account of a slight complaint. On Tuesday, the 28th August, he saw his patient, and sent him a draught containing rhubarb and julap. On this day Sir Theodosius appeared in great spirits and good health. Witness produced two phials in court—the one containing a rhubarb draught exactly as he had sent it, the other the same ingredients with the addition of laurel-water, by which it was believed his patient had been poisoned. On the Wednesday morning he was sent for to Lawford Hall. He arrived there a little before nine. Captain Donellan accompanied him into Sir Theodosius's room. He had been dead nearly an hour. There was no distortion, nor anything particular. He continued some minutes in the room. Captain Donellan asked him no questions, but, in answer to his inquiries, said Sir Theodosius died *in convulsions*. Being questioned what farther conversation he had then with the Captain, he said that he could not recollect his particular words, but his general intent was to make him believe that "Sir Theodosius had taken cold."

Lady Boughton deposed that Sir Theodosius was twenty years old. On his coming of age he would have been entitled to above £3000 a year. In the event of his dying a minor the greater part of his fortune was to descend to his sister, the Captain's wife. The prisoner, several times before the death of her son, had talked to her about the state of his health. His expressions were, "Don't talk about leaving Lawford Hall: he is in a very bad state of health: you cannot tell what may happen before that time." She thought he meant his being so very vexatious in going a hunting, and the like. Mr. Fonnereau, a friend of her son, was expected at Lawford Hall, the latter end of the week in which he died. He was to stay a week, and then Sir Theodosius was to have returned with him into Northamptonshire; Sir Theodosius had not said how long he intended to continue there. On Tuesday, the 28th of August, a servant was sent to Mr. Powell for the draughts for Sir Theodosius. Upon inquiring where the servant was, Mr. Donellan said, "O, Sir Theodosius has sent him a second time for the bottle of stuff." It was known in the family that Sir Theodosius was to take his physic the next morning. He used to put his physic in his dressing-room. He happened once to forget to take it; upon which Mr. Donellan said, "Why don't you set it in your outer room! then you would not so soon forget it!" After this he had several times the medicines upon his sideboard over the chimney-piece in his outer room. On the evening of Tuesday the 29th, about six o'clock, Sir Theodosius went a-fishing, attended only by one servant, Samuel Frost. She and Mrs. Donellan took a walk in the garden. They were there above an hour. To the best of her recollection she had seen nothing of Mr. Donellan after dinner till about seven o'clock, when he came out of the house-door into the garden, and told them that "he had been to see them a-fishing, and that he would have persuaded Sir Theodosius to come in, lest he should take cold, but he could not. Sir Theodosius came home at eight, apparently very well. He went up into his own room soon after, and went to bed. He requested her to call him the next morning, and give him his physic. Accordingly, she went into his room, about seven that morning, when he appeared to be very well. She asked him "Where the bottle was?" He said, "It stands there upon the shelf." He first desired her to get him a bit of cheese, in order to take the taste out of his mouth, which she did. He then desired her to read the label, which she accordingly did, and found these words was written upon it, "Purging draught for Sir Theodosius Boughton." As she was talking to him, she emitted to shake the bottle. Observing this, he said, "Pour it back again, and shake the bottle." In doing this she spilt part of it upon the table; the rest she gave him. As he was taking it, he observed, "It smelt and tasted very nauseous;" upon which she said, "I think it smells very strongly like bitter almonds." She gave him the cheese; he chewed it, and spit it out. He then remarked, that "he thought he should not be able to keep the medicine upon his stomach." She gave him some water, he washed his mouth with it, and, spitting it out, lay down.

Here a bottle was delivered to Lady Boughton [containing the genuine draught], which she was desired to smell at, and to inform the Court whether it smelt at all like the medicine Sir Theodosius took. She answered in the negative. She was then desired to smell at another [containing the draught with the addition of the laurel-water], which she said had a smell very much like that of the medicine she gave to Sir Theodosius.

Lady Boughton then proceeded with her evidence. In two minutes, or a minute and a half, after Sir Theodosius had taken the draught, he struggled very much. It appeared to her, as if it was to keep the draught down. He made a prodigious sudden rise in his stomach, and gagging; all these symptoms continued about ten minutes. He then seemed as if he was going to sleep, or inclined to doze. Perceiving him a little composed, she went out of the room. She returned in about five minutes after, and, to her great surprise, found him with his eyes fixed, his mouth open, and foam running out of his mouth. She instantly desired a servant to take the first horse he could get and go for Mr Powell. She saw Mr. Donellan in less than five minutes after. He came into the room where Sir Theodosius lay, and asked her "How he was?" She answered, "Very ill." She repeated to him him what a terrible thing had happened, that it was an unaccountable thing in the doctor to send such a medicine, for, if it had been taken by a dog, it would have killed him, and she did not think her son would live." He asked "In what manner was Sir Theodosius?" She told him. He then asked "Where the physic-bottle was?" She showed him the two draughts. He took up one of the bottles, and said, "Is this it?" She answered, "Yes." He took it, and, after rinsing it, emptied it into some dirty water that was in a wash-hand basin. After he had thrown the contents of the first bottle into the wash-hand basin, she observed "That he ought not to do that." She added, "What are you at? You should not meddle with the bottle." Upon that he snatched up the other bottle and emptied it; then he put his finger to it and tasted it. She said, "What are you about? You ought not to meddle with the bottle." Upon which he said, "I did it to taste it." But he did not taste the first bottle. Sarah Blundell and Catherine Amos came into the room. The former is since dead. He desired Sarah Blundell "to take away the basin, the dirty things, and the bottles;" and he put the bottles into her hand. Her Ladyship took the bottles from her, set them down, and bid her let the things alone. He then desired "that the room might be cleared, and the clothes thrown into an inner room." Her Ladyship opened the door of the inner room. As soon as Sarah Blundell had put the clothes into that room, Mr. Donellan, while the witness's back was turned, put the bottles into her hand again, and bid her take them down; and was angry she had not done it at first. This circumstance Sarah Blundell told her; for all that she herself knew of it, in fact, was that the bottles were taken out of the room.

From the evidence of other witnesses it appeared that Captain Donellan had spoken of Sir Theodosius as being in very bad health: "His life was not worth a year's purchase." And yet, at the time he was making these statements, Sir Theodosius, according to Mr. Kerr, surgeon, of Northampton, was not in bad health at all; indeed he hardly required any medicine of any kind. As regards the opening of the body, after suspicion had been excited, Captain Donellan had acted a very suspicious part: while professing his willingness to promote the most complete investigation, he had contrived to put off the examination on various pretexts, even until it have taken place but for the firmness with which it was urged by Sir William Wheeler, the guardian of Sir Theodosius. The evidence as to the symptoms of poisoning was in the main unfavourable to the prisoner. Dr Ratray said the appearance of the body confirmed him in the opinion that the deceased was poisoned, and that the poison was laurel-water. In cross-examination he admitted that his first opinion, on hearing Lady Boughton describe the symptoms, and after he had seen the body opened, was that death had been caused by arsenic. Mr. Wilmer, who had also assisted at the *post-mortem* examination, was of opinion, that death was caused by the poisonous draught administered by Lady Boughton. Dr. Ashe, of Birmingham, thought that death had been caused by poison. Dr. Farmer was of the same opinion that Sir Theodosius died by poison, and that the poison was laurel-water.

The only important evidence in defence of Captain Donellan was that of the celebrated John Hunter. He said he had dissected some thousands, and, so far as he could judge from the symptoms described, they were certainly not such as would necessarily lead to the conclusion that the person had taken poison. On cross-examination, he said that the fact of Sir Theodosius being in good health a few hours before his death explained nothing. The healthiest people were frequently seen to die suddenly.

The trial began at half-past seven in the morning. At twenty-five minutes past six the jury withdrew, and in nine minutes they returned with a verdict, finding the prisoner "Guilty."

Immediately after the conviction of Captain Donellan, a divine, accompanied by a particular friend of the prisoner, went to see him, and to all appearance he was perfectly resigned to his unhappy fate. It was urged to him that, as the evidence had been so clear, a denial of the fact would be looked upon by the world as a mean prevarication, and would induce people to throw additional insult upon his memory. To this observation he answered, he could not help any man's conclusions: he knew his own heart, and would with his last breath assert he was innocent of the crime for which he was convicted. expressions, aggravated by falsehoods of the most flagrant kind, which were sworn at his trial, had induced a jury to take his life; but time would do him justice, and prove him an injured man, runned by those who ought to have been his friends. Perceiving the gentlemen in astonishment at this conversation, he added, that he should dedicate to-morrow (Sunday) to the purpose of drawing up an answer to, and a refutation of, the evidence, and should leave it with a friend that he had no doubt would comply with the last request he should make—that of seeing it correctly published. He was asked whether he had not a desire to see his wife, and take a last farewell. To this he hastily replied, I do beseech you let me not hear again of this: if she does not come I shall die composed. On Sunday evening he deputed his case with a gentleman of Coventry, who assisted him in his trial, with an earnest request that he would print and publish it. He then gave some directions relative to the adjustment of the sad operation which was to take place in the morning, and appeared remarkably cheerful and composed. At seven o'clock next day he was carried to the place of execution in a mourning-coach followed by a hearse, and the sheriff's officers in deep mourning. As he went on he frequently put his head out of the coach, desiring the prayers of the people around him. On his arrival at the place of execution he alighted from the coach, and, ascending a few steps of the ladder, prayed for a considerable time, and then joined in the usual service with the greatest appearance of devotion. He then in an audible tone of voice addressed the spectators in the following terms:—That as he was then going to appear before God, to whom all deceit was known, he solemnly declared "that he was innocent of the crime for which he was to suffer;" that he had drawn up a vindication of himself, which he hoped the world would believe, for it was of more consequence to him to speak truth than falsehood, and had no doubt but that time would reveal the many mysteries that had arisen in his trial. After praying fervently some time, he left his handkerchief (a signal agreed on between him and the executioner), and was launched into eternity. After hanging the usual time, the body was put into a black coffin, and conveyed to the Townhall to be dissected. He was dressed in a suit of deep mourning.

Years rolled on, but the public mind remained sore and ill at ease. Donellan died with dark sayings on his lips, and Lawford Hall became a pilgrimage to many who doubted of his guilt. So great was the number of these visitors, even in those days when the facilities of travelling were so imperfect, that the Hall was actually taken down.

Lady Boughton soon slept with her son in the ancestral vault at Newbold-on-Avon; and there, also, after having married two subsequent husbands, the wife of Donellan was interred, almost in our own day. She is still spoken of as "the wife of three husbands—the pendent, independent, and dependent:" the first, Donellan; the second, a Baronet of Nonconformist religious principles; and the third (whom she married when far advanced in life), Barry O'Meara, the author of "A Voice from St Helena."

Whether there be, indeed, as many have thought, a possibility of Donellan's innocence, can never, of course, now be satisfactorily determined; but we may at least congratulate ourselves on an improved condition of our legal machinery. It would hardly be possible in these days to convict on an indictment of such enormous latitude; nor, we trust, would a prosecution be allowed to prepare, and exhibit in court, a poisonous draught altogether supposititious, but so deeply injurious to a criminal; and, lastly, we never need fear the repetition of such a painful exhibition of toxicological ignorance as was displayed by the Warwickshire doctors in the memorable case of Donellan.

## THE PALMER CASE.

*(To the Editor of the* ILLUSTRATED LONDON NEWS.)

PERMIT me to add a few more words about Rugeley and its neighbourhood. At present, in the imagination of your readers, it is the fit abode of a horde of thugs; or, perhaps, a dismal collection of dank and ruinous edifices, in some watery waste of "Holland-like Staffordshire," inhabited by a race of doleful and cadaverous creatures, languidly creeping through an objectless existence. Out of our legal machinery. It would hardly be possible in these days to convict on an indictment of such enormous latitude; nor, we trust, would a prosecution be allowed to prepare, and exhibit in court, a poisonous draught altogether supposititious, but so deeply injurious to a criminal; and, lastly, we never need fear the repetition of such a painful exhibition of toxicological ignorance as was displayed by the Warwickshire doctors in the memorable case of Donellan.

Come, perhaps, a dismal collection of dank and ruinous edifices, in some watery waste of "Holland-like Staffordshire," inhabited by a race of doleful and cadaverous creatures, languidly creeping through an objectless existence. Come and see for yourself

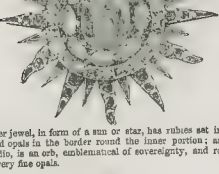
# Memorabilia,

## LITERARY, ANTIQUARIAN, SCIENTIFIC, AND ARTISTIC.

*"A little chink may let in much I ght"*—Old Proverb.

### MEMENTOES OF SIR FRANCIS DRAKE.

At Nutwell Court, near Exeter, are preserved several mementoes of the great circumnavigator Drake; and amongst them unquestionably the most precious are the two jewels represented in our Engravings, which, as tradition says, were given to Drake by Queen Elizabeth, on his return from the voyage round the world.



The smaller jewel, in form of a sun or star, has rubies set in the rays, and diamonds and opals in the border round the inner portion; and engraved in this, in intaglio, is an orb, emblematical of sovereignty, and round the ruby are several very fine opals.

The larger jewel is a most exquisite specimen of goldsmith's skill; is richly enamelled in red, yellow, blue, and green; and has a few diamonds and rubies introduced in the border. The centre is composed of a very fine cameo, cut in onyx, believed to be by Valerio Vincentino—a most celebrated engraver of precious stones, and of whose works Felibien says, that if his designs were equal to his execution, he might be compared with the ancients. The subject of this cameo is a representation of two heads—one of negro character, and the other a beautiful female face—typical, doubtless, of Europe and Africa. At the back of the jewel, in the centre, is an exquisite miniature of Queen Elizabeth, in all her glory of ruff and necklace, painted by Nicholas Hilliard, and bearing date Anno dni. 1575; Regni 20. Hilliar was limner extraordinary, and goldsmith to Queen Elizabeth, and his works were highly esteemed. On the inner side of the cover to the back of the jewel is a phœnix in enamel.

### NOTES.

Swift, Pope, and Addison.—The following scraps, which I find in Dr Birch's voluminous MSS., will form an agreeable addition to the "Addisoniana," in Mr. Bohn's valuable Life of the great essayist

"Tuesday, Aug. 17, 1740.—Mr George Faulkner, of Dublin, told me that Dr. Swift had long conceived a new opinion of Mr. Pope, on account of his jealous, peevish, avaritious temper

The Doctor gave Mr. P. the property of his "Gulliver," which he sold for £300; and gave up to him, in 1727, his share of the copy of three volumes of their Miscellanies, which came to £14.

The Doctor was angry with Mr. P. for his satire upon M. Addison, whom the former esteemed as an honest, generous, and friendly man. Wm Dodsley, the painter, was employed by Mr. P. to go to Curl in the habit of a clergyman, and sell him the printed copies of his letters. Mr. P. sent to Ireland to Dr. Swift, by Mr. Gerard, an Irish gentleman then at Bath, a printed copy of their letters, with an anonymous letter, which occasioned Dr. Swift to give Mr Faulkner leave to reprint them at Dublin, though Mr Pope's edition was published first."—(Birch Papers, 4244.)—J. Kemp.

Mr. Macaulay and his Critics.—In one portion of your paper of the 26th of January, you notice an imputation cast upon Mr. Macaulay by some of the critics, to the effect that he, for the sake of rounding a period, is wont to mis-state facts, and abuse the confidence of his readers. Two cases of misrepresentation are adduced in support of the accusation, which, as against an historian, is a very grave one. We are first told that Mr. Macaulay stated that Marsha. Schomberg was buried in Westminster Abbey—whereas, in fact, the veteran hero was interred in the Cathedral of St. Patrick's, Dublin; and, secondly, that the historian represents Judge Jeffreys to have been buried in the Tower Chapel—whereas, in fact, he body lies in the vault of St. Mary, Aldermanbury. If these critics would bear in mind the advice which Gibbon gave to their grandfathers four score years ago, and accustom themselves to read before they write, they could hardly fail to perceive that, in both these cases, the inaccuracy is made by themselves, and not by Mr. Macaulay. With respect to Schomberg's funeral, after a reference to the general feeling throughout the country, that "Westminster Abbey was the only cemetery in which so illustrious a warrior slain in arms for the liberties and religion of England, *could properly be laid*," &c., Mr. Macaulay adds, "It was announced"—(mark his cautious expression)—"It was announced that the brave veteran should have a public funeral at Westminster. In the mean time his corpse was embalmed with such skill as could be found in the camp, and was deposited in a leaden coffin" This "announcement" referred to by Mr. Macaulay, was made during the first flush of national gratitude and enthusiasm, but we are no where told that Westminster Abbey was, in fact, the last resting-place of the gallant Schomberg (Hist., vol. iii, p. 688). As to Jeffreys: "His emaciated corpse was," says Mr. Macaulay, "laid with all privacy next to the corpse of Monmouth in the chapel of the Tower." (Hist., vol. i.i, p. 403). And this is the fact; nor was it until years after the period of which Mr. Macaulay is treating that the wicked Chancellor's body was removed from the Tower chapel and placed next to that of his son and successor, in the vault of St. Mary, Aldermanbury. See Life of Jeffreys, in Chalmer's "Biographical Dictionary," vol. xviii, p. 496; and in Lord Campbell's "Lives of the Chancellors." It is one thing, Sir, to cavil, and another, and a very different, thing to criticise.—B. Blundell, F.S.A., Temple.

The First Day-Coach from Oxford to London, and Some who travelled by it.—I send you the extract from the "Life of Anthony à Wood," communicated by Thomas Hearne, and continued by other hands, Oxford, 1772.—"An. Dom 1669, April 26th (30 Car. II) Munday was the first day that the Flying Coach went from Oxon. to London in one day. Anthony à Wood went in the same Coach, having then a Boot on each side. Among the six men that went, Mr. Rich. Holloway, a Counsellor of Oxon. (afterwards a Judge) was one. They then (according to the Vice-Chancellour's Order, stuck up in all public places) entered into the Coach at the Tavern Dore against All Souls. Coll. precisely at 6 of the clock in the morning, and at 7 at night they were all set downe in their inn at London."—Latton

Tobacco.—"Singular taste of an Ass.—There is now in the possesion of Mr. Walton, farmer, of Great Lever, near Bolton, a male ass, which is known to be nearly fifty years of age. He is named "Billy," and prefers tobacco to any other luxury. He is likewise very fond of a pinch of snuff. Our informant has, within these few days, seen "Billy" masticate a large quid of pigtail with as much gusto as any Jack tar in her Majesty's service. When he had finished the tobacco a pinch of strong rappee was administered, which "Billy" snuffed up without the least demur, and, curling up his olfactory organ, delivered one of those charming solos so peculiar to his species."—*Southey's Commonplace Book, 4th Series*, p. 593.

### QUERIES.

John Gilpin.—Can any of your antiquarian readers inform me whether the original history of John Gilpin still exists in legend or unwritten tradition?—Lady Austen, it is said, told the tale, "which had been treasured in her memory from her childhood," to relieve the gloom of Cowper's spirits. Convulsions of laughter kept him awake during the greater part of the succeeding night, and before morning he had turned the story into the immortal ballad. Such a story is worthy of preservation in its original shape.—Edmonton.

Tale of a Tub.—Can any of your readers inform me whence the derivation of the phrase "Tale of a tub"? That it is one of long standing is evident from the fact of Sir Thomas More having made use of it, when examining a witness named Tubb, who, giving his evidence in a clumsy manner, provoked the witty Chancellor to indulge a joke.—J. Q. K.

Dentists of Old.—"In Queen Elizabeth's days there was a fellow that wore a brooch in his hat like a tooth-drawer," &c. So says John Taylor. Are we to infer from this that a brooch in the hat was the distinguishing mark for a dentist in those days?—B. M.

Godfrey Medals. Sir,—Would you be so kind, through your excellent "Memorabilia" column, to inform me why, and at what period, the following medal was struck, and whether it is valuable?—On the obverse: Head of Sir E. Godfrey with a rope round his neck, led by two hands, with the inscription—*" Morlendo. Hesterek. Hem. E. Godfrey."* On the reverse: Two figures on a horse, one probably Sir Edmondbury Godfrey, preceded by a figure pointing with his thumb to the words:—*" Eyro. Credit. Teror."* Sir E. Godfrey was found strangled in a ditch.—H. L. F.

Archbishop Law.—Will any of your readers give me information respecting the family of James Law, who was Bishop of Orkney, and afterwards for (1618—1632) Archbishop of Glasgow. His grandson, or great-grandson, William Law, married Jean Campbell, descended from one of the members of the House of Argyll—and they were the parents of the celebrated John Law, of Lauriston—perhaps this may give some clue to Archbishop Law's descent.—A. T. L.

Chess MSS. Wanted.—In Egerton's (bookseller's) catalogue of books for 1793, No. 7710, is entered as follows:—"MS. Treatise on Chess, in old French, on vellum, with 210 illuminated schemes of various games, elegant, in russia leather, £4 4s." In another catalogue (the date of which I do not know) was the following article:—"1742. Libro che insegna giocar a Scachi, nel qual si sono alcune sutilita bellissime per guadagnar il gioch, et gioch de partido molto belli et ingenios, *cose al'antiqua come alla moderna*, cossa belissima. MS. of the xvi. Century, 4to, in russia, £7 7s. A very valuable and unpublished MS on Chess, containing upwards of 200 games, and illustrated by very numerous large diagrams explanatory of the moves. This MS. is from the Grædnigo Library at Venice." *Query*, what has become of the above two MSS.—F. Madden, Mus. Brit.

### ANSWERS TO QUERIES.

The Prefix "Ug."—Ug, prefixed to names of places, such as Ug-bamby, Ug-thorpe, is the same as Irish *ough, augh, aghs, agh*, in Ough-eval; Augh-aval, -rim; Agha-boe, -bog, -crew, -cross, -da, -derg, -doe, -down, -dowy, -gallen, -ilee, -lurcher, -more, -vallah; Agh-er, -ern, -hart, -old, -oure, -trim. This prefix means river or water, as the same weed with Gaelic *ay, ey, wiege*; Saxon, *ea, eue*; Dutch and Danish, *aa*; Gothic, *ahva* Teutonic, *aha*; Russian, *uj*; French, *eau*; Sanscrit, *ap, apa*, Latin, *aqua*: water, river. It is as often suffixed in names of places, *e.g.*, Irish, *-agh*, in Ard-agh, Don-agh; and thus appears in such names in many a country, *e.g.*, German, *-ach, -au, -a*, in Elsen-ach, Eber-ach, Kreuzn-ach, Zurick-au, Ilmen-au, Goth-a, Gur-a, Fuld-a, &c; French, *-ay, -ey, -y*, in Cambr-ay, Tourn-ey, Queen-oy, Cheun-y, Landre-y, &c. It *enters* in names of rivers: *e. g.* Irish *-augh*, in Ough-ter, a lake formed by the river Erne, English *-ey, -ay*, in Mers-ey, Wer-ey, Conw-ay, Russian *-ey*, in Jeus-ey, &c, It appears alone in [illegible], Lat, *Aqua* (Sextile), Germ, *Ascher*; Teuton. *Adda, Athan*. But these prefixes and suffixes, though they originally signify water or river, are also used to designate "a meadow or field near, aside, or along the river." Thus Ug-thorpe, in Yorkshire, like its German namesake Aha-dorf, a village in Franconia, may be interpreted either "the village near the river;" or, if you like that better, "the village on the field near the river." This word *ug, ayh, aha, &c*, for water, is one of the many words common to all languages, showing that there was once, and giving hope that there will perhaps once more be, but one language on earth.—Dr. J.A. Kaltschmidt, Dollar.

The Rafparee Cove.—In answer to your correspondent "Y." it is well known to many old men now living that about sixty years ago a vessel, manned by blacks, ran ashore, and that the then best families in the town (being nothing but wreckers and smugglers) murdered the crew and buried the bodies on the beach, and then plundered the vessel of a very valuable cargo, consisting of ivory, doubloons, jewels, &c. This having caused some disturbance, put an end to the system; otherwise, in bad weather, a common custom was to affix lanterns to horses' tails, and lead them about the cliffs, to decoy vessels. Many near descendants of the actual wreakers of the before-named vessel still reside here, and rank amongst the most respectable of the inhabitants. The people here still retain the name of "Coombe Sharks," which appellation was bestowed upon them by the surrounding neighbourhood about a century ago.—N. V., Ilfracombe

Marriage Bans.—I beg to state that, according to the Marriage Act, 4 Geo. IV., cap. 76 (which statute is in most of its provisions a re-enactment of Stat. 26th, Geo. II., cap. 33), "all bans of matrimony are to be published upon the three Sundays preceeding the solemnization of the same, during Morning Service (or Evening Service, if there shall be no Morning Service in the church or chapel on the day of publication), *immediately after the Second Lesson*." I am not aware of the Act which your correspondent alludes to (as having been passed early in the present century), "directing bans to be published during the Afternoon, instead of the Evening Service;" if any statute, however, was promulgated to that effect, such doubtless has been superseded by the above-cited later enactments.—C. Egan Belgravia.

President Bradshaw.—It is stated in the Illustrated London Almanack "that in Lancaster there is a popular belief that no Bradshaw has flourished since the days of the regicide." If such a belief exists it is not borne out by facts. The lineal descendant and representative of "President Bradshaw" is James Edward Bradshaw, of Fair Oak Park, five miles from Winchester, the possessor of several thousands a year, with a fine family of seven sons and daughters. He is at present High Sheriff of the county of Hants, and retains the old family seat at Bolton-le-Moors, where he has considerable property.—W. B.

The Congleton Bible.—I remember hearing my father tell that many years ago, when at Congleton, he was taking an evening stroll, and heard sounds of merriment issuing from a tailor's window. Upon stopping to listen, he found the parties were singing, and he caught the following couplet, which was two or three times repeated:—

Congleton rare, Congleton rare,
Sold the church Bible to buy them a bear.

W. B., Chigwell.

Landed Gentry of Somerset.—In reply to the inquiry of F. R., I beg to say that there is a record of the landed gentry of Somerset unknown to Mr. Langmead, among the MSS. of Caius College, Cambridge, No. 540, entitled "The Visitation of the County of Somersettetheyr, taken by Henry St. George, Richmun and Sauspon Leonard Blew Mantell, in Anno Dom. 1623." Pedigrees 308; coats 193. See a Catalogue of MSS in the Library of Gonville and Caius College, Cambridge, published by Deighton.—Caienesis.

### TO CORRESPONDENTS.

T. C. Newcastle.—The authority from which Borre derived the translation of *Ey*, a town, is Lappenberg's "Anglo-Saxon History," translated by Thorpe. Grimm is a great authority on these subjects. *Ey* was certainly used by the Danes in this sense, and both Ey-by and Wath-by derived their present names from them. Bret-by, Sax-by, Angle-by, Danish, Normanby, Wed-by, must certainly indicate the towns of the Britons, Saxons, Angles, Danes, Norman, and Welsh. The Danes subsequently occupied the very parts where these names prevailed, and chiefly introduced the word *By* themselves, in some instances. Would our Correspondent undertake to follow in the steps of the learned historians of Hamburg, and answer what still appears a fair question for research—namely, did this term originate with the original Angles, as stated by Lappenberg, or with their Danish successors?

W. Walsall will perhaps be good enough to send another copy of his communication. The first has been mislaid.

C. T. C., Dublin.—Apply to Mr. Lilly, bookseller, 19 King-street, Covent-garden. London

R. J. Maidstone.—The most perfect specimens of autograph *facsimiles* perhaps ever executed, either here or on the Continent, are by Mr. F. Netherclift, in his work, the "Autographic Miscellany."

A Subscriber.—The Foundling Hospital. The benevolent founder of this institution was Thomas Coram, master of a trading vessel, who obtained a Royal Charter in 1739.

W. S. [illegible]ston.—See the preface to any modern edition of the *Spectator*

Lord Dundonald.—The coal last worn by Lord Nelson is still shown at Greenwich Hospital

T. C. W.—You are quite right. It must have been in Strype, not Stow, we read the passage respecting the books in Tenaeus's Library.

Jas. A., who inquires after the Engravings of the late Thomas Bewick, should write to his daughter, Nine Bewick, Ward-street, Gateshead, Durham, where he will get all the information he requires, and what he may require, as Miss B has the works for sale. We have received some fifty offers of Bewick's Works. If J. A. will send an address, the letters shall be forwarded

J. F. G. H., J. E. H., Congleton, Alpha, W. St. Sheffield, E. P., John M. D Collingwith, Adrian A—, W. T. C. Union Terrace, F. S. Spectator, L. M., Saltcarther, W. W., Stone, [illegible]ton, A. E. A., L. A., Pilsen, W. Cotton, Du Dun, J. P. C. H., J. E. H., Congleton, Alpha, W. St., Sheffield's, E. P., M. D., John Carmichael, Adrian, A. C. S. S., A. B. Adamson, J. M. W. T. C., Gram E. W., J. Hunson, S. Dawson, V. Z., C. Burton, S. R., P. S., received with thanks

A Bookseller and A Young Antiquary's acquaintance at the delay in the appearance of their communications will be diminished, probably, when told that there are at least two hundred letters before us all of wh ch have a prior claim to insertion.

D. C. L.—Hayden's Shakspeare Notes. Any reliable information upon the subject of these interesting papers will be thankfully received

## CHESS.

### TO CORRESPONDENTS.

C. P. J. (Voxford). Your Problem admits of two solutions

Thomasini. If you have more equally good, No. 3, 5, and 6, we shall be glad to see them. The other three are built wrong

J. H. W.—Not quite up to our standard

J. H. H.—Ask some friend to teach you the moves, then obtain an easy rudimentary treatise on the game, and at the same time subscribe to the Weekly Intelligencer Chess-club

T. W., M. C. C. Your solution of No. 616 was either not received at all, or received too late.

T. C. S., Rendford. The "Forty-move Rule," as it stands, is so vague that we cannot pretend to define its application.

Q. B., Sunderland.—It shall be submitted to Mr. Grimshaw

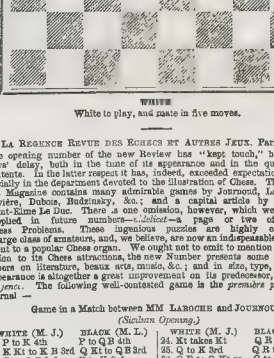
Brieger. The price of Mr. Tomlinson's pleasant Bible book, the "Chess Annual," is, we believe, 5s. It is procurable through any bookseller

La Regence, 3, P——The "New Readers" Review is obtainable from any of the foreign booksellers. Try Messrs Williams and Norgate

### PROBLEM NO. 625.

By J. B., of Bridport.

BLACK.



WHITE

White to play, and mate in five moves.

La Regence Revue des Echecs et Autres Jeux. Paris, 1856

The opening number of the new Review has "kept touch," bating a few days' delay, both in the tone of its appearance and in the quality of its contents. In the latter respect it has, indeed, exceeded expectation, more especially in the department devoted to the illustration of Chess. This portion of the Magazine contains many admirable games by Journoud, La Roche, De Rivière, Dubois, Budzinsky, &c.; and a capital article by the veteran Saint-Esme Le Duc. There a one omission, however, which we trust to see supplied in future numbers—*a Solicit*—a page or two of first-class Chess Problems. These ingenious puzzles are highly esteemed by a large class of amateurs, and we believe, are now an indispensable accompaniment to a popular Chess organ. We ought not to emit to mention that, in addition to its Chess attractions, the new Number presents some entertaining papers on literature, beaux arts, music, &c.; and in size, type, and general appearance is altogether a great improvement on its predecessor, the old *La Régence*. The following well-contested game is the *premiere partie* of the journal —

Game in a Match between MM Laroche and Journoud.

*(Sicilian Opening.)*

THE REMAINS OF HIS HIGHNESS THE PRINCE DE SCHINAS LYING IN STATE, AT SPA.

## REMAINS OF THE PRINCE DE SCHINAS LYING IN STATE, AT SPA.

In our Obituary of January 12th we recorded the death of the Grand Postelnik Prince de Schinas, which took place at Spa, where his Highness had latterly resided. The Prince was related to the ancient reigning families of the Danubian Principalities, and Seigneur of Moldavia; and at Spa the high respect in which he was held was testified by the lying in state of his remains, in a chapel erected for the purpose, being visited by the public, by whom the deceased Prince was much beloved.

The chapel and paraphernalia were designed by H. M. Desprez, of Spa. The arrangement of the tall wax-lights and the funereal evergreens beside the bier whereon lie the remains is very effective.

## STEEPLECHASE IN THE CRIMEA.

We have to thank a Correspondent (an Officer of the 17th Regiment) in the Camp, Sebastopol, for the accompanying sketch of the Grand Military Steeplechase, which took place on the 3rd of December last, and afforded capital sport. The race represented is the first of the "Grand International Steeplechase," which was won, in good style, by Captain Smith's "Master-Roll."

## SKETCHES IN THE CRIMEA.—TCHORGOUN, ON THE TCHERNAYA.

"By the shortest road," says Mr. Danby Seymour, in his recently-published work, "Tchorgouna is about four miles from Balaclava, and occupies a romantic situation in a gradually-contracting valley, through which the Tchernaya Retchka discharges itself into the bay of Sebastopol. *Here is*, or was, a lofty octagonal tower, which dated, probably, from the time of the Genoese, and, placed half-way between Balaclava and Mangoup, was intended to keep open the communication between them when Mangoup was an important fortress." We are enabled to complete Mr. Seymour's account of the Tchorgouna Tower, which was very recently in existence, and was sketched by one of our Special Artists just previous to his leaving the Crimea. "The Tchornaya (Black River)," says our Correspondent, "is fordable at this place, and a temporary wooden bridge has recently been thrown across here. It was guarded by a picket of Bersaglieri, or Sardinian riflemen, and a picket of French dragoons; and in the Sketch a sentry is seen on horseback. Of the neighbourhood Mr Seymour gives the following interesting details —

At four miles from Tchorgouna, in a north-east direction, is the "*Mulinaya gora*," or Soap-hill of the Russians, which is literally burrowed with pits for extracting the fuller's-earth, which is found under chalky marl, at a depth of about forty feet. The Soap-hill is a gentle elevation, in a broad tract of level country, about six miles wide, at the foot of the steep mountain called Mackenzie's Farm. It received this name because Admiral Mackenzie, who was commander of the fleet at Sebastopol, towards the end of the last century, established a farm on the summit of this mountain; for the erection of which a considerable portion of the woods was granted to him, but subsequently repurchased by the Crown for the use of the navy. The Tatar name for the mountain is Kok-agatch, from the numerous white

GRAND MILITARY STEEPLECHASE IN THE CRIMEA.

beech-trees which once covered it. The oak, Christ's thorn, and cornel-tree also grew here; and of the latter the long pipes were made, in such request among the Turks. In spring the ground is covered with large-flowered primroses, bearing white, and yellow, and pale violet blossoms. Veronicas, euphorbias, hyacinths, broad peonies, asphodels, and yellow irises, also deck the ground in spring: and the clematis, wild vine, and wild rose may be found among the shrubs in the neighbourhood of Inkerman.

The *Tchorgouna* (*Black Village*) has been destroyed, says our Correspondent; the tower remains. It is of an octagonal form, some fifty feet high. Near it are some tall poplar-trees; on the left is a clump of elm trees and poplars, under which are camped some hundred Zouaves and Turks. Behind the tower at some 100 paces distance may be seen the ruins of houses, apparently barracks, from their regularity and size. The trees are of very luxuriant foliage. On the right the valley is so full of trees and shrubs that only the tops of the tents of a party of Turks, keeping garrison there, can be seen.

## LIEUTENANT-GENERAL LIPRANDI.

LIEUT.-GENERAL LIPRANDI, whose name has become familiar to most of our readers, takes a high rank amongst the Russian Generals who have distinguished themselves in the present (we were about to say the late) war. Of his antecedents much is not known. Brought up from his earliest years to the profession of arms, he gradually rose to high command, and enjoyed in an eminent degree the confidence of the late Emperor Nicholas, on account of his cool courage and great strategic qualities.

When the Russians crossed the Pruth, in 1853, and invaded the Danubian Principalities, General Liprandi was sent with a strong division to prevent the Turks occupying Kalafat. In this he did not succeed. Despite all his efforts the Turks seized upon the island opposite Widdin, and on the 17th Oct., 1853, intrenched themselves there. Kalafat was soon afterwards fortified. General Liprandi attempted to carry it by a *coup-de-main*. He was, however, compelled to retreat. The energy displayed by the Turks in converting the open village of Kalafat into a stronghold of vast strategical importance convinced General Liprandi that the force under his orders was inadequate to show front against an enemy upon a line of battle which extended from Kalafat to the Pruth. The chief command of the 4th Corps d'Armée, to which General Liprandi's division was attached, was intrusted to General Dannenberg, under the supreme orders of Prince Gortchakoff.

In the campaign on the Danube the Russians had the worst of it. Achmet Pacha had rendered Kalafat impregnable. The battles of Citate and Oltenitza had proved to the Russians that the ancient Turkish valour still burned in the heart of the Moslem.

The evacuation of the Principalities having been resolved upon, for strategic reasons, General Liprandi was intrusted with the task of covering the Russian retreat. The raising of the ever-memorable siege of Silistria was the signal of this retreat. There are few sieges on record where the lives of so many men and superior officers were sacrificed in an attack upon outworks. The loss in attempting to carry the Arab Tabia alone is something incredible.

The siege of Silistria was raised on the 26th June, 1854. General Liprandi concentrated his troops in Moldavia. He covered the Russian retreat in a manner which fully justified the opinion entertained of him by the late Czar. The Russians recrossed the Pruth; on the 8th of August the Turks entered Bucharest. They in their turn evacuated the Wallachian capital to make place for the Austrians under General Coronini, who entered it on the 6th September.

Russia, shielded, as it were, by the Austrians, was enabled to send large reinforcements to the Crimea, which had become the real theatre of war. The Fourth Division, under General Liprandi, was among the first sent.

It is from his command in the Crimea, rather than from his previous career, that Liprandi has acquired a great reputation in Western Europe. His energy and daring soon displayed themselves. It was General Liprandi who planned and carried out the attack on Balaclava, the consequences of which to the Allies, had it succeeded, would have been almost irretrievable.

A few days previously to the 25th October General Liprandi assembled a large force near the villages of Tchorgouna and Kamara, where it was in some measure screened from view by a range of hills. The presence of this force was no secret in the English Camp; and, as it threatened to interrupt the communications between the harbour and the lines encompassing Sebastopol, Lord Raglan had ordered redoubts to be thrown up on the heights which run across the plain, at the bottom of which the town of Balaclava is situated.

The force under General Liprandi that made the attack on the 25th October was 32,000 strong. This we learn from his own official report. The attack was made with great skill and resolution. The Turks intrusted with the defence of the redoubts fled. The Russian cavalry then advanced, supported by artillery, in very great strength, but were stopped by the gallant 93rd Highlanders, under Sir Colin Campbell. It would be superfluous to recapitulate what has been so often and so graphically described—the Battle of Balaclava: the thin red line of the 93rd, and that fearful volley which stopped the Russian onslaught; the splendid charge of Scarlett's Heavy Cavalry, and the ill-fated "death

LIEUTENANT-GENERAL LIPRANDI.

TCHORGOUN, ON THE TCHORNAYA.

ride" of the Light Cavalry brigade. Let it suffice that General Liprandi's bold attempt failed.

Since then the name of Liprandi has not been brought so prominently forward: it has been occasionally mentioned in connection with the different localities occupied by his division.

At Inkerman General Liprandi was not engaged: his division made a demonstration on the English right.

We believe a high command was in reserve for General Liprandi. The prospect of peace put a stop to all military movements for the moment. Among the many distinguished names which honour the Russian army that of General Liprandi stands in the front line.

## THE WAR IN THE CRIMEA.

*(From our Artist and Special Correspondent.)*

CAMP, SEBASTOPOL, Jan. 19, 1856.

As Marshal Pelissier was out not long since with his brilliant Staff of officers, dragoons, and Spahis, he espied a famous group of English Generals and officers rushing madly over the hills in pursuit of nothing apparent to his astonished eyesight. Although a heavy man, and not addicted to fatiguing riding, he galloped towards the party, and was astonished beyond measure to see them following a scent of paper shavings. He reined up incontinently, and burst into a hilarious chuckle, exclaiming "L'amusement national. Quel génie inventif." The French have, in truth, no idea of varying the serious game of war with the lighter pleasures of the chase. A few determined hare-shooters there are, who, leaving their stove and double tent, wander out in the snow in pursuit of "leetle birds," as they call them; but the majority remain torpid in their quarters, smoking the by no means fragrant *caporal*, or passing dull hours in the enjoyment of siestas. There is an overflow of spirits in the so-called phlegmatic Englishman which unsuits him for the torpid state. He therefore indulges in hunting, leaping, billiards, and theatricals—not, perhaps, with the fulness of means or completeness of arrangement which mark similar enjoyments in the mother country, but with as much zest and pleasure as if he were at home. The French, in fact, are like trained game-cocks. When trained to fight, they think of nothing else; whilst the Briton deports himself in moments of relaxation, as if there was no such thing as war, enjoying his pleasurable hour while he may, with a lightness of spirits and determination for fun, which is the more astonishing to our neighbours, in proportion as they apply to him the general notions prevalent on the subject of Englishmen in the sunny land of France.

It was a beautifully clear day on the 12th when the meet took place at the head-quarter house of General Codrington. General Barnard, General Garrett, and a host of officers, had gathered together, to hunt the country between the monastery and Sebastopol. At a quarter before two Captain Blane was observed scampering over the hills towards the former place, carrying an ammunition-bag full of paper shavings. Every one was on the tiptoe of anxiety to know the direction he would take—whether towards the distant and overhanging precipices of St. George, or in the undulating ground towards Kadikoi. Horses were there of every size and colour, from the blood of genuine English race, to the Spanish barb, the polished Arab, and the Turkish pony. Uniforms were there in plenty: shell jackets of red, staff coats of blue, fur jackets, and hoscouts. The many-coloured throng circled round and round in short curvets as the steeds were held by each, whilst the familiar nod of recognition, a passing joke, and sporting talk made up the usual scene of a hunting meet. A few French officers moved amongst the crowd looking round with mingled curiosity and doubt as to what was really the nature of the fun to be enjoyed.

By two o'clock, the chase being supposed to have had a sufficient start, a stately movement was made by the mass of sportsmen at a slow pace in the direction of the scent. The hounds and beat-taunted had off immediately, scattering up the sides of the hills, and spreading themselves out like skirmishers. Presently a shout was heard; the track had been discovered, and off we all scampered down the sides of a deep ravine, crossed by a trench and ditch. Over went the leaders, down toppled a horse with its rider, whilst the rush passed rapidly on with greater ease through a gap. Up the sides of the ravine again, through wet and stony ground, and on towards St. George a steady pace was run. But in the mean while the track was lost. It had disappeared like the Rhone into the bowels of the earth, or like a stream from an oasis in the desert. The trail was gone—but where? All then was uncertainty and doubt. The hunt separated into widely-distant parties: some sought the track towards the Monastery, led by the impetuous Neville; others took the opposite direction, and cunningly retraced their steps down the ravines towards Sebastopol. The mass kept circling in the undulations to the left; whilst wondering Frenchmen looked up, down, and around them to see what the race was for, and what animal it pursued. In the chase our French friends had been distanced; they didn't like the pace. There they stood, looking on in the extreme distance, enjoying the sight. They could see General Barnard diligently climbing the sides of a rocky precipice, and staggers returning beaten from the Monastery, and the body of riders still at fault. But who, they asked, is that solitary horseman waving his handkerchief? His cry is faintly borne to our ears from a distant acclivity. Can the trail be there? It is. He has found it, and leads. A knowing tracker is Blundell, late master of the drag hounds at Oxford. He is soon followed, and the pace becomes terrific. Over hill and dale they go, over stone walls and small ditches, through ruts and stones—many a fall is witnessed in the general rush. A solitary horseman is visible at a distance, he stands, dismounted, near his panting horse. The ammunition-bag hangs from his shoulder; it contains no more shavings. One man—two—small flying groups close with him, and the hunt is over. Blundell is first, Ford next, Tom Devar, Dallas, close up. What is the reward? Surely the first up should have the bag. The fox gives up his brush, but here is no fox. Why not give up the bag? But no! bags are scarce, perhaps, and this must be used another day.

Captain Thomas has received a pack of hounds, it is said, at Balaclava; we have heard their well-known voices in the neighbourhood of Kadikoi. Shall we not range the hills of Baidar after deer, or hunt imported foxes on the bare down of Sebastopol? One man cannot keep a pack out here. The hounds must be divided. "I will keep two," says one; "and so will I," says a second and third. And so we are to have a real hunt one of these days. The danger will, however, be when the dogs are in pursuit of real game. Who shall stay them if they stray in the direction of Russian pickets. Shall we all blindly follow over the hills of Ozumbash, or up the vale of Tchulin? I for my part say no, and think discretion the better part of valour. So here ends my chapter on Crimean hunting.

The weather, which had been fine during the hunt of the 12th became overcast in the evening, which was ushered in by rain. The wind then veered gradually from south-west to north and north-east, when snow set in, whirling into huts and houses with the vivacity of a Canadian poudrée, chilling the atmosphere and freezing up everything before it. In a few hours the thermometer fell to 16 degrees, and stopped all sketching by freezing the water-colour brushes to the paper, and variegating the huts with particles of crystal. This state of things lasted two days, when another thaw and rain followed, by which the roads have been reduced to a pitiable state of roughness. There is nothing for it but to remetal and repair as quickly as possible. The thaw was so violent in the sun of the last two days that the evenness of the railway was impaired by it, and the "Alliance," one of our locomotives, was thrown off the rail, where she remained for some twenty-four hours, luckily unharmed.

Much interest has been created by the sudden departure of Mr. Dayes, of the Army Works Corps, for England, on urgent business. It is believed that measures are to be instantly taken for giving a more military organisation to this valuable corps and rendering it more compact and movable. There is no doubt that this is a desirable end to attain, and there seems no obstacle in the way of its [illegible]

The question of moving the army is itself one which attracts considerable attention amongst military men; and one hears it said by some that we are altogether unable to move, whilst our allies the French can start anywhere at a moment's notice. If it be meant thereby that in an advance to the interior of the Crimea the English army is likely to be behindhand with the French in means of transport, I should give it as my humble opinion that both armies are in the same difficulty. It has never in the annals of war been the lot of an army of 150,000 men to advance into the interior of a country entirely destitute of all species of supply; and no organised army of any nation can do it without enormous additional means, which it may become necessary to procure. The ordinary means of transport of the French army is as inadequate to that task as is that of the British force; and this it is which induces people to speak doubtingly of a campaign in the Crimea or even in Asia this spring. Invading armies find ready means of transport in the common carts of the peasantry of the invaded country. The Russians, when they entered Wallachia, pressed into their service all the bullocks, cars, and drivers of the Principalities; and had the audacity and cleverness to carry with them across the Pruth 70,000 arabas, with their bullocks and drivers. Were we to advance to-morrow into the Crimea, there is no reason to believe that we should find a single waggon, bullock, or driver in the whole peninsula. Every article of food would have to be carried from the coast; and how is this to be done? This question is one of such importance that it cannot but have been taken into consideration long before this, and the sequel alone can show how it has been decided.

Connected with the Army Works is an innovation just made in the arrangements of our Commissariat, which has its utility. The Commissariat is now furnished with a body of skilled men—such as butchers, bakers, *et hoc genus omne*—whose duties have hitherto been performed by sergeants and soldiers of the army. By the play of the new arrangements a large number of men is restored to the ranks, which will partly compensate for the draught of those taken from the regiments for service in the Land Transport Corps.

A melancholy accident, by which Lieut. Messenger, of the 46th, was killed, has to be recorded. He was in command of a divisional road fatigue-party a few days ago, and superintending the explosion of a small mine. The fuse having hung fire, Lieut. Messenger had the imprudence to approach and blow upon it, when the charge was ignited, and blew away a portion of rock, which overthrew all in its way. Lieut. Messenger did not long survive. He was buried on Thursday. A sergeant lost his eyesight by the same accident.

## THE FALL OF KARS—WHO IS TO BLAME?*

THE siege of Kars is a dismal blotch on the fair fame of a war whose results have generally been so glorious and satisfactory. The scene of action, being distant and secluded, the details have but partially reached us; but enough is known of the heroic endurance of the little garrison, during a long, dreary blockade—the culpable neglect of which rested with those who were responsible for their succour and relief—to excite at once the enthusiasm and the indignant reproaches of the world. Of the gallant conduct of General Williams, the British Commissioner, intrusted with the defence, as well as that of the devoted garrison under his command, no doubt can exist, and too much cannot be said in praise; but the more important question, as to where the guilt rests of the cruel and scandalous desertion which led to the surrender of the place, and upon which so many conflicting opinions have been expressed, is one which the information hitherto published does not enable us to decide upon with certainty. The simple yet graphic "Narrative" before us, whilst it abounds in details of thrilling interest, supplies us also with ample grounds to induce us at least to suspend a judgment which we have lately been invited by "leading" authorities in journalism, daily and quarterly, to pass against a very high and respected British functionary as the sole cause of all this neglect and disaster. We, on our part, have no wish to prejudice the case, which must undoubtedly be brought to a definitive issue before long, and merely have been anxious to collect the statements in the light of "materials for history" and aids to judgment.

We pass over the earlier chapters, which relate to previous campaigns in Armenia, and to adventures and observations of various sorts in the East, and come at once to the memorable siege of 1855, which has only recently been brought to so sad a close. The condition of the army of Kars, in the very beginning of the spring, was seen to be so wretched, so inefficient, both in point of numbers and supplies, "as to fill us all," writes Dr. Sandwith, "with forebodings for the ensuing campaign." The Central Government were so absorbed in the great siege of Sebastopol, as to forget all about this Armenian citadel, threatened by a strong Russian army, under an able General; the troops were twenty-four months in arrears of pay, ill fed, their clothes in rags, constant mutinies and desertions being the necessary consequences. Riza Pacha, the Seraskier Minister of War, was fully aware of this state of things, and in reply to representations on the subject quietly recommended to the newly-appointed Mushir, on his setting out to his Government, "That the frontier fortresses should be abandoned, if he thought they could not be held." This statement is important, as affording the key to all that followed.

In March, General Williams was sent to the defence of Armenia, and with Colonel Lake and Captains Thompson and Teesdale, soon succeeded in putting Erzeroum and Kars in an admirable condition of defence. To organise the army; to feed and clothe the troops; to lead and encourage them in their duty; to repress the peculation of the Pachas and various officials; and to guard against treachery, to which he was exposed on all sides, was afterwards his constant care; and nobly, without repining, did he acquit himself of a laborious and thankless task—persevering undauntedly till the very last, when the treason of which he was the victim was fully revealed to him.

Dr. Sandwith, as chief of the medical staff, and the confidential friend of General Williams, had the fullest opportunity of knowing all that was going on, and a great deal that passed in the mind of his distinguished commander. The facts, he states, are such as, if known to the authorities at Constantinople, ought to have called for instant and vigorous exertion on their part; yet we do not find, from beginning to end, that they did anything, or that a single expectation of the British Commander, and the brave garrison which, from the first, placed implicit faith in him, was realised. It was on the 7th June that General Williams entered the city to take the command, and gloomy enough in forebodings were the very first discoveries he made as to the condition of the blockaded fortress—there being only three months' provisions and only *three days ammunition* within the walls. With regard to the latter fact, safety consisted in its concealment from the Russian Commander; as for the former, from the first there was a confident hope that, when the Russians unmasked their plans, and the Central Government heard that the place was invested, it would have ample time to send an army to its relief—an expectation cherished to the last, and all along miserably and fatally disappointed. Omitting some of the more harrowing details of the sufferings endured both by the garrison and the inhabitants of the hapless city during this memorable siege, we cite, in the order things occur, some of the entries in Dr. Sandwith's Diary, which show how they were kept alive with false hopes in this particular.

On July 17 "a most dismal discovery is made" that there is no barley in the stores, owing, of course, to official peculation; a vigorous investigation is instituted into the state of the provisions generally, the result of which is that the men are put upon two-fifth rations of bread, in addition to animal food. "It is found," writes our author, "that we have still provisions to last until the end of August, and hope by that time to have aid from the Central Government."

[illegible] By Hunt, 2s.

On July 27 we read:—

An Aide-de-Camp arrives from Batoum; he brings word that the order for the march of troops from that place for the relief of Kars has been countermanded from Constantinople, and that some English officers had arrived there, from which facts we infer that a diversion will be made from that quarter in our favour, and that a landing of fresh troops is contemplated.

On Sept. 3 we are told of an order for the slaughtering of starving horses, at a considerable distance from the city; with the addition, "the weather is too hot to allow of this horseflesh being salted or otherwise preserved; and we have no forage. Up to this time the troops have had rations of beef.

On Sept. 8 cheering news is brought of a contemplated landing of Omer Pacha near Batoum; with the remark that a landing at Trebizond would have been much more cheering, as affording more direct and nearer relief. The glorious news of the fall of Sebastopol was received in the city on the 23rd September, and greeted with enthusiasm by the famishing troops. "A grand salute" was fired from the Castle; which the Russians, wishing to disguise its real import from their own troops, answered with a sham cannonade.

By the 8th October there was no more animal food left, and the troops were reduced to a ration of 100 drachms (not quite three-quarters of a pound) of bread, a *soup maigre*, consisting of five drachms of flour, five of biscuit, and five of wheat. Three week later the bread was reduced to 86 drachms.

On October 22:—

Glorious news arrived, and, like a gleam of sunshine, raises our drooping spirits. We hear that Selim Pacha has landed at Trebizond, with an army of 20,000 men, and that he is marching straight on to Erzeroum. We now feel confident of being relieved, since the road from Trebizond, although a difficult one, is nevertheless quite practicable for an army

On Oct. 31 comes another despatch from Selim Pacha, who has arrived at Erzeroum with his advanced guard, and tells how his soldiers "loudly demanded to be led on to the relief of their comrades by forced marches. He does not give the number of his army, lest his despatch should be read by the Russians, but he tells us his troops are numerous and first-rate. We have now but to wait for a fortnight and our relief is certain." On the 4th November another encouraging message from Selim Pacha, who is advancing at all speed. Meantime let us take one glance at the horrible state of things which is yet to continue for another fortnight: soldiers brought to the hospitals and dying at the rate of a hundred a day from starvation.

The emaciation is wonderful, yet in most no diarrhœa or other symptoms of disease is observable. Their veins are excessively feeble—a clammy cold pervades the surface of the body, and they die without a struggle. Several of these men are recovered by the administration of horse-broth, with the application of warmth to the extremities. Surgeons are posted in every part of the camp with broth of horse-flesh in the form, and under the name, of medicine. A search is made for surviving horses, and these are secured to make soup for the hospitals.

General Williams determines to increase the soldiers' rations by thirty drachms of bread a day—a timely boon, since the mortality has become alarming, and still more so the frightful emaciation of our troops. With hollow cheeks, tottering gait, and that peculiar feebleness of voice so characteristic of famine, they yet cling to their duties. I have again and again seen them watching the batteries at midnight, some standing and leaning on their arms, like men dozed off to sleep during cold as intense as an Arctic winter, scarce able to respond to or challenge the visiting officer, and, in answer to a word of encouragement or consolation, the loyal words were ever on their lips, "*Padishah sagh ossun!*" Long live the Sultan! It would seem that the extremity of human suffering called forth latent sparks of a loyalty and devotion not observed in seasons of prosperity.

On the 16th November, on the sound of some distant firing, "a thrill of joy and excitement runs through the population at the idea of the near approach of a succouring army;" but their hopes are doomed to disappointment: "the report is a false one." Meantime men, sometimes officers, are sent out in disguise every night to find their way to Selim Pacha with despatches in cipher rolled up in quills, urging him to hasten his advances, "as we cannot hold out much longer."

On the 22nd November, when there are not five days' provisions left in camp, the fraud is revealed, the delusion dispelled:—

At six a.m. a messenger comes in with a despatch from Selim Pacha to the Mushir. He was to have left Erzeroum for Kars on the 14th, and would hasten on. Besides this veracious Turkish document there is a little note in cipher from Mr. Brant: it is as follows:—"Selim Pacha won't advance, although Major Stuart is doing his utmost to make him. Omer Pacha has not advanced on from Soukoum Kaleh. I fear you have no hope but in yourselves; you can depend on no help in this quarter."

On the 25th General Williams rode out, under a flag of truce, to the Russian Camp, and signed those terms of capitulation so honourable both to his brave garrison and his generous foe. The wild dejection and bitter indignation of the troops and inhabitants at their cruel fate, is fearfully told:—"We lay down our arms," writes the author, "to our conquered enemy, *starved by the dishonest jobbery of rascally factions, and the bribed apathy and unworthy intrigues of modern Byzantine officials.*"

There is no doubt that the garrison of Kars were basely betrayed by Selim Pacha and the whole fraternity of Turkish officials. General Williams complained that but for the expectation of relief from this quarter, he would at an earlier period, seeing the hopelessness of the struggle, have cut his way out of the place, after destroying guns, standards, &c, and so have spared the garrison much unnecessary suffering. As little doubt can there be that Omer Pacha was guilty of a strategetical error in landing Redout Kaleh, in the rear of the Russian force, instead of at Trebizond in the territory of the besieged,—in attempting a diversion, instead of direct relief. "Mouraviefi smiled," says Dr. Sandwith, "as he remarked to us (after the capitulation) that Omer Pacha had gone to Soukoum Kaleh to relieve us."

To return again to a point which we briefly hinted at in the outset, we do not find throughout this narrative the slightest suggestion of a complaint against any member or department of the British Government, whether at home or at Constantinople,—no complaint of unanswered letters, or other sign of neglect on the part of our Ambassador, who has recently been the subject of much invective, upon this subject; and we can hardly believe that if General Williams had been systematically treated by that functionary, in the manner described in the charges we refer to, the fact would have been altogether unknown to Dr. Sandwith, or that, with the knowledge of such a fact, he would have suppressed all mention of it. Thanking Dr. Sandwith for a very able and interesting volume, we now recommend it to the attention it is so justly entitled to command.

"VERY LIKE A WHALE."—A discovery of great scientific importance has just been made at Culmont (Haute Marne). Some men employed in carting a tunnel which is to unite the S. Dizier and Nancy railways, had just thrown down an enormous mass of stone by means of gunpowder, and were in the act of breaking it to pieces, when from a cavity in it they suddenly saw emerge a living being of monstrous form. This creature, which belongs to the class of animals hitherto considered to be extinct, has a very long neck, and a mouth filled with sharp teeth. It stands on four long legs, which are united together by two membranes, doubtless intended to support the animal in the air, and the end of each four claws terminated by long and crooked talons. In general form resembles that of a bat, differing only in its size, which is that of a large goose. Its membranous wings, when spread out, measure from tip to tip 3 metres 22 centimetres (nearly 10 feet 9 inches). Its colour is a livid black; its skin is naked, thick, and oily; its intestines only contained a colourless liquid like clear water. On reaching the light this monster gave some signs of life, by shaking its wings, but soon after expired, uttering a hoarse cry. This strange creature, to which may be given the name of living fossil, has been brought to Gray, where a naturalist, well versed in the study of paleontology, immediately recognised it as belonging to the genus *Pterodactyl*, two cases, many fossil remains of which have been found among the strata which geologists have designated by the name of lias. The rock in which this monster was discovered belongs precisely to that formation the deposit of which is to old that geologists date it more than a million of years back. The cavity in which the [illegible] was lodged forms an exact hollow mould of its body, which indicates that it was completely enveloped with the sedimentary deposit.—*Presse Scientifique.*

## ST. VALENTINE OF OLD.

A SKETCH.

ENE: *A lady's chamber, in a baronial hall. On the table lie a number of Valentines, writing materials, &c.*

[*Enter* "DAINTIE DEMOISELLE."]

*Demoiselle (approaching the table)*:

How now, good Bishop Valentine! Methinks
Thy crosier hath become a magic wand,
Turning men's wits to folly.—By your leave.
(*Reads*).

VALLNTINE I.

"List, O list to love's sweet tune,
Thou whose beauty mocks the moon:
Hear a faithful lover's tale,
Thou that maketh the sun look pale.
For thee he bears these bosom-scars—
Thee, the twin-sister of the stars!

"When to yon skies thine eyes turn not,
The moon herself is but a blot.
In heavens that see not thy sweet face,
The sun himself hath lost a grace:
Such radiance streams about thy name,
The chidden stars go hide for shame!"

"O deem this isle the Latmian plain,
Descend, sweet moon, to earth again!
Where, shivering, chilled, I mope apart,
Come thou, blest sun, to warm my heart!
O radiant scorner, near or far,
Thou only art my guiding star!"

*Dem.* Is woman, then, a puppet and a toy,
And worthy only to be thus tricked out
In the poor, cast-off sweepings of your brains?
I pray you, gentlemen, respect us more!
Shall beauty thus be coined into a lie?
Is Truth a fiction—Love itself conceit—
And courtship still a mummery and a mask?
Methinks the moon hath more to do with this
Than my poor self, or my unlucky stars!
Another?—So! hath folly ne'er an end?
(*Reads.*)

VALENTINE II.

"When merry bells do ring their bridal peal,
And maids go strewing blossoms by the way,
From the too sudden face of joy I steal
And down before thy feet my bruised heart lay—
When merry bells do ring.

"When Sabbath bells call wandering souls to prayer,
Inviting Sin its burthen down to rest,
Then breathe I straight thy name upon the air,
And all my vain presumption stands confest—
When Sabbath bells do call.

"When solemn bells toll slow that last sad rite
That ushers in the bridal of the grave,
In others' darkness find I my true light,
Dying, in thought, for thee whose love might save—
When solemn bells do toll."

*Dem.* Certes, were I an undertaker's daughter,
'Twere meet thy groans prevailed, most dismal wooer!
We'd weep—we'd hold our troth-plight o'er a grave,
And wed beneath a canopy of pall
In very truth I would thou'dst been a mute!
Why, what comes next? More vain and empty breath?
Good Bishop, give me patience to the end!
(*Reads.*)

VALENTINE III.

"Might I but touch thy garment's hem
I'd ask no kingly diadem,
The silken net that binds thy hair
Dearer to me than empires were;
Another envy I save that rich zone
Which calls thy beating heart its own!"
* * * *

*Dem.* Go to! the man's a milliner! I vow
A barber's block were meeter for a wife
To this so mincing, superficial ape,
Than such a breathing frame of earth as I!
I'll call my trewoman; sooth, he shall have
My garment's self, my silken net—ay, even
My girdle-cord to hang himself withal!
But, soft! here's one whose music sounds like truth.
(*Reads.*)

VALENTINE IV.

"Count thou my wealth! A soul without a stain,
Born to be free—
A soul that never yet could brook a chain,
Not even for thee:
A right good sword—to succour, not oppress,
No sword of state,
But one, the wrongs of nations to redress
Ever in wait.
A lance unsmirched, and ever foremost hurled
Where Freedom bled;
A shield, to keep the battles of the world
Far from thy head.

"If this be wealth, to honour and to thee
I pledge my all:
Should'st thou below thy higher standard see
How far I fall;
O, patience, gentle lady! Breathe that word
Whose lightest sound
Mid the heart-silence of devotion heard
Makes virtue crowned:
Then, in the fulness of thy richer grace
To thee 'tis given
To bid me follow where thy b'est feet trace
The path to heaven!"

*Dem.* O, noble soul! Had I a heart to give
'Twere thine without a blush! True soldier thou!
What wonder is it that our woman-hearts
Still cling about a sword? Who else but he
That righteth for the sanctity of home
Should there hold honoured place 'fore all the world!
Would I were troth-free, for thy valour's sake!—
What have I said? I would not for the world!
Out on the thought, disloyal and untrue!
Yet why, O why, send'st *thou* no single word,
O love of all my life? What have I done,
What said, or thought, or dreamed, that I should bear
This rueful penance? Wherefore did'st thou still
Walk hand-in-hand with me from childhood up—
Wherefore forsake the labours of thy youth
To make me pastime, turning toil to sport—
If thou'rt too wise for love? Alas, weak heart,
That trembles in the silence of the loved:
Yet can I but remember of the time
When we two roamed together, like the stars
In the unchanging heavens—each true soul
Upheld and guided by the law of love.
Like, too, the stars, we gazed on this green earth,
Radiant in smiles—so full of light were we!
No word—not one—nor shadow of a word?
Yet stay—what is it I behold? A scroll,
Looped in a golden ring! It is—it must be;
This is the very trick of his dear hand!
I asked but for a single word—'tis here!
(*Reads.*)

VALENTINE V.

"WIFE!"

*Dem.* A simple word: a sweet old Saxon word
As e'er took root within an English home,
Or blossomed into beauty by a hearth!
Illumined, too, with quaint devices strange,
Like some rich monkish missal, wrought by hand,
That ne'er—pray Heaven he be not a monk!
How shall such word be mated? (*Taking up a pen.*) Laggard pen,
That will not write what love is fain to say!
(*She pauses, then writes a single word, and folds the letter.*)
So! there,—no more: 'tis writ: now, on my life,
I've given thee, love, a "Husband" for thy "Wife!"

E. L. HERVEY.

## CIVIL SERVICE SUPERANNUATION TAX.

As some misunderstanding is said to exist respecting the present policy of the service with respect to this question, the following statement has been furnished to us by a well-informed Correspondent, as the correct account of the position of the ten thousand civil servants whose petition Mr. Roebuck is about to bring under the consideration of Parliament.

A petition was presented to the House of Commons in December, 1852, signed by twenty-seven gentlemen belonging to different public departments, in which they prayed that the present deductions from official salaries should be converted into a fund for the relief of the widows and orphans of the members of the service. This petition—which, it will be observed, left the question of the scale of pension (now so low as to be practically useless to the service) altogether untouched, and which deferred till after the civil servant's death a redress of the grievance he complains of during life—was not, previously to its presentation, submitted for the approval of the service. In November, 1853, however, 2196 gentlemen—a very small proportion, be it observed, of the 12,000 or more contributors to the tax—accepted this proposal, most of them doing so in utter hopelessness of any better scheme being offered to them, and thinking that, while it would be fruitless to ask Government for a simple measure of justice, they might possibly make some impression by suing *in formâ pauperis*.

Now, however, that the Press and very many influential members of Parliament have turned their attention to the question, a movement originating spontaneously with the great body of the service, has been made for an equitable adjustment of the superannuation grievance, by the restoration of a scale of pension that will be something more than a mere nominal benefit to the officers and clerks, and the repeal of a class-tax, which, though laid on for the benefit of the service, is fast becoming a mere source of revenue to the State. This petition, of which Mr. Roebuck has kindly takencharge, has now received more than ten thousand signatures, and therefore expresses the all but unanimous feelings of the parties concerned; but twenty-four of the twenty-seven gentlemen who signed the petition of 1852 insist, in spite of the service, in again forcing their plan on the attention of Parliament, claiming to represent a body that almost entirely ignores them.

It is to be regretted that, at the eleventh hour, an excuse should be given to the Government for getting rid of the whole question, by pointing to an apparent division in the service on this very important matter, when in reality the feelings of more than ten-twelfths of the contributors to the tax are unanimous.

JOHN MITCHEL.—This insane personage has delivered an address, in the United States, on the "Ripening of the Revolution in Ireland," in which he indulges in the foulest abuse of England. He says that in the event of a war, England and France against America, he could promise an army of "40,000 armed Irishmen to invade Ireland at their own expense." In the conclusion of his address he advises patience, and fractically winds up with an appeal to the hereditary hatred of England

## ANOTHER CRIMEAN HERO.

WE have been requested to give insertion to the following communication:—

Hyder Pacha Barracks, Scutari, Jan. 9, 1856

DEAR SIR, I have long intended to send you the particulars of the case of Private John Dryden, 11th Hussars, who received thirty-one wounds in one day. It has interest connected with it on account of the large number inflicted upon the man within a few hours. He was exchanged at Odessa in October last, and is now at his duty in the Crimea. *He is not in the receipt of any pension.* You will doubtless agree with me in considering his escape almost miraculous, and that the soldier is deserving of some compensation for his wounds. I am indebted to Surgeon Crosse, of the 11th Hussars, for his kindness in allowing me to examine the man in his presence. My worthy friend will corroborate, if necessary, the statements I am about to bring to your notice.

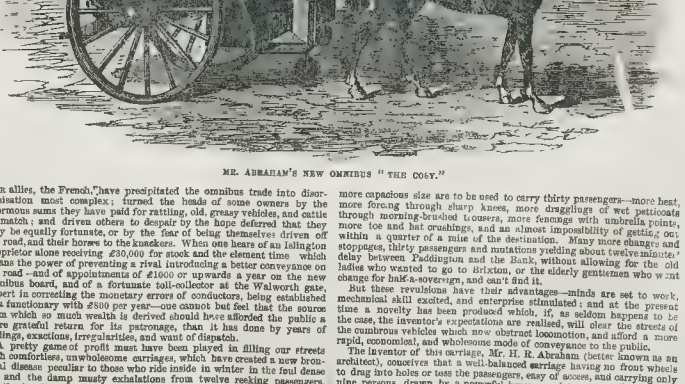
Believe me to remain yours truly,
ROBERT COOPER, Surgeon, 4th Dragoon Guards.

G. J. Guthrie, Esq.

Outline of the case of Private John Dryden, 11th Hussars, taken prisoner after the Light Cavalry charge at Balaclava on the 25th October, 1854:—Aged 2.., service, five years; No. 1617; Scotchman; Dumfriesshire. At the Light Cavalry charge he was cut off and surrounded by about twenty Russian Lancers and Dragoons. He received several wounds before he was dismounted. When on the ground was pierced by lances. He was left for dead. An hour or so after the engagement had terminated some Cossacks came on foot, and speared him. He made signs of life while they so employed themselves: they would not desist. At the time he was weak and faint from the loss of good deal of blood When night came on he was placed in a bullock-waggon, to be conveyed to an adjacent village, where he remained about forty-eight hours. Was then forwarded to Simpheropol, which he reached at the expiration of two days. His wounds were not attended to, or dressed, by anybody for four days after their infliction. On his arrival at Simpheropol they were washed and dressed, in a manner, by a Russian soldier In a fortnight after an American surgeon came to the hospital and personally dressed every man's wound. The Russian surgeon had previously overlooked the English altogether. He remained three months at Simpheropol.; was then marched up country, being at the time quite well. After proceeding 900 versts was taken ill with fever, which laid him up for three months. He walked from twelve to thirty versts every day; had plenty to eat on the road, being allowed eightpence per diem to find himself. Was exchanged at Odessa in October last, and rejoined his regiment in the Crimea on the 26th of the month, having been absent one year. The following table will afford some idea of the nature and extent of his wounds:—

| Locality of Wounds | Number of Wounds | Class of Wounds. Incised | Punctured | Lacerated | Contused | REMARKS |
|---|---|---|---|---|---|---|
| Head and Face | 6 | .. | .. | .. | 6 | Two severe cuts (followed by depressions), one about two inches in length, in the region of the vertex and occiput, three slight superficial scalp wounds in the same vicinity; one cut through the nasal bones |
| Trunk, Scapular region | 13 | .. | .. | .. | 13 | Twelve large lance wounds, and three small ones, among the spinal and lumbar muscles; the dimensions varying in size from a sixpence to a crown |
| " Pectoral region | 2 | .. | .. | .. | 2 | Could not see one small lance would on the right side of body |
| Arms .. .. .. | 4 | 1 | .. | .. | 3 | One severe wound at the insertion of the left deltoid, two of 3 inches in length, three cuts in under the right elbow One on the back of the left hand |
| Legs .. .. .. | 3 | .. | .. | .. | 3 | Two on the right thigh and one on the left calves. |
| Total .. | 31 | 24 | .. | .. | 7 | |

He suffered most from the wounds on the head and at the insertion of the left deltoid; they were three months healing. It took two months to cicatrise the wounds on the back. He was informed by his comrades who had been in hospital with him at Simpheropol that he had been delirious when last under treatment. Portions of bone came away from the wounds on the head one piece as large as a sixpence. Liquor affects him sooner, and in smaller quantities, than it used to do; has slight giddiness now and then for two days at a time; suffers from singing in the ears occasionally. Intellect at times confused for half an hour. With the above exceptions he enjoys good health; has perfect use of his left arm; can do everything with it as before; raises it freely over his head. Cannot remember whether he had a cough after the wounds were inflicted: has no recollection of spitting blood, neither did he pass any to his knowledge ROBERT COOPER, Surgeon, 4th Dragoon Guards.



MR. ABRAHAM'S NEW OMNIBUS "THE COSY."

OUR allies, the French, have precipitated the omnibus trade into disorganisation most complex; turned the heads of some owners by the enormous sums they have paid for rattling, old, greasy vehicles, and cattle to match; and driven others to despair by the hope deferred that they may be equally fortunate, or by the fear of being themselves driven off the road, and their horses to the knackers. When one hears of an Islington proprietor alone receiving £30,000 for stock and the element time which means the power of preventing a rival introducing a better conveyance on the road—and of appointments of £1000 or upwards a year on the new omnibus board, and of a fortunate toll-collector at the Walworth gate, expert in correcting the monetary errors of conductors, being established as a functionary with £800 per year—one cannot but feel that the source from which so much wealth is derived should have afforded the public a more grateful return for its patronage, than it has done by years of stiflings, exactions, irregularities, and want of dispatch.

A pretty game of profit must have been played in filling our streets with comfortless, unwholesome carriages, which have created a new bronchial disease peculiar to those who ride inside in winter in the foul dense air, and the damp musty exhalations from twelve reeking passengers, mostly invalided and coughing in chorus—living hearses as they are, pacing at an average rate not exceeding, and mostly less than, four miles and a half per hour, except when, like a cat in a fit, they make a sudden dart to obstruct a competitor. A mine of gold has, it appears, been rolled over in the course of these abominations. We would seek to learn what the transition from disorganisation to a redevelopment is to produce for the public.

There is a rumour, which shocks the *amour propre* of the conductor, that a new ticket, to prevent financial mistakes, is to be introduced. Conductors won't have it: they desire to share with the wife of Cæsar the privilege of not being suspected. Another is, that omnibuses of a more capacious size are to be used to carry thirty passengers—more heat, more forcing through sharp knees, more draggings of wet petticoats through morning-brushed trousers, more fencings with umbrella points, more toe and hat crushings, and an almost impossibility of getting out within a quarter of a mile of the destination. Many more changes and stoppages, thirty passengers and mutations yielding about twelve minutes' delay between Paddington and the Bank, without allowing for the old ladies who wanted to go to Brixton, or the elderly gentlemen who went change for half-a-sovereign, and can't find it.

But these revulsions have their advantages—minds are set to work, mechanical skill excited, and enterprise stimulated: and at the present time a novelty has been produced which, if, as seldom happens to be the case, the inventor's expectations are realised, will clear the streets of the cumbrous vehicles which now obstruct locomotion, and afford a more rapid, economical, and wholesome mode of conveyance to the public.

The inventor of this carriage, Mr. H. R. Abraham (better known as an architect), conceives that a well-balanced carriage having no front wheels to drag into holes or toss the passengers, easy of access, and carrying only nine persons, drawn by a powerful horse equal to seven miles an hour, will effect a great saving in cost, and run easier and faster; and the result of many practical experiments induced him to construct a carriage which is to test his opinion. There will be necessarily fewer stoppages, and less loss to the proprietor when only partly filled. The carriage has a *coupé*—a most easy and enjoyable place for three to ride in—and a roomy *rotund*, to carry four passengers; and there are seats for two more outside. We give an Engraving of the carriage, which, as may be seen, is applicable for private use, and, as a chunk of jaunting carriage, most handy. We hope the inventor will have fair play, and we wish him every success. The carriage is a model of build, executed by Messrs Holmes, of Derby, builders to her Majesty.

"WHAT NEXT, AND NEXT?"

CERTAINLY not humbug, but matters of fact, that Gentlemen will find the best CLOTHING at the smallest cost, in immense variety, by visiting the Establishment of

7, MILLS and CO.,
Clothiers, &c., No. 7, Aldgate.

"WHAT NEXT, AND NEXT?"

A TRUTH that for GENTLEMEN'S CLOTHING, Mess's Mercury, Outfitting, &c., a better house cannot be found than

7 MILLS and CO.,
Hosiers, &c., No. 7, Aldgate.
(Nearly opposite Messrs. Moses and Son).

"WHAT NEXT, AND NEXT?"

THAT the Best Saxony Wool Shirts, now so fashionable, are selling at 3s 6d to 10s 6d. also, 20 dozen of Superior Printed Cotton Shirts for Gentlemen at 2s. 6d. per dozen, usually sold at 42s., by

7 MILLS and CO.,
Shirtmakers, &c., No. 7, Aldgate.

"WHAT NEXT, AND NEXT?"

IT has been intimated by many of our patrons that the huge hive of industry, Aldgate, is not sufficiently aristocratic to be mentioned in connection with Superior CLOTHING, however cheap; therefore, on the 1st of February, 1856, we establish a Branch at 69, Regent-street, where it is hoped many more will test the style and quality of

7 MILLS and CO.,
Clothiers &c., Leonard street.

"WHAT NEXT, AND NEXT?"

NOT Prophecy in our day, the Public require proofs. Such are greater honour than a host of the adroitest efforts to Economists by

7 MILLS and CO.,
Clothiers, Outfitters, Merchants, &c
Nos. 1 and 3, Aldgate. Branch, Leonard-street, City, London.

It has been pronounced by her MAJESTY'S LAUNDRESS TO BE THE FINEST STARCH SHE EVER USED. WOTHERSPOON and CO., London and Glasgow

EDUCATION.—Blackheath. —In a LADIES' ESTABLISHMENT, situate in the immediate locality of Blackheath-hill, Kent, a VACANCY occurs. Terms, to include French, by a resident Parisienne, with music and drawing by professors. Forty Guineas per annum. Introduction in the above by resident teachers only. Thirty Guineas per annum. Address (pre-paid), DELTA, Rose's, 35, Poultry.

PRACTICAL MILITARY INSTITUTION, Conducted by the Military Profession Under the Patronage of

Gen. Sir J. Fitzgerald, K.C.B., | Col. J. H. Pringle
M P | Col. the Hon J Lindsay, M.P.
Major-Gen. Sir M. Creagh. K.H. | Col. Brook Taylor
Major-Gen. C. Morton Edon | Lieut.-Col. J. Macnaughten Hogg
Major-Gen. D. Cox | Rev. Dr. Wrench, D.C.L.
Col. the Hon R. H. Wilbraham | Rev. W. G. Hawtayne, M.A.
Col. A. W. Hope, R.A.
Director of Studies Captain LENDY, late of the French Staff, Graduate in Classics and Mathematics, Cambridge.

This Institution will definitively open on February 13, at SUNBURY, Middlesex.

The extensive grounds and the situation of the Establishment are well adapted to the various purposes to be carried out.

The Staff consists of four resident Masters and twelve Professors.

Terms of Admission, Prospectuses, &c., forwarded upon application to Capt. Lendy, 6, Hyde-park-gardens; and, after the 13th inst., to the Secretary of the Institution, Sunbury, Middlesex

C. HAMEL, Esq., Sec.

BAZAAR.—HOSPITAL for CONSUMPTION, BROMPTON. The Committee of Management beg to announce that, in order to promote the Fund for carrying on this Institution during the present severity of weather, a number of wishes has been increased by accommodation for 130 additional patients, and on the opening of the new wing, on Wednesday, a GRAND BAZAAR will be held on its behalf in JUNE next.

The Friends and Patrons of this valuable Institution are therefore earnestly and respectfully solicited to prepare such articles of Work and Ornament as may on occasion, including Paintings, Drawings, &c. Donations also of Music, Autographs, Minerals, Seaweeds, Specimens, and Botanical Articles and Flowers, or pecuniary aid, forwarded to the Hospital, will be gratefully received and acknowledged. Further particulars will be duly published.

PHILIP ROSE, Hon. Sec.
Brompton, January 31, 1856. OSBORN P. CROSS, Sec.

BERIAH DREW AND COMPANY'S PURE COD-LIVER OIL with QUININE (Quinine à l Huile de Foie de Morue) combines the Tonic and Strengthening properties of Quinine (the essential salt of Peruvian Bark) with the Nutritive Power of Cod-Liver Oil. Many eminent physicians have prescribed and testified to the great efficacy in Consumption, Rheumatism, Gout, Debility, Infants and Children, Rickets, Scrofula, Ague, &c., &c., of this perfect combination of these invaluable Medicines.

Prepared only by Beriah Drew and Company, Chemists, 91, Blackman-street, Borough, London, in sealed bottles, at 2s. 9d., 4s. 6d., 11s., and 22s. each, of all Chemists in the United Kingdom and Ireland. and in the Colonies, and of Messrs. Barclay and Sons, 95, Farringdon-street, M.S. An 11s. bottle, or three 4s. 6d. ditto, sent free to all parts of England, on receipt of Post-office Order.

BERIAH DREW AND COMPANY'S PURE COD-LIVER OIL WITH QUININE (Quinine à l'Huile de Foie de Morue) combines the tonic and strengthening properties of Quinine with the well-known virtues of Pure Cod-Liver Oil. Many eminent medical men have testified to the efficacy of this valuable combination. In Bottles at 2s. 9d., 4s. 6d., and 11s., direct of B. Drew and Co., 91, Blackman-street, Borough, London; Sangar, 150, Oxford-street; Johnston, 68, Cornhill; Newbery, 69, St. Paul's; or of any Chemist in the British empire.

From C. T. Pearson, Esq., M.D., Physician, Accoucheur, Guy's Hospital, Fellow Royal Med. Chir Society, &c., &c.

"I cannot have the least hesitation in bearing my testimony to the great efficiency and value of your preparation of Cod-Liver Oil with Quinine. In many cases under my treatment it has acted solidly, and I have the greatest confidence in it.

"Gentlemen,—Having given a fair trial in the Diseases of Women and Children, to your preparation of Cod-Liver Oil and Quinine, I can bear testimony to its value in those various cases in which such combination is desirable. SAMUEL GRIFFITH, M.D.,

Physician, Accoucheur, &c., at St. Thomas's Hos. and Med. Col.

N.B. One 11s. or three 4s. 6d. Bottles sent FREE to all parts for stamps or money order.

# THE ILLUSTRATED LONDON NEWS

No. 785.—VOL. XXVIII.] SATURDAY, FEBRUARY 16, 1856. [WITH A SUPPLEMENT, FIVEPENCE.

## THE WENSLEYDALE PEERAGE.

A QUESTION, fizzing like a bomb-shell, has been suddenly thrown into the decorous and solemn arena of the House of Lords. The Wensleydale Peerage has discomposed the gravity of the gravest assembly in Christendom, and threatens to bring into hostile collision two out of the three great estates of the realm, if it do not also involve the third in the discussion of delicate and difficult points of Constitutional law, which it would have been better for all parties to have left untouched.

The question is by no means so simple as it appears. Neither is it so unimportant as some men, who pique themselves upon their plain common sense, strive to represent. We cannot wonder that the Upper House, whose constitution the innovation tends to impair, should so soon have taken the alarm, and so strenuously have resisted it.

If we take, in the first instance, the reasons which have induced the Government—acting upon the advice of its highest legal authority, the Lord Chancellor—to depart from the ordinary practice in the case of a man thought worthy of being elevated to the honours of the Peerage, we shall, perhaps, disencumber the question of some of the complications which have grown into, and upon, it. The reasons alleged are that the House of Lords, in its capacity as the highest Court of Appeal, does not possess within its body a sufficient number of men learned in the law to transact Appeal business; that the ex-Lord Chancellors, and others who are qualified to sit in judgment on its benches, are too old for the work expected of them; that non-legal or lay Peers are not to be fitly or even safely intrusted with functions such as these,—that, if they were, such peers hold themselves aloof, and do not choose to become Judges of Appeal, and run the risk of doing injustice to the unfortunate persons whose cases come before them; that many men of the highest legal attainments, whose presence among the Peers would be of the greatest advantage to that assembly, and to the due administration of justice, are not wealthy enough to support the honours of an hereditary peerage, and shrink from leaving to their sons the burthensome dignity of a coronet; and that, as the Bishops sit among the Peers by virtue of their office, and for the term of their natural lives only, it is for the public benefit that a few great lawyers should, on a similar principle, be introduced into the Upper House as life members of that illustrious body. Acting upon this conviction, the Ministry resolved to offer Baron Parke, a peerage for life; that eminent person accepted the limited dignity; and Government making the question a Cabinet one, resolved to stake its Ministerial existence upon it.

We grant the scandal and the abuse as regards the manner in which the Lords have been compelled to do, or to leave undone, their legal work. Their Lordships themselves must be but too painfully conscious of their manifold deficiencies in this respect; but we may grant the abuse without granting the remedy. Were there no means left but the one adopted? Could not the Lords have been legally relieved of their appellate jurisdiction, without loss of dignity to them, and with satisfaction to the legal profession and the public?

On this point issue has not yet been joined. The House of Lords, not unanimously, but by a strong majority, has determined to resist the introduction of Lord Wensleydale among them, on the broad principle that the Sovereign, who is the fountain of honour, has no right to confer a life peerage; that if the right was ever enjoyed it has fallen into desuetude, the latest instance of its exercise having occurred at a period so far back as the reign of Richard II. The great law Lords allege, in support of this argument, that, if desuetude be not allowed its full weight, the Sovereign might in the same way revive many other antiquated and obsolete rights—the nomination of members to the Lower House of Parliament, among others—to the destruction of the Constitution of the realm, and to the injury of the popular liberties. They furthermore allege that if it be desirable or necessary—which they deny—to create life peerages, the consent not alone of the Queen, but of the Lords and Commons, is necessary to give legal validity to so great a change in the constitution of one branch of the Legislature, in the same manner that the consent of the House of Lords was essential to the validity of the Act for the Reform of the House of Commons. On these grounds they have thrown down the gauntlet to the Sovereign, from the exercise of whose prerogative all nobility

THE EDINBURGH ELECTION.—(SEE NEXT PAGE.)

springs, and to the Ministry who have made themselves responsible for the innovation. They have constituted themselves into a Committee of Privileges, and, until they have decided the question for themselves, have determined, should Lord Wensleydale present himself before them, to refuse him admission.

To say the least of it, this is an unhappy state of things. It raises very inopportunely the whole question of the policy or impolicy of a Hereditary Peerage, and places the Crown and the Ministers in an invidious position, as assailants of the aristocratic branch of the Legislature, which they strive, or seem to strive, to render more democratic.

As far as the discussion has yet gone, the Lords have the best of the argument. It remains for the Ministry to show that they could not have remedied an admitted abuse without the introduction of a new, or at all events of a disputed, element into the constitution of an assembly which Englishmen have so many reasons to respect, and against which they have no ground of quarrel. If there be a ground of quarrel against that illustrious assembly it is on this very question of life peerages; inasmuch as a large section of the people maintains that it would be for the advantage of the State, and of Religion, no less than of the House of Peers itself, if the Bishops—who sit for life in that body—were forthwith deprived of the privilege.

The weakest argument which has yet been employed on behalf of their Lordships is that the creation of life peerages is a principle open to abuse, and that an unscrupulous and wicked Ministry might at any time swamp the independence of the Upper House, by turning into it a whole host of life Peers to carry some particular measure, or series of measures, which the Lords might otherwise reject. But the same argument applies with equal force to the creation of hereditary peerages. The Crown might send into the Clubs or the streets any day of the week, and make a thousand new Peers, if it so pleased. Its theoretic right would be unquestionable. But there are thousands of things which people have a right to do which they are too sensible and too virtuous to think of doing. The argument derivable from the possibility of abuse would cut away the Peerage altogether, and the Peers ought to be the last men in the world to insist upon it.

Altogether the question is one of the greatest difficulty and delicacy—and we cannot but think has been very gratuitously raised by the Ministry. Simply, and stripped of all verbiage, it resolves itself into this:—Has the Crown, that could not of its own independent and unassisted action, reform the House of Commons, a right to reform the House of Lords, without the consent of the other branches of the Legislature? The desirability of Reform is a question that stands by itself, and on which there is not much, if any, difference of opinion.

## EDINBURGH ELECTION.

THE nomination of candidates for the representation of Edinburgh took place on a hustings erected in front of the Signet Library, on Thursday, the 7th inst. Mr. Black, who arrived first on the hustings, was accompanied by the Lord Provost, the Lord Advocate, Sir W. G. Craig, Sir John Dick Lauder, the Solicitor-General, and a large following of Whig gentry and lawyers. Bailie Brown Douglas was escorted by Sir R. K. Arbuthnot, Sir James Forest, Mr. D. M'Laren, and others. The nomination of the two candidates having taken place, amidst great excitement, Mr. Adam Black came forward to address the constituency, and at the end of an able speech, in the course of which he dealt some hard blows at his antagonists, he defended himself against the charge of being a mere Whig.

I am charged (said Mr. Black) with being a Whig and belonging to the Whig clique. There are silly people in this world who are led by a nickname without considering the reason of it (cheers). Gentlemen, what do you mean by Whig clique? Is it Fox and Grey, and Russell, Jeffrey and Cockburn, and Cranstoun and Abercromby, and Gibson Craig and their fellows, without whose courage and talents and labours we should not have been standing on these hustings to-day? Gentlemen, if it is not treason to participate in the sentiments of these great men, I glory in the reproach; but don't imagine that because I admired the men to whom we are so much indebted and am proud that my sentiments so generally coincided with theirs—that therefore I either did or will follow them when they differed from me.

He avowed himself as opposed to intolerance, and taunted the voluntaries with sacrificing their principles by their support of Mr. Douglas, who was only in favour of the abolition of one endowment (the Maynooth grant), whereas he (Mr. Black) would abolish all.

Mr. Brown Douglas also addressed the electors, speaking against Popery, and professing himself a supporter of the war policy of Lord Palmerston.

The show of hands was in favour of Mr. Douglas. A poll was demanded on behalf of Mr. Black, which took place on the following day, when he was returned by a majority of 643 over his opponent. The numbers polled for the two candidates were:—

| | |
|---|---|
| For Mr. Black .. .. .. .. | 2439 |
| For Mr. Douglas .. .. .. .. | 1796 |

RUSSIAN RAILWAY PROJECTS.—If God grant us peace, we shall take advantage of it to provide Russia with railways. If every landed proprietor would invest five silver roubles per annum for each of his serfs in railway stock, in less than five years the sum derived from eleven millions of serfs would amount to 550,000,000 of silver roubles. An enormous amount! Let the merchants, too, show a readiness to purchase scrip, and the net of railways between the sea coasts will speedily approach completion. Russia will then be ten times richer than she is at present. It now takes twenty-two hours to get to Moscow, a distance of 607 versts: at the same speed we shall travel from St. Petersburg to Simpheropol (2038 versts), and to Astrachan (3076 versts), in four days, and get to Kasan on the third day. I do not speak of the advantages respecting the conveyance of merchandise, but what a delight it will be when our brave troops and the munitions of war can be taken from one spot to another almost like the wind, in a spot menaced by the enemy for instance, supposing we should then have any enemies. All this can and will be done, but we must wake the beginning. Private individuals are already permitted to construct roads, and this is all we want. The good North Americans will cordially assist us, supplying us with skilful engineers and machinists.—*Northern Bee.*

"A WINDING-SHEET OF SNOW."—The northern part of this continent is wrapped in a winding-sheet of snow, from six inches to forty feet deep. A new storm of unmitigated severity has swept along our coast from Halifax to Texas during the last forty-eight hours. It travelled 3000 miles in that direction, and in a due line towards the west it has buried the continent beyond the lines of the telegraph. Only twice during the present century has such a mass of snow and ice rested upon the surface of this continent within the temperate zone. Nearly all channels of intercourse are stopped, travel is interrupted in every direction, the coast has been strewed with wrecks. And yet, on the whole, it will be a fine winter for America; because when a great body of snow falls to the earth and remains there for a considerable length of time, the earth is kept warm. The great staple crops of America—Indian corn, wheat, rye, &c.—come out with greater riotness and abundance after snowy winters. The frost does not penetrate so deep, and if it dissolves somewhat late in the winter we feel confident of an early spring, which promises always a fruitful harvest. New York and all its environs exhibit at the present moment an Arctic picture of snow and ice. None but the mightiest steam-tugs that can be built now attempt to move through these Arctic regions.—*Letter from New York, Jan. 26.*

LARGE PURCHASE OF SCREW STEAMERS BY A FRENCH COMPANY.—On Saturday the purchase was made, of the General Screw Steam Shipping Company, of the *Jason, Indiana, Golden Fleece, Calcutta, Argo, Queen of the South, Hydaspes*, and *Lady Jocelyn*—amounting, we hear, to nearly £500,000. We believe this to be the largest purchase of shipping ever made in one line, and it has been effected by Mr. Graham (of the firm of Maitland, Cuthbert, and Co., of Paris), Mr. Brett (of the firm of Cunard, Brett, and Austen, of London), and Mr. Bernal Villars (manager of the French Clipper Company).

All the civil inhabitants of Sebastopol who took part in the defence, women included, are to receive the commemorative medal instituted by ukase of November 27th, 1855.

## *FOREIGN AND COLONIAL NEWS.*

### FRANCE.

*(From our own Correspondent.)*

PARIS, Thursday.

THE Carnival over, the lull which marks the commencement of Lent follows, and there is a momentary respite from gaiety and excitement. Now begins the reign of concerts: right and left, pianists, violinists, vocalists, and their patrons and patronesses, besiege the public with concert-tickets at every price, from five francs upwards; infant musical prodigies, who commence their career at twelve years of age, and never get beyond, abound; French, English, German, Italian, and Russian unknown celebrities blazon forth in large letters famous names that no one has the slightest recollection of ever having, at any time or place, heard mentioned. A few of the tickets are, by dint of indefatigable perseverance, sold; many are given away; about half of the people—rather less than more—of the latter category attend, or send their friends; the concert takes place: the hapless beneficiary is much mortified, and a good deal out of pocket; but he has appeared—has been heard at the Salle Herz or the Salle St. Cecile, he has come before the public, he hopes—alas: vain hope, for the most part—that the public will retain some favourable recollection of him; and with this scant grain of comfort he fights his way on, happy if, at the end of some six, eight, ten years of such struggles and disappointments, he can obtain a name that is recognised with a moderate degree of consideration.

Just at present balls are quite at a standstill; so they are all through Lent, under that title. Balls in Lent! (except just at the Mi-carême) who ever heard of such a thing?—never. It is against all the rules of right—all the dictates of conscience. There are *soirées dansantes*, certainly, —nobody, I suppose, ever thought there could be anything wrong in giving or going to *soirees dansantes* in Lent, did they? Why, at balls there are, perhaps, one, two, three, four hundred people, according to the size of the locality and the length of the visiting-list; at *soirees dansantes* the guests only go by nineties. The light, the refreshments, the orchestra, the dresses, are in a like proportion as to number and expense: indeed, for the ignorant, it is difficult, if not impossible, to distinguish between the two; but it is his own ignorance, not his hostess, he must blame for that, and the fact that it is a *soirée dansante*, and not a ball, he is figuring at, must be received as a point of faith, reposing on which he may entirely tranquillise any scruples of conscience.

After it being entirely decided that the confinement of the Empress should take place at the Tuileries, and every arrangement made in consequence, it now appears, on information on which we believe we may rely, that St. Cloud is to be the place where the expected event is to occur. It is said also that the period hitherto named—the end of February or the first days of March—is earlier than may really be expected, and that the *accouchement* is not likely to be before the 15th or 20th of next month. The Countess Montijo and the Duc and Duchesse d'Alba are expected in Paris in about three weeks. It was reported last week that this event was hour'y expected, and crowds assembled about the Tuileries to ascertain the *fact*. The appearance of her Majesty in a carriage, however, effectually contradicted the rumour. The nurse of the expected Prince (since Prince it is to be) has been chosen, and is installed at the Tuileries. She is a handsome Normande, selected by the Imperial accoucheur, Dr. Dubois, and wears the *bonnet cauchois* and peasant costume of her province. It is said that if the choice had not already fallen on the Prince Jérome as godfather to the Imperial Infant, the Emperor of Austria would have been invited to accept the office. Mdme. de Pierry, the wife of the Marquis de Turgot, so Long Ambassador at the Court of Madrid, is spoken of as the *gouvernante*, or superintendent, of the Imperial nursery.

The report of the return of Rachel to these latitudes, mentioned in our last letter, was premature. The rest of the tribe Félix, with the exception of Sarah, have arrived in a state of mind greatly at variance with the signification of their patronymic, the speculation having proved a most losing one. *La Grande* remains at Cuba, reposing from the fatigue, moral and physical, of her disastrous campaign, and writes thence long letters to her friends descriptive of the manners, customs, tastes, and ideas of Brother Jonathan, as viewed from the boards trodden by her classic buskin. Well for Brother Jonathan that it is not his neck that finds itself in that position!

The Emperor is in the habit of receiving every Sunday, after mass, all the general officers of the army who may be at Paris, without letters of audience or any other previous ceremony. It appears that the favour thus accorded has caused considerable jealousy among the members of the Senate and the Legislative Body, who have presented to his Imperial Majesty a respectful remonstrance on the subject, attended with a request for a similar privilege.

On Saturday the Empress, partly the more effectually to silence the rumours respecting the premature termination of her present situation, made her appearance at the Porte St. Martin. Her Majesty was so much struck by the grace and beauty of the statue of Hebe, executed on the stage by Melingue, in the part of *Benvenuto Cellini*, that the artist actor was sent for to the Imperial box, during the *entr'acte*, and the Empress, after expressing in the most gracious and graceful terms her satisfaction, requested that the model might be brought to the box for her inspection. Its rough and fragile state, however, preventing its being in a condition to be moved, the artist sent to his house an express for a bronze model of the same subject, which her Majesty graciously accepted.

It appears that in the building of the Palais d'Industrie has appeared a perfect plague of rats—to such a degree do they swarm, that nothing within the walls is safe from their aggressions, and that even the clothes of the *gardiens* are devoured by them. Unless it can be effectually extirpated, this nuisance will seriously affect any destination to which the building may be applied.

The Grand Opera has in rehearsal "La Rose de Florence"—music by M. Billetta, words by M. St. George. The principal part is destined for Roger, with whom is to appear a débutante, Mdlle. Moreau Ciati. L'Opera Comique is preparing "Manon Lescaut," by MM. Scribe and Auber, for Madame Marie Cabel, who makes in it her début on the new stage, for which she has deserted that of the Théâtre Lyrique. The Gymnase is also about to produce a piece of Madame George Sand, in addition to the two in preparation at the Théâtre Français.

## THE OVERLAND MAIL.

The Indian papers received by express in anticipation of the Overland Mail are of the following dates: Calcutta, Jan. 8; Bombay, Jan. 16.

A notification has been issued by the Governor-General intimating that, as the Santhal insurrection was at an end, the troops engaged in its suppression would return to cantonments. The news from all other parts of India is of the same peaceful character. Neither from Burmah nor our north-west frontier is either intelligence of past disturbance or rumours of coming war, and the Nizam's dominions themselves appear to have sunk into a state of entire tranquillity. Throughout the length and breadth of India profound peace reigns supreme.

Respecting Oude, nothing positive has yet transpired; but an impression prevails that the last grand act of Lord Dalhousie's Indian career will be the sequestration of that kingdom. The King will, perhaps, retain his crown, but the dominion of his people will pass away from him and his heirs for ever.

From Burmah intelligence has been received of a terrible conflagration which devastated Rangoon on the 10th of December. In a few hours it destroyed 18 brick warehouses, 180 timber houses, and 300 bamboo dwelling-places. Water was not to be procured in sufficient quantities, and a considerable amount of plunder was carried off. The loss, estimated at £150,000, will fall on the European houses, to whom the native merchants are large by indebted.

A great battle was fought at a place called Kalnan, ten days' journey from Lasha, between General Jung Bahadoor, who visited England a few years ago, and the Thibetians, on the 15th of November. The former proved victorious after a severe struggle, having lost nearly one-third of his army; the loss of the Thibetians was very great, nearly three times as much as the Nepaulese. It is said that there could not be less than 32 000 killed and wounded on both sides. The Thibetians lost all their standards and more than fifty leaders; but the whole country was rising to expel the invaders; and, from the Generals getting experience, every battle was bloodier than its predecessor, and eventually Jung Bahadoor would be expelled.

## THE WAR IN THE CRIMEA.—RUSSIAN REJOICINGS.

By the *Vatican* steam-ship, which arrived at Marseilles on Wednesday, we have news from Constantinople to the 5th instant.

The news from the Crimea, which is to the 31st January, announces that the Allies have undermined Fort St Nicholas. Five English regiments are preparing to return to England. 3000 infantry, with two batteries of artillery, have been sent to Kertch. The Egyptians have left Eupatoria for Varna, according from St. Petersburg had brought to Odessa the news of the acceptance by the Emperor Alexander of the Austrian ultimatum. This intelligence had produced the greatest sensation on the entire population of the city. In the evening, with the authorisation of Count Strogonoff, Governor General of Southern Russia, all the houses had been illuminated; and on an immense transparency placed over the front of the Exchange were inscribed these words:—"Long live the Emperor Alexander II.! He enjoys the affection and gratitude of his people." Printed copies of the news were spread like lightning throughout the country, and was hailed every where with similar satisfaction. It was particularly grateful to the country people, who stand so much in need of peace and tranquillity. At the winter fair of Alexeshki, near Cherson, one of the most important in the country, and which usually lasts three days, too mount the event became known, provisions of every description, which the day before found no buyers, were eagerly inquired after, and the market closed at a rise of thirty per cent. on the opening prices. Those symptoms prove that the resolution of the Emperor meets with the approbation of the people. Previously to the arrival of the St. Petersburg courier, an order had been addressed to all the authorities of Southern Russia to suspend the levies of recruits, and that order was generally regarded as an indication of peace.

### AMERICA.

The steam-ship *Baltic*, which left New York on the 2nd inst., arrived at Liverpool on Wednesday last.

The papers do not contain any information respecting the differences with England on the enlistment question. On the 29th the ballot for Speaker stood as follows:—Banks, 99; Orr, 69; Fuller, 24; Scattering, 8. Necessary to a choice, 106.

The news of the acceptance of the peace propositions by Russia was known in New York by telegraph from Halifax. The opinions expressed by the United States press are generally doubtful as regards the result of Russia's acceptance.

In the Senate, on the 28th ultimo, Mr. Cass delivered a speech, which occupied two hours and a half, on General American affairs. Alluding to the remarks of the *National Intelligencer*, that the country might be drifting into difficulties, he said that he did not believe it. He thought the ship of State was on its true course, and the pilot doing his duty. Mr. Cass used strong language, denunciatory of the positions assumed by the British Government relative to the Protectorate in Central America, characterising its pretensions in setting up a King over the Mosquito Indians as mere mockery, under which England alone exercised the sovereignty. Mr. Clayton corroborated Mr. Cass by reading extracts from documents, showing that the British Vice-Consul was the real Governor of Mosquito, and gave titles to land in his own name. Mr. Collamer contended that there could be no possible ground for the assumption of England, that the occupation she agreed not to exercise was only prospective, and had no reference to the occupation which she then held. He, however, thought the time for legislative action had not arrived, inasmuch as the President, in his annual message, expressed himself in that sense that still he saw amicable adjustment of the controversies between this Government and Great Britain. The subject was then postponed.

A resolution, declaring "any agitation of the slavery question unwise and unjust to a portion of the American people and injurious to every section, and ought not to be countenanced," had been adopted by a majority of one in the House of Representatives.

General Walker, it is said, has now 850 Americans under arms. The suburbs of the city of Granada run into building lots, and already sold. A pier is being built into the lake, to be ready early in the month of March for use. Schooners for Virgin Bay and San Carlos are advertised to sail three time a week between those ports. Walker has sent by other two of his best officers, Captain Davidson and Lieutenant-Colonel Gilman. Colonel Fry, who went out with a scouting party of thirty men, to march to a point about 108 miles north of Granada, had been surrounded. The report is that he had cut his way through, and was retreating upon Granada, with the loss of seven men. Walker received by the last steamer an addit on to his force of 105 men, besides fifteen officers; 120 in all.

There was a rumour current that a filibustering expedition, numbering 500 men, had landed at San Blas, Lower California. Referring to these piratical expeditions, the Washington correspondent of the *Courier and Inquirer* says:—

There is no doubt that Walker receives recruits by every steamer from California, as well as from New York and New Orleans. The Government has exhausted its ingenuity in the attempt to put down such accessions. It went to the very verge of its admitted powers in seizing the *Northern Light* and detaining its passengers, and it is expected that the case will yet give Mr. M'Keon and the Attorney-General no little trouble. You cannot prevent invalids from seeking a milder climate, nor can you restrict the privilege of expatriation. It may be assumed that no obstacles interposed by our Government will seriously impede the colonisation of Central America from the United States. As many men will go there and range themselves under the leadership of Walker and other chiefs as the resources of the country can subsist. They will conquer the country, and establish there institutions analogous to our own.

Vice-President Dallas has been offered, and has accepted, the Embassy to London, in room of Mr. Buchanan. A despatch from Washington states that despatches, requiring Mr. Buchanan to remain until his successor arrives, have been sent to England by this steamer. Mr. Buchanan will, therefore, probably defer his departure.

A despatch from Cincinnati, dated January 28th, says:—

A stampede of slaves from the border counties of Kentucky took place last night. The whereabouts of several of the fugitives having been discovered here, officers at noon to-day proceeded to make arrests. Upon approaching the house where the slaves were secreted, the latter fired,—wounding two or three spectators, but not seriously. One slave woman, finding escape impossible, cut the throats of her children, killing one instantly, and severely wounding two others. Six of the fugitives were apprehended, but eight are said to have escaped.

Advices from Vera Cruz of the 22nd January state that Haro y Tamires had conspired to overthrow the Government and establish an empire, but was arrested before his plans could be put into execution. He subsequently, however, escaped, and was joined by a force, with which he was besieging Puebla, with good prospects of success. Generals Pachaco and Serva had been exiled for their connection with Haro.

SUDDEN DEATH OF A MISER.—A man named Hoffman, who was well known in Westminster for his penurious habits, was engaged as a waiter and to take the bats of the company at a club given by Mr. Rochild, a diamond-merchant, of 10, Argyll-street, on Friday evening. He arrived about eight o'clock, and performed the duties of his office, and at supper time ate very greedily. About three o'clock on Saturday morning he was seized with a fit in the supper room; and, although medical assistance was immediately procured, he died in a few minutes. On the body being searched, the first thing which presented itself was some pudding-crumbs which he had secreted during supper in his pockets, and £36 in gold and 21s. in silver; a Bank-of-England note for £100; a deposit-book of the Royal British Bank for £1235; a deposit-receipt of the London and Westminster Bank for £500; a bill of exchange for £15 15s.; another for £35; a bank deposit-receipt for £150; three parcels of pearls, three of rubies, three of diamonds, one of rough diamonds, one of emeralds, and one of garnets. Forty-one sovereigns were subsequently found in the fob of his trousers. He was supposed to be so poor a man that, some time since, a subscription was raised to send him into the country for the benefit of his health. An inquest was held on Saturday night, when a verdict of "Natural Death from Serous Apoplexy" was returned.

## TOWN AND TABLE TALK ON LITERATURE, ART, &c.

By all means let our readers beg or borrow, for the sake of perusal throughout, the very interesting volume just published, called "Recollections of the Table Talk of Samuel Rogers." There are, it is true, some regular "old Joes" here and there, and some things not by any means good in themselves; but these do not constitute the marrow, backbone, and flesh and blood of the book. Many excellent anecdotes that well deserved recording have found enduring preservation in this volume. Mr. Rogers was not a table-talker. He told epigrammatic stories, and told them well. He sent scandal into the world in the constant shape of an innuendo. The listener went away pleased, nor did he forget what he heard. But Mr. Rogers did not converse; he did not exchange ideas with the person he sat next to or "over against" at dinner. His was not the merit which he was fond of ascribing to his friend Luttrell—"None of the *talkers* whom I meet in London society can slide in a brilliant thing with such readiness as he does."

The Rev. Alexander Dyce, the editor of the volume (why should we conceal the name of a writer who has so often instructed the public?) has not attempted any kind of dialogue. He is simply content with recording the very words the poet used in relating his favourite stories and his most cherished recollections. As we turn from one anecdote to another, we can hear the very voice of the poet and, as it were, see him before us. Some of the anecdotes we have heard from the poet's own lips; and, though we miss here and there a point (which we could ourselves supply), we must bear a general testimony to the fidelity and accuracy of Mr. Dyce as a chronicler of what he heard. We cannot compare the volume for a moment, either in matter or in manner, to Boswell. It reminds us, rather, of Pinkerton's "Walpoliana," and still more so of "Spence's Anecdotes." The Rev. Alexander Dyce is very much like the Rev. Joseph Spence. Neither attempts to give those little traits of manner which evince a master power in catching character and expression. Compare any of the many clever recorders of Dr. Johnson's conversation with James Boswell, and you will see in a moment in what the superiority of Boswell consists.

"A man," said Samuel Rogers, "who attempts to read all the new publications must often do as a fish does—*skip*." It is time that we should skip to other matters.

Two new appointments are mentioned. Mr. Fergusson (the author of that admirable work the "Handbook of Architecture") is to forsake fortifications and earthworks, and dedicate his time to the Crystal Palace. He is to be the Manager of the Palace. Then Mr. Layard has accepted the office of Chairman of a newly-established Ottoman Bank. We shall see him soon Nineveh bull ing and bear-ing on the Stock Exchange.

The Clarendon Press at Oxford is actually evincing a little vitality. The delegates of the press have stepped in between the Camden Society and All Souls College, and are about to print that MS. diary of Narcissus Luttrell to which Mr. Macaulay makes such constant reference in his "History." Oddly enough, the two Diaries, which throw so much accurate light on English history and English manners and customs, are recent discoveries in College libraries. Pepys' was found in the library at Magdalen College, Cambridge, not many years ago; and Luttrell has just been detected on the shelves of All Souls College, Oxford.

Mr. Uwins has resigned the office of Librarian of the Royal Academy of Arts, and Mr. Pickersgill has been, somewhat unexpectedly, elected to succeed him. Sir Charles Eastlake, having interrupted the supposed succession of portrait-painters as Presidents of the Academy, no doubt thought himself bound to do something for the set of disappointed facepainters. Hence, it is said, the selection of Mr. Pickersgill.

The new Joint Secretary and Editor of the Photographic Society and Journal is an accomplished scholar, the Rev. J. R. Major, of King's College. The salary is £200 per annum. There were many candidates, and some difficulty in the selection.

Mr. Hepworth Dixon has just put forth a well-sustained and well-written reply to the accusations made and renewed by Mr. Macaulay against his favourite, William Penn. The reply appears in the shape of a preface to a new edition of his "Life of Penn." One part of Mr. Macaulay's conduct does, indeed, surprise us. Why should he in every new edition perpetuate the mistake he has made in confounding as unknown George Penne with a well-known William Penn, and that, too, in a transaction that is very damnatory? We are not very great admirers of Penn, and are inclined to think that in his latter years he often, unintentionally, did not tell the truth. The truth of history is, however, another and more serious matter.

Rumours of an approaching election will add to the interest of an unpublished Bill of Election Expenses at Weymouth, in 1764, just one hundred and two years ago:—

The Right Hon. Lord John Cavendish, the Hon. George Dodington, the Hon. Welbore Ellis, and John Tucker, Esq., to sundry charges in the election for Weymouth, in April, 1754.

| | £ | s. | d. |
|---|---|---|---|

½ of £392 8s. = £98 2s.

Weymouth, 13th July, 1754. RICHARD TUCKER.

21st Aug., 1754.—Received of the Hon. Welbore Ellis, Esq., one hundred and ninety-six pounds four shillings, for two-fourths of the foregoing account, being his own and that of the Right Hon. Lord John Cavendish, for my brother Richard Tucker.—Pr. John Tucker.

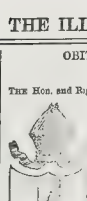
We have been permitted to transcribe this curious document from the original bill

---

THE TURKISH LOAN.—From the return moved for by Mr. Disraeli of the payments made on account of the Turkish Loan up to the 6th instant, it appears that the total sum paid out of the loan of £5,000,000 is £1,691,919. The first payment took place on the 25th of August last, when 100,000 sovereigns were delivered to the War Department for shipment; four similar payments took place before the 15th of September; and on the 21st a bill drawn by the Ottoman Government, amounting with interest to £283,000, was paid. The subsequent payments were pretty equally spread over the intervening space. They consisted of shipments of sovereigns, of £23,000 paid for the ship *Zenith*, of £150,000 given to the Paymaster-General for the purchase of steam-vess- ls and coals, and of £13,350 "paid to the executors of D. W. Wilson, for cashmere."

## OBITUARY OF EMINENT PERSONS.

### THE BISHOP OF CARLISLE.



THE Hon. and Right Rev. Hugh Percy, D.D., fifty-fifth Bishop of Carlisle, died suddenly at Rose Castle, his episcopal residence, in Cumberland, on the 6th instant. His Lordship was the third son of Algernon Percy, second Baron Lovaine, and first Earl of Beverley, by his wife, Isabella, second daughter of Peter Burrell, Esq., of Beckenham, Kent, and sister of Peter, first Lord Gwydyr. He was born in London, in 1784. At a first very important appointments after he had taken holy orders were those of Chancellor of the diocese of Salisbury and Canon of St. Paul's. At St. Paul's he also held one of the golden prebends. In June, 1827, he was consecrated Bishop of Rochester; and in the September following, during the Administration of Mr. Canning, he was translated to the see of Carlisle. It is related of Dr Percy that, when about to be translated, the Premier said to him that he hoped to obtain his parliamentary support. Dr. Percy declined to make the expected response, and took his departure without the appointment. Nevertheless, he soon afterwards obtained it, and his independence is a strong proof that the office was appropriately conferred.

His Lordship married, first, in 1806, Mary Manners Sutton, eldest daughter of Dr. Manners Sutton, Archbishop of Canterbury, by whom he had issue three sons and eight daughters. Mrs. Percy dying the 4th of September, 1831, his Lordship married, secondly, in February, 1840, Mary, daughter of the late Vice-Admiral Sir Wm Hope Johnstone, G.C.B., which lady died without issue, in 1851. The sons of the Bishop by his first marriage are Algernon C. H. Percy, Esq., of Hodnet Hall, Salop; the Rev. Henry Percy, Vicar of Wakworth; and Hugh Josceline Percy, Esq., of the 7th Hussars. Of the Bishop's daughters four are married, viz., Mrs. Vernon Lockwood, Mrs. Askew, of Glenridding, the Viscountess Holmesdale, and Mrs. Edward Thompson.

### GENERAL SIR WILLIAM GABRIEL DAVY, G.B., K.C.H.

THE demise of Sir William Gabriel Davy took place a short time since at Tracy Park, his seat, near Bath. He was the eldest son of Major Davy, E.I.C.S., the Persian Secretary of Warren Hastings, and was born in 1779. He was placed early in life, in 1814, to Miss Arthington, eldest daughter of Thomas Arthington, Esq., of Arthington, Yorkshire; and secondly, in 1840, to Miss Wilson, eldest daughter of Richard Fountayne Wilson, Esq., of Melton, Yorkshire. Sir William Gabriel Davy entered the British Army the 4th March, 1797, and gallantly shared in some rough and glorious work during the Peninsular War. He commanded the fifth battalion of the 60th Foot at the battles of Roleia, Vimeira, and Talavera; and for his conduct on those occasions received a medal and one clasp. He was also in the receipt of an annual pension for "distinguished services." He was made a Companion of the Order of the Bath in 1815, he became a Lieutenant-General in 1830; and was nominated a Knight Commander of the Hanoverian Order in 1836. Sir William was further, in 1842, appointed Colonel of the 60th Foot; and was advanced to the rank of General in 1854.

### SIR ALEXANDER MACKENZIE, BART.

SIR ALEXANDER MACKENZIE, eighth Baronet, of Coul, died on the 3rd ult., at his residence, Kinellan Lodge, Ross-shire. He was the eldest son of Sir George Steuart Mackenzie, F.R.S., the seventh Baronet, and was born on the 10th of January, 1805. He succeeded his father the 26th Nov., 1843. He never married. Sir Alexander was a soldier of high reputation. Entering the Indian army in 1824, he distinguished himself at the siege and capture of Bhurtpore, in 1825-26, and had the medal in consequence. He was afterwards Deputy Judge-Advocate-General with the army at Gwalior, and had his horse killed under him at the battle of Maharajpore in 1843. He also took part in the first campaign in the Sutlej in 1845-6. He finally retired from the Bengal army in 1851, after a military career of more than twenty-six years. Since his return to Scotland, Sir Alexander had won the esteem and respect of every one as a landlord and a neighbour: his early decease, in the prime of manhood, is much regretted. He is succeeded in his title and estate by his next brother, now Sir William Mackenzie, the ninth Baronet, who is unmarried. Of Sir Alexander's other surviving brothers, the third brother, Robert Ramsay, married, in 1846, Louisa, daughter of Richard Jones, Esq., Member of Council, in Sydney, Australia; the fourth brother, the Rev. John Mackenzie, of the Free Church, Scotland, married Eliza, daughter of the late distinguished divine, Dr. Chalmers. The fifth, Donald Macleod Mackenzie, is a Commander in the Navy; the sixth, the Rev. James Mackenzie, of the Church of England, who married on May 11th, 1847, Philadelphia, youngest daughter of the late Sir Percyval Hart Dyke, Bart., Lullingstone Castle, Kent.

### THE REV. CHARLES EUSTACE.

THIS venerable and much-esteemed gentlemen, the heir and representative of the Viscounts Baltinglass, died at a very advanced age on the 6th Jan. In 1839 he petitioned the Crown that his right to the Viscounty of Baltinglass might be acknowledged. His petition was referred by the Queen to her Majesty's Attorney-General for Ireland (the present Lord Chancellor Brady), who, having investigated the case, reported that "the petitioner had shown sufficient evidence of his right to the dignity of Viscount Baltinglass, in case the attainder of James, third Viscount, *temp.* Elizabeth, were reversed." Mr. Eustace first during the whole course of his life the deepest anxiety to have this attainder removed, and to see the ancient title of his family restored; but, despite of his constant efforts, and of the being almost the very last peerage honour similarly obscured, the act of justice he so ardently desired he has not survived to see accomplished.

Mr. Eustace was the eldest son of the late Lieut.-General Charles Eustace, a distinguished commander against the rebels in 1798, and brother of Sir William Eustace and Sir John Rowland Eustace, both general officers. He married Cassandra, daughter of John Stannard, Esq., of Ballydoyle, co. Cork, son of John Stannard, recorder of Dublin; and leaves issue one son, Captain Charles Stannard Eustace, in whom now vests the right to the Baltinglass Peerage; and four daughters—Mrs. Robertson, Mrs. Leader, Mrs. Arbuthnott, and Mrs Conner.

### MRS. ELIOT.

THIS lady, the wife of Rear-Admiral Eliot, died on the 15th ultimo, after a long illness. Mrs. Eliot was the fourth daughter of the late George Baring, Esq., granddaughter of the late Sir Francis Baring, Bart., and maternal granddaughter of the late Sir John D'Oyley, Bart. By the death of this excellent lady the families of Viscount Dillon, Lord Ashburton, Lord Suffield, Mr. Henry Baring, the Right Hon. Mr. Henry Labouchere, Sir Francis Baring, Bart.; the Hon. Mr. Francis Baring, M.P.; Sir John D'Oyley, Bart.; Mr. Thomas Baring, M.P.; Sir Grenville Temple, Bart., and a numerous circle of other relatives, are placed in mourning.

### LADY EMILY HENRY.

THE death of Lady Emily Elizabeth Henry occurred, after a lingering and protracted illness, on the 9th inst., at her Ladyship's residence, No. 2, Cumberland-terrace, Regent's-park. Her Ladyship was the second daughter of William Robert, second Duke of Leinster, by his wife, Emilia Olivia, only daughter and heiress of George Usher Lord St. George, and was born the 13th May, 1775. She was married the 13th March, 1801, to John Joseph Henry, Esq., of Straffan, county Kildare, by whom, who died in 1846, she had a large family.

---

GLANCING HOMEWARD.—Coming in from Sebastopol, over Pickethouse Hill, the Camp had quite a homely and snug appearance, as it lay basking lazily in the Sabbath sunshine, its numerous smoking chimneys telling of Sunday dinners in preparation; and one could hardly fancy that—if all we hear be true—in a few weeks' or months' time this extensive military city will have disappeared from the earth's surface, leaving a blackened and ashes-strewn desert. Although the news of Russia's acceptance of the ultimatum appears positive, and is confirmed by recent letters received in Camp from Constantinople, a reaction has taken place in the military mind, and doubt is cast upon that which, a very few days ago, obtained almost universal credence. In many cases both wife, perhaps, is father to the doubt, for there are many here to whom peace is unwelcome. That there is a strong probability of its being made is evident from the fact of a Commissariat officer having been sent off to suspend contracts and stop supplies in Constantinople, Malta, and Italy; and to make such arrangements as plainly indicate an expectation that hostilities are drawing to a close. If peace be made, how long shall we be getting away from this? is a question one hears continually asked and replied to by various conjectures. Much will depend on the amount of shipping that can be supplied. I understand that the Quartermaster-General's people say it would take a year to get men, *matériel*, and stores of all kinds away, and to clear the English army and its appurtenances entirely out of the Crimea and Turkey. Probably this is rather an exaggerated estimate of the time really necessary, and yet, bearing in mind the enormous quantity of things that will have to be removed, one can hardly pronounce it so. The horses alone will require a vast deal of shipping. Officers whose rank and position in the service entitle them to horses can hardly be refused permission to take them home, or be fairly compelled (unless compensation be given) to sell the animals here, where the glut would render them unsaleable. It is to be expected that huts, furniture, and all sorts of household property will be condemned to the flames.—*Letter from the Camp, Jan. 26.*

The *Moniteur* of Sunday contained an Imperial decree by which the Senate and Legislative Body of France are convoked for the 3rd of March.

## *EPITOME OF NEWS—FOREIGN AND DOMESTIC.*

On Saturday last, at a meeting of the Royal Agricultural Society of England, held at Hanover-square, his Imperial Majesty the Emperor of the French was unanimously elected an honorary member of the Association.

The Emperor of Russia has ordered mourning for nine days in all the kingdom of Poland for Prince Paskiewitch. During that period the theatres will be closed, and the Army will wear crape on their left arm.

The King of Prussia has named Count Victor Schwerin, "hereditary head cook" in Pomerania, to be a peer, or member for life of the first chamber.

Attempts have been made by the agents of the Count de Montemolin to raise a loan for Carlist purposes, through the principal bankinghouses here, at Frankfort, Hamburg, and in Holland.

A veterinary surgeon attached to the Emperor of Russia's stables has been commissioned to purchase in Hanover and Holstein 120 horses for the Emperor's stud. When complete, this stud, which has stations in every large town, so that the Emperor may always travel with his own horses, numbers 1400, at present it contains no more than 900.

On Sunday last the French Emperor received M. Pahud, Governor-General of the Dutch East Indies, and M. Conrad, chief engineer in the service of the King of the Netherlands, President of the Commission for cutting through the Isthmus of Suez.

Pius IX. has presented to the Queen of Spain a prayer-book said to have belonged to St. Catherine of Sienna, in return for the presents by her Catholic Majesty—the "Prodigal Son" and the "Marriage of St. Catherine," of Murillo.

The Rev. Dr. Newman, Rector of the Catholic University of Dublin, is at present in Rome. Dr. Manning was also expected there to preach during Lent to the English in the Church of Saint Andre delle Fratte.

Queen Isabella has named General Bosquet Grandee of Spain of the First Class.

The Princess of Prussia is to leave Berlin on Monday next, with her daughter, to return to the Rhenish provinces; and the Prince of Prussia is to remain in Berlin until the middle of March.

Captain Brooke, a relative of Sir James Brooke, Rajah of Sarawak, is now engaged in London in purchasing steam-boats for Sir James.

The King of Hanover has conferred the Grand Cross of the Guelphic Order on Count Cavour and the Marquis de Villamarina.

Baron Brunnow arrived at Paris on Tuesday night, at half-past ten o'clock, at the Russian Embassy.

Among the passengers by the *Avon*, which arrived at Southampton on Tuesday, were Lord H. Cholmondeley and his two daughters, from Madeira.

General de Martimprey has left Paris for the Crimea, to resume his post of Chief of the Staff of Marshal Pelissier's army.

Letters from St. Petersburg state that the re-establishment of the Episcopal See, which had been promised to the Pope by the Czar Nicholas, has not yet received the sanction of the Emperor Alexander.

General Sir Colin Campbell arrived at Malta on the 1st instant, by the French packet the *Thabor* from Marseilles, and proceeded to the East in the same vessel the day after.

The French Ambassador at Constantinople was to give his first ball on the evening of the 28th. It had been fixed indavertently for the 31st, but "was afterwards countermanded on M. Thouvenel calling to mind that it was the anniversary of the death of Louis XVI."

Prince Gortschakoff, ex-Commandant in the Crimea, has been appointed Commander-in-Chief of the Central and Western Armies, and Imperial Lieutenant of Poland.

Mehemet Djemil Bey, the Turkish Ambassador at Paris, arrived at Turin on the 6th inst., and was present the day after at a grand fête given by the Duke de Grammont, Minister of France at the Sardinian Court.

The Prince Regent of Baden, as well as the Prince and Princess of Prussia, with their daughter, has arrived at the Court of Weimar for a stay of some length.

Prince Gortschakoff, Russian Ambassador at Vienna, has taken a villa near Schoenbrunn for the summer.

Mr. Benson, the newly-elected President, was duly installed at Leeds on the 12th of January.

Mr. G. Hayes, of the Midland Circuit; Mr. G. Pigott, of the Oxford Circuit; and Mr. M. L. Welle, of the Norfolk Circuit, have been admitted to the degree of the coif, and will be sworn in immediately.

M. Alphonse de Rothschild has been received by the Sultan. He purposes, it is said, to establish a bank at Constantinople.

The *Austrian Correspondence* announces the arrival in Trieste of the Prince and Princess of Montenegro.

It is stated that sixty thousand copies of Mr. Caird's sermon on "Religion in Common Life" have been sold; that Mr. Caird has received £700 for the copyright; and that it is his intention to apply the whole sum to the endowment of the Errol Females' Industrial School.

Considerable excitement was created at the sitting of the 9th inst. of the Piedmontese Chamber of Deputies by the presence of General de La Marmora, who was loudly cheered.

Lucie, a very pretty peasant woman of Normandy, has been installed at the Tuileries.

The Hungarian officer Turr, who has been so much talked about lately, did not obtain his pardon until after he had been tried by the court-martial of Carlsburg, and condemned to death.

The Directors of the Crystal Palace have elected Mr. James Ferguson, F.R.A.S., &c., to the office of general manager. The directors have mace arrangements with the manager and the other principal officers of the company, by which their remuneration will in some degree depend for the future on the commercial success of the enterprise.

The arrest at Berlin of a banker named Meyer has created much sensation, as "many ladies of high rank are peculiarly compromised in the operations which provoked the measure."

The Greek Minister of Public Instruction, M. Christopoulos, has devoted the establishment at Athens of an archæological museum.

In consequence of the death of the Rev. David Gray, a vacancy has occurred in the Professorship of Natural Philosophy, Mariachal College, Aberdeen. The patronage of it belongs to the Crown. The emoluments amount to about £300 per annum.

The *Madrid Gazette* of the 4th announces that Cabrera, backed by the Carlist clubs of Paris and London, is trying to get up a new insurrection, but that the other principal chiefs of the party are opposed to the enterprise.

The Grand Duke of Tuscany has ordered a new levy of 2000 men of the class of 1837.

The Russian *Gazette de Commerce* announces the formation of a company for furnishing the Lower Dnieper with steam navigation from Alexandrof to the mouth of the river in the Black Sea.

The importation of seaborne coal into London in January, 1856, amounted to 361,370 tons: same period 1855, 219,150 tons. The quantity of coals brought into London by railway and canal in January was 123,707 tons: same period last year, 61,818 tons; showing an increase of 61,889 tons.

Some Turkish ladies at Scutari left their homes the other day on account of the telegraphic wires having been carried over the roofs of the houses. They imagined that the wire could tell all their secrets!

The *Herald* states that, in consequence of the probability of peace, an order has been already issued prohibiting naval officers from wearing moustaches while on full pay.

According to the *Mentz Journal*, the Greek Government intends to conclude a concordat with the Holy See. The number of Roman Catholics in Greece is about 16,000.

The museum at the Hôtel Cluny, Paris, has just received one of the crosses taken by the French army of the East—the cross with four branches, and six feet in height, belonging to the Church of St. Vladimir, at Sebastopol.

As a sign of the extreme mildness of the season, it is stated that several beautiful butterflies were on Monday caught in a garden in the suburbs of Paris.

Letters from Constantinople mention that telegraphic despatches intended for Turkey should be addressed to the Governor of Giurgevo, on the Danube, who will forward them to their destination.

The *Scotsman* says it is in contemplation to abolish the London Trinity House.

The criminal prosecution decreed against the Minister Scheele by the Holstein Diet is, by Royal decree, to be brought before the Superior Court of Appeal of that Duchy.

The body of Mr. Spiller, late librarian at the Bath Athenæum, was discovered on the 8th inst., near the weirs at Swinford, near Bitton. His shirt-front, in which were valuable studs, was torn away, and his watch or money was not found upon him.

CARNIVAL RACES AT ROME.

## HORSE-RACES AT THE CARNIVAL AT ROME.

We have been favoured with the accompanying Sketch by an eye-witness of a scene quite unique—the Horse-races which take place during the Carnival at Rome. It is totally different from what we are accustomed to see in our own sporting country. The Carnival, though sadly degenerated from what it once was, is still a scene of great liveliness. There are only two ways of enjoying its festivities: either to absent yourself altogether and enjoy it from hearsay; or to enter into it with your whole heart and soul, condescending to engage in amusements which, upon reflection, appear decidedly babyish; but at the time are really very good fun for all who have health and spirits to partake of them.

For ten days the farce is kept up. At two o'clock a party of mounted soldiers, headed by an officer, canter up and down the Corso, which is the principal and only tolerable street in Rome, being about three-quarters of a mile in length and twenty-five feet in breadth, well paved, perfectly straight, and possessing a narrow footpath. The Carnival is now open. In rapid succession follow carriages of all descriptions, provided they are drawn by two animals (no others are admitted), crowded with men, women, and children of every country, and dressed in every conceivable costume; they soon form into two lines, the up and down stream. What portion of the street is not thus occupied is filled up with pedestrians, each one of whom endeavours to render himself or herself more conspicuous than his or her neighbour by costume, or by antics, the most absurd possible. During all this time a shower of confetti and bouquets is kept up—the former to try the temper, the latter to soothe the ruffled spirit: many of the bouquets are costly, and carry in their flight—for they are all thrown—much sentiment or sarcasm. This lasts for two hours, when the same troop of horsemen is seen in martial array preparing for the charge to clear the street. Off they set at full gallop, and woe betide the inquisitive if they attempt to interrupt the progress of these daring military heroes. The horses are now at their starting-posts, without riders, but most plentifully supplied with leaden balls and sharp spurs, which rattle against all the most tender parts of their bodies, increasing the velocity and deepening "the raw" in proportion to the speed of the senseless brutes, who never stay their onward course to reason philosophically upon the easiest mode of escaping from their tormentors until they arrive at the goal, where they encounter a sheet of strong cloth stretched across the street. During this performance many is the scene to distract the attention of the observer. At the start a rope is p aced across the street, the horses being led close up to it. Those trained to it wait for the drop, and then fly off like an arrow from a bow. Some try this too soon, and inevitably perform a somersault, dragging with them the hapless groom in all the glory of his holiday costume. Some, from nervousness, let go their best opportunity, and are left far behind, exposed to the raillery of the spectators, who encourage only the successful; soon these are stopped in their course, and lucky is the rightful owner if he ever procures his horse again.

The race is now over: all again is confusion, each one hurrying home to prepare for the joys of the evening, which are numerous, in the shape of jolly dinners, gay balls, and crowded theatres. Masking is now forbidden, owing to the facilities which it gave to those evilly disposed to take vengeance for some outrage or insult committed against themselves, families, or friends. The Romans consider the whole of this entertainment as unequalled for grandeur or for fun. The English, one and all, although they are the whole life of the scene, pronounce it to be childish and ridiculous; but any fun in dull Rome is hailed with joy by our jovial countrymen.

## NEW CHURCH BUILT BY AN ENGLISH ARCHITECT AT ROME.

The circumstance of a church being erected in Rome among a greater number of ancient edifices than are to be found upon any other city of the world is a fact deserving artistic commemoration. Such is the Church of Il Santissimo Redentore, now in course of erection from the designs of Mr. George G Wigley.

Of the exterior and interior we engrave two views. The church is situated in the Villa Caserta, on the road between Santa Maria Maggiore and San Giovanni Laterano, at the corner of the Via di San Vito, and close to the Arch of Gallienus. The Redemptorist Fathers (an order founded at the end of the last century, by the well-known theological writer, St. Alphonsus Liguori) have lately purchased the Villa Caserta, to make it their head-quarters in the Eternal City, and have added to the existing buildings the church which is the subject of our Illustration.

The general dimensions of the church are 200 Roman palms (146 feet) in length, by 70 palms (51 feet) in width, and 70 palms in height. The estimated cost is 18,000 Roman scudi (about £4000). The style of the church is an adaptation of Italian Gothic, of a very simple character, studied from mediæval buildings at Subiaco and other places in the neighbourhood of Rome. This is due chiefly to the taste of the Rev. Father Douglas, who is at present Provincial, or Local Superior, of the Order in Rome. The church will be opened next spring.

NEW CHURCH OF IL SANTISSIMO REDENTORE, AT ROME.

MALE BUSTARD TAKEN NEAR HUNGERFORD, BERKS.

THE LAWRENCE TESTIMONIAL.—(SEE NEXT PAGE.)

## THE GREAT BUSTARD.

A VERY valuable specimen of this almost extinct bird was, on the 3rd of January, taken near Hungerford, in Berkshire, just on the borders of Wiltshire. It has been seen by the celebrated ornithologist, Mr. William Yarrell, and is by him represented to be a young male bird, of the third year. It is unquestionably the only male specimen of the Great Bustard which has been taken for some years in this country. An interesting paper on the Bustard appeared in *Fraser's Magazine* of September, 1854, and is well worthy of perusal. The author of that communication (believed to be the Rev. Charles Badham) mentions that in 1843 a Bustard was shot between Helston and the Lizard Point; but this was a female bird. It is added that "this is the *first* instance of the capture of the Great Bustard in Cornwall, and the *last* instance known to us of this noble species in Great Britain." Mr. Yarrell, however, in a paper

COLLISION IN THE ENGLISH CHANNEL, BETWEEN THE STEAMER "MANGERTON" AND "THE JOSEPHINE WILLIS."—(SEE NEXT PAGE.)

which he wrote for, and read before, the Linnean Society in 1853, mentions specimens having been taken in 1850, in Romney Marsh; and, in 1851, in Devonshire; but these were female birds.

The specimen now under discussion, when taken, had its left leg broken just above the knee-joint; and although it "showed fight" at first, it was ultimately very easily taken on the ground by the little boy who found it. It was at the edge of a ten-acre field of turnips, and was captured in the middle of the day by the boy, who was going up to a lone farm with his brother's dinner; and who, as the bird was fighting at him, caught hold of the end of the wing on the side of the disabled leg of the bird, and so, having once been thrown on its side, the bird became powerless.

The bustard was seen by Mr. W. H. Rowland, of Hungerford, on the same evening, and purchased by him, and now is in the hands of Mr. Leadbeater for preservation.

The wound in the leg is stated to have been a *stale wound*, and Mr. Rowland is of opinion was the result of shot by a *ball* and not a common charge, as the limb was not shattered, but broken off. The weight of the bird when captured was thirteen pounds and a half; and it measured from tip to tip of the wings six feet three inches.

## THE LAWRENCE TESTIMONIAL.

THIS magnificent Testimonial was projected in the year 1853 for presentation to Sir Henry Montgomery Lawrence, K.C.B., the President of the Board of Administration for the Affairs of the Punjaub, by a very large body of subscribers (including almost all the European officers, civil and military, who had served under him in the Punjaub: the list also includes many of the Sikh chieftains and others, who had so maternally benefitted by his mild but firm rule) upon the occasion of his voluntarily relinquishing the above appointment for the no less honourable and important post of Governor-General's Agent in Rajpootana.

The military services of Sir Henry Lawrence throughout the Affghan, Cabul, Sutlej, and Punjaub campaigns, and his equally important services in a civil capacity as a political officer in Affghanistan, under the Governor-General, Resident in Nepaul and in Scinde, and lastly also in Rajpootana, are too well known to our readers, and especially to those who take an interest in our Eastern possessions, to require any lengthened description at our hands.

The description of this piece of Plate, which is in the form of a candelabrum, is as follows:—The figure on the summit represents India; beneath, in *basso relievi*, are five reclining Deities, representing the rivers of India. The branches, ornamented in the Indian style, carry twelve lights. The palm, plantain, and fig-tree encircle the shaft.

On the base is a grand composition of figures, divided into three groups. The first is typical of the state of anarchy which existed in the Punjaub previously to the introduction of British rule. One of Runjeet Singh's body-guard is attacked by a hill-man—a dismounted irregular horseman lies dead on the ground, and above him is a wounded Akalie.

The second group represents the conflict between the British and the Sikh forces, which resulted in the conquest of the country by the former. The figures introduced are a Sikh irregular horseman mounted, opposed by a British foot soldier, and a Sikh artillery man contending with a dismounted trooper

The third group represents the pacification of the Punjaub. Sir Henry Lawrence is represented in the act of receiving from an Affghan villager and a Sikh Chief their arms; in exchange for which he is about to present them with the different implements of husbandry, held by Industry and Peace, which are represented by two female figures.

The entablatures on the three sides of the Testimonial contain respectively representations:—firstly, of the sacred Tank at Amritsir (the Pool of Immortality), with the Sikh temple in the centre; secondly, of Sir Henry Lawrence, with the Maharajah of the Punjaub and Chieftains seated in Durbar at Lahore, arranging for the payment of the troops, who were in a state of mutiny; and, thirdly, the establishment of the Lawrence Asylum in the Himalaya, for the children of European soldiers—allegorically represented by Benevolence under the guidance of Wisdom—removing the children from the plains to the salubrious regions of the Himalaya. At the angles are the Brahmin Bull, the Cashmere Goat, and the Camel.

This work has been intrusted to Messrs. Hunt and Roskell, of New Bond-street, who have produced so many interesting testimonials connected with India. The costumes and character of the figures are perfect. Major Reynell Taylor, Dr. Bernand, and C. B. Sanders, Esq., having rendered valuable assistance.

The artist who produced the design and executed the model is Mr. Alfred Brown, whose works, as connected with this establishment, are so frequently noticed. He was the recipient of one of the medals at the French Exhibition; and of which, including the Grande Medaille d'Honneur and the Medaille d'Honneur, nine were awarded to this house and to their artists.

## THE COLLISION AND FOUNDERING OF THE "JOSEPHINE WILLIS," IN THE CHANNEL.

THIS shocking catastrophe, which took place in the Channel on the night of the 3rd instant, has created the most painful interest along the coast. The moment the intelligence was made known at Ramsgate, Margate, Folkestone, and the other places in the vicinity of the Downs, crowds of boats made off to the spot where the ill-fated *Josephine Willis* was reported to be on her beam-ends, for the twofold object of saving life and property; but, on reaching the place, it was discovered she had gone down about nine miles S.S.W. of Folkestone, and her topgallant yards were just above water. The sea, for several miles round, was secured by the boats in the hope that some of the unfortunate creatures might be found floating on some spars or hencoops; but none were to be observed.

The ocean on board the vessel just before she careened over and went down is described by the survivors to have been truly horrible. Captain Clenny, the unfortunate master, was below at the time, marking out his course on a chart he had on the cabin table; the chief officer (Mr. Clayton) having charge of the watch on deck. William Grindle, a seaman, was at the wheel, and two look-out men (John Sheen and another man) were forward. Sheen, in his depositions before the Receiver of Admiralty Droits at Ramsgate, states that, the ship was going about six knots at the time, on the port tack, the wind being S.S. (and not S.W. as reported). Seeing a steamer approaching he notified the same to the mate, who immediately called out to the man at the wheel to put her helm a-starboard. The mate, at the same time, shouted to the steamer; but no notice was taken of the distance continuing her course, and in less than five minutes the collision took place. Captain Bouchier, of the steamer *Mangerton*, in his report of the occurrence to Lloyd's agent at Deal, stated that he observed the *Josephine Willis* apparently starboard her helm, he (Captain Bouchier) having just previously put his helm hard a-port, and before there was time to reverse the engines the vessels met, the ship striking them on the port bow, and the steamer striking the ship abaft the fore rigging on the starboard side.

Upon hearing the terrific crash Captain Clenny rushed up on deck. His first order was to sound the pumps; and, on the steamer backing out, which might have occured some eight or ten minutes afterwards, he called out to the man at the helm to keep her due north. The helm was put up; but by this time she was careening over, and would not steer. The poop deck was crowded with passengers, and the Captain, seeing that the ship was foundering, told them to throw the hencoops overboard and hold on to them. All the boats were gone; they were capable of holding all hands, but they were sent adrift with only a few people in them. The last that was seen of him, was after the ship had fallen over on her beam-ends, with her topgallant yards in the water. He was then clinging to a hen-coop in the water, together with two females. Throughout the trying scene he is reported to have behaved with the greatest coolness and bravery.

The Folkestone jury, in their verdict respecting the death of three of the unfortunate sufferers, remark that "there appears to have been a great want of humanity on the part of the crew of both ships, in not sending assistance to the passengers of the ship whilst they had it in their power to do so; and we believe that, if proper efforts had been made, many more lives would have been saved."

POSITION OF THE RUSSIAN FORCES IN THE CRIMEA.—The following is said to be an exact statement of the disposition of the Russian forces in the Crimea:—General Commanding-in-Chief, General Gortschakoff; Chief of the Staff, General Kotzebue. Corps of Grenadiers: First Division towards Eupatoria; second and Third Division, Simpheropol. 3rd Corps, General Sonchoganoski.—9th, on the Koralı Plateau; Reserve Division, stationed on the heights of the Belbek; 8th, Mackenzie Plateau; 9th, North-side Post-house. 4th Corps, General Osten-Sacken.—10th, on the Tonzla; 11th, Inzkola Plateau; 12th, on the Belbek; 14th, on the Boulganak. Lancers, General Radziwill, before Eupatoria. Dragoons of General Wrangel, Eupatoria. 2nd Division of Dragoons in the North Steppes. 11th Regiment of Cossacks of the Don, Steppes. One Brigade of Hussars, Boulganak. With militia to each regiment of the Line the whole strength is from 105,000 to 120,000.

### CALENDAR FOR THE WEEK.

SUNDAY, Feb. 17.—2nd Sunday in Lent. Battle of St. Albans, 1461.
MONDAY, 18.—Martin Luther died, 1546.
TUESDAY, 19.—Galileo born, 1564.
WEDNESDAY, 20.—Voltaire born, 1694. Duke of Suffolk beheaded, 1554.
THURSDAY, 21.—Archbishop Cranmer burnt, 1556.
FRIDAY, 22.—Sir Joshua Reynolds died, 1792.
SATURDAY, 23.—Mason, poet, born, 1725.

FOREIGN POSTAGE.—As newspapers sent to most parts of Europe are subject to a heavy postage, and charged by weight, copies of the ILLUSTRATED LONDON NEWS, printed on *thin paper*, may now be had, if specially ordered, for transmission abroad.

## THE ILLUSTRATED LONDON NEWS.

*LONDON, SATURDAY, FEBRUARY* 16, 1856.

IF is too much the fashion, not only among the few who disapprove of all war, even in a just cause, but among a larger number, whose complaint against the Government of Lord Aberdeen and also against that of Lord Palmerston, is that they never carried on hostilities with the vigour that was essential to success—that the British nation and the British Army have gained little or no honour in the present, or late, war against Russia. They seem to imagine that the capture of the Malakoff was "the be all and the end all;" that Englishmen had no share in that crowning achievement; and that the gallantry, the daring, the true heroism, both of men and officers at the Alma, at Balaclava, and at Inkerman, were as nothing in the balance if weighed against the deeds of the French in the final assault upon the Malakoff. If any such objectors, whom it pleases to look with gloomy eyes upon the great deeds of their countrymen, can retain their old opinion after reading the simple and eloquent story of the siege of Kars, told by Dr. Sandwith to his fellow-townsmen at Hull, we can but pity their prejudice or their obtuseness, and be thankful that all Englishmen are not such as they are. We do not begrudge our gallantallies the glories of the Malakoff; and we are certain that no Frenchman will begrudge to the British name the glory attachable to it for the deeds of the brave General Williams and his companions at the siege of Kars. Even when the details were imperfectly known, the heart of the British people throbbed with pride for the courage, and with sympathy for the fate, of Williams and his comrades. But now, when—thanks to Dr. Sandwith, the only sharer in those memorable events who has reached England—we know more fully how much they did, and how greatly they suffered, the public admiration, that so seldom waits upon failure, is increased by the very greatness of the catastrophe. General Mouravieff, the best General in the Russian service, and a man who seems to be in every respect an honour to his profession and worthy to be pitted against such an opponent—(we will not call him foe)—as General Williams, addressed our countrymen on the fatal morning of the surrender, in words that will reverberate through Europe, and leave happy traces, it is to be hoped, on the future intercourse of Great Britain and Russia. "General Williams," he said, "you have won for yourself a name in history. Posterity will stand amazed at the courage—at the endurance—at the lofty qualities exhibited by you in this siege. You and your troops are covered with glory. I have no wish to outrage humanity by anything unbecoming in me as a General, and the terms you ask I accede to." Should, unfortunately, the war be destined to proceed, in consequence of any hitch or dispute at the Conferences of Paris, these noble words of Mouravieff—repeated in every camp, and tent, and hut, where the soldiers of Great Britain are assembled, and in every home which these soldiers have left in the service of their country—will tend to humanize and ennoble the struggle. Chivalry such as that is contagious; and the feeling will spread from rank to rank, and soften, if it cannot remove, the inevitable horrors of a state of warfare. But should, as we earnestly hope, the means be found of an honourable pacification, and General Williams and his comrades, as a necessary consequence, return to their native land, a right royal welcome will await them. Perhaps the Government, which rewards not only mediocrity, but proved neglect and incompetency, may, as usual, give the cold shoulder to men who won renown in spite of difficulty and of danger; and, worse than all, in spite of the callous indifference of superior authority; but the people of all ranks and classes will act a more generous part. The war has produced many heroes. Too many of them sleep in their cold graves in the Chersonese; but among the heroes who yet live, to be of further service to their country, the names of those who fought at Kars, and foiled for a time the whole strength of Russia, shine in the foremost rank. Whenever they set foot on the English soil, the public, whatever the Government may do—or refrain from doing—will give them the greeting which they deserve. Lord Routine's hero may be Sir Richard Airey, but the people's heroes are such men as General Williams.

THE affairs of the little miserable kingdom of Greece appear to march from bad to worse. The direct and almost immediate result of the resignation of the late Administration has been an extended development of that chronic brigandage which is the curse of the country, and which always increases in proportion to the weakness and corruption of the Government.

On the advent to power of M. Mavrocordato's Government the greatest energy was displayed by General Kalergi. Had he continued in office it is probable that his perseverance would have been eventually crowned with the most happy results, as the stringent and effective measures in operation at the period of his resignation had already done much to dissolve the marauding bands which infest the country.

Unhappily, however, for the country, the King deemed it expedient to erect what he supposed would prove a barrier against Constitutional progress, by unwarrantably forcing the Anglo-French Ministry to resign their charge of public affairs at a conjuncture when order and regularity were being infused into every department of the State. Such improvement did not meet the particular and egotistic views of Hellenic Royalty; and Greece now possesses a Ministry whose official conduct perfectly harmonises with the political doctrines of the King—a Ministry that will ere long, if it be not superseded by a better, draw down upon the unfortunate country which it misrepresents and oppresses, a series of great, if not of fatal, disasters.

What will be the opinion of the civilised world when it is known that the Greek Government manifests the most stoic apathy, or takes such ineffectual measures only, in checking brigandage, as in a more civilised country would subject its members to impeachment for presumed complicity in the crime?

Almost under the very walls of Athens the brigands periodically attack, rifle, torture, and murder innocent individuals who have the ill luck to cross their path during their murderous excursions. Yet there are about 2000 soldiers in the city for the exclusive purpose, it must be presumed, of protecting the precious lives of the King, Queen, and retinue, whilst Greek subjects are being butchered almost within sight of the Palace. For appearance sake a military force has, occasionally, been sent out to catch brigands in the vicinity of Athens; but more than once the military force has been overpowered. This will not appear surprising when it is stated that the maximum complement of the force sent out never exceeds twenty men.

It would be tedious to detail the number of foul deeds of which the neighbourhood of Athens—once the cynosure of the world—is the daily, almost hourly, theatre. A few extracts from the list will suffice to give our readers an idea of their nature. A letter from our Correspondent at Athens, under date of the 28th January, says:—

Athens, January 28.

Some few days ago two brigands seized thirty travellers on their way to Patras, in the immediate vicinity of the town, and after having behaved most cruelly, robbed them of all they possessed. Unfortunately an interesting young woman of eighteen was one of the travellers, and the poor creature, after having been cruelly handled, suffered from one of the miscreants the most shameful and cruel of all possible outrages, although so many men were in company. Such is the dread in which the bandits are held.

The Government had sent a body of irregulars into the Morea for the greater security of the inhabitants. On the arrival of a portion of them at Patras a quarrel ensued between two of the soldiers and forty Lepius; and in the struggle one drew his pistol and deliberately fired at the other, regardless of the lives of about 200 persons who were sauntering about them in the public promenade.

Four shepherds were seized near Eleusis by brigands, and, after having been savagely tortured, were decapitated, and their heads stuck on poles. These shepherds had been witnesses in the Athenian courts against a brigand who was condemned to death.

The ransom of 60,000 drachmas was paid by the family of Bonduri to procure the liberation of some of its members from the hands of brigands. Although this was the sum required, and although Mr. Bonduri paid over an additional sum of 2000 drachmas as a Christmas-box to ensure a more prompt delivery of his children, nothing has been seen or heard of them up to the present moment; and the Government itself acknowledges that it is ignorant of where they are. This is truly disgraceful.

As to villages being attacked, and murders perpetrated, nothing else is heard of. These are daily occurrences, and, from their frequency, create little impression.

Another letter, of the same date, from Patras, says:—

Patras, 28th January.

The brigand Baccagh was shot by two peasants on Saturday morning, in the vicinity of this place; he went for shelter and bread in the night, and the peasants borrowed a double-barrelled gun from an acquaintance of mine who happened to be in the country that night—they loaded it with ball cut in four pieces, and put some grains of wheat in, to do away with any charm that they supposed might protect him. They then crept stealthily to the door of the cottage, where he was sitting warming himself, and shot him through the breast. He tried to run off, but was too badly wounded, so they dispatched him with their knives. They got a reward of two thousand drachmas. This man had shot a fine young fellow a few days previously, stopped thirty persons passing, and committed a fearful crime on the person of a young woman of eighteen. He had only one companion, and they had the people as they came up. I went to see the famous brigand as he lay dead outside the Church of St. Andrew; he was surrounded by an immense crowd—he was tall and of active figure, and had no reason for his warning.

Of this state of things Great Britain and France must be cognizant; and it is impossible, even if actuated solely by feelings of humanity, that they, as protecting Powers, can any longer permit it. A prolonged manifestation of their apathy would be criminal. They may be assured that the Greek people look to them to rescue Greece from this worse than anarchy. Greece requires a powerful Government, even if it should be a foreign one; for, in her present position, it is not too much to say that her people are infinitely more miserable and oppressed than they were under the milder rule of their Ottoman masters.

RUMOURED MINISTERIAL DIFFERENCES.—The *Times* announces that the DUKE of Wellington has resigned his office of Master of the Horse, in consequence of his Grace's disagreement with Ministers upon the subject of life peerages, as evinced by his vote in favour of Lord Lyndhurst's motion. Our contemporary also gives currency to a rumour to the effect that the Lord Chancellor had resigned from differences of opinion with some of his colleagues upon the same question. We have every reason to disbelieve this latter report. We are confident that the Government will not flinch from carrying into effect the course which they have already initiated, for the purpose of adding to the dignity and usefulness of the Upper Chamber of the Legislature, which alone appears to object to the measure.—*Globe*

THE PEACH CONGRESS.—The Earl and Countess of Clarendon will reside, during the Conferences, at the Hôtel Bristol, which has been engaged for the accommodation of our Foreign Secretary of State and his suite. His Lordship will be accompanied by his private secretary, the Hon. Spencer Ponsonby, and by Messrs. C. Spring Rice, John Ridwell, J. C. Vivian, and Villiers Lister—all of the Foreign-office; and by the Hon. Julian Fane, who is attached to her Majesty's Mission at Vienna. Mr. E. Hammond and Lord Wodehouse, Under Secretaries of State, will remain in London, and supervise the business of the Foreign-office during the absence of Lord Clarendon. Ali Pasha, the Ottoman Plenipotentiary, will not arrive before the 18th or 19th. It is still doubted whether it be possible for the Conferences to begin on the 25th.

## METROPOLITAN NEWS.

GRAND BANQUET TO ADMIRAL SIR EDMUND LYONS.—The Lord Mayor gave a grand banquet on Wednesday night, in the Egyptian hall, Mansion-house, to Admiral Sir Edmund Lyons and several other gallant officers who have recently returned from the seat of war. His lordship gave "the Army and Navy," complimenting both services for their past deeds, and expressing his conviction that, should the negotiations fail, they would show themselves worthy of their country in the ensuing campaign. Sir C. Wood returned thanks on behalf of the Navy, General Buckley for the Army. The Lord Mayor, in proposing "The Health of Sir Edmund Lyons," referred to the gallant deeds he had performed in his early life. If Sir Edmund Lyons were dead, he would be called a naval battles in the Black Sea? he might ask, where was the Russian fleet, or did it exist at all? It was Sir E. Lyons and his brave seamen that had virtually destroyed that fleet, or, rather, forced it to scuttle *ride ac*. Sir E. Lyons in returning thanks said it was very sad indeed that her Majesty's fleet had had no opportunity of coming face to face with the enemy; for never was the English fleet in a finer state of efficiency than it exhibited at present (loud cheers). The ships of each class were as near perfection as could be attained—far superior than at any former period. Sir C. Wood, in returning thanks on behalf of "her Majesty's Ministers," said that, if the present negotiations should fail, our fleets and army were in such a state of preparation as must ensure ourselves in the resumption of the war. To be prepared for war was the best way to preserve peace, for what was so fatal as trusting to the generosity of your opponents?

ASSOCIATION IN AID OF THE DEAF AND DUMB.—A social meeting of this Association was held on Tuesday evening, in Pitzroy-hall, Little Portland-street, Mr. Shirley Woolmer in the chair. In addressing the meeting, which consisted of about 200 respectable deaf and dumb persons of both sexes, the chairman explained the objects of the association, which were to benefit, religiously and morally, the deaf and dumb, and, through qualified agents selected from their own afflicted class, to give such advice and aid when suffering from oppression, or any other cause. In the course of his observations the chairman alluded to the erection of places of worship for the preaching of the Gospel to the deaf and dumb in their own language of signs, and to the establishment of a periodical and library for their especial use. Messrs Baker, Hayard, Barry, Bather, and other deaf and dumb gentlemen, then addressed the meeting in the finger language, informing those who were the objects of the benevolence of their high appreciation of the benevolent objects of the institution. After the presentation of a gift from deaf and dumb ladies and gentlemen—Mr. Noble, the secretary, read the plans of worship opened by the association at the west end of the metropolis—and the appointment, by those present, of six gentlemen as their nominees, Mr. C. E. Hazle, a member of the Syro-Egyptian Society, commenced a lecture "On the life, character, trial, and execution of Sir Thomas More;" which was cleverly communicated by the finger language to the mutes present by the secretary, Mr. Smith.

THE LORD'S DAY OBSERVANCE MOVEMENT.—On Saturday last Lord Palmerston received a numerous deputation of ministers and laymen of all Evangelical denominations, headed by the Archbishop of Canterbury. The Archbishop of Canterbury having briefly addressed his Lordship on the character of the question at issue, urging the close connection between our national Sabbath and the public maintenance of religion in the land, and pointing out the unanimity of all Christian bodies in upholding the present legal sanctions of the Lord's Day, read an address. Lord Palmerston acknowledged the importance of the question. In a matter involving Parliamentary action on the individual members of Government, did not like to pledge his colleagues without first consulting them. They would, however, meet that afternoon, and he would bring the subject of the address before them.

NOVEL PROCESSION IN THE CITY.—Considerable curiosity was excited last Sunday morning in the immediate vicinity of the Mansion-house, in consequence at the Right Hon. the Lord Mayor, Alderman Kent and Rose, the two Sheriffs, W. Cubitt, Esq., M.P., and a great number of gentlemen belonging to the Court of Common Council, in their robes of office, walking in procession from the Mansion-house to St. Mary-at-hill, parish of Billingsgate, by way of Walbrook and St. Mary Woolchurch Haw, at the corner of Lombard-street, where the civic functionaries met the Most Rev. the Lord Archbishop of Canterbury, who had undertaken to preach a sermon in behalf of the Langbourn Ward charity schools. The spacious church soon became densely crowded, so much so, that shortly after the commencement of Divine service it was found necessary to close the doors against the crowd assembled. His Grace delivered a most eloquent and appropriate sermon. In which he advocated the peculiar and pressing claims which the schools had upon his and the congregation's support. At the close of the service a collection was made, which was liberally responded to by the congregation.

LONDON AND COUNTY JOINT-STOCK BANKING COMPANY.—At the annual meeting of proprietors held on the 7th inst., at the London Tavern, the report for the year ending the 31st December, 1855, was read, from which it appeared that the net profits of the bank for the past half-year after making due provision for bad and doubtful debts amounted to £34,005 8s 10d., which, with £15,363 1s. 2d. brought forward from the half-year ending the 30th June, and £2275 10s. 4d., the balance of the former year, left in excess of £52,974 0s. 4d. The report having been received and adopted, it was unanimously resolved that a dividend at the rate of ten per cent per annum be declared upon the capital stock of the company for the half-year ending the 31st December, 1855, together with a bonus of £5 per cent—both clear of the income-tax—payable on and after Monday, the 18th of February instant, and that the balance of £4842 18s. 2d. remaining to the credit of the profit and loss account be appropriated as follows, viz.:—£500 to be presented to the officers of the bank; £500 be placed to the credit of the "Sadler Provident Fund;" and £107 19s. 5d. be carried to the next account.

THE OMNIBUS MOVEMENT.—The smaller omnibus proprietors are fast following the example of their larger brethren, and falling within the circle of the London general fusion. The suburban and suburban amalgamations are becoming numerous. Among these which have lately taken place are the vehicles, stock, and times of Mrs. Edmonds, from Camberwell-gate to St. John's Wood, from the Swiss Cottage to London bridge; from the Angel, Islington, to Sloane square, Chelsea; and from Paddington, by the Bank, by the New-road; those of Mr. Andrews from Kensal-green Cemetery to London bridge station, those of Mr. Stanhope from Kilburn-gate to Whitechapel; the Royal Blues of Messrs. Clarke and Ingram (seventeen in number) from Pimlico to the Blackwall Railway; those of Mr. Siborne from Kilburn-gate and the Royal Oak by Paddington to the Bank; with Mr. Unett's, which run over the same district. Mr. French's from Lower Edmonton and Tottenham to Oxford-street; and Mr. Rickard's Atlas, New-road, and Royal Oak omnibuses. Mr. Cotton and Mr. Siborne's short mile omnibuses from the Marble Arch to Farringdon-street have also been sold into the general alliance under the style of the London General Omnibus Company, the present chairman of the present traffic of London. In the three weeks that have intervened since the working of the company, the price of oats has fallen from 32s. a quarter to 23s., which, as their weekly consumption already amounts to 1500 sacks, gives an unexpected benefit to the new shareholders of £357 weekly.

DESTRUCTION OF THE PAVILION THEATRE BY FIRE.—On Wednesday morning, at a few minutes before eight o'clock, the inhabitants of Whitechapel were alarmed by a report that the Royal Pavilion theatre was on fire. In a few minutes the Fire Brigade was present; but by that period the whole of the flues were in a blaze, and the burning drapery was falling thickly upon the stage. In less than half an hour after the first appearance of the fire the flames had seized upon the pit, and also the boxes and proscenium. To stop the fire at these places the firemen exerted themselves to the utmost, but unfortunately with out the least success; and in the course of a few minutes longer the conflagration laid hold of the roof, and, seizing the chandelier, it suddenly fell into the pit, where the crystal drops soon became reduced to misshapen masses. Nearly the present houses, so have lost a vast quantity of property by the disastrous event, were not insured for a single penny. The whole of the performers employed on the establishment have lost their wardrobes, and, what is still worse, none of the artistes or others employed in the theatre were insured for a single penny. The theatre was originally erected for a floor-cloth factory; but in the year 1828, after the fall of the Brunswick Theatre, it was converted into a place of entertainment.

FIRE IN CLERKENWELL.—Thursday morning, at a quarter past six o'clock, a fire broke out on the extensive premises of Mr. I. White, mahogany and timber merchant, Yardley-street, Exmouth-street, Clerkenwell. The premises in question cover a large area of ground, and are connected with houses on all side. The stores were left quite safe on the previous evening. Some of the neighbours, on getting up, observed sparks issuing from the building, and immediately informed the police, who sent for the fire-escape and engines, both of which quickly arrived. In spite, however, of the exertions of the firemen, the work of devastation continued, and stack after stack of timber kept falling, while huge volumes of flame extended on every side, and speedily caught the houses in Exmouth-street. By ten o'clock, however, the fire was subdued. The loss is estimated at between £20,000 and £30,000.

THE CASE OF DR. VAUGHAN.—On Saturday last the trial of Dr. Vaughan was brought to a close. The second indictment charged him with having knowingly, wilfully, and feloniously made a false entry in the registry of the parish of St. Matthew, Brixton, of and concerning the burial of one William Raven. Serjeant Wilkins, Mr. Clarkson, and Mr. Clerk conducted the prosecution. The Attorney-General, Mr. Ballantine, and Mr. Prideaux appeared on behalf of Dr. Vaughan. During the examination of Miss Emma Vaughan Mr Serjeant Wilkins rose, and stated that, with the consent of the counsel for the defence, he would withdraw from the prosecution. The evidence of the servant and of the young ladies appeared to him to be so overwhelming, and it was so evident that they were speaking the truth, and they only regretted the unwillingness for the prosecution so distinctly, that he felt compelled to state the conviction that was created in his mind to the churchwardens, and they at once unanimously, and with the full approbation of the vestry, with the learned judge's sanction, withdraw from the prosecution, and he felt a great deal more satisfaction at so doing than in obtaining a verdict against the truth. There was a murmur of cheering at the conclusion of the observations of the learned Serjeant, which was with difficulty repressed. Mr. Justice Wightman said it appeared to him that the prosecution had been instituted under a mistaken notion on the part of the churchwardens as to the facts. The jury then returned a verdict of "Not Guilty."

FORGED BANK OF ENGLAND NOTES.—On Saturday last information was received at the Bank of England that a number of men are at the present time passing forged notes in London and different parts of the country, and it is expected that the crime will be carried to a still greater extent unless some of the offenders are speedily apprehended

## NAVAL AND MILITARY INTELLIGENCE.

THE following is an account of the composition of the British naval force in commission on the 1st of January, 1856:—

| Where Stationed. | No. of Ships. | Guns. | Complement. |
|---|---|---|---|
| Mediterranean and Black Sea .. .. | 69 | 1123 | 19,774 |
| East Indies, China, and Australia .. .. | 11 | 16 | 3231 |
| West Coast of Africa .. .. | 14 | 84 | 1225 |
| Cape of Good Hope .. .. | 7 | 72 | 937 |
| South-East Coast of America .. .. | 8 | 107 | 1109 |
| West Coast of America .. .. | 9 | 236 | 2147 |
| North America and West Indies .. .. | 21 | 468 | 4874 |
| Particular Service .. .. | 14 | 257 | 2870 |
| Surveying Service .. .. | 5 | 22 | 350 |
| Portsmouth .. .. .. | 14 | 242 | 1534 |
| Plymouth .. .. .. | 6 | 204 | 904 |
| Sheerness .. .. .. | 7 | 276 | 910 |
| Woolwich.. .. .. | 3 | 43 | 265 |
| Pembroke .. .. .. | 2 | — | 63 |
| Queenstown .. .. .. | 6 | 134 | 1,412 |
| Yachts .. .. .. | 3 | 2 | 138 |
| Unappropriated, refitting, and fitting out, which includes the Baltic fleet now home | 100 | 2193 | 34,242 |
| Ordered home .. .. .. | 19 | 428 | 4,540 |
| Total .. .. | 325 | 6231 | 63,345 |

On Wednesday last there were in commission, at Portsmouth only, fifty-four sail of men-of-war, there were also one first-rate of 131 guns, one second-rate of 90, two frigates of 50, and a store-ship of 42 (all screws), two paddle steam sloops of 6—nearly all ready for the pendant. Also five gun-vessels (the *Blazer, Prompt, Porpoise, Hawke*, and *Cupid*) quite ready for service. Thus at Portsmouth alone there were sixty-five men-of-war.

THE several regiments forming the army in the Crimea are distributed as follows:—The Light Division, First Brigade—7th and 23rd Fusiliers, 33rd and 34th Regiments, and the 2nd Battalion Rifle Brigade; Second Brigade—19th, 77th, 88th, 90th, and 97th Regiments; two Batteries, E and G, Artillery. The First Division, Brigade of Guards—3rd Battalion of Grenadier Guards, 1st Battalion Coldstreams, and 1st Battalion Scots Fusilier Guards; Second Brigade—the 9th, 13th, 21st, and 63rd Regiments, and 1st Battalion of Artillery. Second Division, First Brigade—3rd (Buffs), 30th, 55th, and 95th Regiments; Second Brigade—41st, 47th, 49th, and 62nd Regiments; B and G Batteries of Artillery. Third Division, First Brigade—4th, 14th, 29th, and 50th Regiments; Second Brigade—18th, 28th, 38th, and 44th Regiments; E and W Batteries of Artillery. Fourth Division, 1st Brigade—17th, 20th, 21st, 57th, and 62nd Regiments; Second Brigade 46th, 48th, 68th, and 1st Battalion Rifle Brigade. Highland Division, First Brigade—42nd, 79th, 92nd, and 93rd Highlanders; Second Brigade—1st and 2nd Battalions, 71st and 72nd Highlanders—the former is at Yenikale; and H Batteries of Artillery. Royal Artillery—1 Field Battery series, A, B, E, F, G, H, P, Q, W, N, Y; two heavy brigades—J and K Batteries (Connyn); two-and-a-half troops Horse Artillery (A I), Karanyi, and 26 Companies Siege Train, 18 of which are at Balaclava Heights. Royal Engineers, 1st (Balaclava), 2nd, 3rd, 4th (Sebastopol), 5th, 8th, 9th (Highland Division), 10th (Light Division), and 11th (Sebastopol), Companies of Sappers and Miners. At Balaclava—1st Battalion of Artillery and the 82nd and 89th Regiments. The Cavalry are stationed at Varna, the Ottoman Contingent are at Kertch, the Osmanli Irregulars at Varna, the British German Legion at Kulalee.

THE second pier which was commenced about three months ago at the Arsenal-wharf, Woolwich, will be ready for service in about three weeks. This will considerably augment the capabilities of landing and shipping; and, as vessels of the largest tonnage will be enabled to moor alongside in any tide, the use of barges will be superseded. A spacious platform, branches off on each side of the pier, provided with a double line of railway, and extends a sufficient length to admit of the loading of four ships at the same time. Four cranes are about to be erected on the platform, and are to be served by hydraulic pressure. The apparatus for this purpose is in the course of erection, under the superintendence of Colonel Beatson, commanding Royal Engineers. This will be applied to the joint purposes of working the whole of the numerous cranes along the Arsenal-wharf side.

THE newly-erected barrack-huts at Pembroke Dockyard are to be immediately filled with militia. The troops ordered to move for this purpose are the Montgomery shire Rifles and the North Gloucestershire Militia. The present arrangements are, that the former regiment, under with the Pembrokeshire Artillery, are to occupy the permanent fortified barracks, and the North Gloucestershire and Monmouthshire Militia are to be quartered in the wooden barracks, the Monmouth regiment moving from the regular barracks for this purpose. Thus there will be four regiments of militia stationed at Pembroke. These ranges of wooden barracks have been constructed to hold 1000 men and their officers, and have been fitted with every convenience. They are well drained, and supplied with good water, and situated on the hill at Hobb's Point.

ON Sunday last the steam-transport *Repon* left Southampton Docks, having on board the 1st battalion of three-and-one Swiss Legion, and a quantity of ammunition for conveyance to Smyrna.

THE sum required to be voted in the year ending the 31st March, 1857, to make good the deficiency of the vote of last Session, for defraying the expenditure of the Mint for the various medal services in the year ending 31st March, 1856, is £80,000. The sum of £52,500 was voted for this service last Session; but, it having been subsequently decided to present the Crimean medal to the troops of the Allies, the provision made was inadequate, and the sum of £80,000 is required to carry on the work at the Mint to the 31st March, 1856. The expense of Army and Navy medals will henceforward be provided for in the estimates for the two services.

ON Wednesday morning the draughts of the Scots Fusilier Guards and Coldstream Guards, which have been for some days under orders for the Crimea, left Aldershot Camp about seven o'clock a.m. for Farnham, a distance on the part of a large number of persons who congregated to witness their march from the Wellington and St. George's Barracks to the Southern terminus. There were about 500 of the Coldstreams and 230 of the Fusiliers, and their appearance was very good, most of them being slight, well "set-up," active young fellows, in the best possible spirits

ON Monday last the South Mayo Rifles, numbering above 700 men, were drawn up in the barrack-yard, Dublin; and, an order for volunteering into the regiments of the Line having been read, more than 300 men at once stepped to the front.

THE pontoon mortar-raft has returned to Woolwich from Shoeburyness, having gone through the second series of experiments with Col. Chalmers's ten-inch howitzer-gun. Since the pontoon metal has been strengthened all the experiments have turned out satisfactorily; consequently the raft has been pronounced in perfect service condition.

A CURIOUS experiment was tried on Monday last in the Arsenal marshes at Woolwich with a new description of shell, the invention of a Mr. Stevens. A piece of wood fitting the bore of the gun was attached to a shell, according to the inventor's contrivance, to accelerate its flight, which he expected would be a very long one. Several of the shells were then fired from a six-pounder gun, and in each instance the wood was shattered in pieces, and the shell rolled to a distance of about two hundred yards. In fact, the experiment completely failed.

PORTSMOUTH garrison presents just now the appearance of a town besieged from the sea, and the garrison preparing busily for its defence. A large fleet of ships and gun-boats is at anchor in the roadstead off the town, and new batteries and quarters for soldiers are being constructed rapidly within the walls of the fortress. The Government are also endeavouring to negotiate for a large extent of house property in Green row and the rear, for further enlarging the barrack accommodation, and this to the extent (says military rumour) of 30,000 men. If so, Portsmouth and its adjacent dependencies must become almost exclusive a citadel.

## NATIONAL SPORTS.

THE racing season opened cheerlessly enough, as regards weather, in the Lincoln meadows on Tuesday and Wednesday last; and that cleverest of light-weights, Fordham, rode the first winner. Eight out of the nine two-year-olds met the starter's eye, and a half-length verdict was in favour of an Alarm colt (Wells), who is not in the Derby or St. Leger. The stock of Grecian and Vatican (two untried sires, and beautiful specimens of the Epirus and Venetian blood) ran into the second and third places respectively. Mr. Johnson had also good reason to be satisfied with the result of his first handicap this year, as the three leaders finished within half a length. Fandango, 8st. 5lb, has accepted for the Great Northern Handicap, where Rataplan gives him 16 lb. and Rifleman 5lb; and thus the Ascot Cup issue will not improbably be forestalled. The race between the three, whether over Knavesmire or Ascot, will be one of immense interest, as Yorkshire will almost to a man stick by their favourite "red spots" champion, in preference to the "green" of the Squire, or the "red" of the "Thellusson Trust," which, by-the-by, finally vested on the death of Mr. Thellusson, Senior, at Brighton, last week. We may, therefore, perchance see the Pigburn training ground, over which crops are now springing, add an eighth St. Leger winner to its dead-roll. The entries for the six great Spring Handicaps this year are 57 in advance of last year; and the acceptances are also in a majority of 30. Dan Dawson was supposed to have reached the acme of high art in horse-poisoning when he drugged Lord Foley's brood-mare troughs by the aid of a syringe; but some modern ruffian has quite rivalled him by introducing arsenic in a carrot into John Scott's stable, and killing Garrick by mistake for Fly-by-Night. Ellington's Derby trials have also begun; and, although his enemies have failed in their first attempt to break open his stable door, his trainer's life between this and the afternoon of the Derby day will be no sinecure. We understand that 401 race-horses, or just one-fourth of the number we have in the United Kingdom, are at present in training in France. With them Chantilly corresponds to our Newmarket, and 190 out of the 401 are trained there.

Ion and the Baron—whose blood, like that of Gladiator, we began to prize too late—are in high favour among the French breeders, who have just imported that "bad mover," the high-bred Dirk Hatteraick. The gigantic Nabob has gone to the stud; and Son Mot—who cost the Duke of Bedford 3000 guineas, and was cast as a mere heath hack very shortly after his purchase—was sold at Tattersall's last week for 27 guineas. Exact and Muy Fair are both at Kingston's paddocks, and an Arab is also a candidate for public favour, on the ground that he was selected by Omer Pacha, from his surpassing swiftness, to bear the news of the raising of the siege of Silistria to the Allied forces at Varna.

The recent successful right-and-left shot of the Highland gillie at two eagles has been rivalled by Colonel Bentinck, who brought down two deer and wounded a third with one crack of his rifle; and the great grouse-shooting question, which ended in a drawn battle between the Earl of Lonsdale and Mr. Rigg, in the Exchequer, will be reargued before all the Judges in the Exchequer Chamber next term.

We are forcibly reminded of the notorious disagreement between the English and Scotch law on the liability of an owner whose dog is found worrying sheep for the *first* time, by the announcement that the Raby foxhounds broke out of their kennel lately, and killed forty sheep, while the bulldog who keeps watch and ward over Rifleman, at Tilley, is credited with fifty-six victims. This is almost as bad as the savage dog-quizers who harried the flocks on the Border for a whole season at the beginning of the present century, like another mosstrooper, and ate nothing but the fat about the kidneys.

The descendants of Mocking Bird—one from each of her Motley, Mathematics, and Egypt litters—have just been especially lucky over the plains of Newmarket, where she was almost invincible in her day. Coursing meetings are very plentiful, however, and the best workman makes the trials anything but satisfactory. The Cork Southern Club hold their Spring Stakes at Killady Hill on Tuesday; Limerick, Appleby (open), and Middleton (Westmoreland) are fixed for Tuesday and Wednesday; Hordley for Wednesday, and Selby and Southport (open) for Thursday and Friday. To these succeed Dirleton Club, and Champion (open) and Red Dial (Wigton) on Thursday, North Union (Antrim) and Ampthill on Friday, and Charley (open) on Friday and Saturday.

The steeplechases have, on the contrary, but a very poor fare, consisting of a mixed meeting at Derby on Tuesday, a steeplechase at Narbeth (Haverford West) on the same day, and three steeplechases at Bristol on Thursday.

News from the salmon fisheries is everywhere cheering. The followers of the gentle craft on the Derwent declare that they can recreate their eyes with forty of them lying together at times in the pools; and the last report of the Irish fisheries speaks most hopefully of their prospects, as well as of their progress in artificial rearing. We understand that the eggs have been hatched in a tumbler within sixty-six days after impregnation, whereas one hundred and twenty days is often required for the process, when it goes on in an open pond.

### LINCOLN SPRING MEETING.—TUESDAY.

Trial Stakes.—Tame Deer, 1. Fisherman, 2.
All-aged Selling Stakes.—Clare, 1. Ida, 2.
Two-year-old Stakes.—Amoreus Boy, 1. Annot Lyne, 2.
Grand Steeplechase.—Escape, 1. Hopeless Star, 2.

### WEDNESDAY.

Lincoln Spring Handicap Stakes.—Flageolet, 1. Vanessa, 2.
Hunters' Steeplechase.—Tom Gurney, 1. Johnny Raw, 2.
Two-Year-Old Selling Stakes.—Magistrate, 1. Dellian, 2.
Handicap Hurdle Race.—Stamford, 1. Free-ton, 2.
Selling Steeplechase.—Fanny Wynn, 1. Miss Bambygh, 2.

### TATTERSALL'S—THURSDAY EVENING:

LIVERPOOL STEEPLECHASE. 10 to 1 agst Sir Peter Laurie (c); 1000 to 40 agst Jemmy the Black (t); 1000 to 40 agst Jean du Quesne (d).
CHESTER CUP. 12 to 1 agst Yellow Jack; 100 to 6 agst Yorkshire Grey (off); 30 to 1 agst Stark (c).
GREAT NORTHERN.—7 to 1 agst Fandango (t).
TWO THOUSAND GUINEAS.—3 to 1 agst Yellow Jack (t). 9 to 2 agst Fly-by-Night (t).
DERBY.—9 to 1 agst Ellington (t); 15 to 1 agst Rogerthorpe; 300 to 100 about Day's lot (t).

## EXHIBITION AT THE BRITISH INSTITUTION.

THE remarkable feature of the present Exhibition is its unlooked-for absence of support from the members of the Royal Academy. In former years at least a dozen of the forty Royal Academicians were conspicuous exhibitors at this the earliest exhibition of each year. Gradually the number has fallen from twelve to six, and from six to four. Last year the number was four. This year the number is only *one*. We miss Messrs. Creswick and F. R. Lee, always delightful contributors of English spring landscapes to a February Exhibition. We could spare (the only Academician) Mr. H. W. Pickersgill, R.A., whose contribution—a lacka-daisical half-Turkish lady, of doubtful country and costume, is here labelled with four lines from "Lalla Rookh," rather poor in themselves, and not appropriate to the picture.

Only four Associates of the Royal Academy—viz., Mr. Sidney Cooper, Mr. E. W. Cooke, Mr. Frank Stone, and Mr. Frost—are exhibitors on this occasion. Mr. Sidney Cooper contributes two pictures, clever repetitions of his well-known style—admirable representations of English meadow scenery about his native Canterbury. Of the two, we prefer "Sunset on the Meadows" (No. 23), dated, we observe, "31st Dec., 1855." Here we have cows painted with a Paul Potter touch and the knowledge of an Islington cow-feeder. Mr. Cooper is never happier on canvas than he is in cows. To him the advice may well be given which was given to Boswell, the biographer of Johnson. Boswell was fond of imitations, and delighted an expectant pit in a theatre with his imitation to happy that there was a call for other bestial noises from the same human mouth. Jamie tried a second and a third, but not with the same success, when his friend who accompanied him whispered this piece of sensible advice, "Stick to the cow, man." Jamie repeated "an lellipse" and was again received with thunders of approbation. So we say to Sidney Cooper, "Stick to the cow, Sidney." "Crummie" has done good service to Sidney Cooper: "sift has she warmed the bairns' mou'." Observe the dexterous handling in the left corner of this beautiful "Sunset in the Meadows."

"*Canaletti* Cook," as his friends delight to call him, since he deserted "Fort Rusydael" for Venice, is a prolific exhibitor—exhibiting, in all, five pictures. Their titles are characteristic of his style. "A Cool Day in Venice" (17), painted on the spot, "Facade of San Giorgio, &c., Venice—a Warm Evening" (35); "A Rainy Day on the Lagune of Venice" (127), a sketch on the spot; "Danish Fishing Craft on the Elbe at Blankenese—Low Water" (245); "San Clemente on the Lagune of Venice—Sunset" (402)—painted on the spot. The four Venetian views present his intimate knowledge of architecture and perspective, his fine sense of distance, and his occasional hardness of man-

## OPENING OF THE BRITISH INSTITUTION.

ner. Mr. Cooke never plays pranks with a scene, as Turner almost invariably did; but is content to seize the best view, and adhere to the actual scene.

Mr. Frank Stone's single contribution occupies the well-known position of the centre, over the fireplace in the North Room. It is a cabinet picture very carefully finished, of two Calais girls, painted at half-length, with pretty peasant faces, and a sweet expression on each face. Its title in the Catalogue (Mr. Stone is a careful hunter after titles) is "A la Dunette.—Pas de Calais." As a small specimen of a favourite painter in his favourite manner, this is a good example.

Mr. Frost, among the most refined of living painters, exhibits a "Nymph and Cupid" (231) in his usual chaste, careful, and poetic style.

Having paid all due honour to the Academy, we shall pass to the pictures by artists not members of the Academy.

The novelty of the Exhibition is a large picture in oil colours, by that master in water-colour art, Louis Haghe. For what we take to be his first publicly-exhibited attempt in oil, Mr. Haghe has selected the interior of a church of Florence, "The Choir of the Church of Santa Maria Novella." With all the unquestionable merit to be seen in every part of this picture, we miss, we are sorry to say, that charm and dexterity of touch which has put Mr. Haghe at the head of figure-painting in water-colour art. Here his figures look hard and stick to the canvas. When working in water colours his figures stand out from the rich leather hangings which surround them, and all but move and have being. By no means, however, would we dissuade Mr. Haghe from pursuing painting in oil colours. With his fine sense of light and shade, and his dexterity in drawing, he may accomplish in oils still greater triumphs than he has won so successfully in water-colour art. Three hundred pounds is the price of the picture, and not too much for it.

Perhaps the most ambitious picture in the collection is "The Martyrdom of Ridley and Latimer" (No 60), by Sir George Hayter. As we have selected this picture for engraving we shall reserve our remarks upon it. The same cause must necessarily postpone the observations we would gladly make at once on the clever contributions to the Gallery made by Messrs. Ansdell, Lance, Holland, Hemsley, and Aster Corbould.

Our Engravings this week from the Institution are two in number: "The Cradle" (74) by Mr. D. W. Deane; and "Timber Clearing on the Hill-Side, Sussex" (168), by Mr. Henry Jutsum. We have selected "The Cradle" as a favourable specimen in oil colours of those features in Irish peasant life which have made Mr. Topham so distinguished an artist, and by which Mr. Deane is so deservedly known. The "Scene in Sussex" we have selected as a careful rendering of some of the most beautiful characteristics of English landscape—as a picture which will justly add to Mr. Jutsum's reputation. Mr. Deane has a fine eye for colour and great dexterity of touch; and Mr. Jutsum has a true sense of the art of selection—that rare quality in a landscape-painter.

There are pictures still to be mentioned that materially support the character of the Exhibition. Thus the "Bay of Baia" (2), by G. E. Hering, a small picture, is a fit ornament for the boudoir of Lady Mary Wortley Montague; Mr. Dearle's "English Landscape" (161), hung shamefully low, contains qualities which will arrest the attention of all careful observers of nature; the two flower pieces, "Azaleas" (22), and "Magnolia" (91), by Miss Mutrie, would please Van Huysum, and obtain a first-class medal from Dr. Lindley; Mr. Felbin's picturesque "View of the Alhambra, as seen from San Christoval" (310), fully satisfies Mr. Richard Ford, from whose map-like sketches it was made; Mr. Buckner has "A Roman Piper" (177), replete with qualities that denote a marked improvement in his style; Mr. Hicks has a small picture on the screen, "Maternal Love" (393), very delicate in conception and touch; Mr. G. Smith has an excellent little picture, called "The Brother's Lesson" (109), in which he treads still closer on the heels of Mulready, the painter of his idolatry; Mr. Inskipp is as Inskipp always was, full of beauties and defects; Mr. Hayes and Mr. Wilson contend for the palm of excellence in representing maritime life—Mr. Hayes gives us with an effective pencil, "A Fresh Breeze off Dublin Bay" (402); and Mr. Wilson exhibits "A View off Dover—Squally weather" (320) sufficiently indicating to what good account he has turned his residence at Folkestone.

With the mention of one more picture we must conclude our notice for the present. That picture is "The Ptarmigan's Haunt," by J. Wolf (339)—a marvellous piece of execution in every respect, smacking of the heather, the mountain and the breeze. The birds seem ready to spring from amid the grey stones and heather which surround them. The grey feathers of the birds and the grey nature of the stone—amid which they delight to haunt—form, however, too great a resemblance of grey tone. This fine picture will fully satisfy the sportsman; though, from the defect (inherent in the subject) it will fail to give equal satisfaction to the critic.

"THE CRADLE." PAINTED BY D. W. DEANE. FROM THE EXHIBITION OF THE BRITISH INSTITUTION.

"TIMBER-CLEARING ON THE HILL-SIDE, SUSSEX."—PAINTED BY HENRY JUTSUM.—FROM THE EXHIBITION OF THE BRITISH INSTITUTION.

## THE ROYAL INSTITUTION.

### PROFESSOR FARADAY LECTURING BEFORE PRINCE ALBERT, THE PRINCE OF WALES, AND PRINCE ALFRED.

The leading object of the Royal Institution, in Albemarle-street, is the teaching of the principles of Inductive and Experimental Science, and the exhibition of the Application of these Principles to the various Arts of Life. On each Friday evening during the session the members of the Institution and their friends assemble in the theatre to hear a discourse on the subject which he has studied; and almost every eminent philosopher in England has rendered the Institution this service. The list of the present year contains the names of Sir Charles Lyell; of Professor Rogers, of the United States; Thompson, of Glasgow; Owen and Hofmann; besides those of Faraday, Tyndall, and Huxley, the Professors of the Institution.

A short course of lectures, entitled the "Christmas Lectures," is also given at the Institution yearly, by Professor Faraday. They are specially adapted to a juvenile auditory; the subject of the course lately completed was the Elementary Properties of the Common Metals. Each of these lectures was honoured by the presence of their Royal Highnesses the Prince of Wales and Prince Alfred, who, at the first lecture, were accompanied by their Royal father, Prince Albert; and it was truly interesting to witness the profound attention with which the illustrious children received their earliest scientific impressions in such a place, and from such a teacher. The scene in the Theatre, with the young Princes and their father, Prince Albert, Professor Faraday at the lecture-table, and the attentive audience was sketched by Mr. Alexander Blaikley, to be hereafter painted by him. Mr. Baikley has obligingly placed his sketch at our engraver's disposal; and the result is the large illustration upon the preceding page, which will be regarded as a gratifying evidence of the care bestowed upon the early education of the Royal family, in thus introducing them to the culture of the higher branches of knowledge. In the sketch, the Prince of Wales is seated on the right hand of Prince Albert, and Prince Alfred on his left.

The objects of the Royal Institution have been chiefly illustrated out since it was first originated by Count Rumford, and Davy gave here his first lecture in London, and within the walls of the Institution began his brilliant career of chemical philosophy. The Laboratory has, from the first, been distinguished by its advancement of chemical and electrical science, by experiments and original investigations. Here the researches of Professor Davy and afterwards of Professor Faraday, extending over a period of nearly half a century, have been conducted; and the results of the investigations of this period include the laws of the electro-chemical decomposition; the decomposition of the fixed alkalies; the establishment of the nature of chlorine; the philosophy of flame; the condensibility of many gases; the science of magneto-electricity; the twofold magnetism of matter, comprehending all known substances; and the magnetism of gases. To the honour of the Institution, the cost of these researches has been defrayed by the willing contributions of the members, without any aid from the Government of the country.

The Royal Institution has, indeed, been the source to the public of the highest scientific and literary instruction during the last half-century. Among many other eminent men, Coleridge, Campbell, Sydney Smith, Crotch, Dalton, Young, Babbage, Brande, Lyell, Faraday, Wheatstone, and Lindley, have here given lectures on the subjects which they have so successfully cultivated. The results from philosophical researches made in the laboratories of the Institution within the same period are second in importance to no contemporaneous investigations conducted by any other philosophical society; and such is the estimation in which Dr Whewell, in his "History of the Inductive Sciences," to these investigations, that he designates the time in which they were made "the epoch of Davy and Faraday," and one of the periods of scientific chronology. The same system of experimental research is still pursued by Professor Faraday, the Fullerian Professor of Chemistry, as well as by the present Professor of Natural Philosophy, Dr. Tyndall.

## *THE COURT.*

The Queen and Prince Albert left Windsor Castle at four o'clock on Monday afternoon, accompanied by the Royal family and suite. A special train conveyed the Royal party to the Paddington terminus: whence they proceeded in seven of her Majesty's carriages, escorted by a party of the 3rd Light Dragoons, to Buckingham Palace, where the Queen and Prince arrived at five minutes before four o'clock.

On Tuesday the Queen held a Court at Buckingham Palace, at which Count Björnstjerna, Chamberlain to the King of Sweden, had an audience, and invested his Royal Highness Prince Albert with the Order of the Seraphim, by command of the King of Sweden. In the afternoon her Majesty and the Prince visited her Royal Highness the Duchess of Gloucester, at Gloucester House, and in the evening the Queen and his Royal Highness honoured the Olympic Theatre with their presence.

On Wednesday his Royal Highness Prince Albert, accompanied by the Prince of Wales and Prince Alfred, visited the British Institution in Pall-mall, and afterwards the Architectural Exhibition in Suffolk-street.

The Countess of Desart has succeeded the Duchess of Wellington as the Lady in Waiting. Earl Somers and Mr. R. Ormsby Gore have relieved Lord Dufferin and Sir Edward Bowater as the Lord and Groom in Waiting to her Majesty

The Countess Granville "received" on Wednesday evening, at the family mansion in Bruton-street. Their Royal Highnesses the Duchess of Cambridge and Princess Mary honoured the Lady-ship with their presence, arriving about eleven o'clock. His Royal Highness the Duke of Cambridge was also present.

Viscountess Palmerston held her second assembly on Saturday evening, at the Premier's mansion, on the Terrace, Piccadilly.

His Excellency Lord Cowley arrived at Dover on Wednesday afternoon, in the Government steam-packet *Vivid*, Captain Smithett, from Calais. His Excellency dined at Birmingham's Royal Ship Hotel, and came on to London by the evening express train.

The marriage of the Lady Emily Curzon, third daughter of Earl Howe, took place on the 8th inst., at Gopsall Hall, to Lieut.-Colonel Kingscote, C.B., M.P.

Approaching Marriages in High Life.—A matrimonial alliance is arranged, and will shortly take place, between the Lady Jane Hay, daughter of the Marquis and Marchioness of Tweeddale, and sister of the Duchess of Wellington, and Sir Frederick Arthur Bart. Lady Rachel Russell, youngest daughter of the late Duke of Bedford, and half sister of Lord John Russell, is about to marry Lord James Wandesford Butler, son of the first Marquis of Ormonde. Sir Thomas Whichcote, Bart., is also about to lead to the altar Miss Montgomery, sister of Mr. Alfred Montgomery.

## *CHURCH, UNIVERSITIES, &c.*

Appointments.—*Prebendary:* The Rev. F. C. Cook to the prebendal stall in St. Paul's Cathedral. *Rectories:* Rev. C. Bowen to St. Mary's, Church by Kerr; Rev. St. Lawrence to Kerr; Rev. R. Mitchell to South Moreton, Berkshire; Rev. J. Nesbitt to Deal, Kent; Rev. R. Shipwith, B.C.L., to Whelton, near Daventry; Rev. E. Rice, M.A., to Great Gonerby, Gloucestershire. *Vicarages:* Rev. T. Hillier to Cardington, near Bedford; Rev. E. J. Howman to Exhall, Warwickshire; Rev. H. H. Adcock, M.A., to Humberstone, near Leicester. *Incumbency:* Rev. W. H. Hopkins to St. Paul's, Wernetn, near Stockport; Rev. G. Procter to Egton-cum-Newland, near Ulverstone.

Testimonials.—On Thursday evening week the pupils of the Brixton-hill Collegiate School presented their principal, Mr. Geo. Wilson, and Mrs. Wilson, with a handsome silver épergne, as a grateful mark of respect and esteem.—The Rev. W. Henry Smythe, of Market Bosworth, also received one from the parishioners of Kirkby Mallory, Leicestershire.

Mr. Hancock, of Bruton-street, has had the honour of receiving the commands of his Royal Highness the Regent of Baden for his marriage jewels, boiste, &c.

Kent County Ophthalmic Hospital.—On Wednesday week, at a crowded meeting held in the Corn Exchange, Maidstone, Mr. John Woolcott, the surgeon to the Kent County Ophthalmic Hospital, was presented with a valuable testimonial, subscribed for principally subscribed by the working classes of the country, to show their sense of the value of Mr. Woolcott's services as the founder and promoter of the institution. The testimonial consisted of a chronometer clock of the "Gothic," three feet high, on a black marble base with bas-reliefs. In the centre is a costly clock, chiming the quarters on eight bells, manufactured by Mr. Dennis Taylor, the well-known watchmaker of Cheapside, as exhibited by him at the recent Paris Exhibition. The case was supplied by Messrs. Jackson and Graham.

Photographic Society's Exhibition.—Their Royal Highnesses the Prince of Wales and Prince Alfred, accompanied by Mr. Gibbs and Dr. Bekker, visited the Photographic Society's Exhibition, in Pall-mall East, on Thursday morning. They were received at the Gallery by the Rev J. R. Major, secretary to the society, and remained for an hour and a half, carefully examining the pictures, with which they expressed themselves greatly interested and pleased.

## *IMPERIAL PARLIAMENT.*

### HOUSE OF LORDS.—Friday, Feb. 8.

Earl Granville laid on the table of the House a bill to authorise the Government to create a Vice-President of the Council of Education. The Government proposed to appoint a member of the House of Commons to the office.

Lord Campbell suggested that, instead of appointing a Committee of Privileges to inquire into the peerage conferred on Sir James Parke, a new patent should be granted making the peerage hereditary.—The Earl of Derby having concurred in the suggestion, the subject dropped.

### HOUSE OF COMMONS.—Friday, Feb. 8.

Mr. Cobden drew attention to the state of our relations with America with regard to the construction of a canal through the Isthmus of Darien. The correspondence relating to this matter had been laid before the American Assembly; but, because it was not officially published here, this House could not discuss those documents. The Americans considered the correspondence concluded, and he, therefore, hoped the noble Lord would not refuse the production of the documents. In reference to the foreign enlistment in America, he admitted that when the United States complained to this country the Government apologised and withdrew her agents; but from some private quarrel between the Ministers of the two countries the matter was not likely to be so amicably arranged as was at first supposed. He, therefore, suggested that the Parliament should take the whole matter out of the hands of those Ministers and settle it themselves. He referred to articles that had lately appeared in the *Times* and *Morning Post*, the two organs of the Government, whose tendency was to inflame the animosities of this country against the Americans.

Lord Palmerston went through the negotiations of the Central American question, and the circumstances which led to the dispute between the two Governments. In order to prevent any disputes they had framed a treaty so fair that they thought no disputes could arise on it, but the American Government put a construction on that treaty contrary to that which the English Government could agree to, and they had forwarded their interpretation of the treaty to the United States Government, and had offered to refer the question to any third nation. The Americans had not yet answered that note, and so the matter rested for the present. The misunderstanding was occasioned by misunderstanding with the United States Government, but upon their making a complaint to this Government, the whole of those establishments had been withdrawn and an apology made for the insult. He hoped that this country had declared himself perfectly satisfied. He did not consider the correspondence referred to as finished, and therefore he had refused to produce it; but he had no objection to lay it on the table. The noble Lord sat down amid loud cheers

The Metropolitan Police Bill was read a third time and passed. The Partnership Amendment Act Amendment Bill was read second time, after some discussion, the Joint-stock Companies Bill, the Burial of the Dead (Ireland) Bill, and the Youthful Offenders (Ireland) Bill, were read a second time.

Sir W. J. Clay obtained leave to bring in a bill for the abolition of Church-rates, which he stated was the same as that he introduced last Session.

### HOUSE OF LORDS. Monday.

#### THE CRIMEA REPORT.

The Earl of Cardigan complained of certain reflections upon his professional conduct contained in the Report of the Commissioners respecting the Management of the Army in the Crimea. He announced his intention of tabling an explanatory statement to the War Minister, and trusted that equal publicity would be officially given to his defence as to the attack on his character.

The Earl of Lucan thought the Commissioners with misrepresentation, and expressed some surprise that no notice had been taken of the explanations he had already addressed to the War Minister.

Lord Panmure, in reply to Lord Lucan, said his letter had been referred to the Commissioners, and would be laid on the table, together with their reply, in due time. All rejoinders which any officer might think proper to make to the allegations contained in the report would be added, be officially promulgated, if properly sent to the War-office with that intent.

#### THE WENSLEYDALE PEERAGE.

Lord Lyndhurst having proposed that the Committee of Privileges on the Wensleydale Peerage should meet at two o'clock next day,

Earl Grey inquired what would be the object and character of the inquiry which was to be undertaken; and complained that the inconvenience that would attend the inauguration of so important and unusual an investigation without some previous indication of its special purpose?

Lord Lyndhurst replied that the object of the investigation was simple and definite, involving merely the competence of the Crown to confer a peerage on life tenure. Besides the arguments which noble Lords might adduce upon that question, the Committee, if it recommended, had to be intimated, be invited to hear evidence on the subject from witnesses at the bar.

In the course of a lively conversation—in which the Lord Chancellor, the Earl of Derby, Earl Granville, Lord Brougham, and other peers took part—Lord St. Leonards suggested that the meeting of the Committee should be postponed for a week. Ultimately the subject dropped, and the final understanding being that the Committee should meet next day, according to the original arrangement.

The Burial of Dissenters Bill was read a second time, after a brief discussion.

Earl Grey urged some inquiries touching alleged omissions or discrepancies in the despatches sent by Lord Stratford de Redcliffe from Constantinople in 1853 and 1854.

The Earl of Clarendon, in the course of his explanations on this point, passed a high eulogium on the zeal and diplomatic talents displayed by the British representative at the Porte, and stated that Lord Redcliffe had just succeeded in effecting much of the difficulty which might otherwise have attended the attempt at settling the Fourth Point, by securing for the non-Mussulman subjects of Turkey a status which would be highly satisfactory to the Christian Powers of Europe.

### HOUSE OF COMMONS.—Monday.

#### THE NAVY ESTIMATES.

Mr. W. Williams, in the view of a possible peace, recommended that the Estimates should at present be voted for only part of the year. He denied, however, any intention of crippling the public service in any branch, believing that a liberal expenditure upon preparations for war would render the United States more cautious and cheaper in the end.

The House then went into Committee of Supply.

Sir C. Wood, in moving the Estimates for the Naval Service, stated that the amounts had been computed on the presumption that the war would continue without interruption, but only a part of each vote would be immediately asked for, leaving the residue for future discussion when the issue of the negotiations at present in progress between England, the active force of the Navy it was intended to ask a vote of 68,000 seamen and marines, being 6000 more than last year, and 10,000 boys. The estimates for the wages of this force was £2,327,333, showing an increase of £352,366 beyond the amount granted last year; but of this gross total he should require a present vote of only £2,000,000. The First Lord then went through the subordinate votes, stating and explaining the amount and causes of the increments which appeared upon almost every head in the charges for the ensuing twelve months. The grand total for the naval service reached £19,135,000, showing a net augmentation over the previous estimate of £921,135, besides a vote of £304,000 for the excess of expenditure incurred beyond the grants of the bygone Session. Respecting the Transport Service, Sir C. Wood detailed the amount of duty which had fallen to that department during the year. In addition to almost incalculable quantities of *materiel* and provisions, 50,000 British troops, 1000 men of the Sardinian and 5000 Swiss and Germans of the Foreign Legion had been transported from England to the Black Sea; 26,000 French troops from Marseilles or Toulon, and 19,000 Sardinians from Genoa to the same destination; 5000 Turks had been conveyed from British ports to the Mediterranean, and 138,000 men had been transferred from Malta or Corfu to the Crimea, and variously transported to and fro in the Black Sea. To avert intervention towards the seat of war, some 46,000 men had been conveyed homewards, making altogether 284,000 men embarked and conveyed on different voyages during the year. After enlarging upon the services performed by the Navy, the right hon. Baronet recapitulated the steps that had been taken to enhance the strength and availability of the arm in the next campaign. Among other additions, he stated that 6000 Minnie had been conveyed from British ports to the Mediterranean, and 138,000 men had been transferred from Malta or Corfu to the Crimea, and variously transported to and fro in the Black Sea. To avert intervention towards the seat of war, some 46,000 men had been conveyed homewards, making altogether 284,000 men embarked and conveyed on different voyages during the year. After enlarging upon the services performed by the Navy, the right hon. Baronet recapitulated the steps that had been taken to enhance the strength and availability of the arm in the next campaign. Among other additions, he stated that 6000 Minnie had been conveyed from course of preparation, augmenting to a total of 200 the number of that species of vessels which would be ready for service in the Baltic as soon as the campaign opened. Should war continue, they would be fully prepared to dispatch 350 pennants to the Baltic and 100 to the Black Sea, whenever the time arrived for resuming active operations.

The discussion of the various votes on the Estimates was then proceeded with, and occupied some hours.

### HOUSE OF LORDS.—Tuesday.

#### THE WENSLEYDALE PEERAGE.

The House met at two o'clock, when they formed themselves into a Committee of Privileges, for the purpose of considering the motion of Lord Lyndhurst relative to the Wensleydale peerage.

Lord Lyndhurst, in introducing the question, stated that within the last 400 years no instance had occurred in which a commoner had been called up to their Lordships' House to take his seat by virtue of a patent creating merely an estate or dignity in the Peer for life. He considered that two or three solitary instances occurring at a remote period, in very disorderly and troublesome times, before the Constitution had assumed anything like its present form or character, before the Petition of Right in the reign of Charles I., and more especially before the Bill of Rights at the time of the Revolution, could not justify an attempt to alter in any way the hereditary character of the House, and that any attempt to do so was inconsistent with the genius of the Constitution.

On the motion of the learned Lord, Mr. Hardy, the Keeper of Records at the Tower, was called to the bar, and examined relative to the creation of the Earl of Huntingdon for life in the reign of Richard II., and other patents relative to life peerages.

The Lord Chancellor stated that in consequence of an accident his noble and learned friend Lord Wensleydale had been confined, and that the confinement had brought on a fit of the gout; but he anticipated that at the end of this week he would be able to come to town, when he would present himself with her Majesty's writ, demand admission to their Lordships' House, and insist upon his right to take his seat as a Peer.

After some further conversation, it was agreed that the search for the purpose of ascertaining whether there were any other patents for life peerages than those produced should be continued till Monday next.

Lord Lyndhurst did not know that they could then do anything better than to adjourn until Monday next. He therefore proposed an adjournment of the Committee until two o'clock on that day.

Lord Campbell gave notice that when the House resumed he would move that Baron Parke should be heard by himself or his counsel in support of his claim to sit in the House.

If the Lord Chancellor could state, on the authority of his noble and learned friend Lord Wensleydale, that he would decline to take any part in those proceedings. His noble and learned friend could decide, as he (the Lord Chancellor) believed, properly considered—that the whole question was at present *coram non judice*. He meant to claim admission to the House by right of his patent alone, and he would respectfully decline to recognise the jurisdiction of that Committee in the case. He said he had received no intimation that that question had been referred by her Majesty to the House, and until he should receive such an intimation he could not recognise their right to deal with it.

Lord Campbell said that that might be a very natural view of the question for his friend Baron Parke to entertain; but that was no reason why their Lordships should dispense with regularity in their proceedings.

Earl Granville could not help thinking that a decidedly unfavourable effect in reference to their Lordships' mode of proceeding would be produced on the public mind if they were then to adjourn for a whole week without having determined what was the course they were to adopt in that matter.

Lord St. Leonards said the noble and learned Baron—if that was the title by which they chose to call him—was a person for whom he had a very great regard, and whom he would be very glad to see take his seat in the House, if he came with a descendible title (Hear, hear); but if he came in any other shape they might depend upon it that the opinion of the House must be taken upon the question how he could be satisfactorily settled.

The Lord Chancellor wished to correct a misapprehension which seemed have arisen in some quarters of a statement he had made on Thursday last. It had been supposed that he had stated that Lord Wensleydale had been selected in order to try the validity of the creation of a life peerage. Now, it was impossible that he could have made use of any such language. He solemnly protested that it had never occurred to him, until the evening before Parliament had met, that the validity of the proceeding could possibly be questioned. What he had really stated was that it had occurred to her Majesty's Government that, if it were desirable to create life peerages, no better selection could be made for a commencement of the exercise of the power than Lord Wensleydale, who was not poor, and who was not likely to have any posterity to whom a title could be transmitted. On the first day of term his noble and learned friend the Chief Justice had suggested to him a doubt as to the propriety of such a step; but had added that he had not the least doubt of its legality (Some laughter, and emphatic cries of "No, no," from Lord Campbell). His noble and learned friend said "No," and he (the Lord Chancellor) must, of course, have misunderstood him; but he protested most solemnly that his noble and learned friend had used language to him which he had so understood, although he must, no doubt, have understood it incorrectly.

Lord Campbell said he would state, to the best of his recollection, what had passed between him and his noble and learned friend on the occasion in question. He had told his noble and learned friend that he had heard that Lord Wensleydale was to be called to the House of Lords as a Peer for life, and he had asked his noble and learned friend whether the rumour was a well founded one. His noble and learned friend replied that it was; and he (Lord Campbell) then stated that he was sorry for it at, as he should be obliged to make a row about the matter as soon as Parliament met.

Earl Granville said he had reason to believe that five years ago, at all events, his noble and learned friend had thought that the creation of a life peerage would be perfectly legal; and he would like to know the precise date since that period when his noble and learned friend had changed his opinion upon the subject.

Lord Campbell said he had never formed any decided opinion one way or the other. In the course of the debate the other night he had frankly acknowledged that the impression on his mind had been that the Crown might confer life peerages, because he could find no mandate of any such creations for a period of 400 years, and no instance before that period—he had begun gravely to doubt the legality of the proceeding; and, unless he could find some clear evidence in which the Crown had been so made a Peer for life, he should come to the conclusion that it was beyond the Royal prerogative to create such a Peer.

The Earl of Clarendon could see no good reason at the present moment why that peerage should be created merely for judicial purposes, and he was, therefore, at a loss to know why it had been granted if not to try as soon as possible the question of prerogative which it involved.

Lord Brougham observed that it was difficult to imagine that they could have any other object in view, inasmuch as in the case of his learned friend, who had not, and who was not likely to have, a son, a heir, estate and a life peerage were of precisely the same value—ne might say—*res ipsa loquitur*.

Lord Redesdale remarked that although he as much as any man should rejoice at seeing a lawyer of Baron Parke's eminence elevated to the Peerage, yet he must deprecate strongly the unusual course which had been taken by her Majesty's Government to effect that object. It was a course which, if persevered in, would pave the way for the utter annihilation, dignity, and real independence of their Lordships' House (Hear, hear).

The Chairman then reported progress; and a motion for the adjournment of the Committee until two o'clock on Monday next was agreed to.

### HOUSE OF COMMONS. Tuesday.

#### THE TURKISH CONFERENCES.

Mr. Layard asked the First Lord of the Treasury if it were true that the Sardinian Ambassador had been excluded from the Conferences now being held at Constantinople relative to the Principalities, and, if so, what were the reasons for excluding him?

Lord Palmerston explained that the Conferences alluded to, now being held at Constantinople, were between England, France, and Austria, respecting the Principalities, had no reference to the war, but to the internal arrangements of the Turks. The Sardinian Ambassador had applied for admission, but the Ambassadors of England, France, and Austria, having no instructions to that effect, refused, and communicated with their respective Governments for instructions; but in the mean time the Sardinian Minister had not been admitted.

#### ADMINISTRATIVE REFORM.

Mr. Napier moved—"That, in the opinion of this House, as a measure of administrative reform, provision should be made for an efficient and responsible department of public justice, with a view to secure the skilful preparation and prompt passing of Statute Bills, and to promote the progressive amendment of the laws of the United Kingdom." The right hon. gentleman, in an able explanatory speech, pressed upon the House the urgent necessity of effecting reforms in law commensurate with the exigencies of the times.

Mr. Collier seconded the motion. He thought the Lord Chancellor had too many duties to perform to be competent to examine Acts of Parliament; and the Attorney and Solicitor Generals had many other duties to attend to, and could not give that attention to public acts which they required; and therefore he was of opinion that a department should be appointed whose sole business should be to consider and prepare all acts of a public nature.

Mr. Bates, after complimenting the right hon. gentleman for bringing forward such a comprehensive and desirable motion, said the Government were about to appoint a Commissioner whose business would be to superintend the legislation of the Home Office; and he would suggest that the right hon. gentleman should wait until that appointment took place.

Sir G. Grey said the Commissioner the Government intended to appoint would have to prepare all bills, which would then be submitted to the Crown, and after that to Parliament. He entirely disapproved of the officer to be appointed being a Secretary of State, as had been suggested.

Lord J. Russell concurred with Mr. Napier; but, after what had been said by the Secretary for the Home Department, he did not think the right hon. and learned gentleman could ask the House to pass that motion.

Mr. Drummond could see no reason why the resolution should not be pressed upon the House.

Mr. Malins did not think the appointment of a Minister of Public Justice would rectify the evils of our present legislative system.

Mr. Ewart advocated the appointment of a Minister, as giving the motive power to the machinery necessary for the improvement of the Legislature.

Lord Palmerston thought that the question was of great importance; but, considering that the Statute Law Commission had under their consideration a proposal to submit to the Government that would go far towards meeting the views of the right hon. gentleman and the House at large, he hoped he would adopt the suggestion thrown out to postpone the motion until a later period of the Session.

After a short discussion,

MR. NAPIER agreed to strike out the latter part of the resolution; and, this amendment having been made, the resolution was agreed to.

OUR MONETARY SYSTEM.—MR. MUNTZ postponed until the 21st inst his motion for a Select Committee to inquire into the working of our present monetary system.

ADULTERATION OF FOOD.—On the motion of MR. Scholefield, a Select Committee was ordered to be appointed to inquire into the adulteration of food, drinks, and drugs.

DISQUALIFICATION OF CONTRACTORS.—MR. MITCHELL obtained leave to bring in a bill to repeal the Act 22nd Geo. III., disqualifying contractors from being elected to, or sitting and voting as members in, the House of Commons.

## HOUSE OF COMMONS.—WEDNESDAY.

FORMATION OF PARISHES, &c., BILL.—The Marquis of BLANDFORD moved the second reading of this bill, which would vest in the ecclesiastical Commissioners the power of constituting parishes in certain districts, whether there was a church in them or not, and making them distinct from, and independent of, the mother parish.—MR. HADFIELD objected to the bill, and moved the second reading that day six months; but upon receiving an assurance that it would be referred to a Select Committee, he withdrew his opposition, and the bill was read a second time.

POLICE (COUNTIES AND BOROUGHS) BILL.—On the motion for the second reading of this Bill, MR. Hadfield, MR. Healey, SIR F. Baring, and many other members, having asked for the postponement of the bill, SIR G. Grey said he would accede to the wishes of the House, and put off the second reading for a fortnight.

## HOUSE OF LORDS.—THURSDAY.

The Earl of DERBY, in calling their Lordships' attention to the case of Baron Fermoy, said he understood that a petition had been recently presented on behalf of the claimant of the title, which had been referred to the Committee of Privileges. Although for centuries past there had never arisen any difference between the Crown and the House of Lords, it was a curious fact that within the last year Her Majesty's Government had involved the Crown in great difficulties with that House, in the creation of two new Peerages, each of which it was contended was unconstitutional and unjustifiable.—Earl GRANVILLE defended the conduct of the Government, and justified the new creation.—After a brief conversation, in which Lord Brougham, the Earl of Desart, and Lord Campbell took part, the subject dropped.

THE TRANSPORTATION BILL was passed through Committee.

The Metropolitan Police Bill was read a second time.

The Earl of ELLENBOROUGH, in presenting a petition from certain seamen complaining of being obliged to go to sea in unseaworthy vessels, took occasion to call the attention of the Government to the necessity of adopting some measure to prevent the evil complained of. He recommended the appointment of a Select Committee on the subject.

Lord STANLEY of ALDERLEY admitted the importance of the subject, and said that the attention of the Government was directed to it.

## HOUSE OF COMMONS.—THURSDAY.

The Speaker took the chair at four o'clock.

MR. LAYARD gave notice that he should postpone his motion until this day fortnight. It would be as follows:—"That this House has observed with regret that those officers whose conduct in their respective departments has been shown by the report of the Commission of Inquiry into the supplies of the British army in the Crimea to have occasioned great and unnecessary sufferings and losses in that army have received honours and rewards, or have been appointed to and are still holding responsible offices in the public service."

STEAM COMMUNICATION WITH AUSTRALIA.—MR. BAXTER asked the Secretary of State for the Colonial Department, if Her Majesty's Government were taking steps to re-establish steam communication between this country and the Australian colonies; and, if not, what were the obstacles which prevented them doing so?—MR. LABOUCHERE said the Government had taken steps in reference to this matter which, he trusted, would be satisfactory. The plan would be to put out tenders for a monthly communication, half the expense to be borne by the government, and half by the colony.

TRADE WITH RUSSIAN PORTS.—MR. EWART asked the First Lord of the Treasury whether it would be lawful to dispatch British ships with cargoes to Russian ports during the armistice which is about to be concluded? and, in that case, would articles contraband of war, such as brimstone, lead, and saltpetre, be exempt from such permissions of shipping? If the sailing of British ships be unlawful, might foreign ships be chartered for that purpose? Or whether the blockade of Russian ports would be soon re-established?—Lord PALMERSTON said he would strongly recommend any person who wished to engage in such undertakings as were referred to in the question to wait until an armistice was concluded, and then to ascertain what were its nature and conditions (Laughter).

INSURANCE COMPANIES.—In answer to a question by MR. Scholefield, the CHANCELLOR of the EXCHEQUER said his attention had been called to the establishment of an insurance company in Paris whose operations were to extend to this country. If he found it necessary to protect the revenue, he should introduce a measure for that purpose.

OFFENCES AGAINST THE PERSON.—MR. KELLY moved for leave to bring in a Bill to Consolidate the Statute Law relating to Offences against the Person. He believed that by a judicious arrangement the statute-book might be reduced to one-seventh or one-eighth of its present dimensions.—Lord STANLEY seconded the motion.—The ATTORNEY-GENERAL thought that a system of codification was better than consolidation. For part of the hon. and learned gentleman had no principle of law in it, inasmuch as it was embodied in the recommendations of the Statute Law Commission, from which he and the Solicitor-General, when members of it, differed. Being, however, a subordinate, he would offer no objections to the hon. and learned gentleman carrying out his views.—After some discussion, leave was given to Sir F. Kelly to introduce two bills

STATE OF THE IRISH BENCH.

SIR J. SHELLEY called attention to the Irish Bench at the present time, and moved for certain returns in connection with the subject, with the view of showing that several of the Irish Judges were incapacitated by age and infirmity for the proper performance of their judicial duties.

MR. T. KENNEDY moved an amendment so as to include England in the motion

MR. NAPIER censured the motion, and proceeded at some length to vindicate the character and ability of the Irish Judges.

SIR C. GREY said he never had any inquiry on the subject to be made of the Lord-Lieutenant of Ireland, who reported that he could not vindicate the retention on the bench of a Judge who was totally blind; and that he had caused an intimation to be made to Baron Pennefather that, in the event of such a motion as the present coming before the House the Government could not justify his continuance on the bench. As for the motion under consideration was not properly drawn up, he (SIR G. Grey) would give it his support.

MR. DISRAELI condemned the conduct of the Government, and denied that any care had been made out for the removal of Baron Pennefather, against whom neither public complaint nor anonymous calumny had been ever expressed.

THE ATTORNEY GENERAL took the same view of the question as that of SIR G. Grey.

After much discussion of a very exciting and personal character, the House divided upon MR. T. Kennedy's amendment. For the amendment, 130; against it, 124: majority against the amendment, 14.

The House then divided upon the original motion. For SIR J. Shelley's motion, 137; against it, 121: majority in favour of the motion. 11.

TELEGRAPH TO AUSTRALIA.—The Mediterranean Electric Telegraph Company, which is at this moment occupied in laying down the necessary wires to unite the Island of Sardinia with La Calle, on the coast of Africa, intends to establish a complete telegraphic communication between Europe and Melbourne, in Southern Australia. After opening secondary lines between La Calle, Bona, Algiers, and Oran, the company proposes to run the principal line by Tunis, Tripoli, Alexandria, Cairo, Suez, Jerusalem, Damascus, Bagdad, Bussorah, along the northern coast of the Sea of Oman, Hyderabad, and Bombay, where the line is to separate into two branches. The northern branch will proceed directly to Agra, whence a wire will be directed towards Lahore and Peshawur, and thus reach within a short distance of Cabul and Cashmere. From Agra the telegraphic line will pass through Benares and unite at Calcutta with the southern branch, which, starting from Bombay, will pass through Bangalore and Madras. From Calcutta the line will follow the north-east coast of the Gulf of Bengal, the peninsula of Malacca, the Sunda Islands, and thence cross over to the north of Australia, and, extending along the eastern coast of that continent, communicate with its numerous towns, until it arrives at Melbourne, Port Adelaide. The entire length of the line is estimated at 20,000 kilometres."—*Genoa Corriere Mercantile*

DR. JOHNSON'S GOD-DAUGHTER.—MESSRS. T. Carlyle, Charles Dickens, and John Forster publish the result of their appeal on behalf of Samuel Johnson's god-daughter, the aged Miss Lowe, and her sister. The sum raised is still but a little over £250, but "on the other hand the price of such a life annuity as was proposed proves cheaper than we anticipated; and in addition to the there has been a lucky chance come to help up us somewhat. Mauritius Lowe, Miss Lowe's father, is now discovered to have been the benevolent painter by whom Turner, at that time a barber's boy, was first recognised, befriended, and saved to art; in return for which fine action, an ardent and renowned admirer of Turner (whose name we need not indicate further) desires to gratify himself by bestowing henceforth £5 annually on the Misses Lowe; and permits us to publish such his resolution, if that can make it more binding. So that, on the whole, there is now as good as an 'additional annuity of £50,' which was our maximum limit, secured for those aged ladies; and thus, by one means and another, our small problem can be considered as done."

## NOTES OF THE WEEK.

Or the principle involved in the grand debate which occupied the Peers of England from five in the afternoon of the 7th till three in the morning of the 8th we have spoken elsewhere. Some of the incidents of that discussion, and of what followed, are not unworthy of note. In the first place, the Ministry, by having raised the question of life peerages, has lost whatever value the name and talents of the Duke of Wellington brought to the aid of Government. His Grace has resigned the Mastership of the Horse—is no longer her Majesty's *Grand Ecuyer*. Some people may think that the noble Duke himself offers—it is no reproach to him if he does so—one of the strongest illustrations of the advantage of not allowing a great man's name to devolve upon a small man. Next, we may note that the helpless condition of the Government, during the debate, was rather pitiable. It is understood that Lord Cranworth, the Chancellor, has specially taken up the life peerage question, as a matter on which he feels earnestly; and it is said that his Lordship did not even consult the Attorney and Solicitor General before sealing the Wensleydale patent, from his conviction that his own view needed no confirmation. But he could not "hold his own" against the array of Law Lords opposed to him, and, though Lord Granville did his best, it was not to be expected that his best on such a subject could be very good. The Government was not only beaten in division, but in debate. On Tuesday the Committee of Privileges sat, and there was produced before it the almost illegible and discoloured patent of creation of two Peers, made for life only, in the time of Richard II. Some of the old law Latin was read out to the Lords, and must have been marvellously edifying. We may remark also that the Chief Justice has profited by the lessons in the vulgar tongue, given him by Mr. Hawkins, the barrister. Lord Campbell's dignified way of apprising the Lord Chancellor that he should feel it his duty to oppose the admission of Lord Wensleydale into the House was, it seems, "Well, then, I shall be obliged to make a row about it as soon as Parliament meets." The new Peer has, unluckily, got the gout; but, as soon as he recovers, which will probably be about the time that it is deemed desirable to take another step in the matter, Lord Wensleydale will claim his seat, and what the Commons do with the Jew the Lords will do with the Judge. The *Morning Post* has discovered another of the celebrated mare's nests with which it bewilders the dowager world. One of its writers "believes" that Lord Bexley's peerage was a creation for life. The innocence of a *gobemouche*, who imagines that all the great lawyers in the Lords would have overlooked what would have been a case in point, occurring but a few years ago, is only equalled by his ingenious reason for his belief "because Lord Bexley had a nephew living at the time of his creation." The organ of the aristocracy should understand the rules of descent better—the ignorance this "reason" implies is truly remarkable.

The American House of Representatives has still no Speaker. In the Senate, Messrs. Cass, Clayton, and Colfamer have delivered speeches condemnatory of the policy of England, in regard to Central America; but the first disbelieved that his country was getting into "difficulties," and the last considered that the time for legislative action had not arrived, as the President had held out hope of an amicable adjustment of the controversy. The Representatives, though not organised, according to the Constitution, are doing business, and, by a majority of one, have carried a resolution to the effect that the Slavery question ought not to be mooted, some subjects being too delicate for handling. As a comment upon this piece of prudence, and as a proof that the subject is not shirked out of doors, we may add a paragraph which arrives by the same mail:—

"A shocking affair has occurred in Kentucky. A number of fugitive slaves having taken refuge in a house, the police officers proceeded to arrest them. The slaves fired and wounded several of the spectators. One slave woman, finding escape impossible, cut the throats of her children—killing one instantly, and severely wounding two others. Six of the fugitives were apprehended, but eight of another party are said to have escaped. The freezing of the Ohio river offered great facilities for fugitive slaves."

Still, this system must not be talked about.

The First Lord of the Admiralty (Sir Charles Wood) brought forward the Navy Estimates on Monday. His first demand was for £204,982; being the amount of the excess of expenditure beyond the Estimate voted last year. This was granted, after a very discursive discussion; and then 76,000 men were voted, and a sum amounting to £8,000,000 for their wages, £3,000,000 for their food, £6,000,000 for the transport service—and, in short, everything else that was asked. The House of Commons thoroughly sets up to its undertaking to support the Queen in carrying on the war vigorously; and to its expression of approbation of the Royal announcement, that none of the preparations for the next campaign should be relaxed; and, should the negotiations fail and hostilities recommence, it will be impossible to over-estimate the responsibilities of those who have the charge of our armaments, and have all they ask thus generously accorded. Should they be found to have speculated, in official fashion, on the chances of peace, and to have neglected any preparation, the just vengeance of the nation will be aroused in a way of which reductapes have but a faint idea.

Mr. Walpole has succeeded, as there was little doubt would be the case, in his contest for Cambridge, and now represents the University. His numbers doubled those of Mr Denman. The latter retired, on Saturday last, in a very graceful manner, not choosing to inconvenience the constituency by protracting the contest. Each candidate voted for his antagonist, a piece of knightly etiquette, not unbefitting a battle waged among the old halls and colleges, but which would be rather provocative of sarcasm in a coarser scene of action. Mr. Black has been returned for Edinburgh, and comes into the House as the advocate of a rational and courageous policy; and Mr. Samuel Warren has taken his seat, as Lord Egmont's nominee. Mr. Cobden, according to Mr. Warren, made him a characteristic reply during his canvass:—"You know how we differ, but I shall be glad to see you in the House." Had Mr. Warren been a Russian, Mr. Cobden could not have been more accommodating.

Sir Thomas Maryon Wilson—

> Oh! words of fear,
> Unpleasing to a Cockney's ear—

is stated by Lord Colchester not to have the slightest intention of trying once more to get hold of Hampstead-heath; and therefore the "Leases of Settled Estates Bills" may be passed without suspicion. The Londoners are very much obliged to Lord Colchester for his kind information, but inasmuch as Sir Thomas's pertinacious endeavours, year after year, have imbued people with a conviction that he is, on the contrary, always trying to get power to build on the Heath, they will be still more obliged if the House of Commons will, as before, take care of their interests. The press watches very vigilantly all the attempts that are made upon poor Hampstead; but, the journals having now sounded the alarm, Parliament must do the rest. This new bill is very innocent, no doubt; but it is a curious fact that it was introduced last year; and that, as soon as the House of Commons inserted a clause which effectually saved Hampstead from the bricklayers, the promoters of the bill ceased to follow it up, and "it did not become law." The precedent is a good one.

The reporters in both Houses of Parliament have a real grievance to complain of. The galleries set apart for them are scarcely large enough, even were the attendance confined to the staff engaged in preparing the reports and summaries for the London papers. In addition to these gentlemen, however, are others whose talents have been called into play by the advance of science—we mean those who transmit accounts (skilfully condensed to the smallest dimensions) by the electric telegraphs. This is a new and very interesting branch of reporting. The "points" in the early part of a distinguished statesman's speech are read in Edinburgh before he has reached his peroration. There is a miniature army of red collared couriers—boys of intense energy—perpetually scudding frantically between the Electric-offices and the Gallery. The reporters for the wire, of course, and very properly, occupy a part of the Gallery. But against another addition to its members the Gallery revolts. Some of the managers of country papers have taken it into their heads to have original reports, and *their* representatives also claim seats. As the *Times* points out, there are 650 of those journals, and, if one has a right to come in, all have. Already the crowding is most disagreeable and inconvenient—the gentlemen leaving their seats having to fight their way out, and their successors having to battle their way in. No one but a practical Gallery man comprehends the hardship of all this, and the injury it inflicts. The daily reporting for the London press is admirable, but its accuracy depends, in a great degree, upon several circumstances of which an "outsider" knows nothing. The reporter must be able to drop into his seat at the prescribed second; but not only this, he ought to have had another seat for some minutes previously, in order that he may fully comprehend what is going on in the House. He must be enabled to confer with colleagues in case of doubt, and to collate his notes with theirs; and his duty is quite arduous enough without its being rendered more difficult by confusion, crowding, and talking in his neighbourhood. The authorities of the House ought, assuredly, to exclude all but the London press and the electric reporters, who supply the country so admirably.

THE CZAR AND THE FRENCH EMPEROR. The following narrative is about to go the rounds of the press, showing how the Emperor Alexander tried hard to draw away the Emperor Louis Napoleon from the English alliance, and how the Emperor Louis Napoleon remained true and firm to his engagements. Friendly courtesies, but of a strictly private nature, had been kept up since the commencement of the war between members of the Imperial family of Russia and the Princess Mathilde, the cousin of the Emperor of the French, a natural result of her union with Prince Demidoff, in September last a political turn was given to this channel, and one of the envoys of German States undertook to bring about a separate peace between France and Russia. Russia communicated to France the concessions she was willing to make (and which subsequently were published in the circular despatch of the 22d December), and in addition offered to France special advantages for herself. These temptations, however, the Emperor resisted, although the advance offered by Russia opened the most ample field to French ambition and for conquest; considerable territorial acquisitions were to be the price and the result of this union of the two greatest and most aggressive military powers; but it only fired a breach of the Emperor's engagement with England, which would have thrown him into the same path and career as his uncle had unfortunately trodden. The Emperor, on refusing these overtures, communicated them to London and Vienna. The result in this latter capital was, that Austria became suddenly alive to the danger to which she had been exposed, and quickly resolved upon putting herself on an unequivocal footing towards all parties; the proposals she drew up for the conclusion of a peace, after being revised and somewhat sharpened in London and Paris, were forwarded to St. Petersburg, and accepted there. While these negotiations were going on Russia got wind of them, and endeavoured to anticipate them by an hurrying Prince Gortschacoff to communicate in Vienna the concession that had been already mentioned to France, and which formed the contents of the despatch of the 22nd of December. The Prince accordingly called upon Count Buol, and addressing him with, "Well, my dear Count, I bring you peace," opened his budget of communications, but met with the objection that Russia's offer came too late; Austria had already drawn up her own propositions, and transmitted them to France and England. All the rest is known.—*Letter from Berlin.*

## THE ROYAL STAGHOUNDS.

THE Royal Staghounds, as we have before mentioned, are well-bred foxhounds. To dilate on these favourites of the Royal pack, and their merits in no routine an amusement as Stag-hunting, would be a waste of time; Mr. Harrison Weir's portraits must speak for themselves. For the old-fashioned staghound (well depicted in Bewick's "Quadrupeds," and some of Landseer's pictures) is all but, if not quite, extinct. It was a slow, deep-mouthed, keen-scented hound, of great power, admirably adapted for finding and hunting down wild deer, by force of perseverance, with power enough to pull down a stag of ten. Even on the Continent the old breed of staghounds have been so crossed with the English foxhound that but little trace of the original type remains.

Although we cannot admit that stag-hunting is anything better than a makeshift for something infinitely superior, which may be excused in men who have not time for the long, uncertain days of fox hunting in a good country; yet we must admit that a good run, with such deer as the "Woodman," and the famous hind, "Fernandez," will test the best horsemanship, and we do not know how a day can be more pleasantly spent than in a journey to the Ascot Kennels, and the Swinley Deer Paddocks. The best way from town is by the South-Western Railway, which affords so fine a view of Windsor Castle as it curves round the Park. A short walk over the bridge conveys the visitor to Eton; and there, at Wyse's—the Tilbury or Tollit of the locality a dog cart may be had. While it is preparing it will be worth while to look through the stables, where there are always some very clever hack-hunters for the hire of the military quartered at Windsor and their friends.

The drive through the Great Park up the Long-walk is delightful—whether the leaves are on the trees, and the deer spread about half-buried in the fern; or whether, on a frosty day of winter, they are packing in herds under the lee side of the great leafless bare armed oaks.

You can turn, if you go armed with a proper order, to examine Prince Albert's New Farm Buildings, and a farm which has been very much improved since it passed from military to civil management.

About half an hour after leaving the boundaries of the Park at a gate, which is opened by a one-armed man with very much the air of an Irish soldier, you come upon Ascot-heath, a wild waste of heather and gorse, except where the course and training grounds run. Half way across the heath on the right a very unpretending cottage, standing in a little garden, with a field in front, is the residence of Mr. Charles Davis, the veteran of the chase, whose portrait we gave in December last: beyond, out of sight, but within hearing, of the cottage lie the kennels.

The Royal pack once suffered severely from kennel lameness; but, after infinite pains, expense, and loss, this fatal disease has been subdued.

## CAPTAIN DISNEY'S WAR SHELL.

WE have already illustrated this new war projectile, when the shells tested were small glass globes thrown by hand; and though, as Captain Disney explained, these could be employed with most destructive effect as hand-grenades, they were, of course, but mere toys compared with the missiles to be projected from a mortar, or an eight-inch gun. Captain Disney has since attended, by appointment with the Select Ordnance Committee, to submit his invention to a practical test of its efficacy in Woolwich Marshes. The new projectile, it will be recollected, differs from the ordinary shell solely in having its interior filled with a liquid which has the property of violently inflaming on contact with the air, accompanied by the slightest friction; in other words, by its internal form, its bursting-charge is ignited in a flame. It is precisely similar to those in common use. Those fired in Woolwich Marshes were the ordinary Shrapnel shells, and, with their bursting charges and fuzzes, were supplied by the Woolwich authorities: the inventor had merely to fill them with the terrible liquid, which is his secret.

At the foot of the land slope of the "butt" a large wooden building, consisting of posts ten inches square, walled and roofed with three inch plank, all of African oak, was placed as a target for Captain Disney's fiery messengers. Into this, at a range of 550 yards, eight rounds were fired from an eight-inch gun, with the usual service-charge. The first three shells failed—two giving way in the muzzle of the gun, and the third bursting within the first fifty yards of its flight. The disorder was attributed by the authorities present to the ordinary charge being too severe for shells filled with a light liquid, instead of the usual ponderous contents of the Shrapnel. As, however, the same accident frequently occurs with the common shell, we believe this explanation to be erroneous, and shall the more endeavour to furnish a better. The propelling charge having been reduced to four pounds, all the remaining shells went fairly to the butt without accident. Only two, however, really entered the shed against which they were aimed, and here the effects of their explosion were sufficiently visible. The massive timber was in place a ruin, and the back wall was set on fire; and, at the close of the experiments, remained burning as fiercely as the damp state and sparely combustible nature of the materials permitted.

This experiment is not, however, considered by practical men as conclusive with regard to the efficacy of Captain Disney's shells. The inventor asserts for his shells, when used in warfare, the possession of certain powers which, under the above circumstances of their trial, it was almost impossible they could exert. The building they were aimed at resembled nothing against which they would be employed in actual

PROSPEROUS. WOODMAN RIGOLETTE CHANTICLEER.

ROYAL STAGHOUNDS.—(SEE PRECEDING PAGE.)

service. It was composed of the hardest and least inflammable of woods, and this saturated with moisture; it had the bare earth for its floor and contained no light materials among which fire could be readily kindled. Now, such a condition would rarely, if ever, occur in a hostile employment of this invention. However difficult of penetration and rapid burning the sides of a ship may be, the quantity of easily-combustible matter contained between her decks—to say nothing of the bodies of her crew—would form a fatal mark for the liquid fire scattered by these missiles. Their destructive effect on ordinary buildings, such as the houses of a town, must be too obvious to be questioned. In another respect, also, the mode of trial can scarcely be considered satisfactory. Owing to various causes of delay, a long interval, often exceeding a quarter of an hour, elapsed between each discharge; so that one shell had time to exhaust itself on the obdurate character of its quarters before another could arrive to strengthen the impression. In warfare, of course, any range of buildings marked out for destruction would be visited by these agreeable projectiles at least once in every three or four minutes. An implement of this kind, if seriously tested at all, should certainly be so in the way most favourable for the development of its properties, or, at least, most resembling its practical mode of employment; and this, for the reasons we have given, was not the case on Monday.

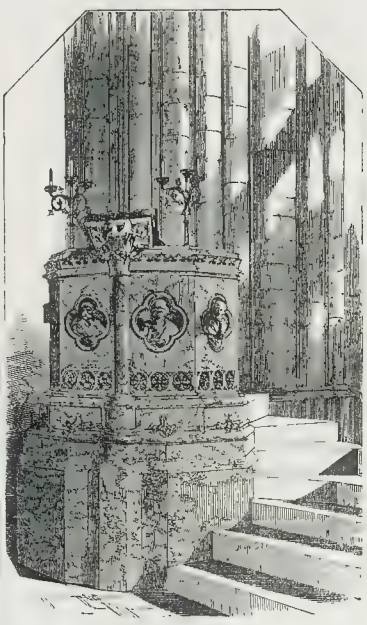
The experiments were brought to a close by an exhibition of the glass hand-grenades, as shown by the inventor at Chelsea, and of which about a dozen were thrown with unfailing results.

We should add that the premature bursting of the first three shells has not been properly accounted for. The shells were eighth-inch Shrapnels, furnished by the Arsenal; and it was assumed that, being merely filled with a liquid, they were thereby rendered less capable of withstanding the shock of the propelling charge than they would have been if loaded in the ordinary manner. To this it is objected, that loose fragments of metal have no more cohesion among themselves than have the particles of a fluid; and that, therefore, a number of leaden bullets inclosed in an iron globe, though they increase its weight, impart to it no greater power of resisting fracture from external violence than it would derive from being filled with water. The truth is, that the contents of the shell have nothing to do with the matter—the cause of any such failure as that we are speaking of must rather be looked for in the indifferent quality of the iron of which it is composed. We are strengthened in this conviction by the fact that, after the reduction of the charge, every shell went safely home; and several of the fragments presented a gritty appearance never shown in the fracture of good iron.

We have a highly-favourable opinion of the merit of Captain Disney's invention, and hope to see it again tried, under circumstances more in accordance with its peculiar uses.

## THE NEW PULPIT IN WESTMINSTER ABBEY.

Pulpit accommodation—or, at any rate, pulpit comeliness—in Westminster, had for many years been but a sorry affair. The miserable wooden box—a *bond-fide* offspring of the Perpendicular period, we believe—was the last of the old choir fittings to yield before the recent improvements in this portion of the building. At last the eyesore has been removed. It has given place to a worthier production, and now occupies a corner in Henry VII's Chapel, where, surrounded by works of coeval character, its influence will produce a less disturbing effect.



NEW PULPIT IN WESTMINSTER ABBEY.

The new Pulpit—of the choicest Purbeck marble, polished—has been wrought from the designs of the Chapter architect, George Gilbert Scott, Esq.

As will be seen by our Engraving, the subject has been designed with most felicitous vigour and mastery; its artistic breadth and general simplicity of plan harmonising completely with the spirit of the splendid old building in which it is placed. As a work of art it is at once dignified, cathedral-like, and effective.

To Mr Samuel Cundy, of Pimlico, by whom the Pulpit was executed, our highest commendations are due.

EXPERIMENT WITH CAPTAIN DISNEY'S SHELL, AT WOOLWICH MARSHES.

VICTORIA DOCKS.—GENERAL VIEW.

## THE VICTORIA (LONDON) DOCKS.

On the commencement of this vast addition to the Dock accommodation of the metropolis we gave an Engraving in the ILLUSTRATED LONDON NEWS for Sept. 8, 1854. We now engrave a general view of the present state of the Docks, which were opened on the 26th of November last. From this day to Dec 26 the gross registered tonnage of the vessels entered was 31,500. The cargoes were silks, sugars, seeds, corn, sulphur, timber, &c. For the dispatch shown by the Dock officials within the above month testimonials were received from several captains and owners of vessels.

The Victoria Docks are planned to occupy ninety acres of Plaistow Marsh, on the north bank of the Thames, and adjoining the North Woolwich Railway; by which they will have ready access to the heart of the City, and be placed in direct communication with all the great railways in the kingdom. The works (according to our former description) are a Tidal Basin on the western side, with an entrance from the river a little below Bow Creek, as well as a Canal on the eastern side of this Dock, with proper basin and gates, to form another entrance from the Thames at Galleon's Reach. It is intended to confine the undertaking, for the present, to the formation of the Western Dock and Tidal Basin, and to the purchase of the land which will be necessary for the formation of the Canal and other extensions at some future time. The land approach is about half a mile east of Bow Creek, on the Barking road, emerging from the latter by a new road on the side of the recently-built Victoria Tavern, and close along the line of the North Woolwich Railway, till it terminates by the north bank of the river.

The water area of the first Dock, opened on the 26th November for the reception of shipping, is very nearly 100 acres. The Entrance Lock is 325 feet long by 80 feet wide, with a depth of water on the outer sill of 28 feet at Trinity high water, and of 10 feet at Trinity low water. The depth of the Tidal Basin (16 acres) varies from 27 ft. 4 in. to 25 ft. 8 in., and that of the Inner Dock from 25 ft. 6 in. to 24 ft.

There are four substantial warehouses for the storing of goods, together with vaults for wines and spirits. Extensive warehouses and vaults will shortly be erected by the company, at the Steel yard, in Upper Thames-street, for the housing of such goods as require to be inspected in the City.

NEW MARTELLO TOWER, AT THE FAIR-WAY OF THE THAMES AND MEDWAY.—(SEE NEXT PAGE.)

The whole of the south side of the Dock, comprising nearly a mile of water frontage, will be devoted to the accommodation of the timber and other trades requiring space. All the cranes, capstans, lock-gates, and sluices, will be worked by hydraulic power.

The Tidal Basin will be accessible by night as well as by day for steamers and other vessels requiring dispatch. There will be ample provision for lifting the boilers and heavy machinery for these vessels.

Goods discharged by the company from vessels in the Docks are delivered, and goods intended for shipment in vessels in the Docks are received, at the Steel-yard.

Frequent railway trains run throughout the day between the Fenchurch-street station and the Docks; and, for the greater accommodation of parties doing business with the Docks, messages will be transmitted by electric telegraph from the Dock house, free of charge.

The published rates and charges on goods of the existing dock companies will be found, on comparison, to be in the majority of instances fully fifty per cent. in excess of those proposed to be levied by the Victoria Dock Company.

For the tonnage rates charged by the existing dock companies on shipping entering the docks, the Victoria Dock Company have substituted a moderate weekly rent, as a more equitable compensation for the occupation of their water area. It is hoped that, under this arrangement, it will frequently be found more advantageous to the shipowner to send his vessels into the Dock, than to leave them exposed to the risks of the river.

The rates for discharging cargoes will apply equally whether the goods are landed by the company or delivered over-side, it being the policy of this company to leave the public to the unfettered exercise of their own discretion in the management of their business.

The width of the entrance gates of these Docks will render them available for the largest class of steamers engaged in the home and foreign trade of the port of London.

The application of screw steamers to the carrying on of the immense coal trade of London, will render of primary importance, dock accommodation for the immediate discharge of their cargoes; which object will be attained through the medium of the Victoria Docks. The company is empowered to provide pasture accommodation for the large numbers of Scotch and foreign cattle which are now brought for the supply of the metropolis.

These Docks will hand down to posterity, with honour, the names of Peto, Betts, and Brassey, as the contractors; and Bidder, as engineer. The works are, in every respect, worthy of this great age of engineering triumphs.

## NEW MARTELLO TOWER.

THE tower off the Spit, Isle of Grain (engraved upon the preceding page), has just been completed by Messrs. Kirk and Parry, of Sittingbourne, Kent, and has been officially given up to the Ordnance authority at Sheerness. The tower has been nearly two years in erection, and was completed within the time specified by the Board of Ordnance. The peculiar construction of this tower affords the facility of firing the guns (which are to be of the largest calibre) on traversing centre pivots, so as to do execution in the fairway of the rivers Thames and Medway. With the latter river this tower forms a cross-fire with the Sheerness Battery guns sufficient to sink any ships attempting to pass. The tower is struck from seven different centres, in order to give stability to the assailable parts thereof. The average thickness of the solid masonry is 12 feet. The outer dimensions are 63 feet by 71 feet; underneath is a barrack-room capable of accommodating forty gunners, and an officers' private room. The basement story contains the following rooms—viz ordnance store, provision store, barrack store, regimental store, and magazine—the latter being encased with an entire coat of asphalte. The whole of this basement is lined with 9-inch brickwork, all being within a 12-feet wall of masonry.

The estimated cost of this tower is about £14,000, exclusive of its foundation of piles, which support solid balks of timber, with York landings, being piled in a depth of six feet with cement. The extreme height of the tower is forty-one feet six inches. From its exposed situation great difficulties were experienced during the winter months in proceeding with the work; but they have been skillfully surmounted by the builders.

## MUSIC.

MADAME JENNY GOLDSCHMIDT-LIND'S THIRD MISCELLANEOUS CONCERT took place at the Hanover-square Rooms, on Monday evening. The audience was as crowded and as enthusiastic as on the previous occasions. The concert was full of interest; and the pieces sung by the fair prima donna were admirably calculated to display her unrivalled powers. She first sang the cavatina "Deh vieni non tardar," *Smarmen's* tender address to her lover, in the "Nozze di Figaro," which she delivered with a softness and sweetness wholly her own. She next gave the well-known and somewhat hackneyed "Casta Diva," from "Norma;" but she gave it freshness by the exquisite purity of her performance. These pieces she gave in the first part of the concert. In the second part she sang, in the first place, the aria "Non pavental," from the "Flauto Magico," one of the two famous bravuras introduced by Mozart into that opera for the purpose of enabling his wife's sister, Madame Lange, to exhibit the singular extent of her vocal powers; with which view he crowded into them every imaginable difficulty which the human voice could possibly execute. We have heard several singers attempt these vocal feats, but never heard them accomplished before. Jenny Lind not only did not fail in any of the difficulties, while she achieved the still more arduous task of preserving, in the midst of these executive difficulties, the dramatic expression and character of the song. Her next performance was another display not less marvellous, but less worthily bestowed. It was the Trio for soprano voice and two flutes, composed by Meyerbeer for his comparatively unsuccessful opera, "The Camp of Silesia," and afterwards transferred to the "Etoile du Nord," where it is sung by *Catherine* while she is restored to reason at the end of the opera. Some fault-finding discovered its appropriateness to the situation: we confess that we have not; being unable to find in it anything but a string of vocal roulades and flourishes, of unheard-of difficulty doubtless, but as innocent of meaning as anything in a scale exercise. The voice was introduced to the condition of an instrument, and in this respect placed on a level with the flutes; though certainly the voice eclipsed the other instruments (though in first rate hands), both in power of tone and brilliancy of execution. But this was nothing but mere display, and we wished if it was not worth a single bar of Mendelsohn's simple and most lovely little song, "The Stars and the Maiden," with which Jenny Lind concluded her performances. M. Goldschmidt gained "golden opinions" by his masterly performance of Beethoven's Concerto in G minor, the great composer's *chef d'œuvre*, we think, in this class of music. M. Goldschmidt also played Chopin's delicate and imaginative Nocturne in D flat, and a fugue of Sebastian Bach, and in all these performances sustained his reputation as a pure and classical artist. Mr. Swift, who has returned to England after an absence of several years, spent chiefly at Lisbon, sang the Romanza, "Quando le sere," from Verdi's "Luisa Miller," and Goodchild's ballad, "By Celia's Arbour." He has made great progress in his art; his fine tenor voice has gained strength, and his style finish and refinement. He is said to have distinguished himself, while abroad, on the opera stage; but the present state of dramatic music in England will afford, we fear, few opportunities to judge of his talents of this kind.

We learn that Madame Goldschmidt-Lind and M. Goldschmidt are to appear at the concerts of the PHILHARMONIC SOCIETY during the ensuing season. The society have it in contemplation to produce Schumann's celebrated Cantata, "Paradise and the Peri," founded on Thomas Moore's poem," in which, it is said, Jenny Lind will probably sing the principal part. Madame Schumann (Clara Wieck), a pianist of European fame, though she has never been in England, is to appear at the first Philharmonic Concert, on the 14th of April next.

## THE THEATRES.

ADELPHI.—"That Blessed Baby" is the title of a most amusing farce, produced at this theatre on Tuesday. It is, from a new candidate for dramatic honours, and has all the freshness of original and unbackneyed talent. Mr. Moore has shown himself especially a competent master of dialogue; it is in this, not in the story, that the merit of his little drama particularly lies. The situations arising from the clandestine marriage of two servants in bachelor's house were never better or more humorously produced; and, indeed, the peculiar talents of Mr. and Mrs. Keeley, proved irresistibly effective. There is also a scheming aunt by Mrs. Murray, who finds in a veal-pie divers evidences of the presence of a baby in the family, such as a shoe and a coral necklace; these valuable substitutes for circumstantial evidence are found in the hospitable board. Great, too, is the alarm of *Miss Fisher* at these signs of *Mr. Frivole's* supposed guilt; but an explanation soon becomes necessary from the absence of *Mary Jane* (Mrs. Keeley) and the alarm of *John* (Mr. Keeley) at her disappearance at night. The police find the female culprit dragging her baby in its cradle along the street, and this discovery compels confession. It is seldom that out of such slight materials such abundant stage-business is evolved: but the amount of fun that the situations afford is not all but a small proportion to that in the dialogue. The reflections of *John Thomas* on the consequences of losing his situation, his description of a street wanderer, and his conviction that to make a mendicant life profitable two more "blessed babies" are at least required, were rich in conception and most ludicrous in effect.

OLYMPIC.—A new drama, founded on "Un Mari qui se Dérange," and entitled "Stay at Home," was produced on Monday. The old story has been cleverly adapted to modern manners; and, in the acting, is worked up to such a pitch of excitement as to call for no praise for Mr. and Mrs. Keeley, proved irresistibly effective. There is also a scheming aunt by Mrs. Murray, who finds in a veal-pie divers evidences of the presence of a baby in the family, such as a shoe and a coral necklace; these valuable substitutes for circumstantial evidence are found in the hospitable board. Great, too, is the alarm of *Miss Fisher* at these signs of *Mr. Frivole's* supposed guilt; but an explanation soon becomes necessary from the absence of *Mary Jane* (Mrs. Keeley) and the alarm of *John Thomas

ST. MARY'S HOSPITAL.—Notice is hereby given that the ANNIVERSARY DINNER in aid of the funds of this Hospital will be held on WEDNESDAY, the 27th instant. The present condition of Ward has become totally inadequate to contain the numerous and severe cases that have come during the present and other seasons before the Governors, therefore, on this occasion specially appeal to the friends of the Hospital for increased additional accommodation for this pressing class of sufferers. Contributions willing received and gratefully acknowledged. Gentlemen willing to act as Stewards are requested to announce their intention to the Secretary, either on or before February 19, 1856.

ROBT. J. NEWMAN, Secretary.

DECLARATION OF BONUS.
ROYAL EXCHANGE ASSURANCE
OFFICE, London January, 1856.
The Governors and Directors have pleasure in giving notice to the holders of Life Policies effected on the system of Participation in Profits adopted by the Corporation on December, 1845, that a second Septennial Bonus has been declared in respect of the surplus realised on that account. Such Bonus amounts to 40 per Cent., effected subsequently to 1841 for the whole term of life, on the participating scale of premium which were subsisting up to the close of the last day of December, 1855, and on which the annual Premium had then been paid.

The following Table shows the amount of Reversionary Bonus added to British Policies of Fourteen Years' standing, for the Sum of £1000 each

| Age when Assured | Bonus made in 1846. | Additions Simple Bonus | Total Additions | Per Cent per Annum on the Sum Assured. | Per Cent on the Premium paid. |
|---|---|---|---|---|---|
| | £ | £ | £ | | |
| 30 | 102 | 117 | 219 | 1 53 | 37 4 |
| 35 | 116 | 121 | 1 54 | 1 54 | 37 4 |
| 40 | 131 | 125 | 256 | 1 67 | 40 8 |
| 45 | 121 | 128 | 249 | 1 78 | 41 6 |
| 50 | 136 | 123 | 259 | 1 85 | 41 7 |
| 55 | 149 | 114 | 263 | 2 16 | 47 2 |
| 60 | 149 | 114 | 263 | 2 43 | 50 3 |

Equivalent Reductions have been made in the Annual Premiums payable by those persons who prefer that form of Bonus

The Cases of Profit will take place every Five Years.

Any sum not exceeding £1,000 may be insured on the same Life.

With a liberal participation in profits, and other advantages of modern practice, this Corporation affords to the Assured the guarantee of an Office safely constituted under Royal Charter and special Acts of Parliament, and tested by the experience of nearly a Century and a half

There is but one older Life Office in existence.

Fire and Marine Assurances are granted on liberal terms.

Tables of Premium and other particulars may be obtained at the Chief Office of the Corporation, in the Royal Exchange, London; at the Branch Office No. 29, Pall Mall; or from the Agents appointed in the principal Towns in the United Kingdom

JOHN A. HIGHAM, Actuary and Secretary.

They are new, very uncommon, and in the best taste; more of them especially those hanging exclusively to the house—being worse of art just high mesh. Thomas Fearon and Son, 73, Ludgate-hill.

MODERATEUR LAMPS.—EVANS, SON, and CO respectfully invite their Friend and the Public to an inspection of the extensive and beautiful STOCK of these much-improvements, in bronze, or white, or coloured, opal, transparent, or various elegant designs, suitable for the cottage or mansion.—Show-rooms, 59, 60, and 61, KING WILLIAM-STREET, London-bridge.

MARION'S RESILIENT BODICE and CORSALETTO DI MEDICI, recommended by physicians and surgeons in attendance on her Majesty, and adopted in their own families—combine firmness with elasticity, fit close by fasten easily in front, and are adapted for every age and figure. Prospectuses of the principles and illustrations of ladies who wear them. Prospectus, post-free. Ladies in town will find it to appoint; most.—Messrs. MARION and MAITLAND, Patentees, 226, Oxford-street.

A BOON to LADIES in the COUNTRY.—The RESILIENT BODICE and CORSALETTO DI MEDICI are sold by all the principal retail houses in England, Scotland, and Ireland, but the most economical plan of procuring them within reach of every lady in the land, that they have become to thousands more thousands not only a luxury, but a necessity, alike in regard to health, elegance, and convenience and, while, for any part to the kingdom, upon receipt of post-office or banker's order. Gold, Silver, and Old Watches taken in exchange.

SILVER WATCHES, £2 2s., £2 15s., to £5. Highly-finished horizontal movements, jewelled in four holes, with all the recent improvements. Patent detached English lever movements, jewelled, strong double-backed cases, £3 15s., £4 4s., £5 5s., £6 6s., £7 7s., and £8 8s. J. W. BENSON, 33, Ludgate-hill

GOLD WATCHES, £3 15s., £5 5s., to £15 15s. Highly-finished horizontal movements, jewelled, with all the recent improvements. Patent detached lever movements, jewelled, engraved, or engine-turned, cases, £6 6s., £8 8s., £10 10s., £12 12s., £14 14s., to £15 15s. Gold Chains, of every pattern. J. W. BENSON, 33, Ludgate-hill

SHRIMPTON and HOOPER'S GRADUATED GROOVELESS NEEDLES.—"Lloyd.—Col. Phipps has received the commands of his Royal Highness the Prince Albert to thank Messrs. Shrimpton and Hooper for the very curious specimens of the perfection to which has been brought the art of making the eye of the needle."—Windsor Castle, Feb. 2, 1855.

On the 5th May, 1854 Messrs. Shrimpton and Hooper obtained an injunction from the Vice-Chancellor, Sir W. Page Wood, against the Manufacturers as Redditch for imitating the Labels of their highly-approved Needles.

None but First-class Goods made by SHRIMPTON and HOOPER. Established more than a Century.
Albion Works, Studley, and 154, Queen-street, London.

HAIR-DESTROYER.—I, Little Queen-street, High Holborn.—ALEX. ROSS'S DEPILATORY, for removing cheerfully superfluous hair from the face, neck, arms, and hands, without the slightest injury to the skin. As Will warrant it not to irritate the flesh in the smallest degree, and the hair to be entirely destroyed. Sold in bottles at 3s. 6d., and 5s. 6d., and 10s. 6d., or applied at the Hair-dyeing Establishment as above. Forwarded for stamps, free by post, 8 extra.

HYDROPATHIC ESTABLISHMENT, SUDBROOK PARK, near Richmond, Surrey, fifty minutes' from London. Terms Two and a half Guineas per week. Farm-house Residence, Beds. Four Guineas per week. Farm-house Establishment, 3s. 6d. per day. Bath Attendants, 2s. per day.
FREDERICK THOMSON, Secretary.

BERLIN DREW AND COMPANY'S PURE COD-LIVER OIL with QUININE (Quinine à l'Huile de Foie de Morue) combines the Tonic and strengthening properties of Quinine (the essential salt of Peruvian bark) with the purest Cod-Liver Oil. Many eminent physicians have prescribed and testified to the great efficacy in Consumption, Rheumatism, General Debility, Indigestion, Infantile Maladies, Glandular, Scrofula, Ague, &c., of this perfect combination of these invaluable Medicines.

Prepared only by Berlah Drew and Company, Chemists, 31, Stockmarket, Borough, London, in sealed bottles, at 2s. 9d., 4s. 6d., and 11s. each; of all Chemists in the United Kingdom and Abroad. N.B. As 11s. bottle, or three 4s. 6d. dittos, sent free to all parts of England, on receipt of stamps.

DR. DE JONGH'S
LIGHT BROWN COD-LIVER OIL,
prescribed with complete confidence and great success by the Faculty for its purity, efficacy, and marked superiority over all other kinds in the treatment of
CONSUMPTION, BRONCHITIS, ASTHMA, GOUT, RHEUMATISM, DISEASES OF THE SKIN, RICKETS, INFANTILE WASTING, DEBILITY, AND ALL SCROFULOUS AFFECTIONS.

SELECT MEDICAL OPINIONS—
A. B. GRANVILLE, Esq., M.D., F.R.S.,
Author of "The Spas of England," "Diseases of the Stomach," "Sudden Death," &c.

"Dr. Granville has used Dr. De Jongh's Light Brown Cod-Liver Oil extensively in his practice, and has found it not only efficacious, but uniform in its character. He believes it to be entitled to this respect, a fit oils sold without the guarantee of such an authority as Dr. Jongh. Dr. Granville has found that this particular kind produces the desired effect in a shorter time than others. And that it does not cause the nausea and indigestion too often consequent on the administration of the pale Newfoundland and other oils. The only, however, more palatable, Dr. Granville's patients have themselves expressed a preference for Dr. De Jongh's Light Brown Oil."

DR. LETHEBY,
Professor of Chemistry and Toxicology in the Medical College of the London Hospital, Medical Officer of Health to the City of London, &c.

"I have frequently had occasion to analyse the Cod-Liver Oil which is sold at your establishment. I found that variety which is prepared for medicinal use in the Cod-fisheries (Iodo, Norway, and at that) to commerce with the sanction of Dr. De Jongh of the Hague.

"In all cases I have found it possessing the same set of properties, among which the presence of chalic compounds and of iodine in a state of organic combination are the most remarkable. I, therefore, consider the Oil to be in all its characters with that named 'Huile de Foie,' and described by Dr. De Jongh in the many treatises of Dr. De Jongh.

"I, Dr. Letheby, universally acknowledged that this description of Oil has great therapeutical power, and, from my investigations, I have no doubt of its being a genuine and unadulterated article.

"College Laboratory, London Hospital, Sept. 24, 1855."

ARTHUR H. HASSALL, Esq., M.D., M.R.C.P., F.L.S.,
Chief Analyst of the Sanitary Commission of the "Lancet" Physician to the Royal Free Hospital, Author of "Food and its Adulterations," &c. &c.

"I have worn than none, at different times, subjected your Light Brown Oil to chemical and microscopical tests, and have to yourself—and I have always found it to be free from all impurity, and rich in the essential principles of life. So great is the confidence that I actually prescribe it in preference to any other, in order to make sure of obtaining the purest and most active condition.

"Bloomsbury-street, St. James's-street. Dec. 1, 1854."

Sold in London by ANSAR, HARFORD, and CO., 77, Strand, Dr. De Jongh's sole agents for the United Kingdom, and sent by them, carriage-free, to all parts of town.

Can be obtained in the Country from many respectable Chemists. Should the least difficulty be experienced in procuring his Oil, Messrs. Ansar, Harford and Co. will forward four half-pint bottles to any part of England, carriage-paid, on receipt of a remittance of 9s. Half-pints (10 ounces), 3s. 6d.; Pints (20 ounces), 6s. 6d.; Quarts (40 ounces), 9s. IMPERIAL MEASURE.

CAUTION.—The bottles are capsuled and labelled with Dr. De Jongh's stamp and signature, without which none are Genuine. The Public are especially cautioned against unprincipled attempts to induce them to purchase other kinds of Cod-Liver Oil, under the pretence that they are the same as Dr. De Jongh's, or equally efficacious.

## DHULEEP SING.

THE life of every Eastern Prince is a romance; intrigue, murder, a throne, or a dungeon, are the usual phases of existence through which they pass.

Dhuleep Sing, now on a visit to this country, has not created the sensation, nor is he such a lion as Jung Bahadour, the Nepaulese Ambassador; yet Dhuleep Sing was a reigning Monarch.

On the 15th September, 1843, the Maharajah of Lahore, Shere Sing, and his two sons, were murdered; and, the murderer himself being slain almost immediately afterwards, Dhuleep Sing, then only ten years of age, was placed upon the throne. Executions and bloodshed followed in the Sikh capital.

The history of Sikh affairs, from the death of Runjeet Sing, in July, 1839, to the accession of Shere Sing, will serve as a background to our brief sketch of Dhuleep. When the old Lion of the Punjaub died, his son, a weak-minded man, Kurruck Sing succeeded him, but he died shortly afterwards; one of his wives and four of her handmaids were immolated on his funeral pyre. Nao Nehal Sing, his son, was killed the same day by a beam falling on his head as he was entering the city gates, returning from his father's funeral.

Shere Sing, Governor of Cashmere was then proclaimed Sovereign. He was the illegitimate offspring of one of the wives of Runjeet Sing, but was always treated as a Prince of the blood. He was a man of great energy, but devoted to debauchery. He had scarcely assumed power, when one of the wives of Kurruck Sing was announced to be in an interesting condition. A civil war ensued, but Shere Sing triumphed.

On the 15th September, 1842, Dhyan Sing, the Prime Minister resolved to make himself King. The Sirdar Ajeet Sing was intrusted with the murder. At a review of the troops in the morning he drew a pistol from his bosom and shot Shere Sing through the right temple. The other conspirators rallied round him. A fierce fight ensued to the advantage of the conspirators. Ajeet Sing cut up the Rajah's body, placed his head on a spear, and, on entering the town, attacked and murdered Prince Purtaub Sing.

All the wives of Purtaub Sing were brought out and murdered; and a child, a son of Shere Sing, only born the night before, was strangled.

Ajeet Sing now thought of assuming the crown himself. He entered the carriage of his fellow-conspirator, Dhyan Sing, and whilst conversing with him stabbed him to the heart. On the 16th matters changed. All the conspirators were mastered and put to death. Ajeet among the rest; and Dhuleep Sing, the only surviving son of Runjeet Sing, was put on the throne.

Lahore, the Sikh capital, is within fifty miles of Furozepore, the frontier English post.

DHULEEP SING.—FROM A COLLODION BY O. G. REJLANDER, WOLVERHAMPTON.

The population of the kingdom of Lahore is between 3,000,000 and 4,000,000. Its standing army under Runjeet Sing amounted to 80,000 men, of which 25,000 were infantry: the regular cavalry and artillery mustered about 8000, with 150 guns; 50,000 irregular horse formed the remainder. The revenue is estimated at about £2,500,000.

That the Sikhs can fight we know from our experience in the last Sikh war. Civil war in a native kingdom is a sure sign that that kingdom will be shortly drawn irresistibly to that great magnetic power the East Indian Government. One by one the native Princes fall like flies into the wide-spread web of the great benevolent spider of Leadenhall-street. The last has been the King of Oude, who is allowed £100,000 a year pocket money.

Lahore and the Punjaub were of course doomed. A treaty was signed at Lahore on the 26th December, 1846, by which our troops were to remain in the Punjaub during the minority of Dhuleep Sing. In May, 1847, a deep-laid plot was discovered at Lahore for the destruction of the English. The Maharanee Chunda, the mother of young Dhuleep, was sent off under a strong escort to Benares.

India was on the eve of a great crisis. A deep-laid, wide-spread plot for the overthrow of the English power burst like a tornado. It commenced in 1848, at Moollan, where Edwardes so distinguished himself. Then came the Sikh war, and the sanguinary battle of Chillianwallah, and the final defeat of the Sikhs, which terminated in the annexation of the Punjaub, on the 17th of March, 1849.

On the 18th May, 1849, the Maharanee Chunda, the mother of Dhuleep, made her escape, and arrived at Nepaul. Dhuleep himself came to an amicable arrangement with the Government, and is actually a guest of Great Britain, where his quiet, unassuming manner have earned for him the respect of all whom he has honoured with his acquaintance.

## THE FALLS OF GARSUPPAH.

THIS scene of magnificent nature is in the Canara district, on the west coast of India, where the spectacle of these stupendous waterfalls from the Ghauts is a sight often enjoyed by tourists in search of the sublime. The scenery is delightful and grand, "displaying stupendous scarps, fearful chasms, numerous waterfalls, dense forests, and perennial verdure." Our View is from a sketch recently taken by a Correspondent. The Falls are from 800 to 900 feet in height. The several torrents have their respective names: commencing from the left hand, the first is called "the Raja;" the second, "the Rouree;" the third, "the Rocket;" and the fourth, "La Dame Blanche."

The height of 800 or 900 feet, more than double that of St. Paul's Cathedral, may appear tremendous; but Bishop Heber describes a waterfall near Candaulah which falls in three or four successive descents down a precipice of 1200 feet, into a valley of awful depth and gloom.

FALLS OF GARSUPPAH, CANARA DISTRICT, WEST COAST OF INDIA.—FROM AN ORIGINAL SKETCH.

FAUSTIN, EMPEROR OF HAYTI, IN HIS CORONATION ROBES.

ADELINA, EMPRESS OF HAYTI, IN HER CORONATION ROBES.

## HIS IMPERIAL MAJESTY FAUSTIN, EMPEROR OF HAYTI.

THE political history of St. Domingo, or Hayti, where his coal-black and Imperial Majesty Emperor Faustin I. reigns, is a curious chapter in the world's history. Discovered in the fifteenth century, by Columbus, St. Domingo is one of the largest and most fertile of the West India Islands. It is situated between the islands of Jamaica and Cuba, and extends in length from east to west nearly 400 miles, and in breadth from 60 to 160 miles. About the middle of the sixteenth century, the island of St. Christophers was taken possession of by a mixed colony of French and English; but, having excited the jealousy of the Spaniards, they were driven from it. They turned pirates or buccaneers, as they were called, and at last succeeded in making good a footing in St. Domingo itself. By the treaty of Ryswick that part of the island on which they had established themselves was ceded to the King of France, who acknowledged them as his subjects, and gave them his protection. In 1723 the colony was in a very prosperous condition, and continued so till 1789, when the great French Revolution broke out. The population of St. Domingo was divided into three classes—the whites, the people of colour, and the slaves. All the power and influence were concentrated in the whites, who disdained any intercourse with the people of colour. The black slaves ranked still lower, experiencing great cruelty from the two other classes. When the French national Convention passed the memorable decree that all men were born equal, and entitled, therefore, to an equality of civil privileges, it became the signal for revolution in the island. Whilst the whites and people of colour were at war, the black population suddenly rose in a body and emulated the *Vêpres Siciliennes* by putting to death all the whites who came in their way without distinction of age or sex. Lamartine's hero, Toussaint-Louverture, who assumed the command of the insurgents in 1794, was recognised by the French Directory. In May, 1801, Toussaint promulgated a constitution and declared the independence of the island. In

FIRST SALE OF SUGAR IN THE MARKET-SQUARE OF D'URBAN, PORT NATAL.—(SEE NEXT PAGE.)

December of that year a French expedition, under General Leclerc, arrived with the intention of subduing the blacks. Toussaint was made prisoner. The French were, however, compelled to evacuate the island in 1803. Toussaint was taken a captive to France, where he died. A ferocious black, named Dessalines, now assumed the reins of the Government. His atrocities were such that he fell under the dagger of the assassin like many of the leaders of the Revolution in France. He assumed the title of Emperor, as Jacques I., on the 8th October, 1804. He was assassinated on the 17th October, 1806.

The island now split into two factions—a negro kingdom in the north, governed by a black, called Christophe, who assumed himself King Henry I.; and a mulatto republic, with Petion as president, in the south. Pethion died in 1818. On the death of Christophe (1820) the two parts were united into a free state, under the presidency of a mulatto of the name of Boyer, who was appointed Regent for life. On the 17th April, 1825, France recognised the independence of the Haytian republic. Boyer had raised a faction against Christophe, who, seeing his case was hopeless, fell upon his sword, like Brutus after Philippi. The eastern portion of the island still remained under Spain. Boyer invaded it, and obtained possession of the entire island. He reigned till 1843. He was then overthrown, and driven from the island, by a revolution headed by Riviere, who succeeded him as President. After about four months the Spanish part of the island revolted; he marched with an army to reduce it to subjection; and, while on this expedition, the other parts of the island revolted against him, and he was compelled to escape to Jamaica. A succession of Presidents followed, of short duration; and, on the 1st of March, 1846, we find Soulouque, the present Emperor, elected President.

What now follows exceeds the production of any writer of fiction, even the celebrated Baron Munchausen. A true recital of the events at Hayti will read to the present day like the hallucinations upon which the fancies of the most excited brain founded a Cervantes and have engaged

[illegible] the election of President Soulouque (the present Emperor Faustin) [illegible] known to fame. His rise was gradual through the army. His first military service consisted, in fact, in cleaning the boots of one of the illustrious black Generals. Being of an enterprising and energetic turn of mind, he relinquished the shoe-brush for the sword, and, being a man of undoubted courage, soon obtained the rank of Captain, subsequently that of General. As already stated, in 1846 he was elected President.

Soulouque's ambition was now aroused, and he resolved in his heart to emulate the achievements of Napoleon I. He studied that great man's career, and took him as a model. He resolved to have his 18th Brumaire! For three years he brooded over his plans, and finally carried them out in 1849.

In April of that year an alleged plot to assassinate the President was the excuse for arresting all those persons he thought likely to oppose his views. Of these he beheaded a great many, and numbers fled.

On the 20th August a petition to request him to accept the Imperial crown was got up at Port-au-Prince, his capital. No one knew where it originated. However, deaths, flights, and banishments had been so numerous of late that no one knew what was to come next. Three hundred and fifty-four citizens signed the petition. One of the Generals, bearing of it, called upon the President to question him upon the subject. He feigned surprise, but said that he could not refuse accepting what the popular will conferred upon him. A second petition was now circulated, signed by forty-nine generals; a third followed, signed by all the Colonels. These petitions were presented to the Chambers on the 24th: it came upon them like a clap of thunder. After deliberating upon the matter the petitions were unanimously adopted. On the next morning it was referred to the Senate. Meantime a crown and Imperial insignia had been procured and placed on the table in the Senate house. Upon their assembling Soulouque entered, modestly accepted the dignity which he said was "thrust upon him," complacently allowed them to place the crown on his head, and he was saluted as Emperor! The cannons which he had placed at all the commanding points of the city now boomed forth, and the bells rang merry peals in his honour.

Let us now describe his Majesty:—The Emperor Soulouque is a thorough "coal black," but his nose and lips are more European than his colour might lead to expect. From the forehead to the top of his head he is completely bald. He is between fifty and sixty years of age; of large form, and very erect; is nearly six feet in height; well proportioned, though latterly inclined to corpulency. He is, like his brother Emperor of France, a most perfect horseman, and generally excites the admiration of strangers by the grace and ease with which he manages his grey charger. He rides out usually in a full uniform of a very rich description, the entire front of his coat and other parts of his dress being overlaid with heavy gold lace. He is usually surrounded by a well-mounted staff of Generals. He is regarded as a man of considerable cunning, but moderate abilities, and of undoubted bravery.

The first act of the new Emperor was to create a nobility. Under the most absurd titles, Dukes, Marquises, Counts, and Barons were created dozens at a time. Bobo, an escaped galley slave, was created Prince of the Empire. Now every one of these black Dukes and nobles aimed at superseding Soulouque. Moreover, they all acted as spies over upon one another, so that his imperial majesty was kept well informed of what was going on around him. Prince Bobo, the ungrateful Bobo, was the most violent of all. Soulouque summoned him to his Court. Prince Bobo knew that if he disobeyed he would be condemned to death, and that if he complied he would be shot: so he took to his heels. Bobo was a popular man, and Soulouque feared a rebellion. As an example to others he ordered his Prime Minister to be beheaded; a price was set on the head of Bobo; and he himself marched at the head of an army into that part of the island where Bobo was popular. Finding no resistance, he attacked the small Spanish colony of which St. Domingo is the capital; but the foreign Consuls there compelled him by threats to suspend hostilities.

Soulouque, determined to follow in the steps of the great Napoleon, now resolved upon a solemn coronation. Having carefully studied all the details of the coronation of Napoleon I. and Marie Louise, he ordered at Paris an Imperial crown, the ring, globe, and sceptre, the sword, and the velvet robes covered with golden bees. All that he now wanted was a bishop. He charged his delegate, a certain M. Villavelesix, to offer terms to the Pope. A black missionary, of the name of Cessena, his accomplice, was also despatched. He had really been ordained; but his acts antecedents were such that, instead of being admitted to a friendly audience, he received a reprimand from the Holy See. Nothing daunted, he proceeded to Port-au-Prince, where Soulouque gave him the title of Vicar General.

On the 4th April, 1851, new uniforms were distributed to the troops. On the following Sunday the ceremony of blessing and distributing the Imperial eagles took place. On the 17th April, at sunset, 101 guns announced the commencement of festivities—illuminations for seven days and nights in honour of the coronation.

On the auspicious morning of the 18th, as early as three a.m., the Imperial Guard and military deputations occupied the so-called Champ de Mars. A temporary church of wood had been erected, all the carpenters of the kingdom having been called into requisition for the purpose. The different Consuls, officers of the French steamer *Le Crocodile*, and all the notabilities of the place, assembled in this church; and at nine o'clock, amidst the roar of cannon and military music, Soulouque and his Empress Adelina left the Imperial palace.

First came the Chevalier Dufont, Juge-d'al-Arme, followed by twenty-four Heralds of Arms, marching in procession, in crimson velvet and gold colored Dukes' robes, and Barons' robes, and Baron in gay attire. Soulouque had created 59 Dukes, 100 Counts, 200 Barons, and 349 Knights. The Dukes and Princes were thus ordered, or ought to have been, according to the Imperial ordonnance in the *Gazette*:—A flowing white tunic reaching to the knees, a blue velvet mantle, with a rich gold border, fastened round the neck with golden tassels, lined with crimson silk, white silk stockings, red morocco Wellingtons, sword with gold hilt, a hat and plumes of the national colours, looped up in front. It is true, alas! that in the processions many of these noble Dukes showed their black shins to the admiring population, their funds not being equal to the expense.

After them came the Imperial Ministers, namely, their Graces the Duke of Tiburon (M. Dufresne), the Duke of St. Louis (Mr. Salomon), the Duke of Bande du Nord (M. Hippolyte), and the Count Petite Rivière de Dalmarie (M. Delva). The Emperor's brother, Prince de Port-de-Paix, came next, then came twelve platoons of troops, then six Imperial Aides-de-Camp, then the Imperial carriage, containing his majesty and the Empress their august spouse Adelina, and the young Princess Olive. This magnificent equipage was drawn by eight horses, and followed by eighteen pages in the Imperial livery. Carriages containing the nephews and nieces of their Majesties, each drawn by six horses, followed. Detachments of cavalry brought up the rear. Many of the Duchesses and Princesses (who on other days keep shops and donkey-carts) appeared in full Court dress, with little niggers holding up their trains. We shall not attempt to describe the ceremony. Imitating his great prototype, Faustin took with his own hands the crown from the altar, crowned himself, and then crowned his [illegible]—we mean his black—Adelina.

"Long live the Emperor!" "Long live the Empress!" now resounded on all sides, and the solemn farce was concluded. The black missionary, in a stentorian voice, gave the signal by shouting out, "Vivat Imperator in æternum!"

Our space is too limited for us to enter into a statistical statement of the revenue and expenditure of this extraordinary Emperor. The revenue of his empire is about £160,000, the expenditure has been about £200,000. Whenever his Majesty requires money, he taxes his subjects. If any one of his Ministers remonstrates, he chops his head off; indeed, latterly, as a precautionary measure, of example, he has annually decapitated some person high in office, and thus keeps the rest in wholesome fear. The idea which now chiefly occupies his Imperial mind is to declare himself head of the Church, as well as of the State, and to disavow the Pope. In 1853 the Pope sent out an Apostolic Delegate, in the person of Monsignor Spaccapietro; but Faustin does not like him, and the delegate has withdrawn.

The little Spanish republic of St. Domingo still exists, under the President Santana, and is engaged in repelling an army to invade it. The Republic is, however, recognised by France and England, and this may deter his Imperial Majesty from [illegible] expedition.

All the Powers of Europe, great and small, have Consuls or Consular Agents accredited to his black Majesty—who, if laughed at and ridiculed in Europe, is nevertheless a great man in his own island. He has no male issue; and his death will be the signal for a new revolution.

## THE NEW SUGAR COLONY OF NATAL.

In the Illustrated London News of the 6th January, last year, we published a sketch of West-street, the principal street in the town of D'Urban, the seat of the Colony of Natal. In the notice then subjoined the general character and capabilities of the country were briefly alluded to. The more matured results of the enterprises in progress, and the increasing interest which a more extended knowledge of those results has awakened in behalf of Natal in this country, justify our devoting space to a statement of the most recent facts—prefacing them, however, with a hasty general notice.

The district of Natal, originally annexed to the British dominions in South Africa as a dependency of the Cape Colony, was in 1845 erected virtually into an independent colony, having a separate Government, under her Majesty's letters patent; whilst, for certain Imperial purposes, it was still, and continues to be, subordinate to the Governor of the Cape, who, during my temporary visit to the district, becomes *de facto* Governor of Natal. For all ordinary purposes of government, however, Natal is under the administration of its own Lieutenant-Governor, assisted by a Legislative and an Executive Council, composed exclusively of the heads of departments in the public service. A very strong and general desire has been expressed by the colonists to have the principle of representation introduced into the Government; and their views have been warmly supported by his Honour Mr. Pine, the present Lieutenant-Governor. The Secretary of State having declared himself favourable to such a concession, there is no doubt that, ere long, popular government will be extended to this portion of her Majesty's dominions.

Already Municipal Corporations are established in the city of Pietermaritzburg, the capital of the colony, and D'Urban, its sea-port, with provision for the creation of similar institutions in towns which shall possess a population of one thousand souls. The district is also divided into counties, and a system of local or county councils organised, whereby the principle of self-government is extended to the rural parts. The jurisdiction over the roads, bridges, and local administration of each county.

For the large native population of Natal, magistrates with suitable powers and appliances are appointed over assigned divisions of the country; and an improved system of native government is rapidly being introduced. It may be mentioned that the tax imposed on the huts or habitations of the Kaffir population now amounts to about £10,000 annually, and is paid with the utmost willingness, and even alacrity. The native population of Natal consists chiefly of the fragments of tribes escaped from the tyranny of former rulers of neighbouring barbarian nations, and possesses none of those elements of cohesion and power which have created frequent and bloody wars on the frontiers of the Cape colony; and as, in addition to an improved machinery of civil government, extensive measures are in progress, under the sanction of the British Government, for establishing a system of industrial schools throughout the district, it is confidently believed not only that the peace which has hitherto reigned in Natal will not be disturbed, but that the native population will be gradually elevated into the condition of settled industry and Christian civilisation.

Natal is peculiarly favoured with regard to the salubrity of its climate, and the variety of its natural capabilities. Whilst the middle and upper parts, as far as the Drakensberg—the range which divides it from the Orange Free State—are admirably adapted for the production of wheat and other European cereals, and for the breeding of cattle, sheep, and horses, the coast lands, extending along the sea-board for nearly two hundred miles, and in breadth inland about fifteen miles, are now proved beyond a doubt to be equally well adapted for the productions of tropical climates—such as sugar, coffee, cotton, arrowroot, turmeric, and ginger. The whole country is well watered by rivers (not, however, navigable), and by innumerable ever-flowing streams; and the peculiarity of the climate is that it is not liable to those long droughts which so injuriously affect the Cape colony and the interior regions. The climate of Natal is also beautifully tempered by the constant sea breezes that sweep over it from the south-west and north-east alternately, being the direction of its coast line; and it is rarely, if ever, visited by the hot blasts from the interior of the African continent.

During the last two or three years European agriculture, including stock farming, has made highly-satisfactory progress in the upper divisions of the country. The Dutch farmers (the original settlers), feeling more confidence and security, have built substantial homesteads, and have largely extended cereal cultivation; whilst the increasing flocks and herds give evidence of a state of progressing prosperity. Numerous British settlers, many of them persons of education and substantial means, have settled amongst their Dutch fellow-colonists; and the condition of those parts is, in all respects, most hopeful.

But the more recent enterprises of tropical industry on the belt of coast land are those which chiefly attract public attention at the present time to the colony of Natal.

Not less than seven years ago, before the ill-digested emigration scheme of Mr. J. C. Byrne, poured a mass of unprepared and unsuitable British settlers upon the shores of Natal, several of the original emigrants had discovered, by experimental cultivation, that the sugar-cane and other tropical plants thrived well near the coast; indeed, a species of sweet cane grows indigenously, and the indigo-plant is a weed in the soil. The want of capital and the depressing effects of the emigration from which Natal has but recently recovered, combined to prevent those experiments from being fully prosecuted. Mr. E. Morewood, however, on his estate—about thirty miles from D'Urban (Port Natal), succeeded, by means of rude and simple machinery, in producing sugar of good quality from cane grown by himself; and a more enterprising and capitalist gentleman, Mr. Isaac Beningfield, commenced the manufacture on a large scale. Some tongue had created 59 Dukes, 100 Counts, 200 Barons, and 349 Knights. The Dukes and Princes were thus ordered, or ought to have been, according to the Imperial ordonnance in the *Gazette*:—A flowing white tunic reaching to the knees, a blue velvet mantle, with a rich gold border, fastened round the neck with golden tassels, lined with crimson silk, white silk stockings, red morocco Wellingtons, sword with gold hilt, a hat and plumes of the national colours, looped up in front. It is true, alas! that in the processions many of these noble Dukes showed their black shins to the admiring population, their funds not being equal to the expense.

After them came the Imperial Ministers, namely, their Graces the Duke of Tiburon (M. Dufresne), the Duke of St. Louis (Mr. Salomon), the Duke of Bande du Nord (M. Hippolyte), and the Count Petite Rivière de Dalmarie (M. Delva). The Emperor's brother, Prince de Port-de-Paix, came next, then came twelve platoons of troops, then six Imperial Aides-de-Camp, then the Imperial carriage, containing his majesty and the Empress their august spouse Adelina, and the young Princess Olive. This magnificent equipage was drawn by eight horses, and followed by eighteen pages in the Imperial livery. Carriages containing the nephews and nieces of their Majesties, each drawn by six horses, followed. Detachments of cavalry brought up the rear. Many of the Duchesses and Princesses (who on other days keep shops and donkey-carts) appeared in full Court dress, with little niggers holding up their trains. We shall not attempt to describe the ceremony. Imitating his great prototype, Faustin took with his own hands the crown from the altar, crowned himself, and then crowned his [illegible]—we mean his black—Adelina.

"Long live the Emperor!" "Long live the Empress!" now resounded

towards maturity, and between 300 and 400 acres more preparing for cane cultivation.

In the year 1856 there will be upwards of 1000 acres planted with cane; and every succeeding year the increase will be measured only by the pecuniary resources of the planters. The mills hitherto in use, or now arrived, are for cattle power only; but it has already been found necessary on the larger estates to order steam power, which will be available for next year's crops.

The accompanying Illustration, taken on the spot, represents the first public sale of Natal sugar in the Market Square of D'Urban. The sketch vividly portrays the scene as it occurred; and the principal persons are characteristic, and will be recognised by their friends. The waggons contain the sugar in bags; and one of the proprietors, Mr. R. Milner, J.P., of Springfield, with his helmet hat: as well as the auctioneer, Mr. Acutt, who patriotically rendered his services gratuitously on the occasion, are conspicuous objects standing on one of the waggons. There was a large muster of the inhabitants of all classes, and the prices realised for the whole averaged more than 30s. per cwt. At the conclusion of the sale champagne was provided for all who chose to partake of it; and success to the spirited proprietors of Springfield, Messrs. H. Milner and J. B. Miller, was drunk with hearty cheers, and responded to by the former gentleman.

The total quantity of sugar hitherto imported into Natal for its own use, and the partial supply of the regions beyond—the Free State and the Trans Vaal Republic—has not exceeded 800 tons annually. Natal will, therefore, after the present year, not only supply this demand, but export largely to the Cape Colony and England. It will thus greatly aid the extinction of slavery, by contributing to the supply of sugar produced by free labour on our own colonial soil. This circumstance alone entitles Natal to the utmost support of the mother country in the development of its vast and varied resources.

By an adequate supply of capital (which for so national an object, we hope will be forthcoming) the harbour works of Port Natal could be secured as a permanently safe haven of refuge for the large ships of any burden; and the interests of commerce, humanity, and civilisation alike demand that this port should be rendered available to the utmost extent of its capabilities.

Port Natal, from its situation with reference to our Eastern commerce, is adapted to become a harbour of refuge, and a calling port for supplies and repairs. Whilst, as regards the vast interior of the African continent, it is adapted to be the entrepôt of commerce, and the gateway through which chiefly must pass the agencies that are to civilise and Christianise the benighted millions of its barbarian tribes.

At the present time the harbour works are advancing but slowly, from the want of adequate funds; but, with scarcely any assistance from the art or labour of man the entrance is already available for vessels of 300 tons burden; and the General Screw Company's steamers, the *Natal* and *Cape of Good Hope*, each of 700 tons, found no difficulty in entering or departing from the port.

## FASHIONS FOR FEBRUARY.

We promised lately to give a full description of evening dresses; and though what is called the London season is still in the future, parties are already sufficiently frequent for thought of toilettes to be necessary.

Rich fabrics and profuse trimmings seem as much in vogue as ever; indeed, it may be doubted if the prevailing taste in these particulars has yet reached its culminating point. Brocade, lace, fringe, and all the ingenious devices for producing a gorgeous effect which belong to the milliner's art seem to vie with each other for favour and popularity. Our readers may judge from our description if this be not the case.

There is, however, a very pretty and comparatively simple, dress suitable for the present season, composed of pink glacé silk, made with three skirts, each skirt edged with a double row of fringe, the lower fringe being laid on stiff tulle; corsage of the same, ornamented with fringe, and bretelles trimmed with the same. Short full sleeves, made of puffings of tulle and fringe.

A blue glacé silk dress has three flounces bracaded in scallops, each scallop edged with pink blonde. The corsage is plain and pointed, with braces to correspond with the flounces. Short sleeves, composed of alternate puffings of blue silk and white tulle.

A white silk dress is made with three flounces; each flounce edged with a double row of blonde laid on tulle, each row of blonde being surmounted by a ruche of ribbon.

Another white silk dress has five flounces, each flounce edged with a band of blue silk to the depth of nearly three inches; above this band appears about an inch of the white silk, and then a band of the blue silk, likewise an inch wide, is laid on; the stripes thus formed being edged with a row of narrow black velvet with stamped edges. To complete the richness of this dress, a row of white fringe falls over the lower and broader blue stripe. Corsage to correspond, long-waisted and pointed, and made with bretelles.

Moiré antique is still much worn, and often with double skirts. Sometimes the lower skirt is of plain silk, the same colour, covered with lace flounces; the upper skirt being of this moiré edged with lace.

For very youthful belles, ball-dresses are made of tulle and other light fabrics, profusely trimmed with flowers; and our readers may be glad to learn that both black and white lace worn over colours—a style which was lately a little recondite—are coming rapidly into favour.

Gaze de Chambery is also a good deal worn for dinner-dresses. There is one of a very rich pattern, with double skirt: it has a white ground; each skirt being edged with longitudinal stripes of blue satin, and having between the stripes a garland of roses.

There are some very pretty jackets for dinner-dress composed of a mixture of black and white lace; they are ornamented either with black velvet, or velvet the colour of the dress. Scarlet, contrasted either with white or black, is a favourite colour.

Coiffures are particularly tasteful just now. There is a wreath of water-lillies and grasses, which, though drooping at the sides, comes much more than heretofore on the top of the head.

A very pretty head-dress is formed of ivy-leaves and pink ribbon, with a bow of pink ribbon behind, and one very long streamer of pink convolvuluses at the side.

Another is composed of bandeaux of blue velvet, which pass across the head, with a mixture of pink roses and white blonde at the side and back.

A simple wreath of blue and white flowers, intermixed with blue ribbon, is also very pretty: and we may mention a head-dress of ivy-leaves made in black velvet with berries, and loops of beads in any bright colour.

A more matronly coiffure is of black velvet and black lace, with a cluster of damask roses bude at the side, and deep black lace falling over the back of the head.

Another of a similar character is composed of black velvet, groseille ribbon, and black currants, with three rows of lace—the centre one black, the others white—at the back.

There is no great change in walking-dresses just at present, though it is expected that in the early part of the spring close-fitting jackets will be a good deal worn out of doors. Meanwhile there is a very elegant rather short sacque of black cloth, trimmed with velvet and velvet braid, and satin buttons, and looped up gracefully over the arms. Also a mantle of black velvet, trimmed with purple velvet and a deep fringe of black and purple, with black and purple tassels down the front.

Bonnets are still small, but they come forward and fit round to the shape of the face. A very stylish one is composed of green silk, black velvet, and black lace; a full blonde cap underneath, with roses and green leaves.

In preparation for the bright days we may now expect, there are some gayer novelties. There is a bonnet of Terry velvet, of the shade which is often described as China blue: on one side is a blue feather; and the bonnet is otherwise trimmed with white blonde, and has outside a sort of second brim turned back. The cap is composed of white blonde and blue flowers.

Next we may describe a bonnet of white tulle, entirely covered by two deep falls of black lace, and having the brim and curtain edged, for about two inches deep, with violet-coloured velvet. A feather to correspond is falls very forward on one side, in the style already described; and on the opposite side beneath the brim are pink flowers.

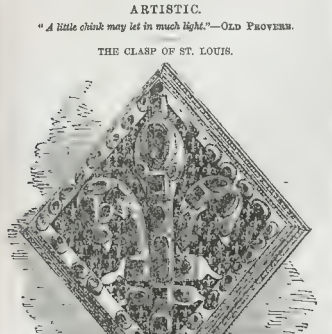
(For our information on Dress and Fashion we are indebted to the courtesy of Madame Einstein Devy, 73, Grosvenor-street, Grosvenor-square.

# Memorabilia,

## LITERARY, ANTIQUARIAN, SCIENTIFIC, AND ARTISTIC.

*"A little chink may let in much light."*—OLD PROVERB.

### THE CLASP OF ST. LOUIS.



This beautiful specimen of mediæval jewellery is now in the Museum of the Louvre, Paris, though formerly belonging to the Royal Abbey of St. Denis. In the "Histoire de l'Abbaye Royal de St. Denis," by Felibien, Paris, 1706, this jewel is figured and described as the clasp (*agrafe*) of the Royal mantle of St. Louis; but Millet, who wrote before Felibien, calls it the clasp of the Royal mantle used in the Coronation ceremony. The clasp is of silver-gilt, enamelled, and ornamented with precious stones; the field of dark blue enamel, and powdered with small fleurs-de-lis, gilt. The precious stones set round the border are rubies, whilst those on the large fleur-de-lis are rubies, emeralds, and sapphires—the largest stones being sapphires, and the square ones emerald. The large fleur-de-lis is merely a thin plate of metal fastened to the surface of the enamel; and the precious stones hang in raised settings, a great richness of character is given to the whole.

### NOTES.

"YANKEE DOODLE."—The history of this popular melody, and its accompanying songs, is not very clear; and a great deal has lately been written (both in this country and in America) which tends only to make "confusion more confused." The tune became popular *everywhere*, at the aid of any words. It has no recognised rhymes of a national character belonging to it. In the United States it is used as a march. The only words now associated to it in America is the following doggrel quatrain:—

Yankee Doodle came to town
Upon a little pony;
He stuck a feather in his hat,
And called it Macaroni.

Many songs have been written to the air. One, by T. S. Fessendea (printed in his "Original Poems," 1804), has great merit —

A merry tale I will rehearse,
As ever you did hear, Sir,
How Jonathan set out, so fierce,
To see his dearest dear, Sir.

Yankee Doodle, keep it up,
Yankee Doodle dandy,
Mind the music—mind the step,
And with the girls be handy.

There are forty-eight more stanzas! The author adds, in a note, "'Yankee Doodle,' a ludicrous musical air, which, I believe, was first invented by the English, in derision of the Americans, whom they style 'Yankees.' The Americans frequently wrote ludicrous songs to this tune." The song printed in "Memorabilia" (Jan. 26) was given last year in one of the numbers of the *Albany Argus*. The *seventh* stanza, which runs thus, is wanting in your Correspondent's copy:—

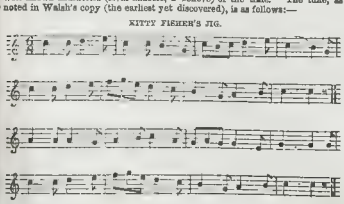
It scared me so I ran the streets,
Nor stopped, as I remember,
Till I got home and safely locked
In granny's little chamber.

In the *Albany Argus*, Dr. Shuckburg is said to have been the author of the tune as well as the words, and to have written both in 1755. This is certainly an error, as far as the tune is concerned, because I have discovered it in an old collection of dances, published by John Walsh in 1745. It is there called "Kitty Fisher's Jig," and evidently connects itself with the well-known rhyme:—

Lucy Locket lost her pocket,
Kitty Fisher found it,
Not a penny was there in't,
Only binding round it.

Mr. Halliwell, in a note upon the above ("Nursery Rhymes," edit. 1843, p. 329), says "Lucy Locket and Kitty Fisher were two celebrated courtesans of the time of Charles II. It was to the tune of this nursery rhyme that the song of 'Yankee Doodle' was written." The first part of this note is wrong. The two ladies in question belong to the reign of the second George, and were well-known characters (rival dancers, I believe) of the time. The tune, as noted in Walsh's copy (the earliest yet discovered), is as follows:—

KITTY FISHER'S JIG.



It has been asserted that the rhyme which I have quoted, "Yankee Doodle came to town," is as old as Cromwell's time; and that it was originally sung of *Nankee* Doodle. This term is supposed to apply to the Protector, and the other lines were des gued to "allude to his going into Oxford, with a single plume, fastened in a knot called a macaroni." This may be the case as far as the rhyme is concerned; but I certainly cannot assign any such antiquity to the tune. It has all the character of the Hanoverian period of popular music, and, at present, its date extends no farther. EDWARD F. RIMBAULT.

STATE OF THE ROADS IN CROMWELL'S TIME.—The following may be quoted in illustration of "the state of English roads in the time of Cromwell," or thereabouts:—1. "*Preamble of an Act for paving Drury Lane and the town of St. Giles in the fields. 3 Jacob. I., p.* 1027."—"Whereas the town of St. Giles in the fields, and that part thereof which leadeth to Holborne, and the lane called Drury Lane, leading from St. Giles in the fields towards the Strand and towards New Inn, is of late years, by occasion of the continuous rode there and often carriages, become deep, foul, and dangerous to all that passe those ways." 2. "*Rushworth. Vol. II., pt. ii., p.* 89. *Anno* 1630."—"This highways in all counties of England in great decay, partly so grown, for that men think there is no course by the common law, or order from the state, to amend the same; and the work-days appointed by the statute are so omitted or ill performed that there comes little good by them." 3. "*Life of Lord Keeper North. Vol. I., p.* 271. *Temp. Charles 2nd.*"—"From Newcastle his Lordship's road lay to Carlisle. The Northumberland Sheriff gave us all arms, and, because the hideous road along by the Tyne, for the many and sharp turnings and perpetual precipices, was, for a coach not sustained by main force, impassable, his Lordship was forced to take horse, and to ride most part of the way to Hexham." It may be added that, in many parts of England, the mere material for road-making was not accessible before the time of canals. All the good roads in Gloucestershire, for instance, are made of stone blasted out of the rocks at Clifton, and the county possesses no other stone fit for the purpose.—HERM.

ANCIENT INK.—Persons in the habit of seeing old MSS. are often struck with the black appearance of the ink. The following receipt, which occurs on a piece of parchment in the hand of the fifteenth century, is pasted on the first leaf of the Cottonian MS., Titus A., XXII :—

" Uncis galiarum miscentur et uncis gummi
Bis 2° vitrioli, superaddas octo falerni."

EDWARD F. RIMBAULT.

### QUERIES.

"THE LUMP OF GOLD."—A GRAMMATICAL QUERY.—A diurnal critic, in an otherwise highly eulogistic notice of Charles Mackay's new poem "The Lump of Gold," takes the poet to task for "violation of grammar" in the following instance:—

"Tradition itself has forgot them."—"The Pharaohs are forgot."—"That civil discord might have broke."

I wish to ask, whether in poetry it is not permitted to say either forgot or forgotten—broke or broken? Whether the critic is not wrong; and whether hundreds of instances might not be culled from our best writers, to prove that the poet is right in the license which he has taken? Two instances occur to my recollection at this moment: the first in the world-renowned song, "Should auld acquaintance be *forgot*," and the second in Thomas Campbell's lines on the Battle of Waterloo, "Our plumes have waved in combats that ne'er shall be *forgot*." Perhaps some of your correspondents will be able to throw a further light on the subject.—C. FITZHUGH.

WHAT IS THE MEANING OF "A BULLY"?—Used in its friendly sense, this word seems to be a diminutive of brother, and to have the same meaning as the common Staffordshire word butty. But in the sense of braggart, ruffian, or bravo, its derivation is by no means clear. The samual, bull, and the Pope's official bull, have each been suggested as the origin. In Spenser's "View of the State of Ireland," (*temp.* Elizabeth) we find the following passage:—"There is one use among them, to keep their cattle, and to live themselves, the most part of the year in *boolies*, pasturing upon the mountain and waste wild places, and removing still to fresh land as they have depastured the former. By this custom of *boolying* there grew in the ancient time many great enormities. If there be any outlaws or loose persons, they are evermore succoured in these *boolies*. Besides, such stealths of cattle as they make they bring commonly to these *boolies*, being upon these waste places, where they are readily received and the thief harboured from danger of law. Moreover, the people that thus live in these *boolies* grow thereby the more barbarous, and live more licentiously than they could in towns, using what manners they list, and practising what lewdness and villanies they will, either against the Government or against private men." It is by no means impossible that the term bully, in its vicious sense, took its origin from the kind of boolying here described.—HERM.

THE CROSS OF CHRIST.—I have seen it stated that the original form of the "Cross of Christ" was not similar to that usually represented, but like the letter X, or rather V, with a short upright stem affixed, but one of the arms longer than the other: in fact, a tree with two leafless branches, both springing nearly from the root. "The accursed tree." If this be true, can any of your numerous antiquarian correspondents inform me of the time when, and the reason why, it was changed? It involves the important questions of the sign made at baptism, the form of cathedrals, churches, chancels, &c., the crosses on steeples, rood-screens, and all kinds of church carvings and decorations; and as the present time is very active in ecclesiastical erections and restorations, and great weight is by many attached to the form, we should be extremely careful not to substitute a fallacy.—J. H. MESSENGER.

### ANSWERS TO QUERIES.

CHRISTMAS HYMN.—As an answer to Mr. Hulbert's inquiry of the 19th inst., Dr. Byrom, of Manchester, was the author of the hymn; and John Wainwright, the organist of the collegiate church there, of the tune. The hymn is almost universally known as "Byrom's Hymn;" and the tune as "Stockport," out of respect to the place where Wainwright was born. I believe the hymn was first sung to the tune at the collegiate church on Christmas-day, 1750. Mr. Wainwright was an organist and composer of mume of no mean order. I am in possession of a printed volume of his tunes published near one hundred years ago. It is entitled "A Collection of Psalm Tunes, Anthems, Hymns, and Chants, for one, two, three, and four voices; composed by Mr. John Wainwright, Organist of the Collegiate Church at Manchester." In this book is the tune and the hymn at full length. It is entitled "A Hymn for Christmas-day; the words by Dr. Byrom, of Manchester." I think this may at once be accepted as an unquestionable authority.—AS. ECCLES, Marple.

TAYLOR, THE WATER POET.—The passage quoted from the author's "Wit and Mirth" in your number for January 5th—"One asked a fellow what Westminster Hall was like?" "Marry,' quoth the other, 'tis like a butter box at Christmas among gamesters, for whosoever casteth, the box will be sure to be the winner'"—refers to a custom which anciently prevailed among the members of our Inns of Court, when gaming, to put a part of the winnings into a box kept for that purpose, and called the "Butler's Box." The contents of which were at Christmas given to the Butler of the Inn. The following from Cotgrave's "English Treasury of Wit and Language," 1655, p. 163, serves to illustrate this meaning:—

To pay the Box well, especally at *fa* and *In*.
Inns of Court Butlers would have but a
Bad Christmas of it else. F. R. S.

TESTONS.—"Sir John Rainsford meeting Parson Brookes, the principle deviser of the copper coin, threatened to break his head, for that he had made his Sovereign Lord (the most beautiful Prince, King Henry) with a red and copper nose. So base and corrupted with copper were his (HENRY VIII.'s) moneys, as also of King Edward VI., that some of them which was then called *Testons, because the King's head was thereon figured*, contained but twopence farthing in silver, and other fourpence halfpenny."—*Camden's Remains, art. "Money."*—J. M. PIKES.

TESTERS, OR TESTONS.—Allow me to correct a mistake, or rather a pair of mistakes, into which your correspondent, J. C. W. (in the No. for Dec. 29), has, relative to the word Testons. 1. He says it never was a legal name for a coin. In the Papal States I know the following to be correct—viz., the silver currency—which is as follows:—

| | | | | | |
|---|---|---|---|---|---|
| 1. Scudo (crowa), 10 Pauls | = 4s. 2d. | 4. Papetto, 2 Pauls | ... | = 0s. 10d. |
| 2. Mezzo-scudo, 5 Pauls | = 2s. 1d. | 5. Paolo, Paul | ... | = 0s. 5d. |
| 3. Testone, 3 Pauls | = 1s. 3d. | 6. ½ Paolo, ½ Paul | ... | = 0s. 2½d. |

Testone is a silver coin of the Papal States, and has been so for ages probably. 2. J. C. W. derives Testone from Tête: but it is an Italian word of itself, signifying "a large head," from Testa, the Italian for head.—J. R. P.

GUISERS.—Your correspondent "W. W." makes inquiries regarding a mumming custom practised in Scotland by the boys before Yule. Those engaged in it are called Guisers, or Gusards—equivalent to Maskers—from the dress or disguise in which they appear. Of late years the custom has fallen much disrepute. But in my young days—twenty-five, or, by'r Lady, some thirty years ago—boys in bookram, often armed cap-à-pie with culinary implements, and all sorts of extemporised weapons, used to form themselves into regular bands of Guisers. They entered a house with but little ceremony, and immediately commenced their exhibition. They were generally received with good humour, and a guerdon bestowed on the purse-bearer, to be expended on a yule bonfire. I subjoin one of the most popular of their performances, at least as much of it as my memory can furnish. Although the dialogue is rudely constructed, it will not be without interest to the readers of your "Notes," from some quaint natupal allusions. DEE DUN.

*Galatson.* Here am I, Galation. Galation is my name;
With sword and buckler by my side, I hope to win the game.
*St. Andrew.* The game, sir, the game, sir; if it not in your power,
I'll cut yo . down to inches, in less than half an hour
*Galation.* My body's made of iron, my head is made of steel;
I'll draw my bloody weapon, and slay you on the field.
*St. George.* Here am I, St. George, I shine in arms bright,
A gallant champion, and a worthy knight.
*St. Patrick.* Who is St. George, but St. Patrick's knave,
Who stole his horse, and was sold for a slave.
*St. George.* I say, St. Patrick, you lie, sir.
*St. Patrick.* Try out your sword and try, sir,
I'll run my rapier through you, and make you fly away, sir.
[*They fight—*ST. PATRICK *goes down.*]
*Doctor.* Here am I, the good *Doctor Bonde*,
With a leek for the lug, and a salve for the bones.
*Doctrum rumanum medetum sey.*
Take out the drink, and get upon your legs;
*O. Cromwell.* Here am I, Oliver Cromwell, as you may suppose,
With my hand round head, and my long copper nose;
I made the French to tremble, my enemies to quake;
I beat the jolly Dutchman, and made him to awake;
So out of the house, ye are rogues every one;
Ye long-lo arded rascals, be quick and be gone.

THE CONSTABLE FAMILY OF UPSALL.—Your correspondent "Antiquarian" will find some particulars of the descent of the Constables of Upsall in Poulson's "History and Antiquities of the Seigniory of Holderness," ii., 236.—THOMAS BAKER, Manchester.

## CHESS.

### TO CORRESPONDENTS.

MANCHESTER AND LIVERPOOL CHESS-[illegible] interest that in the match last year between those two Clubs, Manchester [illegible] as regarded its numbers as inspiring. We are glad to hear that the Liverpool men have been aroused into energy by this defeat, and are about to make a determined effort to retrieve their lost laurels. The terms of a new contest have been settled, and the struggle is to commence at Liverpool on Wednesday the 20th inst. May the best man win!

STAMFORD INSTITUTION CHESS TOURNEY has been commenced at this Institution, and the first meeting on Monday the 4th inst., was attended by no less than sixty members. The following are the list of [illegible] engaged in the opening contests:—

| WHITE. | BLACK. | WHITE. | BLACK. |
|---|---|---|---|
| Hingeston | Jenkins | Gardner | Jones |
| Brigden | Dyson | Reynolds | Acre |
| Young | Bain | Howitt | Pickthall |
| Ford | Dalton | Lewis | Scholefield |
| Smith | Fox | Schreiber | Smith |

In the end in every instance, one of the players [illegible] and as the prizes of the value of £2 is to be awarded to each [illegible] we have no doubt there will be many interesting games played through.

W. M. [illegible] Cambridge, is [illegible]

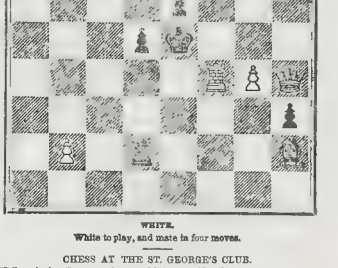
### PROBLEM No. 626.

By Mr. W. GRIMSHAW.

BLACK.



WHITE.

White to play, and mate in four moves.

### CHESS AT THE ST. GEORGE'S CLUB.

While enjoying the pre-eminence of being considered the most important and influential Chess society in Europe, the St. George's Club has long been under the reproach of doing less for the interest of the game than clubs of comparatively minor consequence. It is avowed by many that this institution, with all its advantages, contributes little or nothing in the shape of fine examples of play to our Chess literature; that it neither initiates nor encourages Chess matches, Chess assemblies, or Chess undertakings of any description whatever; and, in fine, except for the mere amusement of a few of its own members, it is of no value or utility at all. It must be admitted, we believe, that the St. George's Club of late years has not done all it might and should have done for the promotion of Chess play, and in that respect it stands in unfavourable contrast with its predecessor the Old Westm nster Chess-club, and indeed with itself in the earlier stages of its career. But it must never be forgotten that even for the last few years it originated and carried out the grandest and most celebrated Chess *réunion* ever known—the Congress of 1851; and did this, in the face of an opposition as powerful as it was unnatural and unscrupulous. Since that period, however—whether from disgust at the inconsistent opposition they met with, or owing to the precarious tenure of their alliance with the Polytechnic Institution—the St. George's members have certainly been in the rearward of Chess events. It is with unfeigned pleasure, therefore, that we announce the commencement of a series of Consultation Games between four of the chief players of the club, and which series, it is hoped, will be followed by a tourney, not confined to members of the club, but in which eminent players of other clubs will be invited to take part. This is as it should be: and, carried through with the spirit and liberality this club can exhibit when it chooses, these entertainments will impart a salutary stimulus not only to the Chess play of London, but to every Chess society in Europe.

Since writing the above, we have been favoured with copies of two games already played at the consultation sittings. The combatants being Messrs. Staunton and Owen on the one side against Messrs. Lowenthal and Barnes on the other. The first game is but indifferent, and terminated as a drawn battle. The second we give below:—

(*Evans' Gambit.*)

| WHITE (Messrs. S. and O.) | BLACK (Messrs L. and B.) | WHITE (Messrs. S. and O.) | BLACK (Messrs L. and B |
|---|---|---|---|
| 1. P to K 4th | P to K 4th | 18. K R to K 4th | P to K R 3rd |
| 2. K Kt to K B 3rd | Q Kt to Q B 3rd | (*d*) | |
| 3. K B to Q B 4th | K B to Q R 4th | 19. K Takes Kt (*e*) | Q B takes Kt (*f*) |
| 4. P to Q Kt 4th | B takes Q Kt P | 20. Kt takes B | P takes R |
| 5. P to Q B 3rd | B to Q R 4th | 21 P to K Kt 4th | Q to K R 6th |
| 6. P to Q 4th | P takes P | 22. K Kt P K t P | Kt to Q sq |
| 7. Castles | P to Q 3rd | (ch) (*g*) | |
| 8. Q to Q Kt 3rd | Q to K B 3rd | 23. Q to K B 4th | Kt to K 2nd |
| 9. P takes P | K Kt to Q Kt 3rd | 24. K Kt to K B 7th | K to Q B sq (*i*) |
| 10 K B to Q Kt 8th | Q B to Q 2nd | (*h*) | |
| 11. P to K 5th | P takes P | 25. Q B to Q B 3rd | Kt to Q B 3rd |
| 12. R to K sq (*a*) | K Kt to K 3rd | 26. Q B to K B 8th | Kt to Q sq |
| 13. P takes P | Q to K Kt 3rd | (*i*) | |
| 14. K B to Q 3rd | Q to K R 4th | 27. Q B likes K t P | Kt takes K B |
| 15. K R to K 4th | K Kt to Kt 3rd | 28. B takes K B | Kt takes B |
| (*b*) | | 29. Q to K B 5th (ch) | K to Q sq |
| 16. Q to Q R 4th (*c*) | Q B to K 3rd | 30. Q to K R 6th | K to K sq |
| 17 Q Kt to Q 2nd | Q B to Q 4th | 31. Q takes Kt (ch) | |

And, after a move or two more, Black surrendered.

(*a*) This appears for a moment to give Black time but the Rook played thus materially strengthens the attack, and he will be found playing an important part as the contest progress

(*b*) A Bishop to K B 4th would perhaps have been better.

(*c*) Intending to win a Piece by playing P to K R 4th. The game from this moment abounds with critical and interesting situations.

(*d*) Their adversaries were of opinion that if Messrs S and O. had now thrown up the K Kt P, they would have won the Black Queen. This, however, was a mistake The Queen could have escaped, as we will show. Suppose

| | | | |
|---|---|---|---|
| 18 P to K Kt 4th | P to K R 3rd | Q Kt to Q R 4th | Q to K R 4th |
| | &c. &c. | | |

(*e*) Quite sound; and very unexpected, we should fancy, by Messrs. L and B.

(*f*) Had they taken the Rook, their Queen was lost, *&c. &c.*—

| | | | |
|---|---|---|---|
| 19. | P takes R | 21 K B to his square | |
| 20 P to K t 4th | Q to K 4th | &c. &c. | |

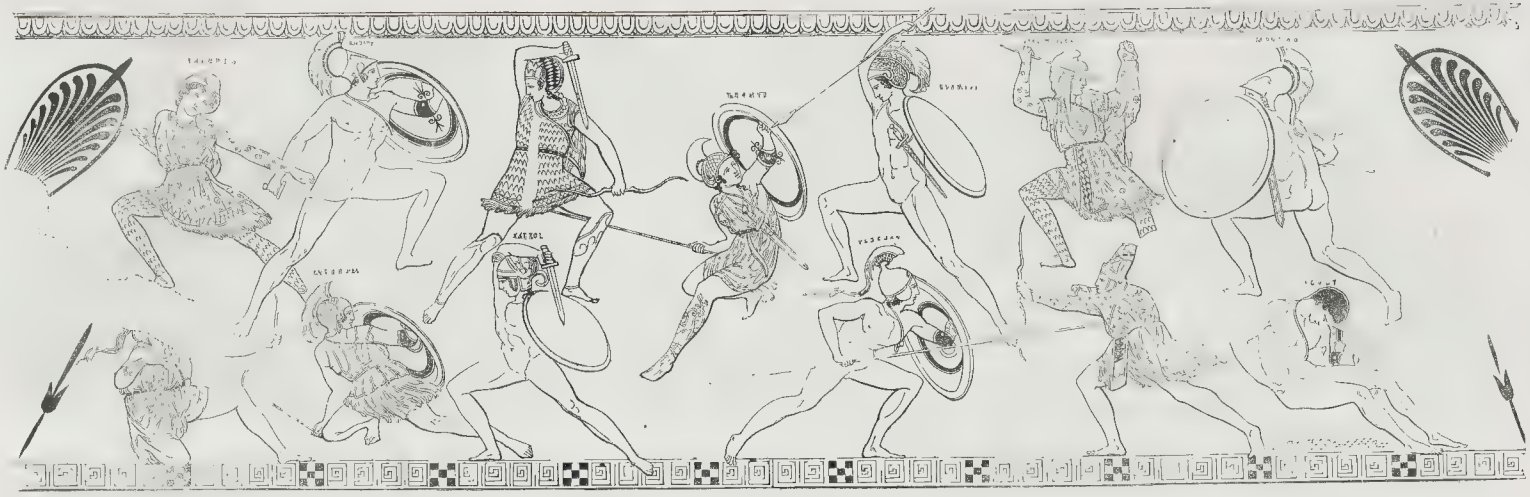
(*g*) Q to K 4th first presented itself as a crushing move, but was soon found to be useless; still, in reply, Black might Castle on the Queen's side and relieve themselves of all their embarrassment.

(*h*) A very troublesome move for Black, as it prevents their anticipated move of Kt to Q 4th, and renders the advance of the K R P dangerous if not fatal

(*i*) Had they played the obvious and necessary move—K to K B sq—the game would most likely have proceeded in this way—

| | | | |
|---|---|---|---|
| 24. | K Kt to K B sq | 26 Q takes R | Q takes K Kt P (ch |
| 25 Q B to Q R 3rd | R takes K B | 27. K to K sq | |
| | And Black cannot save themselves | | |

(*k*) An excellent move. Not already to see that in the advance K 3 Rook wrote safely but because it rendered the step Black relied on for extricating their Queen At to Q 8th unavailing. The merit of suggesting this happy manœuvre is due to Mr Owen If instead of it, they had played R to Q sq, Black would have recovered with Kt to Q 3rd, and have released their long-imprisoned Queen.



FIGURES UPON A VASE RECENTLY FOUND AT CUMÆ

## THE EXCAVATIONS IN CUMÆ.

*(From our own Correspondent.)*

We are glad to be enabled to report that his Royal Highness the Count of Syracuse has recommenced the excavations in Cumæ. They have been suspended for upwards of a year, and it was with the high satisfaction of the artistic world that the workmen again entered on their interesting labours on the 19th November last. The site chosen for excavation is close to the main road to Licola, and at no great distance from the wall of the city; in short, it is in the midst of the Necropolis—a field which has been so fruitful of splendid remains of antiquity within the last three years. The researches of his Royal Highness were not at first attended with any great success, as the tombs into which he entered were found to have been rifled and broken; but, on further investigation, a fragment of a vase struck his attention, by the exquisite delicacy of a figure which was drawn upon it. Would that the other fragments could be found! Orders were issued to sift the earth in the tomb, and the result was that all the pieces were found which compose another beautiful Vase which is the subject of my Illustration. In its form there is nothing either new or remarkably elegant it is of that class called "Lecythus," of which we find so many in Magna Græcia, but the great merit of this work of art consists in the delicate minuteness and the wonderful grace which distinguish the design. His Royal Highness has compared it with the splendid collection in the Museum, and is of opinion that in these respects there is nothing there to equal it. The subject of the design is not uncommon, in fact is a very favourite one, and frequently found on these fictile vases. It represents the battle between the Greeks and the Amazons, and it is somewhat of a peculiarity that, with the exception of two, where the letters are effaced, every figure has its name above it, yet inscribed so delicately, that a glass is required to read them. A glance

VASE RECENTLY FOUND AT CUMÆ

is sufficient to show the spirit, the ease, and elegance which mark the figures. There is nothing stiff or cramped: it is the flexibility of nature we look upon, and we feel almost that the combatants are inspired with life. An interesting question has been started as to what fabric it owed its birth to. It is the habit here to attribute every specimen of high art to Nola, but the distinguished antiquary Signor Fiorelli, to whom the world is much indebted for many and most valuable illustrations of art, is of opinion that this beautiful vase was made rather at Cumæ. Cumæ had undoubtedly a high reputation for its terra-cotta works. Pliny speaks of them in his "Natural History" (lib. xxxv., cap. 46), as does Tibullus in his "Elegies" (lib. iii., v. 40), not to mention other writers. The varnish, says Fiorelli, is certainly much finer and smoother than that of Nola, whilst the figures show an ease, a flexibility, and an *abandon* which it is rare to find. Superior, therefore, to the works of other fabrics, he is induced to consider that this vase was made in the city where it has been found; and of which, together with Reggio, it was said by Pliny that they "nobilitantur" such productions.

With regard to our design which gives in line the circumference of the vase the figures are all of the actual size. The second design represents the vase smaller than it is in reality; with the ornaments on the under part of the handle, and round the neck.

The height is about a palm, while the circumference is about a palm and a half.

We must not conclude this notice without acknowledging the gracious permission which his Royal Highness the Count of Syracuse accorded to us on our application, not only to inspect, but to make a drawing of, this vase,—indeed, upon all occasions that we have had to request similar favours of his Royal Highness, we have met with the same courtesy and liberality, showing that the Count of Syracuse is not only a munificent, but enlightened, patron of the arts. We are the more indebted to his Royal Highness on the present occasion, as we shall anticipate a work to be edited by Signor Fiorelli, as also the notice of the Società Archeologica.

H. W.

INCIDENT ON BOARD "THE CRUISER," IN THE GULF OF RIGA.

## THE FLYING SQUADRON IN THE GULF OF FINLAND.

IN December last the rigour of the winter was strikingly manifested on board the *Cruiser* when in the Gulf of Finland; for the accompanying pictorial evidence of which we have to thank Lieut. A. Thrupp, of that ship. The scene was sketched on the 3rd Dec., 1855, while leaving the Island of Abro, near Arensburg, in the Gulf of Riga, thermometer at 9 deg. The whole ship outside was likewise covered with ice: three times in twenty-four hours the *Cruiser* and *Archer* were forced to weigh and steam some three miles further out, to clear the ice fast closing round them. In the Sketch, the unfortunate man being carried below had vainly endeavoured to hook the cat over the bows, in doing which he became covered with ice and frozen stiff; but, on being carried to the engine room, recovered after some hours' warming. The scene affords some idea of the difficulties and dangers encountered by the Flying Squadron before they were driven from their cruising-grounds by the severity of the weather. The *Cruiser* during the previous week lost an anchor and cable, had her gig washed from the davits, tiller-ropes carried away; and, though in great danger during a heavy gale, was unable to shorten sail, from the ropes being frozen; her anchors at the bows, with all the lashings cut, still remained fast, and resisted all attempts to heave them from the side with crowbars and handspikes. In this state she left the Gulf of Riga for Faro Sound on the 9th of December—a whole day having been devoted in search of the lost anchor, without success.

## GRAND DEMONSTRATION AT SAN FRANCISCO FOR THE FALL OF SEBASTOPOL.

ON November 26th a grand celebration took place at San Francisco on the arrival of the news of the taking of Sebastopol by the Allies. At an early hour the streets were filled with persons going and coming, in preparation for the festivities of the day. The offices of the French and English merchants were all closed, while business in the mercantile portion of the city was nearly suspended. The weather was remarkably propitious. The air was clear and mild, and the sun shone brightly. No finer day could have been desired for the festival.

At ten a.m the procession formed on Market-street, near Second, and marched to South Park, where a spacious pavilion had been prepared for the banquet. The procession was very large and imposing. It included all the principal French, English, and Italian residents here. A numerous band of music preceded the long line of the Allies. The order of the procession was as follows:—

Banners of the Allies. Advanced Guard of twenty-four persons, French, English, and Sardinians. Band. American Flag. French and British Consuls. British Naval Officers. Invited Guests. Presidents of the Committees. General Subscribers.

As the procession moved on, and during the day, salutes of 21 guns and 110 guns were fired from H.B.M.'s frigate *Amphitrite*, and from the rising ground on the south of the pavilion.

The multitude assembled around a high platform which had been erected

CELEBRATION IN HONOUR OF THE SUCCESS OF THE ALLIES IN THE CRIMEA GIVEN AT SOUTH PARK, SAN FRANCISCO.

at the east or main entrance of the pavilion. A great number of elegantly-dressed ladies were present as spectators. Probably the whole number of persons on the ground at this time amounted to eight or ten thousand.

The front of the pavilion exhibited universal admiration. Over a wide arch in the centre, were the words "8th September, 1855—Sebastopol." Above these were the national arms of France and England, while Fame blew her trumpet that the world might hear. Over all were allegorical figures of the four nations—France, England, Sardinia, and Turkey—standing each other. On the arch were inscribed the names of the Generals and heroes of the Allied armies.

At the centre and rear of the platform an altar was erected, on which a pair of silver crucifix and lighted candles were displayed. Wreaths of ever-green, the flags of the Allied nations, and allegorical printings of different kinds, ornamented the remaining portions of the front of the pavilion. It was about 240 feet in length and 110 feet in breadth, and was calculated to seat comfortably at table about 3000 person. Upon the canvas roof were displayed the flags of different nations that either sympathised with the Allies or with whom the former were at peace. The Stars and Stripes, of course, appeared among the national emblems.

In spite of all these preparations, however, the grand demonstration ended most unfortunately. Before the dinner was fairly over an attack was made by a gang of "rowdies" upon the Mishkoff Tower, and in a short time the banquet-hall was seen a scene of confusion, as will be seen from the description given by the *Gateshead Chronicle*:—

The tables broke down by the weight of those who stood upon them. Plates and bottles were carelessly smashed, and their contents scattered on the ground. The handsome lamps on the posts and the wreaths of flowers were broken and torn down. Nobody sat still on his seat; everybody mounted on the tables, to see what was going on. The great mass of the company seemed to have no feeling but regret at the abrupt and unforeseen termination of the banquet, and deep indignation at the shameful conduct of the blackguards who had caused the interruption. Noise, confusion, and strife—the most depraved and hideous rowdyism—ruled supreme. A great many—some hundreds, it was said—vagabonds and loafers, cut holes in the side of the pavilion, and thus made themselves "at home." Others, of the same class, burst past the door-keepers, and defied all attempts to exclude them. These fellows increased the din and confusion so much that it was impossible to proceed with the banquet; and, after unavailing attempts had been repeatedly made to restore order and peace, the company gradually withdrew from the pavilion. At one period there were nearly 3000 persons assembled within the pavilion.

At about four o'clock the greater portion of the company had left the pavilion. A band of nearly a thousand persons—principally Frenchmen—then marched in procession through the city, bearing the flags of the Allied Nations. There was no rowdyism about these men; they marched soberly and gravely through the streets to the British Consul's, where they gave three hearty cheers for one and all of the Allies. It was understood that they next were to pay the same compliment at the French Consulate.

On the same evening a procession was formed which marched out to the residence of the Russian Consul, to salute him. It was preceded by a band of music. The American and Russian flags were twined together and borne in the procession. The crowd, numbering thousands, went to the Consul's, where speeches were made in praise of the Lands of the Slave and the Serf, and the community of interest which exists between the great slaveholder of the North and the Land of Stripes.

## STORY OF THE SIEGE OF KARS.

ON Friday morning, the 8th inst., Dr. Sandwith, the sole sojourner in Kars who has yet arrived in England, was entertained by his fellow-townsmen at Hull to a public breakfast at the Station Hotel. The Mayor (A. Bannister, Esq.) occupied the chair, and there were present a large number both of ladies and gentlemen. After the usual loyal toasts the Mayor proposed the health of Dr. Sandwith, jun. Three enthusiastic cheers were given for Dr. Sandwith. On the applause subsiding,

Dr. Humphry Sandwith, jun., said: Mr. Mayor, ladies and gentlemen,—When, not long ago, I first set out from the town of Hull to seek my fortune in a distant land, high as were my anticipations, I never dreamed of the honour which awaited me on my return home. Gentlemen, my heart is full, but my tongue is feeble and inexperienced (Cheers.) To you, Mr. Mayor, and those gentlemen who have planned this banquet, my thanks are chiefly due for the high honour that has been done me, and the pleasure you have afforded me in meeting so many of my fair countrywomen, whose bright eyes and fair complexions I have but dreamed of for the last seven years (Cheers and laughter), and whom at one time I never hoped to see again. It is scarcely necessary for me to notice the delicacies spread out before me, when but a few weeks ago I was taking a portion of a poor cavalry horse. Gentlemen, I can do little more than repeat my thanks for the honours you have this day conferred upon me (Cheers). But I cannot accept them as merely given to myself. I cannot forget my gallant old chief (cheers)—who, indeed, has not had a city never lost a battle (Continued cheering) who, although in one sense unfortunate, has crowned his honoured head with unfading laurels, and I think, therefore, you will agree with me when I say that at the top of that list of glorious heroes which this war has called forth the name of General Williams ought to predominate. Only those, perhaps, who have been with him during the whole of that campaign, disastrous as it may have been in one respect, yet glorious and advantageous in this—that we may say it has saved Asia Minor (Cheers)—only those, I say, who have been with him, and have been enabled to follow his course step by step, and to watch him day by day, can rightly understand the difficulties he has had to encounter (Cheers). When we first went to Kars we found the army at Erzeroum, a mere rabble. Not one man could fight upon a brave and long-suffering ally; but we cannot disguise the fact that the army to which we went had been beaten five times, and that the last battle had been the most disastrous of all. When General Williams joined that army he did so simply as her Majesty's Commissioner, and not with any authority as a General; he had not the command of a single regiment in the field; his duty was simply to report the course of events to his Government. But General Williams was equal to the circumstances in which he found himself placed (Cheers). He found the army dissolved, and the enemy at the very gates of the province (Hear), and pestilence among the officials (Cheers). He at once told the Governor and the officers that they were enriching themselves at the expense of the troops, and he told them so in language as plain as that I now use to you (Hear) They crouched to him, and from that time he was the actual Commander-in-Chief (Cheers). During the winter of 1854, and during 1855, his work was incessant; he prepared the army for a new campaign; but unfortunately for it, and unhappily, he was not backed up at Constantinople. The Pachas were too busy in filling their coffers to meet General Williams's requisitions; but, nevertheless, this brought out the qualities of the hero of Kars more than ever, and he made the best of the resources he had (Cheers). General Mouravieff, at the head of a well-appointed army of 40,000 men, was just then preparing to besiege Kars. We were at that time at Erzeroum. Colonel Lake had gone on a mission before to Kars, and had greatly improved the ancient fortifications which he found; and, by Captain Thompson and Major Teesdale aiding him, they made that city what it has proved to be—impregnable to all but famine (Loud cheers). Four forced marches over a distance of more than one hundred miles brought the army of Kars round the troops no longer what they had been—poor, neglected, destitute, ragged men; but their eyes were filled with courage and their hearts full of "Veshams Pacha," whom they recognised as their commander. They told us at every step that they would stand by their last man, and I need not tell you how well and nobly they redeemed their word. For some few days we were menaced, but saw nothing of the Russians. On one occasion Colonel Lake and myself did venture to go and take a peep at them. It was early one morning, and that morning reduced me to my first experience of actual warfare, although I had gone through a campaign on the Danube. We set out before daylight. We rode for five or six miles to our outposts, which consisted of about 300 miserable cavalry. While taking a peep at the formidable Russians, my eyes were attracted to a dark body looming through the gloom which appeared to be bearing down upon us. We watched them carefully, but they appeared to disperse. Nevertheless, Colonel Lake deemed it advisable to commence a retreat, and accordingly the Commander gave the words "Trot," "Canter." We had not proceeded far before three whole regiments of Russian dragoons, swept like a whirlwind down upon us. There was the crash of the carbines and the clash of swords, and they cut our little force to pieces, though, thank God! I am here to tell the story, but very few escaped to tell the tale ("Hear, hear," and sensation). A few days after the day's incident, the alarm gun from the top of a battery was fired, and the word passed from mouth to mouth, "The foe, the foe!—they come!" (Hear, hear). We sallied out from our intrenchments, but from the open camp that surrounded our breastworks, and then we saw a compact body of men, their bayonets gleaming in the morning sun, their flanks protected by cavalry and artillery—there, I say, we saw them arrayed in order of battle against our breastworks. Every soldier there said, "Thank God, they have come at last! We are ready!" (Cheers.) I must tell you that at this time our total force was about 17,000, including a great number of irregulars: the enemy's force was 40,000 (Hear, hear). As the huge body came nearer we pushed out our irregular cavalry, who were met by the Cossack irregular cavalry of the Russians. Their masses came on, and made a rush upon the extremity of our works, where they were met with a hailstorm of grape. Our cavalry sallied out and met the advancing columns, and on all sides raged the fate of war (Cheers). The battle lasted but a short time—three hours at the utmost—and then the Russians retreated (Great cheering). Unluckily, we had no effective cavalry, or that might have been the first and last affair at Kars (Renewed cheers). We were long to tell you what followed. We had work enough to do, I can assure you (Hear, hear). Day after day, week after week, passed without any succours showing themselves, and without any reassurance being forthcoming. Nevertheless, the hearts of the troops were the right stuff (Cheers). The Turkish soldier stood out wonderfully (Hear, hear). General Williams at that time was constantly with the Turkish Marshal in command, and he said, "Now we are fairly and completely inclosed on all sides. You are here as Commander-in-Chief not only of the army but of the town and fortress, and I am here to give you advice." He still remained without any nominal command, but he was actually, *bond fide*, and absolutely, in command. We had at that time a large portion of the population dissected towards us, namely the Christians—and a very good reason they had, I am sorry to say, for it—for they had undergone ages of oppression at the hands of unworthy Governors and Pachas (Hear, hear). We had, besides, traitors in the camp; and all these things occupied the attention of the gallant General Williams. However, measures were instantly taken for the repression of these (Hear, hear). Week by week rolled on, varied only by an occasional skirmish, an occasional feint, or an occasional slight attack. Still there were cavalry spirits who counselled surrender; and, completely surrounded as we were by our poor, starved, unpaid soldiers, many of them gave way and deserted. General Williams at once adopted strong measures. Every soldier caught attempting to desert was tried by drumhead court-martial, and shot on the spot. Every man found communicating with the enemy was at once hung. But, gentlemen, abridgter day was dawning for us, another glorious triumph was to be ours. On the 29th of September, when our troops were given way under the hope deferred which maketh the heart sick—on the 29th of September, shortly after the sun had risen, the roar of artillery was heard on the western extremity of our works intermingled with the rattle of musketry. We knew then what had happened. We knew from the constant roll of musketry and the incessant roar of the artillery that the long-looked-for assault had come. And we thanked God in our hearts, and each man buckled on his sword and rushed into the midst of the fray (Cheers). Seven mortal hours those poor troops fought against the enemy, while he made assault after assault. Some of our batteries were carried, but through

out; and, after the melancholy specimens of restoration which we have lately seen in Pall-Mall East, we should be afraid of their still more speedy extinction. With regard to the ownership of the Cartoons and other valuable productions of which we propose a transfer, if the nation has a delicacy about asking the Queen for their possession, the difficulty could be got over by presenting the Queen with the National Gallery, which would be henceforth the Queen's Gallery or Royal Gallery.

We have not space to enumerate in detail the pictures which might be utilised in the sense of both proposals: we content ourselves with a cursory glance at the catalogue.

No. 1 is sat down to Giulio Romano, being a reproduction of Raphael's Victory of Constantine over Maxentius—a great subject greatly treated by the greatest of all masters. But this is certainly not a copy by Giulio Romano. A good print of the subject would be infinitely more agreeable, and at the first item we see the truth of the statement that Hampton Court contains the refuse of other galleries.

The Venetian school is perhaps best represented at Hampton Court. In No. 321 we have an interesting specimen of Gian Bellino, who was to Venetian art what Pietro Perugino was to Roman, and whom we may pronounce to be the greatest of the pre-Titianites. We have in 70 and 152 interesting specimens of Pordenone, one of the greatest of the earlier Venetian artists, just after the full emancipation of Italian art from Byzantine hardness: the latter a portrait of himself and family, and, thus doubly interesting from its subjective character, would be a decided addition to our national collection, already rich in other Venetians. No. 68, a sculpture by Bassano, belongs to the same class.

Giorgione is no doubt well represented in the National Gallery, for we cannot avoid agreeing with Dr. Waagen in thinking the fine "Venetian Musical Party," with its tone of Rosso-ardito, to be a most unmistakable Giorgione, unless Titian performed a *tour de force* in imitating an artist who, however sympathetic, was not his equal. The "Warrior in Armour," by Giorgione, at Hampton Court, from the collection of Charles I., is certainly a fine picture, but in very bad condition, and would need restoration. There is also a woman's head, with a green garment, from the collection of Charles I., ascribed to Sebastian del Piombo, which has extraordinary merit, and, by whomsoever painted, is an admirable picture. On the other hand, the Paul Veronese (No. 72) is manifestly spurious, and ought to be consigned without delay to the lumber-room.

Hampton Court abounds in Riccis (Nos. 107—111), works of the false Paul Veronese, and specimens of what mere mimicry of a great manner can reduce a school to. The Riccis were the decline and death of Venetian art. These pictures are as a corpse to a living body; the features are unmistakable, but the vital powers are extinct. We should, nevertheless, like to see a couple of specimens in the National Gallary as foils to their predecessors, completing the illustration of the rise, fulness, and decline of the great Venetian school.

There are some fair specimens of the Italian sei-cento, worthy of a place in our Italian collection for themselves; for instance, No. 51, "Augustus and the Sibyl," by Pietro da Cortona, a pleasing artist of the decorative school, although certainly not meriting the pompous and pinning title conferred upon him by his flatterers, "Corona dei Pittori." As a clear and very pretty specimen of the silver tone of the seventeenth century, which the Le Sueurs, the Champagnes, and the Knellers so gloated on, we may mention No. 165, "Joseph and Potiphar's Wife," by Orazio Gentileschi, which, like many works of the Realisti, is not in the conventional costume of Biblical history, but modern Italian. The "Luca Giordano," in this tone (467—473), appear to us of so slight value as to be scarcely worth room, except as illustrations of this secondary name.

In the Northern schools we have several specimens of Durer and Holbein. Of the latter the interesting portraits of his father and mother, which have no immediate connection with the English historical series, would fill up a vacuum in our very scant representation of the German schools. We may say the same of No. 368, a Sorceress, by Adam Elzheimer, who is the link between the Durers and Holbeins of the early part of the sixteenth century, and the Sandrarts and Netchers of the latter part of the seventeenth century. We cannot say that the "Sorceress" enchants us; but we remark that there is in the National Gallery no specimen of the artist who, during the Thirty Years' War, with all its disasters, sought, as Joachim says, "to seize the fugitive muse of painting by the skirt."

Of the Dutch and Flemish there are many curious specimens; but we may begin with pronouncing No. 134, a Madonna and Child, by Mabuse, to be unmistakably spurious, and giving no idea of this truly great master, who, in the felicitous expression of ingenuous devotion, yields only to Quintin Matsys among the elder Belgians. Of Gerard Honthorst, who, next to Rubens and Vandyke, was the favourite painter of the Court of Charles I., there are several specimens which might be transferred to the National Collection; for instance, No. 252, "Singing by Candlelight," in Gerard's most celebrated and successful manner, but in miserably bad condition, and needing a restoration by a skilful hand. Several pictures of this class by other artists are exceedingly curious: such as No. 56, "The Family of Solomon de Bray, represented as Marc Antony and Cleopatra." There is no specimen in the National Gallery of this master, who was the fellow-countryman and contemporary of the principal Dutch artists of the seventeenth century.

One of the best of the Dutch school at Hampton Court, and worthy of a most prominent place in the English or any great gallery of European art, is No. 102; a portrait ascribed to Vander Helst; but on this point we do not pretend to speak confidently. Of one thing we are certain, that it is one of the most beautiful portraits in England, of a fine golden tone, and combining elaborate finish with tranquillity of effect.

Of portraits of other schools there are several, which might either be classed in the historical series, or belong to the National Art Collection, such as the portrait of Philip IV., by Velasquez; that of Louis XIV. by Mignard; and the still finer and more remarkable portrait of Louis XVI., by Greuze: trebly valuable from the melancholy interest of the subject; from the renown of the painter, who, living in an age of mannerism, painted after nature; and from the great scarcity—we might almost say dearth—in England of fair specimens of the French school; which, to much intrinsic excellence, has the charm of a wonderful variety, arising from the frequent revolutions of taste, which have been as complete and surprising as those which have affected the political institutions of France. To the stately ecclesiastical style of the seventeenth century succeeded the boudoir prettinesses of the frivolous and voluptuous age of Louis Quinze. This was proscribed by the classico-republicanism of David, which, in its turn, yielded to the military anecdotical style of the Empire. This latter was, in turn, put out of vogue by the Romantic school that sprang from the poetry of Byron, and the prose of Scott and Chateaubriand, and of which the most faultless exponent has been Paul de la Roche. The Classical school has again gained ground with the sensuous harmony of Couture and Gleyre, and the austere majesty and grace of the later conceptions of Ingres. After all these revulsions, we may well say "What next?"

So much for those pictures which, having no immediate and direct connection with English history, but possessing a pictorial value, ought to eke out our general Royal or National Collection, as may be arranged with her Majesty. Many others we might have named if our article were not already too long. In our next we will take a glance at our art treasures in Hampton Court strictly related to British history, and having an illustrative value, without reference to their intrinsic artistic merits.

## *FINE ARTS.*

Modern Painters. Volume III. By John Ruskin, M.A. Smith, Elder, and Co.

The certain amount of success or tinsel éclat which has hitherto attended this voluble writer has always been to us a matter of mystery, involving something of inconsistency. The sale which his volumes, published at a high price, have commanded, proves that there is a large portion of the public who are desirous of cultivating a knowledge of the arts; whilst the readiness with which his extravagant dogmas have been received as canons, and his pedantic conceits accepted as eloquence, proved how very little knowledge of the subject there was amongst his readers. Mr. Ruskin has written with the boldness of one who knew none of the difficulties and dangers of the ground upon which he trod; with fluency, because he was wholly uninfluenced by the opinions—he would call them prejudices—of those who had hitherto been acknowledged as useful labourers in the same field.

In other words, Mr. Ruskin, when he began to discuss the merits of "modern painters," and to compare them with the old masters, ten years ago, had no notions of art, except what might be supposed to come from inherent impulse, and he succeeded in entertaining a very large circle of art-aspirants, who knew no more about the matter than himself. Is it a wonder that, whilst professor and pupil were in the same blissful state of ignorance, they got on very well together? It had been well if Mr. Ruskin had ended as wise as he began, for *certes*, "a little knowledge is a dangerous thing."

Our author, in his preface—which he tells us, being all about himself, "no one need be at the trouble of reading," unless he likes—has very candid upon this point. Accounting for the ten years' delay which has taken place in the production of the present volume, he says:—

> The first and second volumes were written to check, as far as I could, the attacks upon Turner, which prevented the public from honouring his genius, at the time when his power was greatest. The check was partially given, but too late; Turner was seized by painful illness not long after the second volume appeared; his works, towards the close of the year 1845, showed a conclusive failure of power; and I saw that nothing remained for me to write, but his epitaph.

The modesty of this needs no comment. Fortunate Turner, in the decline of your splendid career, to have a Ruskin for a champion! Then, after a sneer at the hollow farce of a public funeral at St. Paul's, our author goes on:

> But, with respect to the illustration and preservation of those of his works which remained unburned, I felt that much might yet be done, if I could at all succeed in proving that these works had some nobleness in them, and were worth preservation. I pursued my task, therefore, as I had at first proceeded, with this only difference in method—that, instead of writing in continued haste, such as I had been forced into at first by the urgency of the occasion, I set myself to do the work as well as I could, and to collect materials for the complete examination of the canons of art received among us.
>
> I have now given ten years of my life to the single purpose of enabling myself to judge rightly of art, and spent them in labour as earnest and continuous as men usually undertake to gain position, or accumulate fortune. It is true, that the public still call me an "amateur;" nor have I ever been able to persuade them that it was possible to work steadily and hard with any other motive than that of gaining bread, or to give up a fixed number of hours every day to the furtherance of an object unconnected with personal interests. I have, however, given up so much of life to this object; earnestly desiring to ascertain, and be able to teach, the truth respecting art; and also knowing that this truth was, by time and labour, definitely ascertainable.

Mr Ruskin's error appears to be in supposing that to imbibe a thorough appreciation of art only requires the inclination and time to bestow upon the pursuit; that natural bent and intellectual capacity for the purpose are not essential. And yet in another part of his book, in a fit of very sublime fervour, he says:—"*Greatness in art is not a teachable or gainable thing, but the expression of the mind of a God-made man.*"

Then, to return to his preface, he goes on to say:—"There are laws of truth and right in painting, just as fixed as those of harmony in music, or of affinity in chemistry. *Those laws are perfectly ascertainable by labour and ascertainable no otherwise.*" Yet, on the other hand, later in his work, talking of the "God made supremacy" of "great men," he says:—

> The great men never know how or why they do things. *They have no rules—cannot comprehend the nature of rules*,—do not, usually, even know, in what they do, what is best or what is worst, to them it is all the same; something they cannot help saying or doing—one piece of it as good as another, and none of it (it seems to them) worth much. The moment a man begins to talk about rules, in whatsoever art, you may know him for a second-rate man; and if he talks about them *much*, he is a third-rate, or no artist at all. To this rule is no exception in any art.

There is an inconsistency here which we will not attempt to reconcile. We return to our preface again, where Mr. Ruskin informs us that he by ten years' "labour" thoroughly mastered all the rules and laws of art, insomuch that:—

> Although it is not possible but that in the discussion of so many subjects as are necessarily introduced in the following pages, *here and there a chance should arise of minor mistakes or misconception*, the reader need not be disturbed by the detection of any such. He will find always that they do not affect the matter mainly in hand.

And again:—

> And of one thing he may be certified, that any error I fall into will not be in an illogical deduction: I may mistake the meaning of a symbol, or the angle of a rock-cleavage, but not draw an inconsequent conclusion. I state this, because it has often been said that I am not logical, by persons who do not so much as know what logic means. Next to imagination, the power of perceiving logical relation is one of the rarest among men: certainly, of those with whom I have conversed, I have found always ten who had deep feeling, quick wit, or extended knowledge, for one who could set down a syllogism without a flaw; and for ten who could set down a syllogism, only one who could *entirely* understand that a square has four sides.

When a man asserts his pretensions after the fashion it is an ungracious task to argue with him. We, in the notice which follows, shall not attempt to do so: we have given Mr. Ruskin's own account of his gifts and accomplishments; and now, in referring to some of his statements about art, shall be content, in great measure, to let them speak for themselves.

After Mr. Ruskin's ten years' study of art one might have expected to have from him some reference to the writers who have hitherto been acknowledged as authorities on the subject, and some observations upon the points wherein he differs from, or agrees with, them. But not so, on the contrary, he writes as if the subject were an entirely new one, upon which nothing worthy of a moment's attention had ever yet been written. In his first chapter, on "the received opinions touching the grand style," he talks of his inquiry as of a "*journey in a guideless country;*" the only authorities he cites on the subject being three papers by Reynolds, printed in the *Idler*, in 1767, and which he quotes at great length, only for the purpose of showing how "our author" had "entangled himself in some grave fallacy," and how, in consequence, he wrote egregious nonsense. In the chapter on "Purism" we are told how "poor *fundatory* Fuseli, with an art composed of the tinsel of the stage, and the panics of the nursery, speaks contemptuously of the name of Angelico as 'dearer to sanctity than to art.'" And in these two notices, with the addition of a passing sneer at "the affectations of Walpole," and "the simplicities of Vasari," we have almost the sum of what reference Mr. Ruskin condescends to make to the art-literature of Europe.

Of the general ignorance which has prevailed, and still prevails, amongst writers on art, he speaks very freely; as, for instance:—"*I cannot remember any writer*, not professedly artistic, who has not, more or less, in one part of his book or another, countenanced the idea that *the great end of art is to produce a deceptive resemblance of reality.*" Whereas, we cannot remember any writer of any pretensions or repute in the matter who held so ridiculous and derogatory a notion. And then he deals a slap at the critics, deprecating "the ignorance of persons whose position in life compels them to speak of art without having any real enjoyment of it." Yes!—true knowledge and enjoyment of art are combined for the first time in the "Graduate of Oxford"; and not a little startling are the *dicta* which he propounds. Time was that Raphael was considered a great painter, and, of all the painter's attributes, to be master most in point of expression. Mr. Ruskin triumphantly explodes this fallacy. The celebrated cartoons did not represent "either historical or possible fact."

> They were, in the strictest sense of the word, "compositions"—cold arrangements of propriety and agreeableness according to academical formulæ; the painter never in any case making the slightest effort to conceive the thing as it really must have happened, but only to gather together graceful lines and beautiful faces, in such compliance with commonplace ideas of the subject as might obtain for the whole an "epic unity," or some such other form of scholastic perfectness.

The cartoon of the "Charge to Peter," for instance, is denounced as "an infinite monstrosity and hypocrisy;" "all a mere mythic absurdity, and faded concoction of fringes, muscular arms, and curly heads of Greek philosophers;" full of "vapid fineries" As for the far-famed "Transfiguration," it is a mere farrago of "kicking gracefulnesses"

On the other hand, "the chief masterpieces of expression which the world possesses are small pictures by Angelico, in which the figures are rarely more than six or seven inches high;" and Hunt's "Light of the World—a cold, fantastic, melancholy production, which some of our readers may recollect seeing in the Royal Academy Exhibition some three seasons back, representing a single figure of Christ knocking at a door—is pronounced by our infallible author to be "*the most perfect instance of expressional purpose with technical power which the world has yet produced*"—in short the finest picture that ever was painted.

We almost feel that apology is due to our readers for reproducing such stuff as this; but the comfort is that it carries its own antidote with it. We are sure also that, after the above specimens, we shall not be expected to follow very closely this author in his rambling rodomontade theories; in which there is much more about theology, metaphysics, poetry, geology, botany, political economy, and every other possible subject, than about painting. It may be satisfactory to the pre-Raphaelites to know that they have still a champion in this flashy author who predicts the first perfection of great art to come at their hands. "Religious art, at once complete and sincere, never yet has existed," we are told; but

> It will exist: nay, I believe, the era of its birth has come, and that those bright Turnerian images which the European public declared to be "deluge," and those calm pre-Raphaelite studies which, in like manner, it pronounced "puerility," *form the first foundation that has ever been laid for true sacred art.*

How we are to reconcile Turner's wild "God-made supremacy" with the minute pattern-cut detail of the pre-Raphaelites, we will not stop to inquire. We must hurry on quickly to the end, glancing only at one or two prominent passages, if we would not become as mad as our author. In a chapter on the grotesque ideal we are treated to an elaborate comparison between a "true" griffin of Mediæval art and a "false" griffin, of Classic art, ending thus conclusively:—"So that, taking the truth first, the honest imagination gains everything: it has its griffinism, and grace, and usefulness, all at once. But the false composer, caring for nothing but himself and his rules, loses everything—griffinism, grace, and all."

A chapter "of the use of Pictures" the author opens with a quaint reverie on the biped character of "useful truths".—

> I am afraid this will be a difficult chapter; one of drawbacks, qualifications, and exceptions. But the more I see of useful truths, the more I find that, like human beings, they are eminently biped; and, although, as far as apprehended by human intelligence, they are usually seen in a crane-like posture, standing on one leg, whenever they are to be stated so as to maintain themselves against all attack it is quite necessary they should stand on two, and have their complete balance on opposite fulcra.

In what follows we are told that "poets and men of strong feeling are apt to be among the very worst judges of painings." A comparison is instituted between the beauty of a real landscape seen from a window and a picture of the same; and, after enumerating five of Turner's landscapes, the author writes:

> None of these things are bad pieces of art; and yet,—if it were offered to me to have, instead of them, so many windows, out of which I should see, first the real chain of the Alps from the Superga; then the real block of gneiss, and Aiguilles-Rouges; then the real towers of Fribourg, and pine forest; the real Isola Bella; and, finally, the true Mary and Elizabeth; and beneath them, the actual old monk at work in his cell,—I would very unhesitatingly change my five pictures for the five windows; and so, I apprehend, would most people, not, it seems to me, unwisely.

A position which, we submit, would alone be sufficient as evidence that Mr. Ruskin, with all his ten years' "labour," actually knows nothing about the genius and province of art.

Mr. Ruskin indulges some peculiar notions on the subject of colour; he talks of the "sacred element of colour;" and considers that bright colours are inseparable from true religious fervour, and that dark and mixed colours are a conclusive proof of "want of faith" and "darkness of heart."

> For instance (he says), our reprobation of bright colour is, I think, for the most part, mere affectation, and must soon be done away with. *Vulgarity, dulness, or impiety, will, indeed, always express themselves through art in browns and grey*, as in Rembrandt, Caravaggio, and Salvator; but we are not wholly vulgar, dull, or impious; nor, as moderns, are we necessarily obliged to continue so in any wise. *Our greatest men, whether sad or gay, still delight, like the great men of all ages, in brilliant hues.*

Here we will stop. We have cited enough from this very original and modest writer to establish the measure of his pretensions to the satisfaction of all who know or care anything about the matter. If his writings on art were at first a mystery to us, they now turn out to be "a mistake."

*NEW BOOKS, &c.*

Illustrated Gift Book, price 8s. 6d., richly gilt,
**TREASURES in NEEDLEWORK.** By Mrs. WARREN and Mrs. PULLAN
"The best ideal of a present to young ladies."—Stamford Mercury

# THE ILLUSTRATED LONDON NEWS.

No. 786.—VOL. XXVIII.] SATURDAY, FEBRUARY 23, 1856. [WITH A SUPPLEMENT, FIVEPENCE.

## THE CONFERENCES OF PARIS.

A WEIGHTY task has devolved upon the men who are within a few hours to assemble in Paris, to regulate the affairs of Europe. The interests of the civilised world are in their keeping. If they be true to their trust, and if the peace which they seem resolved upon making shall be honourable and stable, their names will live in the grateful recollection of the present and a future age. If by incapacity, or treachery, or unworthy weakness of any kind, they patch up a hollow truce, and dignify it by the name of a permanent peace; if they sacrifice the rights of any nation, or omit any opportunity to affirm and strengthen the great principles of eternal justice, upon which societies and communities exist in themselves, and with relation to their neighbours; their names will deserve the opprobrium of history. A great opportunity lies before them. Let them not neglect it, or, like Tarquin, who "bought a minute's mirth to wail a week," they will, for the sake of avoiding a little present embarrassment, incur infinitely greater peril at a future time. He who roofs a dilapidated powder-magazine with burning-glasses may keep out the rain and wind of the winter, but takes no precaution against the summer sun; and the sailor who stops a leak in his ship with shavings and sawdust, and foolishly imagines that he shall ride safely into port, will discover his folly, when, clinging to his last plank, he looks vainly around him for a rescue. To allow Russia to escape from any of the just penalties of the war which she provoked, and in which she has been so signally worsted;—to have brought about her humiliation without taking sufficient security against her renewed aggression, is to sacrifice a thousand to-morrows at the shrine of to-day.

It is for the representatives of Great Britain and France to be just above all things. Russia will, of course, endeavour to hold her own; and Austria will in all probability plead for a generous treatment of the vanquished; but the questions to be decided are not merely Russian and Austrian, but European. They relate not only to the past, but to the future. If they be not discussed in the proper spirit by the two great nations who have borne the brunt of the battle, and who have achieved by their arms the victory denied to their peaceful remonstrances, these nations will but perform the work of Sisyphus. They will have rolled up the huge stone to the top of the hill, only to see it roll down again. But more unhappy than Sisyphus, who had immortal strength for every fruitless exertion, each of their future attempts will be weaker than that which preceded it, and the stone which they do not fix may fall upon them and crush them in its rebound.

The Four Points formulated at Vienna, and accepted in good faith by Great Britain and France, no less than by Russia, meet the immediate danger which produced the war. They seem to include all that is absolutely necessary for the security of the Turkish empire against the aggression of the Czars. Yet there are not wanting thousands of able and clear-sighted politicians, who would have been better satisfied if the terms of pacification had included the payment by Russia, of the expenses to which the Sultan has been put in the defence of his territories, and the whole cost of the Turkish fleet so treacherously destroyed at Sinope. Perhaps this question is held in reserve? But, whether it be so, or not, the Four Points appear to be sufficient to render any Russian assault upon the Ottoman empire an impossibility for the present, and an improbability for the future. So far there is reason to be satisfied with the concessions which Russia has made.

But the men who look upon this war by the light of a comprehensive experience—who have been able to trace it from its remote as well as its proximate causes—who have profoundly studied the history of Europe, and who are well acquainted with the aspirations and passions which agitate the several nations of the European system—who have at length awakened to the conviction that the politics of the Old World are intimately and indissolubly connected with those of the New, and that Christendom is a somewhat wider term in its relation to politics than it was in 1815—are deeply convinced that the question at issue is not merely a Turkish one. To them the vague, unformulated Fifth Point is more important than all the rest. In the abortive Conferences of last year the Third Point was the

THE CONFERENCES AT PARIS.—HOTEL OF THE MINISTER FOR FOREIGN AFFAIRS.—(SEE NEXT PAGE.)

stumbling-block. In the Conferences of Paris the Fifth Point will be the *pièce de resistance*. The Four Points are already agreed upon in principle; and may be speedily energistered as binding and completed documents—signed, sealed, and delivered. But the Fifth Point will be the test of the statesmanship of Great Britain and France. Within its comprehensive or exhaustive circle the interests of all Europe are included. If the presumed necessities of the Russian Czars force them to encroach upon their neighbours; if they crave possession of an oceanic seaboard; if they look upon themselves, or are looked upon by smaller despots in Central Europe, whether German or Italian, as the representatives and upholders of a particular form of government with which popular freedom is incompatible—it is for the statesmen of Great Britain, more especially, to remember at this critical hour of European history how great an example England has set to the world. It is for them to consider with what confidence the Germans, the Italians, the Poles, and the Hungarians, look to the British Isles to keep alight the sacred flame of Popular Liberty, and not to suffer it to be quenched in the malaria of Despotism. The interest of all Europe is that Russia should prosper within her own boundaries, with such form of government as best pleases or suits her own people, if she will but leave other nations to do the same. Russia must not only cease to absorb the territories of her neighbours, but to dictate to them what form of government they shall adopt. These, and a thousand other considerations, lie within the compass of the Fifth Point. The more thoroughly they are foreseen and settled, the more stable will be the peace which all men hope will spring from the deliberations of the Conferences.

## HOTEL OF THE MINISTER OF FOREIGN AFFAIRS AT PARIS.

THIS Hotel, one of the most recently-erected of the public buildings of Paris, and a fair specimen of the handsome style of the official edifices of that city, possesses considerable interest at the present moment, as the place for the holding of the Peace Conferences

This splendid pile is situated on the Quai d'Orsay, close to the Palace of the President of the Legislative Body. The first stone was laid in 1845, by M. Guizot, and thither the offices of the department of the Minister of Foreign Affairs (embracing correspondence with foreign powers, political and commercial treaties, conventions, passports, &c.) were transferred in September, 1853.

The entire Hotel has cost five millions of francs. The principal front, shown in the Engraving on the preceding page, is on the Quai d'Orsay, and consists of two pavilions connected by an intermediate body composed of a ground floor and upper story; the former of the Doric and the latter of the Ionic order. The windows have small balconies, and are surmounted by medallions, the fields of which are of grey marble. An unbroken balustrade runs along the roof. The whole of the façade is profusely sculptured. The western pavilion is connected by a terrace with a somewhat plainer building, which reaches to the Rue de l'Université, containing the offices of the Ministry.

## *FOREIGN AND COLONIAL NEWS.*

### FRANCE.

*(From our own Correspondent.)*

PARIS, Thursday.

THE health of the Empress continues so excellent as to encourage in the highest degree the hopes of a safe and easy confinement. Last week her Majesty attended in an open carriage at the hunting party in the forest of St. Germain, and remained out nearly the whole day. Since then she has accompanied the Emperor to visit the orphan asylum founded under her especial patronage in the Faubourg St. Antoine, and examined all the details and arrangements of the interior.

The following fact is significative:—Some time since one of the first upholsterers in Paris received an order to make a table for the Conferences about to be held capable of accommodating ten persons, and nine *fauteuils* were at the same time commanded. A few days later a tenth was ordered, and directions were given that four more should be made and kept in readiness in case of their being required; and that a leaf should be added to the table to render it sufficiently large to serve at will fourteen persons.

Great and numerous fêtes are said to be in preparation for the celebration of this occasion. Already various foreigners—Russians among the rest—have taken measures to secure habitations—a circumstance which will doubtless have the effect of again raising the prices of lodgings already extremely dear. A distinguished artist, M. Adolphe, is charged by the Government with a commission to make a picture introducing the portraits of the various diplomatic personages engaged in the negotiations about to be entered upon.

From almost all the provinces arrive the happiest and most encouraging reports relative to the agricultural prospects of the country. It is said that in some parts they have not been so brilliant since the year 1826. The steadiness of the temperature has brought on all the crops gradually and naturally: the grain is magnificent, the vines vigorous and healthy, and nearly all the other products in an equally promising condition. It is even said that, should the late frosts—generally so much to be dreaded—arrive, the state of the ground would preserve the most important crops from suffering any serious damage, and that only the fruit-trees and the colza would have to fear from their attacks.

The new uniform of the Cent-Gardes is, it appears, decided upon, and promises, by the arrangement of colours, to be as ugly as can well be conceived. The amaranth which now forms one of the two colours that composes it is to be suppressed entirely; the trousers are to be garance (a dull brick-dust), with a gold or blue band, according to the rank of the wearer. The collar and facings are to be scarlet; the aguillettes scarlet and gold, and the epaulets of the privates garance and gold—brick-dust and scarlet coming together! Instead of the képi the *bonnet de police* is to be adopted, with gold band, and each soldier is to bear the mark of his grade in silver—the absence of this having formed the excuse of the privates of other corps for not saluting as *sous-officiers* the members of this body.

The Municipal Commission is about to proceed to the demolition of the houses in the rue des Mathurins and the rue Laharpe which immediately surrounded the Hôtel de Cluny and the Palais des Thermes—the latter, which dates from the fourth century, being the oldest monument in Paris. The Hôtel de Cluny was built in the sixteenth century. In 1842 it was purchased by the Government, and became a museum of antiquities, one of the most complete and interesting in Europe.

Several petitions from the departments request that the child to which the Empress is about to give birth shall, in the event of its being a boy, bear the title of King of Algeria. It appears that such an idea has for some time been entertained

Heinrich Heine, the celebrated German poet—one of the last, if not the last, of whose works a collection of short poems has been very felicitously rendered into English by the Hon. Julian Fane—died on Sunday, at his residence in Paris, of a malady of nearly eight years' duration.

The new arrangement in the Church respecting the adoption of the Roman, instead of the Parisian, Liturgy, and the displacing of various members of the clergy, has led to a good deal of discontent in that body, and among some of the parishes affected by the changes. A certain number of ecclesiastics have even refused to accept the new cures in exchange for the old ones they are unwillingly called upon to resign.

The Théâtre Lyrique is, it is said, about to change managers. The appearance on that stage of a version of "The Solitaire" of the late Vicomte d'Arlincourt has had not only the effect of keeping away the public, but of indisposing composers and librettists of talent from producing their works there, and even including MM. St. George, Leuven, and Clapisson to withdraw their new opéra-comique, "Fanchonette." It appears that M. Carvalle is, therefore to take the place of M. Pellegrin. Madame Sand's piece at the Gymnase, "Lucie," has had but a doubtful reception. Like most of her dramatic works, it wants interest and action; she embroiders on too slight a canvass; the finesse and delicacy of the work are almost always more or less lost in placing it before a public, who go to the theatre to be amused, and not to study traits so fine as to be almost lost in the glare of the footlights. Madame Sand is, nevertheless, engaged in writing a pantomime for the Folies-Nouvelles. This amusing little theatre has produced a most successful little piece, "Le Bras Noir." The idea is original, and the execution very effective. At the Italiens, the representation of "Don Giovanni" has been but moderately successful, owing to the indifferent manner in which it is sung. A new opera of M. Bottesini, the *chef-d'orchestre* of this theatre, "L'Assedio di Firenze," is announced for this evening's representation.

## THE PEACE CONFERENCES.

On Thursday morning last Aali Pacha, the Turkish Plenipotentiary, arrived at Marseilles in the steam-frigate *Sané*, which left Constantinople on the 13th inst.; and was expected to start for Paris that evening.

A considerable sensation has been created in Paris by the republication of an article from the *Siècle* in the *Moniteur* of Wednesday, by way of reply to the *Journal des Débats* of Monday, which had served to fill its columns filled with a discussion of the points that are to come before the Conferences. One of the principal questions taken up by the philo-Russian *Débats* was whether Circassia or should not be comprised among the arsenals on the shores of the Black Sea whose suppression will be one of the conditions of peace with Russia. Whether Nicolaieff belonged to the third or to the fifth proposition it will have to be considered by the Plenipotentiaries, and very probably one of the first. The reasoning of the *Débats* went to prove that the Allies have no right to include it in that category, and it declared in rather a decided manner that Nicolaieff could not be considered as being on the shore of the Black Sea. Indeed, the greater part of the article in question might be very advantageously employed by Count Orloff and Baron Brunnow in the discussion, and they might rest their case on a French journal of such influence as the *Journal des Débats*. The *Siècle*, which has taken a manly and patriotic view of the whole question from the beginning, seemed to feel ashamed that the cause of the Russian Plenipotentiaries should be thus defended by one of the principal journals of France. It replied, and in the opinion of most people satisfactorily, to the Russian pleadings in the *Débats*. The publication of the article of the *Siècle* in the official journal is considered not only as a corrective administered to the *Débats* through the *Siècle*, but an interpretation of a still more significant kind is given to it. The rumour goes that it was at the Emperor's express desire that the article should appear, and the publication in the *Moniteur* of the passages which insure on the destruction of Nicolaieff gives it no small importance. The discussion of the Five Points, and the advocacy of Russian interests is not confined to journals however. As on former occasions the subtle resources of feminine diplomacy have been called into requisition on the most extensive scale. The Paris correspondent of the *Globe* says:—

Considerable sensation has been excited in political circles by the active anti-English propaganda which Russian ladies of the highest rank are said to be carrying on in very high quarters, but hitherto with more activity and energy than success. It is believed, from reports which have been allowed to transpire, that these fair politicians—the chief of whom are said to be one of the daughters and the niece of Count Nesselrode—have transmitted accounts of their operations to the Russian Court, which, with sagacity, may vie with some of Prince Gortschakoff's bulletins. They are, in fact, reported to have asserted that, thanks to their manœuvring, the Anglo-French alliance was on the eve of dissolution, and it is apprehended that the Russian Court is acting in accordance with their reports—or rather misinformation. If that be really the case, there is no doubt the conduct of the French and English Plenipotentiaries at the Conferences will convince them of the sad mistake of overtrusting to petticoat diplomacy.

The correspondent of the *Daily News* gives some further particulars regarding Baron Brunnow and his lady auxiliaries:—

I believe I may say that at the present moment the intrigues of these ladies occupy no inconsiderable share of the attention of the French Government. First on the list comes the notorious Princess Lieven. Next in importance is the Baroness de Seebach, a daughter of Count Nesselrode. This lady has for a political correspondent at St. Petersburg Madame Zograffe (whose maiden designation was Princess Soutzo), the wife of the Greek Ambassador. The Princess and Baroness have under their immediate orders the following efficient and experienced staff of feminine intriguers, viz.:—Mdme. Kalergi, a niece of Nesselrode; Mdme. Mavrodi, a Russian lady, of Greek origin, possessing large property at Odessa; Madame Meyendorf, the wife of the Russian Envoy at Berlin; the Princess Ypsilante, a Greek fanatic, under Russian protection, and two ladies of the Obreskof family—one of whom is married to a French Count, and the other of whom is the wife of Prince Jean Soutzo, a Greek attaché at St. Petersburg. However high-sounding the above names may appear, I can assure you that some of them have long been on the police list of Russian spies in Paris. The present business of these ladies is to compare notes of all the information they can pick in the many political salons to which they have access, and to endeavour to ascertain how far the Emperor Napoleon really means to stand fast by the conditions which it is presumed England will insist upon, and what objections Brunnow and Orloff may venture to make in the Conferences, without the risk of breaking off the negotiations, as far at least as France is concerned.

## THE WAR IN THE CRIMEA.—DESTRUCTION OF FORT NICHOLAS.

The principal (indeed, almost the only) item of intelligence in the letter from the Camp (coming down to Feb. 8) is the report of the destruction of Fort St. Nicholas at Sebastopol. The fort, which occupied nearly the whole of the promontory of land dividing the north and south Artillery Bay, commanded the entrance to the roadstead, and swept with its guns the whole surface of the water thence to the south harbour itself.

General Codrington, in a despatch to Lord Panmure, gives the following picturesque account of the explosion:—

The scene and feeling of expectation were of great interest, for another tangible proof of power and success was to take place, and 108,000 lbs. of powder were in the mine chamber.

At the hour named a burst of smoke, dark and thick, rolled from our left of the building; it was followed by another: the heavy sound arrived, the clouds were shot into the air and into the sea; the explosions of the extreme right and centre mingled at little intervals into one drifting cloud, which veiled the destruction below.

The light of the sun played beautifully on the mass of smoke, of which the lower part lay long and heavily on the water in violins. The breeze passing it away over the remains of the town showed that a low line of ruin was all that remained of the pride of Fort Nicholas, and one standing menace of the harbour lay buried under its waves.

A despatch from Marseilles, Feb. 19, says:—

The Allies are about to complete the destruction of the Russian ships sunk in the harbour of Sebastopol. It is stated that the French Artillery has received orders on the subject.

### AMERICA.

The mail-steamer *Africa*, which left New York on the 6th inst., arrived at Liverpool on Monday morning. The most important news brought by her is the election of a Speaker of the House of Representatives. This unprecedented and memorable struggle, which had been protracted to nine weeks, was brought to a close on Feb. 2, and resulted in the triumph of Mr. Banks, of Massachusetts, the Fresoil candidate. The contest was only terminated under the adoption of the plurality rule, which the House adopted with the greatest reluctance. By an analysis of the votes it appears that Mr. Banks received the whole Republican strength except four; and that Mr. Aiken received the support of all the Democrats except two, and of all the National Americans except six. The latter eight had it in their power to elect Mr. Aiken, even if the four Independent Republicans had voted for Mr. Banks. But the result is acquiesced in by all parties, as a proper relief from the state of anarchy under which the House had been labouring.

In the Senate, on the 8th inst., the consideration of the Central American question was resumed, and

Mr. Foot, of Vermont, although not an admirer of Mr. Buchanan, took pleasure in eulogising the arguments advanced by that gentleman to sustain the views he entertained of the proper construction of the Bulwer-Clayton treaty. He regarded the reasoning of Mr. Buchanan as sound and of consummate ability. The faithful observance of the treaty required of her Majesty's Government the immediate withdrawal from any actual occupancy of, or dominion over, any portion of the Mosquito territory or sea-coast, by virtue of a pretended protectorate. The claims of England over Central America and the Bay of Islands being founded upon no right of discovery, conquest, purchase or treaty, her occupancy of the territory was, consequently, a clear case of forcible entry and detainer, and her right the same that a highwayman has to pursue an unarmed traveller. He maintained that the honour of his country, no less than its interests, demanded that they should insist upon England fulfilling her treaty stipulations. The idea of yielding to the pretensions of that Government, and allowing her to evade its plain provisions, was not to be thought of for a moment. He proposed that a direct Congressional declaration should be made of their construction of the treaty, and of their purpose to enforce the obligations resulting from that construction. If that proved unavailing, and after negotiation should have been exhausted, he would entertain a proposition similar to that suggested by Mr. Seward—namely, to give England official and formal notice that she must withdraw from her Central American occupations by a given day; if then she still held out, and disregarded their summons, he would have her removed by force of arms. Let England understand that they were in earnest about this, and that it was not a second edition of "54.40, or fight," and then backing down to 49. If, after such forbearance, war should come, let it come—they would be justified both by God and man.

The members of an Irish club recently examined at Cincinnati, on the charge of having attempted to violate the neutrality laws, have been discharged from arrest.

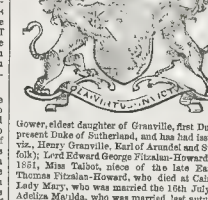
The appointment of the new American Minister to England is thus notified in the official Washington newspaper:—"George M. Dallas, of Pennsylvania, to be Envoy Extraordinary and Minister Plenipotentiary of the United States to her Britannic Majesty, in the place of James Buchanan, recalled at his own request."

The state of affairs in Kansas, at the date of the latest advices from that territory, appears to have been exceedingly alarming. A contest with fire-arms had taken place between bodies of the Kansas freesoilers and the pro-slavery invaders from Missouri, in which one of the latter was killed on the spot, and several others wounded. After this conflict the leader of the freesoilers fell into the hands of the opposite party, who, after keeping him in custody for several hours, deliberately murdered him.

## OBITUARY OF EMINENT PERSONS.

### THE DUKE OF NORFOLK, K.G.

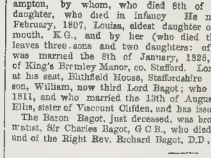
HENRY CHARLES HOWARD, thirteenth Duke of Norfolk, Earl of Arundel, Surrey, and Norfolk, and Baron Fitzalan, Clun, Oswaldestre, and Maltravers; Earl Marshal and Hereditary Marshal of England, Premier Duke and Earl immediately after the Princes of the Blood Royal, K.G., was the only child of Bernard Edward, the twelfth Duke, by his wife, the Lady Elizabeth Belasyse, third daughter of Henry, second and last Earl of Fauconberg, which marriage was dissolved in May, 1794. He was born 12th of August, 1791; and married, 27th Dec., 1814, the Lady Charlotte Sophia Leveson Gower, eldest daughter of Granville, first Duke of Sutherland, and sister to the present Duke of Sutherland, and has had issue three sons and two daughters—viz. Henry Granville, Earl of Arundel and Surrey (now fourteenth Duke of Norfolk); Lord Edward George Fitzalan-Howard, M.P., who married, the 22nd July, 1851, Miss Talbot, niece of the late Earl of Shrewsbury; Lord Bernard Thomas Fitzalan-Howard, who died at Cairo, in Egypt, the 21st Dec., 1846; Lady Mary, who was married the 16th July, 1840, to Lord Foley; and Lady Adeliza Matilda, who was married last autumn to Lord George Manners, M.P.



Henry Charles, thirteenth Duke of Norfolk, the subject of this notice, was, when Earl of Surrey, the first Roman Catholic who took the oaths and seat in the House of Commons after the passing of the Emancipation Act, in 1829. He was then M.P. for Horsham, and he afterwards sat for the Western Division of Sussex, and continued its representative up to 1841, when he was summoned by writ to the House of Lords, during the lifetime of his father, as Baron Maltravers. He succeeded to the Dukedom, on the demise of his father, the 16th of March, 1842. His Grace filled several important offices of State. In July, 1839, he was appointed Treasurer of the Queen's Household, and was made a Privy Councillor: in July, 1846, he succeeded the Earl of Jersey as Master of the Horse. He was subsequently made Lord Steward of the Household, but, soon afterwards, relinquished that place to Earl Spencer. In politics the Duke was a Whig. The Duke of Norfolk died at his seat, Arundel Castle, Sussex, on the 15th inst. He is succeeded by his eldest son, Henry Granville, Earl of Arundel and Surrey, who was born the 7th of November, 1815, and married, the 19th June, 1839, Augusta Mary Minna Catherine, youngest daughter of Admiral Sir Edmund Lyons, G.C.B., Commander-in-Chief of the Mediterranean Fleet. By this lady he has a youthful family of two sons and five daughters. He was formerly in the Royal Horse Guards, and, on his retirement from the Army, entered, in 1837, the House of Commons as representative for Arundel, which he sat for in several Parliaments. He also sat for the city of Limerick for a few months.

### LORD BAGOT

THE Right Hon. William Bagot, LL.D., F.S.A., and F.L.S., Baron Bagot of Bagot's Bromley, in the county of Stafford, and a Baronet, was the eldest son of William, the first Baron, by his wife, Louisa, daughter of John, second Viscount Bolingbroke. He was born the 11th of September, 1773, and succeeded his father, as second Baron and seventh Baronet, the 22nd of October, 1798. He married, first, the 30th May, 1799, Emily, fourth daughter of Charles, first Lord Southampton, by whom, who died 8th of June, 1800, he had an only daughter, who died in infancy. He married, secondly, the 17th of February, 1807, Louisa, eldest daughter of George, third Earl of Dartmouth, K.G., and by her (who died the 13th of August, 1816) he leaves three sons and two daughters: of the latter, the elder, Agnes, was married the 8th of January, 1829, to John Newton Lane, Esq., of King's Bromley Manor, co. Stafford. Lord Bagot died on the 12th inst., at his seat, Blithfield House, Staffordshire. He is succeeded by his eldest son, William, now third Lord Bagot; who was born on the 7th of March, 1811, and was married the 13th of August, 1851, the Hon. Lucia Agar Ellis, sister of Viscount Clifden, and has issue.



The Baron Bagot, just deceased, was brother of the late eminent diplomatist, Sir Charles Bagot, G.C.B., who died Governor of Canada, in 1843; and of the Right Rev. Richard Bagot, D.D., Bishop of Bath and Wells.

CHARITABLE BEQUESTS.—Mrs. Mary Ann Utten, of Michael's-place, Brompton, has bequeathed £100 to each of the undermentioned institutions:—The Royal Asylum; Orphan School, Clapton; Magdalen Hospital, London; National Benevolent Institution; Royal Free Hospital; and the Society Clergy Society, London. Mrs. Jane Sanson, of Coventry, £100 to the Coventry and Warwickshire Hospital; £100 to the Charity for Relief of Necessitous Clergymen, their Widows and Children, in the Archdeaconry of Coventry; and other legacies.—W. M. Nurse, Esq., £100 to the Middlesex Hospital.

WILLS.—The will of Sir Henry Every, Bart., was proved in London under £8000 personalty; William Hilton, Esq., Danbury, £80,000; Robert Hale Blagden Hale, Esq., of Coltes House, Wilts, £25,000; Charles Lamb, Esq., of Warwick, £40,000; Dame Frances Anne Wilder, £20,000; Mrs. Jane Graham, of Barnstaple, £40,000; T. J. Wiltshire, of Cornhill, gold-refiner, £14,000; Thomas Colher, of Brackley, surgeon, £12,000; [illegible] of Monument-yard, fruit-broker, £25,000; Joseph Downs, [illegible], and Price's Wharf, Lambeth, timber-merchant, £160,000. The Rt. Hon. Lord Langdale, Berncharp died intestate, leaving £9000 personalty.

The coroner's inquest on the body of Mr. S. Bell, late [illegible] Bath Abbey-yard, whose death took place [illegible] under circumstances which led to the belief that he had been murdered by some person or persons unknown.

## NOTES OF THE WEEK.

IT is satisfactory to read that in the Crimea, at least, there is no undue faith reposed in the pacific views of Russia. On the 4th the well-known Fort St. Nicholas was blown to pieces by the French engineers, in the presence of the chiefs of the armies, and of a great number of other spectators. The splendid docks are in utter ruin, and there are now only a few quays to be demolished. Russia may vaunt for many a year to come before the recollection of so signal and humiliating a chastisement can pass away. Europe admits that in regard to Sebastopol the avengers have done their work thoroughly and well. The negotiators have gathered, and it remains to be seen how much of the *fruits* of the campaign will be left to the victors when they rise from the "magnificent table" which has been prepared for the Conferences. Already we have hints of shuffling. It is to be contended, folk say, by Russia that Nicolaieff is not a fort in the Black Sea, and, therefore, is not to be affected by the propositions. Supposing an Act were procured for removing all nuisances from the Strand, and the Holywell-street Jews and venders of impure books were to contend that their street was not in the Strand, because Strand houses interpose between it and the larger thoroughfare. That is very much the case with the Russians, who would retain Nicolaieff because it does not exactly face the sea. Then, again, there is the Sea of Azoff, the "nursery" of the naval marine in the south. Is not that to be disarmed? If resistance be offered on such questions (to say nothing of the Asiatic coast, of which we hear little as yet, and in reference to which we are perhaps to stultify ourselves beyond measure), Lord Clarendon may have to send a message that will be transmitted to the Baltic squadron, now about to sail, and that will be received with the loudest cheer our gallant but baffled sailors have yet had the heart to give. The prettily-christened gun-boats may yet salute Cronstadt.

The military blunderers who have been rewarded at home are making efforts to show that they were not so culpable as people suppose; but the attempt is not fortunate.

The Parke Peerage question has again been under discussion. Lord Wensleydale has declined to appear in defence of his title, leaving that duty to those who conferred the honour. The case was referred to a Committee of Privileges, into which the House of Lords resolves itself; Lord Redesdale presiding, and the Chancellor taking his seat among the Ministers. Lord Glenelg and Lord Grey, men of the most opposite temperaments, have each amendments to propound; but the result will not transpire in time for record in this portion of our impression. It is worthy of note that Lord Campbell, who (with two peerages in his own family) is loudest against the legality and propriety of this grant, has written, in his "Lives of the Chancellors," that there is no doubt of the Sovereign's power to confer such honours, and that such prerogative might occasionally be used advantageously. His Lordship may plead that he is better informed to-day than he was when he penned that sentence; but though this might be a sort of reason, in reference to the legal point (for nobody should ever say that he has mastered English law), a gentleman at the ripe age at which Lord Campbell published the "Chancellors" may be supposed to have made up his mind on a political doctrine.

The Corporations, as might be expected, are growing perfectly clamorous in their opposition to the relief to the shipping interest proposed by the Local Dues Bill, introduced by the Chancellor of the Exchequer. Liverpool (where ships are taxed to buy organs and pictures of the Emperor of Russia) began the outcry; but the London Common Council, never stagnant when reform is to be opposed, have followed the Liverpool lead, and the usual logic of such people has been brought into ludicrous play. If, one of the speakers contended, Government is allowed to pass this bill, it will next confiscate the property of the companies, and then proceed to the confiscation of that of individuals. A hideous prospect, excited by a proposal to abstain from robbery. It is possible that Government may be cowed by this selfish opposition: but, should this be the case, and concessions be made, the country will not put much faith in the alleged intention of the Cabinet to reform the Corporation of London. In justice to some of the Council—Mr. Dakin, Mr. Rowe, Sir H. Muggeridge, especially—it should be said that they took a fairer view of the case, and described the bill as "a large and excellent measure."

At last the American Representatives have chosen a Speaker, Mr. Nathaniel Banks, of Massachusetts, who triumphed over Mr. Aiken by 103 to 100. The victor is described as "the Republican candidate," and in his speech he avoided pledging himself "to save the Union." The burst of enthusiasm with which the triumph was greeted is quite amusing. The assemblage was so struck at the defeated gentleman doing a courteous act that some of the members began to cry. We shall be suspected of exaggeration unless we quote an American writer:—"Mr. Aiken, with the nobility of a true gentleman, cast withering censure upon the factious opposition to the Speaker taking his seat, by rising in his place and asking the privilege of now conducting Mr. Banks, as Speaker, to the chair. The applause which hailed this act of magnanimity was only equalled by that which succeeded the announcement of the result: and more than one strong man who had never faltered when the fight was fiercest now sank in his seat, overpowered by generous emotion. The last act of this sublime spectacle was now about to close." Should Sir George Grey and Sir F. Thesiger have a contest for the Speakership of the House of Commons, we dare say there will be a hearty cheer for the winner, and the loser will shake hands with him directly he is installed; but we cannot call to mind any "strong man" who is likely to give way to his pocket-handkerchief, even at the close of the "sublime spectacle." An edifying illustration of the sublimity of the whole business is afforded by the description of the crowds of applicants for patronage, who, as the letter came away, were rushing upon every man who had anything to give. No sooner was the doorkeeper chosen than he turned out a messenger, to give his place to a friend of his own, and "this served as a signal for the crowd inside to rush upon him with importunities, and the scene of excitement was heightened on the adjournment of the House by the rushing in of the office-seeking forces outside." We should add that "a statement is made which translated from the slang of the Washington journalist into English, seems to mean that certain Russian ships have been juggled into the possession of Americans, in a way which has elicited a remonstrance, more or less severe, from Paris, and that the President may find embarrassment from a new quarter.

The Army Estimates for the coming financial year (ending 31st March, 1857) have been issued. About six millions and a quarter is the increase upon those of last year, the total required being thirty-five millions within a fraction. The Queen has paid a visit to Woolwich to see some of the things we have to show for our money—the cannon, mortars, and other articles captured in the Crimea, to which will shortly be added a pair of the enormous dock caissons from Sebastopol. Perhaps some Lord Elkhorn or a thousand years hence will, after the Generals of the time have conquered England for him, send these gates back to Russia (à la Somnauth) with an ovation of his own in honour of the event, and complimentary to the particular idol the Russians may happen then to be worshipping. Her Majesty also did something else: she visited a number of wounded soldiers during a drive, and distributed to them with her own hands, and also examined the new ambulance for conveying the injured soldier from the field of battle, or elsewhere—a contrivance which appears to be excellent, but which, when wanted, will probably be found to be without wheels, or at least without linchpins, and it will be nobody's business to see after these: and the surgeon who grows indignant will be put into arrest, and the wounded man will be left on the field, and the officers will wrangle on the subject until their patient, where the greatest number of all will receive promotion, or pension, or an order.

## *EPITOME OF NEWS—FOREIGN AND DOMESTIC.*

The Court, it is expected, will return to Windsor Castle for the Easter vacation a week earlier than usual—about the 19th proximo—when the Princess Royal will receive the holy right of Confirmation.

It is positively stated that the Emperor Alexander will shortly visit Warsaw, and thence proceed to Berlin.

The Empress of Austria met with an accident on the 12th inst., but fortunately it was not attended with any serious consequences. The spring of her Majesty's carriage broke while she was taking an airing, and she was compelled to alight and return to the palace in a private carriage which happened to pass at the moment.

An address from the Irish bar to the Lord Chief Justice, as the head of the Common Law Bench in Ireland, is in preparation, on the subject of the late motion in the House of Commons reflecting on the capabilities of the Irish Judges.

The Count de Chambord has arrived at Venice from Verona. The Duke de Nemours has sent the Duke de Mounmouney to Venice, with a letter thanking the Comte de Chambord for the solicitude which he had manifested during the illness of the Duchess of Neuilly.

Last week a number of Polish refugees at Paris gave a dinner to General Zamoyski, who is about to proceed to Constantinople. It was attended by Prince L. Czartoryski and by other Poles of distinction, and Prince Adam Czartoryski in the evening joined the party.

The Duke of Portland is having a great number of hares netted alive on his estate in the neighbourhood of Mansfield, for the purpose of being sent to France as a present to the Emperor. Upwards of 130 were netted at Clipstone Park one day last week.

Count Thun, Austrian Minister of Public Worship, has addressed to the Bishops of the Empire an invitation to be present in Vienna on April 6, the day on which will be opened the episcopal conferences relative to carrying the concordat into execution.

The Pope, after a longer delay than usual, has at length filled up the vacancies in the consistory by the death of the late Roman Catholic Bishop of Kildare and Leighlin, and the choice has fallen on the Very Rev. Dr Walsh.

The late Marshal Paskiewitsch was, of all the military men in Europe, the one who had received the greatest number of decorations. The orders of which he wore the insignia amounted to twenty-seven.

The Russian *Gazette de l'Académie* announces the departure of Colonel Lake and Captain Thompson from Tiflis to St. Petersburg, and the inability of General Williams to leave the former city by reason of illness.

The Emperor of Austria is about to suppress all proceedings against persons implicated in political offences committed within the period of 1848 and 1851.

Mr. Bright, M.P., has been unable to resume his seat in Parliament this session, in consequence of indisposition arising from an affection of the liver and bilious attack. The hon. gentleman was very unwell when he attended the Manchester soiree to himself and colleague, a few days before the assemblage of Parliament.

Baron Brunnow met Count Morny at the house of the Princess Lieven on the day after his arrival in Paris. "The conversation lasted some time, and was very confidential."

The intimacy which now exists between the Courts of Paris and Vienna is the subject of general conversation in our official circles. It is rumoured that an Austrian regiment will be given to the Emperor Napoleon; and the Cuirassiers are spoken of as likely to bear the name of the Emperor of the French.

Lord James Butler and Major Nasmyth have both met with rather serious hunting accidents within the last few days, but have both almost recovered from the injuries which they have received.

Prince Michael Gortschakoff, late Commander-in-Chief of the Czar's forces in the Crimea, entered Warsaw on the 13th, as Viceroy of Poland.

The Hon. F. H. Fitzbardinge Berkeley has obtained a verdict against the publishers of a weekly newspaper called the *Alliance*, for the insertion in that paper of a series of libels reflecting upon him. Damage £5.

Mr. Bluhme, one of the members of the Oersted Ministry, now with some of his ex-colleagues on his trial and under impeachment, has been elected to the Grand Council of the Kingdom by the constituency of Copenhagen.

M. Chapot, formerly member for the Guard of the Constituent and Legislative Assemblies, died at Venice from an attack of apoplexy, on the 8th, whilst on a visit to the Comte de Chambord.

The Common Council of Vienna, having applied to the Archbishop of Vienna for permission to erect a monument to the memory of Mozart in one of the churches, his Grace refused to grant it, as he cannot countenance the worship of genius, which is but a kind of idolatry.

Mr. John Lawler, the sculptor, has received a commission from Prince Albert for a copy, in marble, of his figure of "The Father."

Mr. Costa, having sold the copyright of his new oratorio, "Eli," for £500, has given the whole amount to the Committee of the Birmingham Festival, to be applied to the charitable purposes for which the festival is carried on.

The fourteenth volume of the "Biographie Universelle," which will be published at the end of this month, will contain an interesting memoir of Fox, from the pen of M. Villemain.

A gentleman in Greenock has been the lucky finder of a literary treasure at a bookstall—viz., an edition of Motherwell's "Ancient and Modern Minstrelsy," with a great number of valuable notes and corrections in the handwriting of the poet

Mr. Behnes has received a commission to execute a statue of the late Edward Baines, of Leeds. The figure is to be eight feet high, and the price is seven hundred guineas

Madame Amalia Ferraris is at present the star of the ballet at Rome.

The Council of the Royal Institute of British Architects decided on Monday night last to bestow the Queen's gold medal this year upon Mr. Tite, M.P.

A religious service was celebrated on Sunday last at the Church of St. Germain des Près, Paris, for the repose of the soul of M. Chapot, who succeeded the Marquis de Pasoret as confidential agent of the Comte de Chambord, on the Marquis's secession from the Legitimist cause.

The carrying into effect of the Constitution of 1840, in place of that of 1845, is the occasion of a Ministerial crisis at Hanover. Several members of the Cabinet have tendered their resignations to the King.

An English house of great capital has received the concession of the Belgrade and Constantinople Railway. The other concessions are postponed to the 1st of April.

In consequence of complaints which have been made to the Austrian Minister for Commerce and Public Works, orders have been issued that all telegraphic despatches must in future be sent by the line indicated by the person who forward them.

The English residents in Constantinople are about to build two churches—one in Pera, to cost £15,000; the other, on a smaller scale, at Orta-kui.

Negotiations promising a speedy and satisfactory issue have been entered into by the Piedmontese Government with the house of MM. Rothschild, of Paris, for the establishment of a Credit Mobilier Bank

The following additions have been made to the annual interest of our public debt within the last ten years:—In 1847, £374,875, interest of £10,000,000, for Irish famine; in 1848, £9,339; in 1853, three sums amounting in the aggregate to about £80,000; and in 1855, £601,670, interest of the loan of £16,000,000.

The State apartments, Windsor Castle, will be reopened to the public on and after Monday next, the 25th instant.

The warehouses at the Nancy station of the Strasburg Railway have been burnt down, owing to the carelessness of a railway servant. The damage is estimated at 600,000f.

There is now lying in Messrs. Wilmot's dry docks, Newport (to undergo a few slight repairs), that fine old ship the *William Penn*, which, nearly a hundred years ago, bore the celebrated Wolfe from England to Quebec

A company has been formed at Turin, with a capital of 20,000,000f., for the colonisation of the island of Sardinia, and has bought 80,000 hectares (200,000 acres) of Crown lands there for that purpose.

A fatal encounter took place on Tuesday morning, at three o'clock, between the gamekeepers of Sir John Tyrell and a number of poachers, in the preserves at North Boreham, near Chelmsford. One of the keepers was shot dead.

A man confined in the prison at Basle made his escape a few days ago by putting on the hat and cloak which the chaplain of the establishment had left in one of the corridors

The damage inflicted by the late storm upon the shipping in the Clyde, and the erections in and along the banks, is estimated at not less than £100,000.

The Spanish Cortes has approved of a levy of 16,000 men to fill up the vacancies in the army

A Postal Reform Association has been formed at New York.

## *COUNTRY NEWS.*

A FUGITIVE SLAVE IN LIVERPOOL.—A female slave was brought to Liverpool on Saturday last by the American ship *Asterion*, under the following peculiar circumstances: It appears that while the ship was loading in New Orleans the poor creature made her escape, whereupon her master offered a reward of 500 dollars to any person who would restore his "property." The police, as is usual in such a case, made strict search throughout the city and on board the vessels in the harbour; but she eluded their vigilance, and found a friend in the ship's boatswain, who secretly conveyed her on board, and kept her in his berth during the whole of the passage, which occupied twenty-five days. With the exception of the boatswain, who liberated her, her presence in the ship was unknown to all on board, even the captain; and when the vessel anchored in the Mersey she was discovered by the Custom-house officers, searching for contraband tobacco, concealed amongst the bed-clothes in the boatswain's berth. She was taken on shore and placed in lodgings, in Queen-street, a "free" woman.

METEOR.—A correspondent writes from Alford Vicarage, Lincolnshire:—"On Saturday night last, the 16th inst., at a quarter before nine, I witnessed a splendid meteor, direction due east, altitude about 50°. It was, so to speak, about the size of a cricket-ball, of a brilliant bluish white, like the star of a rocket, and fell, without leaving a train, to within about 5° of the horizon. The time it continued visible, I should say, was about three seconds. No doubt, from the angular distance through which it passed in so short a time, it was no great distance off. The day had been almost of summer mildness, with the wind in the south. But about the same time that the meteor was seen the wind began to change towards the quarter in which it appeared, and ever since has continued so, with bitter cold weather. The moon was shining brightly at the time, with a nearly clear sky; but within a quarter of an hour all was overclouded."

COUNTY AND BOROUGHS POLICE BILL.—A meeting of the Mayors and other municipal authorities of many of the boroughs of England was held on Wednesday, at Herbert's Hotel, Palace-yard, to oppose the bill introduced by the Home Secretary into the House of Commons for the regulation of the police in counties and boroughs. More than one hundred gentlemen were present, including, as well as the mayors, aldermen, town councillors, and magistrates of boroughs, several members of Parliament. The meeting was addressed by Mr. Roebuck, M.P.; Mr. Forster, M.P.; Mr. Bass, M.P., and other gentlemen, all of whom strongly condemned the present measure.

ENCUMBERED ESTATES COURT.—A petition for the sale of the Irish estates of the late lamented Marquis of Anglesey was on Saturday presented to the Encumbered Estates Court. The petitioners are the Duke of Richmond, Viscount Sydney, and Lord Clarence Paget, as trustees to the will of the late Marquis. The property is situated in the counties of Down, Louth, and Galway. The net annual rental is £6339, and the encumbrances amount to £43,806 17s. 2d.

LEOMINSTER ELECTION.—The nomination of candidates to fill the vacancy in the representation of this borough, occasioned by the death of Mr. Arkwright, took place at the Court-house in Leominster on Monday. The candidates were Mr. Hardy (who professed to hold the same political principles as the late member), and Mr. Campbell (Liberal). The candidates took their places on the platform without the slightest exhibition of feeling on the part of the electors, who appeared totally indifferent to their presence. After the usual preliminaries both candidates, having been duly proposed and seconded, addressed the electors at considerable length. The show of hands was declared in favour of Mr. Campbell; and a poll was demanded for Mr. Hardy, which was fixed for Tuesday.

DARING ATTEMPT AT ASSASSINATION.—The Sligo papers of Saturday contain accounts of a daring attempt to murder, made on the previous night on Mr. Lemon Armstrong, a gentleman of high position, residing in the county of Leitrim. Mr. Armstrong was returning from Sligo on a jaunting car, accompanied by his wife, and was fired at when passing a grove of trees between Friarstown and Dromohair, the ball of the assassin striking him in the hip and lodging in the thigh. Two men have been arrested, and Mr. Armstrong has identified one of them as being the person who fired the shot. This man's name is M'Gany, and he is, it appears, an old hand in the trade, having been formerly tried at Leitrim Assizes on a charge of murder.

## SUPPRESSION OF THE SANTHAL INSURRECTION.

THE last mail from India brings us the intelligence of the suppression of the great Santhal rebellion—of the capture of the chiefs, and of the dispersion of the insurgents. Some of the chiefs and leading men had been condemned to be hanged at the spots where their brutal murders had been committed. The Zemindars and people of the country were becoming pacified and eased of the fearful suspense in which they had been kept for the last seven months. Government was trying all in its power to efface the melancholy effects of the late disturbance. The cultivators were again engaged in ploughing the land, and in pursuing their ordinary agricultural occupations—rebuilding their burnt villages, but bitterly lamenting the murder of their friends, parents, children, and wives, and the utter destruction of their property.

But many of our readers will exclaim, Who are the Santhals? and why did they set themselves up in rebellion against so upright and powerful a Government as that of India? We are enabled to answer these questions and to give a short description of this little-known and almost unheard-of race, having received the following notes from the pen of an officer of the Bengal Army, who has for several years been in constant communication with the Santhals, and who has lately been actively engaged against them. We are also indebted to his pencil for the accompanying Sketches, illustrative of some of the incidents consequent upon the movement of the troops against the Santhals at the commencement of the rebellion:—

Long before the incursion of the Hindoos into India from the west or from Egypt—that is, upwards of 1000 years B.C.—the fertile valley of the Ganges and several similar portions of Continental India were occupied by many races of men, aborigines—very different in appearance, manners, customs, religion, colour, stature, and language, to the Hindoos. These races—now represented by the wild Koles, Bheels, Dangurs, Santhals, Cheroos, and others—had their own kings and rulers; they built cities and forts and towns; they had a gold and silver coinage; they did battle with those that offended them, and were in their way a powerful set of men. They had no written language. The Hindoos, bringing with them the superior wisdom and knowledge of Egypt, soon came into collision with these aboriginal tribes, and in process of time quarrelled with them, then fought, and eventually expelled them from the fertile plains of India, and obliged them to take refuge in the hilly and jungle clad mountains that occupy such a vast extent and area of India. Buried in the dark forests for nearly thirty centuries, they have lost all trace of their having been members of great nations; they have become ignorant, cruel, and crafty; they possess no written language; they have no religion beyond an indistinct and very confused idea of a good and evil spirit.

Under the rule of the Hindoos, and later, under the Mussulmans, these tribes were treated as the vermin of the country; and by the Hindoo law any one was justified in taking the life of these outcasts. Even if their shadow passed over a Brahmin, or touched a Hindoo, their life was forfeited. But under the benign influence of the English their condition was improved. They were visited in their fastnesses by many English gentlemen and missionaries; they were treated like human beings; they were invited to beat up the forests for game, they were rewarded with money and presents; and, later, regiments of very irregular soldiers were raised from their numbers to keep their own tribes in order, and to protect the lowlanders from their own depredations. These proceedings gave them a certain importance in their own estimation, and finding themselves protected by the laws of justice and humanity, they no longer dreaded appearing amongst their fellow-men, or of being deprived of life for approaching too near a proud Hindoo, or of being shot down by a fanatical Mahometan as an unbeliever and dog. They were comparatively happy and at peace, and under the influence of these two sweet ingredients of human life their numbers increased; their jungles and mountains became too confined for their numbers, and again, after a rigid seclusion from the world for nearly 3000 years, they were permitted to descend into the plains to take their place amongst the nations of the world, to cultivate the land, and to enjoy the bountiful products of their own industry. Such was the happy and thriving state of the Santhals previous to the sudden and astounding outbreak in July, 1855, when murder, pillage, fire, and destruction were hurled through the length and breadth of the country, inhabited by 120,000 Santhals, who had migrated from the jungles of Orissa to the jungles of the Bhaugulpoor District, on the banks of the Ganges, about 200 miles north-west of Calcutta.

These 120,000 Santhals, now styled the rebels, were on the surplus population of the Santhals who occupy the mountains, jungles, and valleys of Orissa, Cuttack, Singhbhoom, Manbhoom, and several other contiguous hilly tracks, who, upon their numbers increasing, had migrated to the north; and finding a congenial forest-clothed country, from mountain jungles to the Ganges, and covering an immense area of

# THE SANTHAL INSURRECTION.

ATTACK BY 600 SANTHALS UPON A PARTY OF 50 SEPOYS, 40TH REGIMENT NATIVE INFANTRY.

territory, had settled down, cleared away the forest, and cultivated the land.

The migration commenced about 1830; and in 1838, their numbers attracting the notice of Government, an officer was appointed to superintend their movements, to watch their interests, to induce them to clear away the forests in the Bhangulpoor District, and eventually to collect the land tax exacted from them as well as from their neighbours, the Zemindars.

In July last intelligence reached the quiet little station of Bhangulpoor that a band of armed Santhals had decapitated a police-officer in the hills; had wounded several policemen; and were plundering the neighbouring villages. The intelligence, delivered with every semblance of truth, and backed by most minute circumstantial and corroborative evidence, was disbelieved, from the simple fact that the Santhals had up to that moment borne the character of being the most truthful, faithful, gentle, and harmless race in India. Rapid and repeated messages, however, pouring in one after the other, soon confirmed the truth of the first report; and it was too soon discovered that this race of men, naturally the most cowardly and harmless of the human race, were all of a sudden turned into the cruelest, boldest, and most bloodthirsty wretches that ever disgraced the face of the earth. Such a transition and effect was too sudden not to have some deep-seated cause, which I will describe hereafter. In the mean time troops were sent against them; but these troops, being composed of the natives of a tribe very similar to themselves, they fled upon the first attack of the Santhals. Regular troops were then poured in upon all sides; and, after some fighting and scouring the jungles, hanging the rebels, and capturing the chiefs, we may hope that the matter is at an end and that the Santhals have been taught a lesson they will never forget.

The Portrait of Seedhoo Manghee, the chief and miserable origin of the insurrection, was taken whilst he was in prison at Bhaugulpoor, immediately after his capture. He is a short, thin, active little fellow, very unlike a Santhal in appearance. He exulted over his performances, and spoke unreservedly about all he had done. He gloried in the orders he had given for numerous executions of Zemindars, police officials, and others; in the numerous villages he had plundered and then burnt, and in the general devastation and misery he had caused; he declared that he was now a great man—that his name was well known, even all the way down to the banks of the Damoodah river, an insignificant stream seventy miles from the scene of his atrocities. Upon being confronted with an official—I believe in the service of a Zemindar—Seedhoo exclaimed "What! you here? Why, I ordered your execution ten days ago!"

Foreign Postage.—As newspapers sent to most parts of Europe are subject to a heavy postage, and charged by weight, copies of the Illustrated London News, printed on *thin paper*, may now be had, if specially ordered, for transmission abroad.

# THE ILLUSTRATED LONDON NEWS.

*LONDON, SATURDAY, FEBRUARY 23, 1856.*

The latest arrivals from the United States bring before us their harassing question of slavery under an entirely new aspect, from which beams a warrantable hope that it will cease to be ere many generations have passed away. In referring to it, we shall neither cast censure nor offer counsel; we shall merely state facts, and leave our readers, both in England and America, to draw their own conclusions. The subject, at all times delicate and irritating, is now likely to become of such intense interest that we cannot pass it by in silence. The formation, a short time ago, of a new territory, afterwards to become a confederate state, has given occasion to an active feud between the free and the slave parties. In Kansas, as this territory is called, violent quarrels, bloodshed, and apprehended rebellion have for weeks prevailed. The latest accounts state that collisions attended with bloodshed have occurred, that all parties are arming, and that a sanguinary intestine war is imminent. The free party has formed companies, with numerous shareholders, and sent emigrants into Kansas as a profitable commercial and political speculation. The slave party has taken corresponding steps, and to secure the soil for slavery has seized political power. Slavery and freedom are thus brought face to face on the same spot to contend for masterdom.

The people of the Southern states are fully convinced, as is stated in a recent number of *The New Orleans Commercial Bulletin*, that the "growth of manufactures and the mechanic arts is a remarkable feature in the towns of the North and East," and that "they do not increase in a similar manner in any part of the South." This is the testimony of the Southerns. For some time past, accordingly, they have taken great pains to introduce various kinds of manufactures into the South; but even the manufacture of cotton, for which it might be supposed the Southerns have some facilities, does not succeed. With a single exception—that of Graniteville, in South Carolina—all the numerous attempts have failed. The Southerns admit and say, "that the *retrogression* of many of the Southern states is to be traced directly to the want of manufactures and other means of absorbing capital." The same authority records instances of "thrifty planters and successful merchants looking to other lands for employment of the capital which years of assiduous labour and dashing enterprise have accumulated." They want to "invest their earnings in industrial enterprises of sure foundation, with a *moral* certainty" of obtaining profitable and permanent returns. "The absence of such enterprises at the South, and the abundance of them at the North, has proved the strongest incitement to emigration to the North, and the transmission of capital." That no doubt may be left as to what is meant, a lamentation follows that *capital* from South Carolina is "invested in *northern manufactures*," instead of "being applied to drain the swamps, to resuscitate the worn-out lands, and to double the crops" of the parent state. Within twenty-five years it is estimated that a sum of twenty-five millions of dollars, accumulated in Charleston, has been carried off by its owners to contribute to the *progressive* prosperity of the "northern cities."

To the cause of the South these are fatal admissions. Whatever theories may be adopted about "capital," the thing which all agree to call by this name is indispensable to improvement; and where there is no accumulation of capital, and where capital cannot be profitably employed, there is no extension of enterprise, little or no improvements in the arts, and the condition of society approximates to stagnation or to "*retrogression*." Whatever prejudices, too, may yet be nourished against "manufactures and the mechanic arts," it is certain that, unless they increase society cannot flourish. The reason is plain. Agriculture, as the rule, produces the necessaries of life—manufactures and the mechanic arts the luxuries. The necessaries are gained by a small and diminishing quantity of labour, as knowledge and skill are brought to bear upon agriculture, as instruments are improved, and as the principles on which fertility depends are better understood. There would, consequently, be no employment for an increasing population—no want of it—no place for it in the world; and it would not come into existence, or would not continue in existence, if it could not find employment in "manufactures and the mechanic arts." Even the agricultural slaves in the States would not increase in numbers if the growth of manufactures and the mechanic arts in the free states of America and in England did not provide a large and continually-increased demand for their raw cotton. Without manufactures and without the mechanic arts, and without a continual improvement in both, prosperity and progress are impossible. Manufactures are not merely an advantage to a few capitalists, but are essential to the well-being of society. They do not flourish in the slave states of America, they flourish amazingly in the free states. They have been brought to their present condition and are continually improved by discoveries in chemistry, electricity, meteorology, pneumatics, hydraulics,—by discoveries concerning heat, light, friction, &c. Now, in the South, in consequence of slavery, the bulk of the population is doomed designedly to ignorance. In the North, as a consequence of freedom, the whole population is carefully instructed.

Experience has taught us that knowledge or mind working by the help of nature is real power; and every free man in the North, considered as a productive agent, is an intellectual giant. He is equal to any slave-owner, while all the slaves are utter pigmies and dwarfs compared to him. They invent no machinery, they make no discoveries, they can scarcely use machinery when invented, or profit by discoveries when made by free men. They do both only to a small extent. It is reasonable to suppose, therefore, that but for the neighbourhood of freedom, which sheds some of its radiance over slavery, the slave states of the South would fall back to the level of the kingdom of Dahomey. Increase of knowledge is always in proportion to the number of minds free to observe, inquire, investigate, and give expression to thought; and in a society composed of forty-nine slaves and one master the intellect of only the fiftieth portion is developed. Such a society can of itself make no progress in knowledge or in power. All the energies of the intellectual small minority are employed in supporting the system of constraint. Thus slavery dooms the South to comparative ignorance, to comparatively slow progress; or, even as some advocates of slavery admit, to retrogression.

On a future occasion we shall have some further facts to communicate upon this part of the subject. In the mean time we commend those on which we have already commented to the serious consideration of all the opponents of slavery, and of all who look with interest and favour on the growth and prosperity of the United States.

The railway battle goes vigorously on, without any apparent indications of a pacific solution of the quarrel. The Directors, who appear to have been responsible for the particular state of diplomacy at last resulting in war, have had a semi-hostile correspondence; the balance of argument being evidently in favour of the united companies, and against the Chairman of the Great Northern, who is charged with repudiating his authorised agent, Mr. Clarke, and with a refusal to combine, except on his own terms. In the mean time the public appear to be taking full advantage of the low fares and increased facilities accorded to them by the various companies, out of no love for their accommodation, but simply to play out the game of mutual injury. The London and North-Western and Midland Companies commenced their quick trains at greatly-reduced fares on the 1st of February—the Great Northern, pending a negotiation set on foot by the officials at the last moment, deciding not to alter their arrangements until after the 8th of February. The result was that, though little was known of the arrangements afterwards made more public, the North-Western and Midland trains were filled with passengers, and the complement of the Great Northern passengers got at last reduced almost to *nil*. Indeed, it is said that on one day the Great Northern express train from York to London left with a single passenger!

However, on the 8th, the Great Northern Company announced their system of quick trains, timed, apparently, on the principle that whatever the other railways did they must excel, at all events on paper; thus, while the London and North-Western and Midland professed to reach London at four, the Great Northern proposed to reach it at half-past three, and all other times were announced in proportion. The fares, too, between London and Retford and London and Sheffield were reduced below the fares announced by the other side; and at present a second-class passenger can travel between London and Sheffield, or London and Retford, for 5s. 8d. and 3s.

The tone of the combatants, also, which began with considerable moderation, appears every day to be getting more and more determined. Longer advertisements are issued, and larger placards; "sandwiches" perambulate the streets in various directions; and individual touters, armed with piles of small bundles, pester and bespatter the passengers with their recommendations and announcements. It reminds one, in fact, of the old coaching days; and a growing impression seems to exist that fares will be again and again reduced, till at last the intelligent public will be positively recompensed by a direct presentation of food or money for honouring one line with their patronage instead of the other. One feature, however, which we alluded to in our last notice of this contest is evidently developing itself, and that is the creation of travelling consequent upon these extremely low fares. We have heard, on good authority, that the number of passengers is already at least forty per cent more than it was prior to the competition. Some of these passengers are, of course, diverted from other places between which and London the fares continue at the old rates; but the great bulk of them are persons travelling who never would or could travel without the great inducements now offered. It remains to be seen whether this accession of numbers will continue, or whether the novelty of riding 150 miles for a few shillings will not tempt many to see a little more of the world, and whether the curiosity of some, the long pent-up desire to travel of others, or the oddity of travelling so quickly and so cheaply, are not mere temporary influences which time will greatly weaken, if not destroy.

In the mean time each company acts as if it were determined to inflict as much injury upon its neighbour as possible; and it is very likely that the low fares of to-day may become lower to-morrow, and that the competition which now attaches to passengers only will extend itself to goods, to parcels, to cattle, to coals; in fact, to the whole revenues of the railways in question, so far as London is concerned.

At present the stake for which the companies are contending—we mean the total value of the passenger traffic affected—cannot be less, directly and indirectly, than from £300,000 to £350,000 a year. We do not mean that this is the sum represented between the competition with what are called the "Twelve Towns," but the traffic of those towns, together with that of very many other places, such as Manchester, Liverpool, intermediate stations between York and London, and others. It is quite clear that the two companies, wherever directly competing—that is, wherever each possesses stations on its own line communicating with London—has the power of reducing the receipts of the other to *nil*, or next door to it. This was shown during the eight days in which the North-Western and Midland had the whole of the competition to themselves, when they got almost the whole of the traffic. It is clear, therefore, that where only a slight difference of time exists a large difference in fares will take the traffic by the other route.

This is an element, in our opinion, decidedly pacific; for, when these rival companies have had a little more experience of the game they are playing, they will find it too costly a war to be carried on without the interference of the shareholders. The competing companies are not merely suffering loss by the reduction of fares, but also by the large increase in their expenses, caused by running needless trains at excessive speed. The extra mileage on the London and North-Western and Midland Railways is about 1000 miles per day, and the extra mileage on the Great Northern about 800 miles per day. Assuming that these trains cost, to work, only 2s. per mile, there is at once an increase in the working expenses of the three companies of some £60,000 a year. We think we shall not be far wrong in speculating (also considering this large accession of working expense) upon the likelihood that, if the competition goes on in all the intensity, and embracing all the elements of traffic instead of only one element, £100,000 a year net money will be taken out of the pockets of the North-Western and Midland, and £150,000 a year out of the pockets of the Great Northern. In fact, the Great Northern Company's share of the passenger traffic of the Twelve Towns alone is £147,000 a year, while the share of the North-Western and Midland of these towns, as carried under the Gladstone award, is only £23,000 a year. Now, the loss to the Midland and North-Western will represent some ½ per cent of dividend. The loss, however, to the Great Northern will represent a much deeper injury as affecting the question of dividend. The reason of this is that the unguaranteed capital of the North-Western and Midland represents together a total sum of nearly £32,000,000, while the unguaranteed capital of the Great Northern is only about £5,000,000. While, therefore, a given amount of loss—all of which loss, it must be borne in mind, must be borne by the unguaranteed capital of the various concerns—will make a comparatively small per-centage difference, distributed over a capital of £32,000,000, the same amount of loss distributed over a capital of only £5,000,000 means the entire extinction of dividend. It is to some point of this kind that all these contests—entered upon with the worst feelings of mutual antagonism—continued pertinaciously, and with a determination not to concede to the other side—inevitably tend. In the mean time the public are, of course, gratified, because benefited, though it may be that the competition and reduced rates of to-day will only lead, as Mr. Denison declares in one of his letters to the *Times*, to a more complete and rigid monopoly in the future. And there are another class of people also looking on with no great feeling of regret: we mean the smaller companies, over whose lines a new traffic is springing up, attracted to the great high-roads to London by the cheapness of transit therealong.

These companies, though they may profess to regret the shocking spectacle of such a contention on the part of the leading railway companies, nevertheless must be gratified to see their small traffic fanned into a glow of temporary increase and prosperity by the breath of this competition. The Government department, too, which professes to regulate the railway affairs of the kingdom, and to watch over public safety, is looking on, a most interested spectator, no doubt determined, through railway regulation bills, facility bills, accident bills, and the like—involving more employment for civilians and military men now returning from war to peaceful avocations—to enlarge its functions, if only to keep the combatants in future order. All these things point to a continuance of the competition; and, as we said before, it will be a question for the shareholders whether they will remain without dividends, retaining the rural spirits of the directorial contest, or whether they will sacrifice the Directors so as again to secure their dividends.

We think the ultimate result must be obvious; but, in the mean time, a great amount of injury will be inflicted on the pecuniary resources of the companies, and, above all, the moral position of railway administration will suffer in the eyes of all thinking people. It is not the first time, however, when, in the midst of a great amount of reason, of forbearance, and of farsightedness, a single firebrand of obstinacy, or a determined clique, has thrown the world's affairs into confusion.

Sealing Letters.—(*From a Correspondent.*)—First close the envelope with a wafer, or adhesive gum; then perforate it with a cross-cut common wafer seal, drop the melted sealing-wax on the perforated surface, and impress it with your usual seal. A letter so sealed cannot be opened without entirely destroying the paper, as the agency of heat will not cause the gum or wafer to give way; nor will moisture loosen the wax, which will hold through the orifices made by the wafer seal.

The King of Bavaria has presented Mr. Cockburn Thomson, of St. Mary Hall, Oxford, with a gold medal, as a mark of his appreciation of that gentleman's edition and translation of the "Bhagavad-Gita"—the celebrated Sanskrit Philosophical poem. Mr. Thomson is a member of the Société Asiatique de Paris and other learned societies of France.

The committee in the camp at Sebastopol for receiving subscriptions for the Nightingale fund have already received over £4000.

## TOWN AND TABLE TALK ON LITERATURE, ART, &c.

THERE is to be a public meeting, with Charles Dickens in the chair, and that very soon, about Dulwich College—about God's Gift College—about Alleyn's College. Between 1580 and 1610 a man flourished in London called Edward Alleyn—in those days of familiar shortening of names known as Ned Alleyn. This man made money by cruel bear-baiting and exquisite acting. Like other great actors, he retired from the stage; enjoyed his money; and then, unlike other actors, married a second time—founded a College under the influence of parochial advice—got maudlin—and died. This man, Ned Alleyn, never for a moment dreamt that the land he bought and the Almshouse College he endowed at Dulwich, would ever rise into anything more than a College with an Alleyn master at his head—another Alleyn as warden, four fellows, six poor brethren, six poor sisters, and twelve poor scholars. He never dreamed (on or of the stage) of a John Philip Kemble, a Sir Francis Bourgeois, or even a Picture Gallery attached to his then remote-lying Almshouse College. His was a humble imitation of Sutton's College, now called Charter House; and it is certainly an odd coincidence that two of the most glaringly-mismanaged institutions should have been established in England, and in the then suburbs of London, so near in time to one another.

Well, this meeting is to take place, and Charles Dickens will take the chair. Now the talk is, will Mr. Dickens take up Ben Webster's (we do not write Benjamin Johnson) happy idea that out of the funds now belonging to Alleyn's College a portion of that fund should be given to the poor brethren of the existing craft to which Alleyn belonged, and from which he derived so large a portion of his property. Actors say Mr. Dickens will not—authors say he will. This is a matter we are properly told in which the public is interested. We feel that it is one in which the public does and will continue to take an interest; but our space is short, and we must chronicle other matters—promising, however, to return to the subject.

We advise our readers to see Mr. Burford's excellent panorama—opened to the public on Thursday last—entitled "The City of Sebastopol, including the Assaults of the Malakoff and the Taking of the Redan." There is little of the Redan—perhaps, properly (certainly complimentary)—but there is enough and more to awaken a proud, and at times a subdued, feeling in every English breast. In every way it is a soul-stirring panorama—noble as a contemporary local and life-size illustration of a siege not to be paralleled, and admirable in every respect as a work of art.

This reference to it reminds us of what is doing in the English world of engraving. In a well-sought and much-loved solitude near London, that able artist Mr. Watt is completing an engraving after Eastlake—an engraving in the like manner, that keeps Mr. Alderman Moon (shall we beg his pardon?—Mr. ex-Mayor Moon—and then re-ask his pardon, Sir Francis Graham Moon, Baronet) something like a publisher still. In London Mr. Thomas Landseer is engraving (for Mr. Gambart) Rosa Bonheur's famous picture of "The Horse Fair," and knowing critics affirm that he is engraving Rosa's picture so surpassingly well that malicious critics allege he is working on it as if he savagely intended to do an injustice to Sir Edwin.

Mr. Hamilton Gray has printed a kind of contradiction to a statement in Mr. Roger's "Table Talk." As Mr. Gray's contradiction relates to a book like Boswell, and to the last *living* person mentioned in that admirable work, we may as well state what it is. Mr. Rogers was wont frequently to refer to the marriage of Mrs. Thrale to the otherwise forgotten Piozzi. He was wont to say that the marriage never should have taken place (in which many will concur), and he would occasionally allude to the estrangement between the mother and her children which this second marriage is said to have produced. The (always) careful recorder of Mr. Rogers's "Table Talk" has published an after-breakfast anecdote about Mrs. Thrale and her children (by her first marriage), which Mr. Gray, the friend of the Honourable Baronet Keith Fraser, Mrs. Thrale's eldest surviving child, and the last of the Boswellians), felt himself bound to contradict. Mr Rogers's after-breakfast talk alleges the children would never see their mother after her second marriage, and that Mrs. Piozzi continued throughout life to lament that she was forsaken by her children, and that they would not see her. The subject is a painful one while any yet survive to whom it relates. But was this so? Mr. Gray says it was not so, and we believe him. What say the people of Bath.

Mr. Samuel Pepys, in his pleasant, gossiping "Diary," makes the following entry on the 6th of June, 1667. "With my father and wife to Sir W. Penn to dinner, which they invited us to out of their respect to my father as a stranger; though I know them as false as the devil himself, and that it is only that they think fit to oblige me." Sounding his opinions apparently on such vague statements as this, and other evidence of a like questionable nature, Mr. Macaulay came to the conclusion that Sir William Penn actually was "as false as hell;" and in the first two volumes of his "History of England" the great apostle of Quakerism was held up to execration as guilty of extortion, lying, seduction, intimidation, simony, and treason.

Those of our readers who feel any interest in historical criticism will remember that Mr. Dixon devoted an "extra chapter" of his "Life of Penn" to a careful investigation of these charges, and that he was enabled to return a verdict of "Not Guilty" upon evidence sufficiently strong to satisfy the more important organs of critical opinion. Even the *Edinburgh Review*, the accredited organ of the Whig party, and the defender of Mr. Macaulay's literary reputation, admitted that the most serious charge against Penn had been disproved. No wonder, then, that Mr. DIXON should have taken for granted that such charges would be withdrawn from any future edition of Mr. Macaulay's "History," seeing that there had been no attempt either on his part or that of his friends to throw any doubt upon the exculpatory evidence.

It is alleged, however, that Mr. Macaulay is not willing to make an open confession of error. So far from withdrawing or softening a single item of the charges brought against Penn, he still persists in painting him in colours not less dark than those he formerly employed. "In the eleventh edition of the 'History of England,'" Mr. DIXON remarks, "bearing the date of 1856, Penn still appears as the pandering brokers who accepted an infamous commission from the Maids of Honour; as the agent employed to seduce Kiffin;—as endeavouring to persuade the Prince of Orange to support the Declaration of Indulgence;—as a tool of the Jesuits; and as trying to corrupt the Fellows of Magdalen. Not a word is withdrawn; no charge is softened; all proofs of mistake are overlooked. In the third and fourth volumes of the 'History of England' the same principle of incessant accusation prevails. Every reference to Penn is accompanied by an epithet of condemnation. His conduct is spoken of as 'scandalous,' his life as 'unfavourable to moral purity,' his word as 'a falsehood.'" Yet, from first to last, not one *fact* is consistent with the highest character and the purest principle is proved against Penn." This (too many perhaps think) is certainly a serious charge against the accuracy of Mr. Macaulay as an historian, and furnishes a strong argument to those who complain that he is "too careless about truth and too much of a mere Whig to write an honest history."

Of course the readers of Mr. Macaulay are somewhat at a loss to account for the silence he has maintained with reference to Mr. DIXON's corrections. The only satisfactory mode in which they can account for it is by supposing that he must be preparing an article on the subject for the next number of the *Edinburgh*.

We may add what Mr. Dixon will perhaps not be surprised to hear that Mr Macaulay places Sir Thomas Armstrong's head on Westminster-hall, and not on Temple-bar; and that, in his elaborate account of the execution of Friend and Parkyns, he never takes King William's victims beyond Tyburn, so that his readers are allowed to gather from Mr. Timbs and other authorities that their heads were taken beyond Tyburn and set on Temple-bar.

## LATEST INTELLIGENCE.

### THE PARIS CONGRESS.

It is announced that the first sitting of the Congress will take place on Monday next, the 25th inst., at the Hotel of the Minister for Foreign Affairs. Count Walewski will afterwards give a grand dinner to the various Ministers Plenipotentiary, the Presidents of the Senate and of the Corps Législatif, and the great officers of the Crown.

The following despatch from Berlin, in the *Constitutionnel* of Friday has considerable significance at the present moment:—

Letters from St. Petersburg state that the School of Marine Apprentices is to be transferred from Nicolaieff to Cronstadt. Orders will be given to stop the building of the vessel of the line *Wittes*, 130 guns, at Nicolaieff.

Taken in conjunction with the adoption by the *Moniteur* of an article insisting on the abolition of the arsenal of Nicolaieff, this seems to indicate that both Russia and the Allies are prepared to include Nicolaieff as one of the arsenals "not to be maintained" referred to in the Austrian propositions. This view is borne out by the circumstance that, in the alterations of the Austrian propositions proposed by Count Nesselrode, he stipulated for the exclusion of Nicolaieff from the arsenals to be surrendered. The subsequent unconditional acceptance of the Austrian propositions without this alteration, implies, of course, the consent of Russia to the destruction of the arsenal of Nicolaieff, as one of the arsenals whose existence would affect the neutralisation of the Black Sea.

The Paris correspondent of the *Times* of yesterday (Second Edition) confirms this view:—

I was informed this afternoon, by a person whose authority I have little reason to question, and who could hardly be deceived on so important a subject, that the point which was expected to present the greatest difficulty during the Conferences—namely, that of Nicolaieff, has been given up by Russia. If this be confirmed, I see no serious obstacle in the way of peace. Indeed, a diplomatist who is a Russian—if not by birth, at least by feeling—said last night that nothing was more certain than that peace would be the issue of the Conferences; and that the Conferences themselves were little more than matter of form. That such a result is owing to the union and identity of views between France and England there can be little doubt.

### *MUSIC.*

THE DEATH OF THE VETERAN BRAHAM, which took place on Sunday last, at his residence in London, though it cannot be called untimely—for he was on the verge of fourscore—yet was unexpected, as he had shown little decay in the health and spirits of which he enjoyed a very extraordinary share at so great an age. Within these few weeks we have seen him at musical performances, enjoying the pleasures of his art with his usual cheerfulness and animation.

Though Braham's career was long and brilliant beyond example, his life was uneventful. He was born in London, it is believed, in the year 1777, and was nine or ten years old when he made his début as a singer at a small house called The Royalty Theatre, then under the management of John Palmer. He appeared in a little opera or burletta, composed by Carter, the author of "Oh, Nanny," "The Mid-Watch," and other beautiful songs, not yet forgotten. Braham's first teacher was the eminent tenor singer, Leoni, one of the original performers in Sheridan's "Duenna." He afterwards became the pupil of the celebrated Rauzzini, who was then the director of the Bath concerts. From that accomplished master he acquired a sound musical knowledge and a pure Italian style. After singing at the Bath concerts—then highly fashionable entertainments—he obtained an engagement at the Italian Opera, where he first appeared in 1796, in an Italian version of Grétry's "Zemire et Azor," and in Sacchini's "Evelina." In the same year he was engaged at the oratorios, and astonished the public by the power and beauty with which, at that early age, he sang the music of Handel.

Though now in the full tide of success, Braham wisely resolved to render himself worthy of still higher triumphs. With this view he went to Italy, still the great school of vocal art. In that country he remained several years, assiduously cultivating his powers, and singing with daily increasing *éclat* at all the principal theatres—his triumphs being frequently shared by his young countrywoman, Mrs. Billington. Before he left Italy he became, in the estimation of the Italians themselves, equal to the greatest of their own singers—an admission made by the elder Asioli, then the greatest tenor of the day, in a manner not a little characteristic. "There are only two great singers in the world," exclaimed David, "when he first heard Braham at Florence, "I and the Englishman."

In 1801 Braham appeared at Covent Garden in Mazzinghi and Reeve's opera, "Chains of the Heart;" and thus began his long and splendid career as an English dramatic singer. The operas of Arne and other old masters were revived, the charming and more modern pieces of Storace were reproduced, and Braham enlarged his repertoire by himself composing a series of works, some of which gained great popularity. Among these was the once-famed "Cabinet," which had a success almost unexampled. It not only drew crowds season after season, in London and all the provincial theatres, but its songs and duets were the delight of every musical lady and gentleman in the kingdom. Braham, of course, sang in all his own operas, but it was not wholly to this that they owed their popularity. As compositions they did not belong to a high order of Art, but they were full of simple, natural, and expressive melody, calculated to please the general taste, in days when the highest works of genius were not so familiar to the public as they are now.

Braham's career continued with uninterrupted and undiminished lustre for more than thirty years. During that long period he was celebrated throughout the whole world as *the* English singer of the age. His sphere was not confined to the English musical stage. He repeatedly held the highest place on the boards of the Italian Operas; and, above all, he was the greatest oratorio-singer that the world has ever seen. It was in this, the most exalted branch of his art that his genius shone with its utmost splendour, and was most free from those faults and failings from which no genius, however great, can ever be exempted. As an English dramatic singer he was by no means without reproach. He indulged in great impurities of style, and was often more solicitous to gain the noisy applause of the galleries than to satisfy the more refined and judicious part of his audience. This he not only did himself but caused to be done by others. On the stage he was "the glass of fashion and the mould of form;" he was copied by all aspirants to fame, and, as it was easier to copy his faults than his beauties, his example, we are constrained to say, did much to corrupt the singing of the English opera stage. As an oratorio singer, and especially as the expositor of the divine conceptions of Handel, he was wholly free from every such fault. He looked upon the text of the mighty master as something too sacred to be trifled with, and uniformly treated it with the deepest veneration. As a singer of Handel, he has no successor. We have able performers, but not one upon whom *his* mantle has fallen.

Braham enjoyed prosperity for the greatest part of his life, but the evening of his days was darkened by misfortune. Unsuccessful speculations—particularly, we believe, the building of the St. James's Theatre and the purchase of the Colosseum—deprived him of a handsome fortune. He went to America, where he remained for several years. After his return, he again took himself to his profession, and sang at concerts; but his failing powers rendered it necessary to abandon public life. His latter years have been spent in retirement, rendered easy and comfortable by the filial affection of his children. He continued to enjoy excellent health, the result of a good constitution and a temperate life, a cheerful temper, and active habits. To the last he retained the kindness of heart which distinguished him through life; and he has left many friends to cherish his memory.

A Memoir of Mr. Braham, with a Portrait, from a Daguerreotype by Claudet, appeared in the ILLUSTRATED LONDON NEWS, No. 550.

THE PERFORMANCE OF COSTA'S NEW ORATORIO, "ELI," at Exeter-hall, on Friday, last week, was as great a triumph to the composer as attended its first production at the Birmingham Festival, in August last. Having at that time described the subject and outline of the character of this work, it only remains for us to say that the impressions derived from a first hearing have been confirmed and strengthened by further acquaintance. "Eli" is a work of singular power and beauty, and will take its place among the greatest productions of its class. And it receives additional interest from the circumstance that its style is widely different from that of the sacred music with which the public of the present day is most familiar. It belongs to the school in which Leonius was matured—the school founded on the great old days of Italian music. Hence this oratorio is characterised by its simple, graceful, and expressive melody, and by the breadth and clearness of its harmonious combinations. It is always rich and graceful; the ear not being tormented by the discords and crudities which, we think, detract from the beauty even of the best modern German music. The Exeter-hall performance was not inferior to that of Birmingham; nay, in some respects, it was even superior. The principal tenor was sustained, as before, by Mr. Sims Reeves, with undiminished power and effect. As the representative of the aged prophet, Herr Formes was decidedly excelled by Mr. Weiss, who sang the music equally well, and spoke the words much better. Madame Castellan, too, was not less decidedly excelled by Madame Rudersdorff, a lady who, by every successive appearance, has strengthened her claim to a place among the greatest oratorio singers of the present time. The place of contralto, occupied at Birmingham by Madame Viardot, was now assigned to Miss Dolby, who, if less forcible and dramatic than her foreign rival, equalled her in sweetness and grace. The choruses were splendidly executed; and the whole performance was received by an immense audience with the utmost enthusiasm.

MR. AND MADAME GOLDSCHMIDT'S CONCERT, at the Hanover-square Rooms, on Monday morning, was of the same character as their previous concerts of miscellaneous music. The selection, as usual, was calculated to display the prima donna's various powers. She sang Mozart's great scena, "Non mi dir," from "Don Giovanni;" Rossini's gay duet, "Per pieta," from the "Turco in Italia," in which she was accompanied by F. Lablache; Meyerbeer's "Quando lasciai," from "Robert le Diable," and a quaint Swedish national ballad. Mr. Goldschmidt played Mendelssohn's concerto in D minor in a manner which sustained his reputation as a first-rate pianist. The room, as is always the case at these concerts, was crowded to the doors.

THE WIZARD OF THE NORTH is extemporising English opera at Covent-garden Theatre. He has got a vocal company together, and produced his burlesque "Bohemian Girl" on Monday evening—better, on the whole, than we could have expected. Lucy Escott, who was the prima donna, sings prettily, and is a pleasing actress. Mr. Haigh, a tenor, made his first appearance in London. He has a good voice—but, at present, that is all he has: he has everything to learn as an artist. A Mr. Durrant, a baritone, may be described in precisely similar terms. The best male performer was Mr. Farquharson, who is already favourably known to the public. The orchestra was respectable; but the chorus-singing was weak and slovenly. The house was excessively crowded; and everything—good, bad, and indifferent—was uproariously applauded.

A VOCAL and Instrumental Concert took place at the Crystal Palace on Saturday last, in the music room, near the Queen's apartments. The pieces selected were Cherubini's overture "Les deux journées;" a violoncello concerto, performed by Mr. George Collins; Weber's overture, "Precioes;" and the symphony in D minor by R. Schaumann. The songs, three in number, were sung by Miss Palmer, a young mezzo-soprano of much promise.

### *THE THEATRES, &c.*

DRURY LANE.—The playbill of this house has been remarkably steady since Christmas, and the squib and the pantomime have proved sufficiently attractive. A slight chance has, however, now taken place, and the Lyceum portion of the company been again brought into requisition. The revival, added to the usual performances, is the slight vaudeville "Taking by Storm," in which Mr. Charles Mathews, as *Backhuysen Buff*, a marine artist, lays rapid siege to the home and heart of a young lady, and succeeds by the force of his voluble rhetoric and ejaculatory diligence. Miss Oliver, as the persecuted damsel, played with pleasing *naiveté*; and Mr. Rogers, as the painter's man, contributed, by his peculiar humour, to the mirth of the evening. The house on Monday was fully attended, and the new piece was greeted with much applause.

PRINCESS'.—We are happy to perceive that this theatre continues to maintain a dignified position, as almost the only one at the West-end where sterling and legitimate dramas occupy the largest share of attention. "Hamlet," "Henry the Eighth," "The Merchant of Venice," and "Louis the Eleventh," are the stock-pieces. Mr Charles Kean has, in all these, "shone like a bright particular star," and will, by pursuing his present track, make the leading characters in them his own. The repetition of the play of the "Merchant of Venice," on Monday evening last, was attended with that success which distinguished its first representation. The *Shylock* of Mr. Kean justifies the celebrity it has acquired. If there is any portion of so admirable a performance which we should wish to specify from the rest, it is the scene in the third act, where the Jew, letting loose all the pent-up passion of years, delivers the passage "He hath disgraced me, and hindered me of half a million." The highest genius combined with the most consummate skill is required to do justice to this difficult passage; and it is always in such that Mr. Kean excels. Mrs. Kean's *Portia* is a fine impersonation. She delivered the celebrated mercy speech of the court-scene with an exquisite combination of grace and dignity, and received genuine applause at its conclusion. Mr. Ryder, though somewhat too elderly for the generous open character of *Antonio*, performed it with that attention to elocution for which he is remarkable. *Bassanio* and *Lancelot* were admirably personified by Mr. Walter Lacy and Mr. Harley; as were *Nerissa* and *Jessica* by Misses Carlotta Leclerq and Marston. Nor must we forget to award a word of praise to Mr. David Fisher for the excellent manner with which he rendered the sprighly character of *Gratiano*.

CITY OF LONDON.—A posthumous drama of the late Mr. J. Wilkins, the author of "Civilisation," has been produced at this theatre, and merits notice, as a work of psychological curiosity. The piece is in two acts, and is entitled "Selfishness"—the title indicating its moral, and the kind of production designed by the playwright. It is indeed a species of morality, not dissimilar to the "Mammon" of Mr. Chorley attempted at the Olympic; but, unlike that, so constructed as to appeal directly to popular feeling and apprehension. The spirit of the hero's conscience actually forms one of the dramatic persons, and appears with him on the stage as his wraith or double. The spiritual action thus commenced is afterwards corroborated by the usual theatrical appliances of practical waiscoats and trapdoors, through which the supernatural agents of the scene enter and vanish. The whole terminates with a tableau of descending angels. The human persons are not a little weirdlike in some of their attitudes there is, for instance, a wizard endeavouring to escape from the soldiery of *King James*, who claims protection in vain from *Sir Lyonel* of Bagot, and accordingly utters a malediction on his head, after which he disappears through the panel. There is also a disguised person who is confined on a charge of murder, and left to starve, and whose figure is seen in a magic mirror, and, with other pageants of a similar nature, serves to alarm the conscience of *Sir Lyonel*, whose conversion to a right state of mind is the object of all this *diablerie*. *Sir Lyonel* was a tampler in one *Sir Rupert Regnard*, who also is subject to the familiar spirit, with whom he sinks into the earth at the close of the drama. There is much complicated machinery employed in the production of the various requisite changes, which are rapidly executed, and in most cases the delusion is remarkably complete. The dialogue of this piece is marked by those felicities of stage diction which aided Mr. Wilkins in the composition of his many productions; and it is needless to add that, at the east end of London, such a drama has met with abundant success.

*The range of temperature during the week was* 32°.

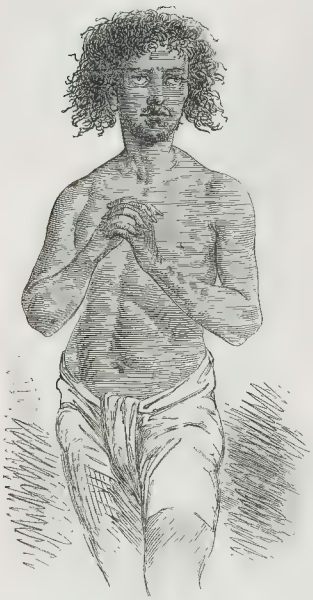
*The weather* was warm till 17th, when a great change to cold occurred, with a cutting E. and N.E. wind.

*The direction of the wind* was on 14th, W.S.W., changing at 3h. 40m. a.m. to W., 4 a.m. to N., 11h. 45m. a.m. to N.E., 1h. 30 p.m. to E., 9h. 30 p.m. to S.S.E., 6th to 8, 8th to S.W., 9h. 30 p.m. to S.S.W., 9th to W.S.W., 10th to S.W., 11th to S.S.W., 12th to S.W., 1 p.m., S.S.W. at 5 p.m., S.W. at 9h. on 14th, to S.S.W. at 2 a.m., at 6h. a.m., S.S.W. at 7 a.m., S.W. at 8h. a.m., S.S.W. 2½ p.m., S. at 3½ p.m., S.S.E. at 4 p.m., moving through S. to W. by N. at 4h. 14m. p.m., and back to S. at 6 p.m.; on 16th became S.S.E. at 10h. 15m. a.m., S.E. at 1h. 15m. p.m., E.S.E. at 7 p.m., E. at 11h. 30m. p.m.; in which quarter it remained till the 18th at 4h. 45m. a.m., when E.N.E., becoming N.E. at 8h. 15m. p.m.; in which quarter it remained to midnight of the 19th.

The 18th was quite a spring day, temperature in sunshine 70°; on 17th was only 51°, and 18th only 38°. Lunar halos occurred on 12th, 15th, and 16th; and a solar halo on the 14th. Splendid snow crystals fell from 10 p.m. of 19th to 2 a.m. on 20th.

E. J. LOWE.

# THE SANTHAL INSURRECTION.



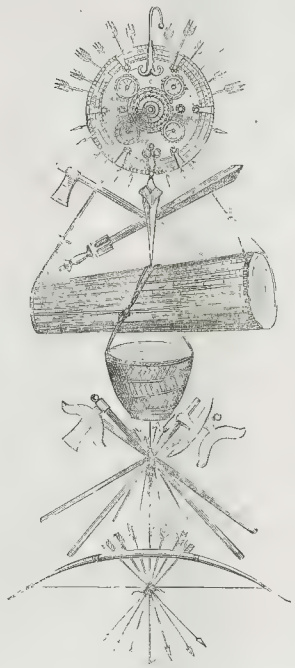
SEEDHOO MANGHEE, CHIEF OF THE SANTHAL REBELS.
SKETCHED FROM LIFE.

(*Continued from page* 196.)

Seedhoo was shot through the right wrist, and through a fleshy part of the body, in the attack of the 7th Regiment Native Infantry upon a large body of Santhals, at Moheshpoor, where the rebels were gallantly led on by Seedhoo in person—he b ing armed with a sword in each hand. He led the attack, and was the last man to leave the field when their numbers were routed.

The origin of the insurrection, he affirmed, was as follows:—Being indebted to his money-lender to the amount of ten shillings sterling, and being very much harassed by the importunities and threats of his creditor, Seedhoo conceived the idea of removing this troublesome man out of the way. As the Santhals in general had been much troubled of late by extortionate money-lenders, and by unfair grain-dealers, who repair at certain periods of the year to purchase the agricultural products from the Santhals, and as the Santhals in these transactions had been for years the duped victims of the most nefarious practices, and as the evil was becoming a universal and a grievous burden, Seedhoo concerted measures with his brothers and friends to expel these traders from amongst them. He gave out that he had been commanded in a vision from Heaven to exterminate all natives from the plains who had any dealings with them or who had in any way oppressed them. The police were the first sufferers, then the money-lenders and grain-dealers, then any one that fell in their way, amongst whom we have to deplore several English, two of whom were females. Having once tasted blood nothing, in the absence of the mi itary, could now check the horrors being daily committed by the Santhals: the whole country was in flames, every respectable man who could not fly the country was murdered, every village within reach was plundered and then burnt to the ground. At this juncture the regular troops arrived, they soon came into collision with the rebels, and of course wherever they met them the rebels were dispersed with great loss of life—being only armed with battle axes, swords, and bows and arrows.

The daring and bravery shown by these deluded men deserved a better channel for its exhibition. I have seen them approach to within fearfully



SANTHAL TROPHY.

THE SANTHAL REBEL, SINGRA.

close quarters to the Sepoys' muskets, and stand repeated discharges before breaking, whilst their numbers were being thinned at each discharge On one occasion, when, in company with Lieutenant and Adjutant J Burn, of the 7th Regiment Native Infantry, and Dr. Macnamara, accompanied by fifty Sepoys (see Sketch), we were reconnoitring the road for the next day's march, we were surrounded by about 600 Santhals, who, shouting and screaming, and beating drums, seemed to spring out of the ground, so sudden was their appearance. They advanced, forming nearly a complete circle round our small band, who, with the utmost coolness, under the orders of their Adjutant—when the rebels had approached to within sixty yards, and when the arrows were falling thick amongst the Sepoys—commenced independent file-firing, killing and wounding a number of the rebels before they dispersed.

SANTHAL SACRIFICIAL WEAPON.

The portrait of Singra, one of the supposed murderers of Mrs. Thomas and Miss Pell, presents a good type of the Santhal physiognomy in general

In the Sketch representing the searching for Santhal rebels is a very fine elephant, the property of Mr. Charles Barnes, a gentleman well acquainted with the Santhals, their country and manners, and who was with us in all our wanderings and foraging parties. This elephant, besides being of great use as affording an excellent and an elevated position for viewing the country from, was employed by us in forcing open the doors and pushing over the huts of the Santhals wherever the presence of rebels was suspected. This elephant was in various engagements, and was several times wounded by Santhal arrows.

SEARCHING FOR REBEL SANTHALS.

THE GUN-BOAT FLOTILLA, OFF RYDE, ISLE OF WIGHT.—(SEE NEXT PAGE.)

CAPTAIN CODRINGTON'S DIVISION OF GUN-BOATS COMING TO MOORINGS AT MOTHERBANK, ISLE OF WIGHT.

THIS most interesting event took place on the afternoon of Tuesday, the 5th inst., and is the first division of the numerous fleet of gun-boats intended for the next Baltic campaign. It con-sisted of the following vessels, each carrying two 68-pounder guns and two howitzers, under the orders of Captain Codrington, viz.:—*Sterling, Biter, Dapper, Stork, Charger, Skylark, Snapper, Beaver, Swinger, Jackdaw, Dove, Banterer, Bustard, Bullfrog, Cockchafer;* attended by the commander of Portsmouth Dockyard, Vice-Admiral Sir G. T. Rose, K.C.B., in the *Fire Queen;* and, though a dull, gloomy day, the sight attracted crowds to witness it. Since then the little fleet has been daily augmented by fresh arrivals from different ports; and it is expected that by the commencement of March one hundred and twenty-five gun boats will be anchored between Ryde and Cowes, and all sheltered by the island; where, it is expected, they will shortly be reviewed by her Majesty.

Our Illustration is from a Sketch forwarded to us by Mr. J. R. Smith, of Cowes.

## *NAVAL AND MILITARY INTELLIGENCE.*

REAR-ADMIRAL THE HON. SIR RICHARD S. DUNDAS, the late Commander-in-Chief of the Baltic fleet, was reappointed to that command by the Board of Admiralty on Monday; and Captain the Hon. Frederick Feilding, C.B., was appointed Captain of the Fleet, having also held that appointment last year in the Baltic. Rear-Admiral Robert L. Baynes, C.B., who was third in command in the Baltic fleet last year, is also appointed to hoist his flag for service in the Baltic.

REAR-ADMIRAL SIR MICHAEL SEYMOUR, K.C.B., who was second in command of the Baltic fleet during the last year, is appointed to succeed Rear-Admiral Stirling as Commander-in-Chief in the East Indies. Her Majesty's ship *Calcutta*, 84, now refitting, is not ready for delay for Plymouth, to be fitted for the flag of Rear-Admiral Seymour. Sir Michael will not wait for the *Calcutta*, but will proceed to relieve Sir James by the overland route.

GENERAL SIR GEORGE SCOVELL retires from the Governorship of the Royal Military College, Sandhurst, on the 31st of March, and a Colonel Fraser, the Lieutenant-Governor, is absent on leave, and presumed to be too ill to return, it is probable that a considerable change may take place in its direction at that time. Rumour asserts that there will be also a change in its organisation, and the College will be drawn into closer connection with Woolwich Academy and the Ordnance Corps, with which view the establishment will be increased

THE Admiralty have given directions for a new vessel, to be called the *Cherybdis*, to be laid down at Chatham Dockyard, on the slip from which the *Secrm*, 50-gun frigate, was recently launched.

A LETTER from her Majesty's Consul-General at Hamburg states that the Quartermaster, Samuel Fletcher, and fifteen seamen, of the late *Polyphemus*, who were in the two boats, have been saved by a Danish vessel, and were about to take their departure for London.

ORDERS have been received at Portsmouth Dockyard for the authorities to expedite with all dispatch the refitment of the three steam troop-ships *Fulcon*, Commander Bowyear; the *Perseverance*, Commander Crang; and the *Urgent*, Commander Phillips, as they may be wanted suddenly to embark troops for colonial service.

IN addition to the 56th Regiment and a battalion of the Rifle Corps, which are about to be dispatched to Canada, it is understood to be the intention to send out several other regiments to British North America, so as to form a powerful force in that country. In anticipation of this step being taken, it is rumoured that almost every regiment now attached to the home station received private intimation that their services may be required in Canada, and such early notice has been given in order that the regimental clothing, which is made expressly for that station, may be in readiness on the suspension of navigation, the service should require a large body of troops to be moved to that country.

GOVERNMENT has entered into extensive contracts for tents and a fire-arms of every description, including Minié and other rifles, Victoria rifles and revolvers; the last-named contracts has been taken by the manufacturers of London, Birmingham, Liège, and Namur.

IN addition to the large body of the household troops which embarked recently for the East, it is intended to dispatch a further reinforcement to the service companies of Grenadiers, Coldstreams, and Scots Fusilier Guards. This additional body will consist of 900 drilled and efficient men, viz., 300 Grenadiers, 250 Coldstreams, and 250 Scots Fusiliers.

FROM a detailed account of the officers, non-commissioned officers, artificers, gunners and drivers, and horses, who are to be in immediate readiness for embarkation for the Crimea, to fill up troops, field-batteries, and reserves of the Royal Artillery, it appears that there are altogether a total of 14 officers, 39 non-commissioned officers, 16 artificers, 16 gunners and drivers, and 800 horses, independently of the medical officers and veterinary surgeons.

MAJOR ROBERTSON, one of the members of the Transport Board, has visited Southampton to inspect the various war-transports, the *Orinoco*, *Great Western*, *Candia*, *Calcutta*, *Hydaspes*, *Aryo*, and *Queen of the South*, now lying there, and to give orders for the whole of them to be fitted up immediately for the conveyance of horses and troops. They are all to be got ready by the 2nd of next month. Hundreds of workmen will be engaged at once, and will work night and day to get them ready. The secret in transports is to carry, in the shortest time possible, the largest number of horses and 1500 troops. The utmost secrecy is observed as to the destination of the transports.

IT is understood to be the intention of the Government to establish camps in the spring on Barnham-downs, near Canterbury; Penenden-heath, near Maidstone; and Southsea-common, Hants. The troops to be encamped are stated at 8000 on Barnham-downs, 20,000 on Penenden-heath, and 15,000 on Southsea-common.—It all which places the men will be under tents, and will be drilled in field duties ready for any emergencies.

A LARGE supply of new arms arrived at Brompton Barracks at Chatham, on Monday afternoon from the Tower for the corps of Royal Sappers and Miners. They were immediately served out to companies under orders to embark for the Crimea

THE following screw-steamers are being fitted at Liverpool for the conveyance of troops and stores to the East:—*Sarah Sands*, 1120 tons (ready); *Java*, 2240 tons; *Babiana*, 1830 tons; her Majesty's ship *Resolute*, 1800 tons; and *Ondina*, 2417 tons. Her Majesty's steamer *Hecla*, 6 guns, arrived in the Mersey on Saturday, for the purpose of towing away the new gun-boats recently launched by Mr. Laird and on Tuesday her Majesty's steamer *Cyclops* arrived in the Mersey for the same purpose, while several vessels of war

THE ARMY ESTIMATES for the year ending the 31st of March, 1857, were issued on Tuesday last. The grand total amount that will be required for the financial year ensuing is stated to be £34,998,504, against the sum of £28,670,467 in 1855-6, thus showing an increase of £6,328,037. The sum of £32,758,280 is required for the effective, and £2 240,224 for the non-effective services The items are thus distributed:—viz., £15,206,368 for the land pay (£6,781,744 more than last year), £3,109,179 for medicines and Militia; £68,900 for volunteer corps; £406,395 for the Army Works Corps; £160,021, for the War Department; £292 701 for "Head-quarters, Military Departments;" £514,141 for civil establishments; £215,201 for artificers' wages; £9,866,261 for clothing, barrack-furniture, &c.; provisions, forage, fuel, and light; £4,371,165 for land and sea stores; £2,044,935 for works and buildings; £726,404 for the educational and scientific branches; £23,549 for rewards for military services; £57,090 for the army pay of general officers, £519,934 for the pay of reduced or retired officers; £30,250 for widows' pensions; £83,268 for pensions, &c., to wounded officers; & for "in-pensions;" £1,168,362 for "out-pensions;" and £124,264 for superannuation allowances. Of the sum voted last year, £13,718 678 was under the head of "Army," £9,900,165 under "Ordinance," and £4,376,403 under that of "Commissariat."

THE *Etna* floating battery, now being built at the large new slip at Chatham Dockyard, is expected to be completed and in the launching at the end of about six weeks. About 1000 tons of iron bands have been added to the force work ng on board this vessel, which now exceeds 200 men. Relays of shipwrights are also working over hours in order to have her completed by the end of March. The whole of the large slip is lit up with gas, which is carried into the interior of the battery by means of gutta percha tubing. The *Etna* is intended to be one of the most formidable vessels of her class. She is to carry sixteen guns of the heaviest calibre; and, in order to protect her from the effects of shot, and to render her almost invulnerable, she is being lined on the whole of the sides and ends with iron plates, of four inches in thickness, each plate measuring twelve feet seven inches in length, two feet eight inches in breadth, and weighing between three and four tons. She is to be provided with a picked crew of the most efficient gunners in the Navy, and it is expected that she will be ready to sail with the Baltic fleet in the approaching spring

HEALTH OF LONDON.—The mortality of London is much below the average; but catarrhal affections prevail, and three deaths from influenza have been recorded. 1636 deaths were registered in the week that ended on Saturday, 16th February, or 115 less in number than the deaths in the previous week. Last week the births of 849 boys and 851 girls—in all, 1700 children—were registered in London. In the ten corresponding weeks of the years 1846-55 the average number was 1517.

## *IMPERIAL PARLIAMENT.*

### HOUSE OF LORDS.—MONDAY.

THE WENSLEYDALE PEERAGE—COMMITTEE OF PRIVILEGES.

Lord LYNDHURST moved that the House should go into a Committee of Privileges.

The Lord CHANCELLOR said that he had received the following letter from Lord Wensleydale:—

My Lord Chancellor.—I have the honour to acknowledge the receipt of the order of the House of Lords, giving me liberty to be heard by counsel, if I think fit, before the Committee of Privileges, to whom is referred to examine and consider a copy of the letters patent purporting to create me a Baron of the United Kingdom for life. I will thank you to inform their Lordships that I decline to appear by counsel. I have the honour, &c., WENSLEYDALE.

Lord CAMPBELL was greatly rejoiced to see that Lord Wensleydale had not taken the course adopted by the Lord Chancellor, and declined to appear by counsel, on the ground that the House had no jurisdiction in this case, and that as to them the subject was *corpus sine judice*.

Several cases from the Journals and Rolls were laid on the table, after which Lord LYNDHURST said that they only made out an affirmative case. If it was necessary for a further search, to prove the negative question, they must again adjourn

Lord CAMPBELL said they had all the evidence to be obtained, but still it might be necessary to have that proved.

The Earl of DERBY thought that it would facilitate the question if the Lord Chancellor would respond to the appeal of Lord Lyndhurst, and admit that the search was complete. The delay rested with Government.

Earl GRANVILLE said it was impossible for the Government to admit that no further evidence existed, although a further search might not discover any. The noble and learned Lord opposite must pursue the arrangement which he had made; but, while no unnecessary delay should take place, they ought to omit no step likely to lead to a satisfactory result.

Lord ST. LEONARDS understood that the Lord Chancellor relied on the cases before the House as being strictly technical, and he (Lord St. Leonards) therefore, have been glad if the Lord Chancellor had met it in a more generous spirit.

The Lord CHANCELLOR said all he meant was that he would not make any admission which would bind anybody, or shut out other evidence

After some further conversation, Lord LYNDHURST said he should propose the following as their report:—

The Committee have, agreeably to your Lordships' order, examined and considered the copy of the letters patent purporting to create the Right Honourable Sir James Parke, Knight, a Baron of the United Kingdom for life, and they report it as their opinion that neither the said letters patent, nor the said letters patent with the usual writ of summons issued in pursuance thereof, can entitle the grantee therein named to sit and vote in Parliament.

Lord GLENELG suggested that it was desirable to have the opinion of the Judges.

Lord LYNDHURST said the Judges might give an opinion as to the qualification of the patent, but they had in former cases decided that they had nothing to do with the right of any one to sit in that House.

The Earl of DERBY asked whether any other noble and learned Lord, or her Majesty's Government, intended to bring forward any amendment to the motion of his noble and learned friend? If they did, he thought it was only fair and just that they should now give notice of it, as his noble and learned friend had been required to do so

Earl GRANVILLE thought it was only just to the Government that they should have twenty-four hours to consider the motion of the noble Lord, which appeared to carry serious consequences with it. If they decided to propose an amendment, they would give ample notice (Hear, hear).

Earl GREY would, in all probability, move an amendment also, and would give full notice of it, but it was impossible to do so until he had an opportunity of fully considering the motion of the noble and learned Lord opposite.

Lord BROUGHAM hoped that the ensuing twenty-four hours would be employed by the Government in well and maturely considering whether they could not relieve that House Parliament in general, and the country, from the position in which they were now placed by this, in his opinion, ill-advised and altogether unprecedented step.

It was then, after some discussion, decided that the Committee should adjourn to Friday, at five o'clock, when the discussion of Lord Lyndhurst's motion would be proceeded with.

### HOUSE OF COMMONS.—MONDAY.

BREVET PROMOTIONS.—Mr. F. PEEL in reply to Mr. Layard, explained the principles on which the brevet promotions had been made among the officers of different divisions who were engaged in the attack upon the Redan, and other operations connected with the capture of Sebastopol, on September.

AGRICULTURAL STATISTICS.—Mr. LOWE announced that a bill was in preparation designed to secure a regular and uniform series of returns relating to agricultural statistics

ORGANISATION OF THE ARMY.—Mr. F. PEEL, in reply to a question from Mr. Ewart stated that steps were being taken to increase the efficiency and improve the organisation of the Staff in the British Army.

COURT OF CHANCERY (IRELAND) BILL.—On the motion that the Court of Chancery (Ireland) Bill should be read a second time, Mr. J. FITZGERALD moved, as an amendment, that the further progress of the measure be deferred for six months. He urged various objections to the bill, and deprecated the proposition in its present form to transfer the monetary arrears of the Encumbered Estates Court to the Irish Court of Chancery He believed that no economy could result from the change, the salaries and offices being quite equivalent to those to be extinguished, while the working of the existing machinery for the sale of real property in Ireland must be seriously obstructed. The amendment was seconded by Mr. POLLOCK.—Mr. NAPIER, on behalf of serious evils would result from the proposed interference with the operations of the Encumbered Estates Court. After a good deal of discussion the bill was read a second time, and referred to a Committee up stairs.

The Drainage Advances Act Amendment Bill and the Commons Inclosure Bill were read a second time respectively.

The Charitable Uses Bill went through Committee.

On the motion of Sir G. GREY, a Committee was appointed to inquire into the present constitution of the Ecclesiastical Commission in England, into the working of the Acts by which its existence had been prolonged, and into the expediency of consolidating with it the Church Building Commission

### HOUSE OF LORDS.—TUESDAY.

THE COMMITTEE OF PRIVILEGES.—PEERAGES FOR LIFE.

Earl GREY gave notice that, upon the motion to be moved by Lord Lyndhurst, on Friday, to the effect that their Lordships were of opinion that the patent creating Sir James Parke a Baron of the United Kingdom for life did not confer on him a right to sit and vote in this House, he should move to omit all the words after the word "opinion," for the purpose of inserting those words, viz.—"That the highest legal authorities having concurred in declaring the Crown to possess the prerogative of creating Peerages for life, and this power having been exercised in former times, the House of Lords is not justified in assuming the inadequacy of the patent creating Lord Wensleydale a Peer for life, and in refusing on that assumption to permit him to take his seat as a Peer." In case this amendment should be carried, the noble Earl further gave notice that he should move the following resolution:—

1. That, though several peerages for life are recorded up to a comparatively recent period, no precedent has been found within the last 400 years for the admission of a commoner to the House of Lords by the grant of a peerage for life.

2 That, the grant of a peerage for life to Lord Wensleydale being a recent precedent, it is expedient that the House should declare its opinion that, as a general rule, the Queen ought not to be advised to put forth, without the consent of Parliament, any prerogatives which may still, in strict law, belong to the Crown, but which cannot be shown to have been exercised except in remote periods of history, which distinction in many respects was unsettled. But that, having regard to all the circumstances of the case, the House, in declaring this opinion, abstain from expressing any approbation of the conduct of the Government in advising the grant of a peerage for life to Lord Wensleydale.

3. That though the grant of a peerage for life might in some cases be unobjectionable, yet that the practice of granting such peerages might be liable to abuse, unless guarded by proper restrictions.

4. That it will require further and mature discussion to determine what steps it may be proper for their Lordships to adopt to prevent the patent granting a peerage for life to Lord Wensleydale from being drawn into a precedent in favour of creating peerages for life, and in order to provide adequate security against any evil as which may hereafter take place.

THE RUSSIAN BLACK SEA FLEET.—In reply to Lord Hardwicke, Lord PANMURE could assure his noble friend that since the Allies came in possession of the south side of Sebastopol they had lost no opportunity of destroying every building and erection that could be applied to naval or military purposes He had only that day received intelligence of the destruction of Fort St. Nicholas. He was quite sure the country might rely on the zeal and ability of Admiral Lyons, that he would lose no opportunity which either science or gallantry might suggest to destroy the Russian ships, whether under or above water (Hear).

### HOUSE OF COMMONS.—TUESDAY.

PURCHASE IN THE ARMY.—Sir DE LACY EVANS postponed until the 4th of March his motion on the subject of the abolition of the system of purchase in the Army.

THE BALTIC FLEET.—SIR C. NAPIER'S MOTION.—SIR C. NAPIER postponed his motion for a Select Committee to inquire into the operations of the Baltic fleet in 1854 and 1855 until the 4th of March.

BANK CHARTER ACT.—The CHANCELLOR of the EXCHEQUER, in answer to Mr. H. Baillie, said it was his intention to introduce a bill during the present Session for the purpose of continuing the Bank Charter Act, unless it was objected to by the Bank of England.

DISPUTES BETWEEN MASTERS AND WORKMEN.—Mr. MACKINNON moved for a Select Committee to inquire into the inconvenience now felt in the country from the want of equitable tribunals, by whose means any difference between masters and operatives might be satisfactorily adjusted; and also to ascertain whether the *Conseils des Prudhommes* in France have answered the purpose for which they were established. The learned gentleman referred to the satisfactory manner in which the French system had resulted, in having a tribunal composed of delegates from both employers and employed, whose award was final, and he urged the adoption of such a scheme for this country, with such a modification as would suit the manners and habits of the people of England. Sir G. GREY observed that the tribunal alluded to had not the power to decide all questions between masters and men, but only those relating to the subject of contracts.—After a few words from Mr. WILKINSON, the motion was agreed to.

THE STATUTES AT LARGE.—Mr. L. KING moved a resolution, to the effect

That there be prepared, under the direction of the Clerk of the Parliaments, an edition of the statutes at large, for the use of this House, including all public general statutes and parts of statutes in force, and omitting all such statutes or parts of statutes as are expired or have been expressly repealed; and that in place of the statutes or parts of statutes repealed there be inserted the title of the statutes repealed, the respective numbers of the abstracts of the clauses repealed, with a reference in the margin to the statutes by which they were repealed.

Mr. EWART having seconded the motion, the ATTORNEY-GENERAL hoped the hon. gentleman would not press the matter to a division, as there was an insuperable difficulty in the wording of the motion, inasmuch as this House had no control over the Clerk of Parliaments, who was an officer of the House of Lords. He approved of the objects of the motion, but it was not sufficiently definite for the House to adopt it. The task was one of that magnitude that no one person could do it, and, therefore, it had better be kept in the hands of that Commission which had undertaken the consolidation of the statute-book.—Sir F. KELLY considered the motion not only impracticable, but useless, and hoped the hon. member would have a little patience with the statute Law Commission.—Mr. S. WORTLEY also thought the motion impracticable, and urged Mr. King to withdraw his motion.—After a short discussion the motion was negatived by a majority of 164 to 1

MINISTERS' MONEY (IRELAND).—Mr. FAGAN moved that the House do immediately resolve itself into a Committee to consider the Act 17th and 18th Vict., c. 11, with the view of amending the same, so far as respects the tax thereby enacted to be levied in eight corporate towns in Ireland, in lieu and substitution of "ministers' money," in order that the said tax might be wholly abolished.—Mr. HORSMAN acknowledged that the subject was one of great importance. If Mr. Fagan, instead of moving for a Committee, would ask permission to introduce a bill for the amendment of it, on the part of the Government he (Mr. Horsman) would not oppose it, reserving any expression of opinion until the second reading of that bill.—Mr NAPIER thought such a course would be unmanly and disgraceful on the part of the Government.—Mr. Fagan having adopted the suggestion, after a brief discussion, leave was given to bring in the bill.

### HOUSE OF COMMONS.—WEDNESDAY.

EPISCOPAL AND CAPITULAR ESTATES BILL.—On the motion of the Marquis of BLANDFORD this bill was read a second time.—Sir G. GREY moved that it be referred to the Select Committee on the Ecclesiastical Commission, which was agreed to.

MEDICAL PROFESSION BILL.—Mr. HEADLAM having moved the second reading of this bill, Mr. SPOONER remonstrated against proceeding so rapidly with a measure which, in his opinion, contained many objectionable provisions.—Lord J. GROSVENOR objected to the measure on the ground that it conferred upon a medical council the power of framing registration, and authorising persons to act as qualified practitioners. Grey objected to the bill, and that some prospect existed of successful legislation on a subject which had long required it. He admitted, however, that several of the details were susceptible of improvement.—After a brief reply from Mr. HEADLAM, the bill was read a second time.

TENANTS (IRELAND) COMPENSATION BILL.—Mr. MOORE brought in this bill, the second reading of which was fixed for the 27th of March.

### HOUSE OF LORDS.—THURSDAY.

The Leases and Sales of Settled Estates Bill passed through Committee

The Trial of Offences Bill was reported with amendments

THE CRIMEAN COMMISSION.

Lord PANMURE said that her Majesty had appointed, by the advice of her Ministers, a board of general officers to inquire into the matters adverted to in the report made by the Commissioners sent out to the Crimea. That board would have to receive and consider the statements of those officers whose conduct had been animadverted upon in the report alluded to

The Earl of HARDWICKE thought the proper course in this case would have been for the Commander-in-Chief, the moment the report was placed in his hands, to order a court of inquiry into the conduct of those officers, with a view to a satisfactory decision of the charges against those officers in a most painful and delicate one. They had been obliged to decind their conduct, assailed as it had been by letters in the public press

The Duke of NEWCASTLE asked that he might receive and consider the statements of those officers whose conduct had been animadverted upon in the report alluded to

Lord PANMURE said that there was a broad mark of demarcation between the duties of the Commander-in-Chief of the Army and the Secretary of State for War, and they could not conflict. The duty of the Commander-in-Chief was to administer the patronage of the Army The House of Commons voted the supplies, and passed the Mutiny Act. Parliament, holding these powers, had, therefore, a complete command over the Army. In consequences of the changes he (Lord Panmure) had made in the Ordnance, the situation of the Army, in respect to its supplies of food, clothing, and comforts, were such as the British nation could now look at with pride and pleasure. After some discussion, the Earl of DERBY withdrew his motion for the papers.

### HOUSE OF COMMONS. THURSDAY.

Mr. Hardy took the oaths and his seat for Leominster.

A vast number of petitions were presented in opposition to the proposed opening of places of amusement on Sunday. The petitions came down in cabs, trucks, and all sorts of vehicles. Some members presented a hundred at a time

On the motion of Mr. HATTER, a new writ was ordered for the borough of Sligo, in the room of Mr. John Sadleir, deceased

Lord JOHN RUSSELL gave notice that on this day fortnight he should call the attention of the House to the subject of National Education in England and Wales

In answer to Mr. Dunlop, Mr. LOWE said that his Joint-Stock Bill and Partnership Law Amendment Bill would be introduced shortly.

THE NEW MILITARY COMMISSION.—Mr. WHITESIDE asked her Majesty's Government, or the First Lord of the Treasury, when the papers relating to Kars would be laid before the House. Lord PALMERSTON said the papers were in the hands of the printer; and he hoped to lay them on the table in the course of a few days. The noble Lord said that her Majesty was going to appoint a board of general officers, with a view to receive such explanations as the officers inculpated desired to offer, and to report to her Majesty—Sir S. DEACON would like to know what instructions would be given to the board. Would the noble Lord object to lay those instructions on the table?—Lord PALMERSTON said it was unusual to lay such instructions on the table.—In answer to Sir J. Ferguson, Lord PALMERSTON said that no officer who had served in the Crimea would be a member of the Board.

OPENING OF THE BRITISH MUSEUM, ETC., ON SUNDAYS

Sir JOSHUA WALMSLEY moved

That, in the opinion of this House, it would promote the moral and intellectual improvement of the working classes of this metropolis if the collections of Natural History and Art in the British Museum and the National Gallery were open to the public inspection and study on Sundays

The honourable member proceeded to answer the objection that had been raised against the measure, and expressed his opinion that the working classes as a body were strongly in its favour.

Sir J. SHELLEY seconded the motion

Mr. PELLATT moved the following amendment:—

That in the opinion of this House more frequent opportunities should be afforded for the due inspection of the National Gallery, Government Museums, and works of Art; also, that the British Museum should be opened five days in the week, and especially on Mondays and Saturdays—those days being most convenient to the working classes

Mr. BAXTER seconded the amendment.

Mr. MURROUGH supported the motion.

Mr. CROSSLEY opposed it.

Lord STANLEY remarked that the resolution was not compulsory, but simply permissive; and he believed that it could be adopted without running any risk of a desecration of the Sabbath, while its effect could not be otherwise than to improve the tastes and condition of the working classes

Mr. NAPIER believed, on the contrary, that the effect of the resolution,

if carried, would lead to the desecration of the Sabbath when it became a day of pleasure it would cease to be a day of spiritual rest.

The motion was supported by Mr. Heywood, and was opposed by Mr. Cairns, Mr. Roundell Palmer, Mr. E. Ball, Mr. Wigram, and Mr. Muntz.

Lord PALMERSTON said he could not support the motion. He did not view the matter as now proposed to be of much importance; but, on the ground that it might go further, and considering that due respect ought to be paid to the religious feelings of the country, which had been extensively expressed upon the subject, he felt it his duty to oppose the motion. He advised the withdrawal of the amendment, as he knew that, without a vote, the Trustees of the British Museum were quite willing to afford every additional facility for visiting that institution.

Mr. Pellatt having withdrawn his amendment, the House divided upon the original motion—

| For the resolution .. .. .. .. .. | | 48 |
| Against it .. .. .. .. .. | | 376 |
| Majority against the resolution | | —328 |

## HOUSE OF LORDS.—FRIDAY.

### THE WENSLEYDALE PEERAGE.

The interest which this case created from the beginning seemed to have greatly increased. Long before the hour of meeting crowds were assembled near the approaches to the House, a great number of ladies were in the gallery appropriated to them, and the attendance of Peers on the Opposition bench was at an early period unusually large. For a considerable time the Duke of Argyll was the only representative of the Ministry in the House.

Lord GLENELG moved that the following questions be put to the Judges, viz.—Is it in the power of the Crown to create by patent the dignity of a Baron of the United Kingdom for life? What rights and privileges does such a grant confer? The noble Lord said he did not intend to enter at large into the question of peerages for life just now; but he thought it was the duty of the House in a matter of such difficulty and importance, to seek the advice of the constitutional advisers of the House. These legal advisers were men who, from their ability, knowledge, and impartiality, were well fitted to take into counsel on the present occasion, not for the purpose of overruling their Lordships, but to learn from them what the law had provided in such case. He wanted to know what the law of the land on the matter was. Their Lordships must not think that this question could be described to the House. They must think if they decided hastily that they could avoid collision with the public, for the question was one which had entered into the public mind, and the public would have the matter discussed in its own merits. It was not the feelings of individuals that were to be consulted as to life peerages, the question was simply this, what did the law of the land say respecting them? Legal authority for that House seemed to be divided on the subject. They should, therefore, seek the highest legal advice which the Constitution provided. He did not think that the authority of Lord Wensleydale himself should be considered to have no weight, for when so eminent a lawyer had accepted a life peerage, he had thereby given his opinion emphatically in support of the legality of the act now questioned.

Lord CAMPBELL opposed the motion, contending that the question was one to be decided rather by Parliamentary than by judicial authority.

The Lord CHANCELLOR supported the motion, arguing that the Judges were the proper persons to decide the question at issue.

After some remarks from Lord Winchelsea, Lord Brougham, and Earl Granville, the House divided, when the numbers were—

| | | |
|---|---|---|
| Contents present .. .. .. | .. | 62 |
| Proxies .. .. .. | .. | 49—111 |
| Non-contents present .. .. | .. | 87 |
| Proxies .. .. .. | .. | 45—142 |
| Majority .. .. .. | .. | 31 |

The motion was, therefore, lost.

The House then went into Committee for Privileges, when

Lord LYNDHURST moved a resolution to the effect that the Committee having examined the letters-patent, purporting to create Sir John Leach, Knt., a Baron for Life of the United Kingdom, was of opinion that those letters-patent did not confer upon the grantee a right to sit or vote in that House.

Earl GREY then moved as an amendment to leave out the words after the word "opinion," for the purpose of inserting the following words —

That the highest legal authorities having concurred in declaring the Crown to possess the power of creating peerages for life, and this power having, in some cases, been exercised in former times, the House of Lords would not be justified in assuming the illegality of the grant creating the Right Hon. James Parke Baron Wensleydale for life, and in refusing, upon that assumption, to permit him to take his seat as a peer.

After considerable discussion, the Committee divided upon the motion, when the votes were:—

| | | |
|---|---|---|
| Contents .. .. .. .. .. | | 92 |
| Non-Contents .. .. .. .. .. | | 41 |
| Majority .. .. .. .. .. | | —5 |

The motion was therefore carried.

## HOUSE OF COMMONS.—FRIDAY.

THE ANNEXATION OF OUDE.—In reply to Mr. Otway, Mr. VERNON SMITH said discretionary powers had been sent to Lord Dalhousie to annex the kingdom of Oude, or not, as he thought proper.

### THE NEW LOAN.

The CHANCELLOR of the EXCHEQUER, in Committee of WAYS and MEANS, made a statement of results for the financial year about to expire on the 1st April next. At the close of last Session the account stood thus:—The income for the year was estimated at £80,126,000, and the expenditure at £88,054,000 showing a margin between income and expenditure of £2,105,000. For the result it was necessary to say that the total receipts from taxes and taxes would be £68,339,000 as against the estimate of £80,126,000, showing a deficiency of £1,800,000. The estimated expenditure having been £88,054,000, the actual payments would be £90,290,000, showing an excess of £1,960,000, so that the actual result of the year would show an excess of expenditure over income to the amount of £3,760,000. This being the state of the account, the question presented itself—how was the deficiency to be met? No doubt, it would be increased by the end of the financial year; and Government therefore proposed to take power to negotiate a loan of £5,000,000 to meet the expenditure of the current year; and to fund £8,000,000 of Exchequer Bills, as it would be cheaper to fund those bills than to continue to pay the present rate of interest upon them. After going through a variety of figures to show that our trade and commerce had not suffered so much from the war as might have been expected; and giving the cost of the war at the rate of £25,000,000, he said he concluded by moving a series of resolutions conferring upon the Government the powers necessary to carry out their scheme.

Mr. W. Ewart seconded the motion.

Mr. WILLOUGHBY expressed his opinion that the loan was unnecessary.

Mr. WILLIAMS condemned the proposal as an improvident one.

Mr. J. MACGREGOR and Mr. WILKINSON gave their support to the motion.

Mr. GLADSTONE also intimated his approval of the Government plan generally, but he entered the House not to be misled by the idea that the amount of money actually borrowed represented the real increase made to the indebtedness of the country: and expressed his conviction that the addition of all the funded debt since the war commenced amounted to £45,000,000. He thought, also, that the power of borrowing money indirectly, by means of Exchequer Bills, was a dangerous power for a Ministry to possess; and recommended that, upon the conclusion of peace, a bill should be introduced to restrict that power.

Mr. P. URQUHART having made a few remarks, the resolutions were put from the chair and agreed to.

ARMY CONTRACTS.—Upon the notion for going into Committee of Supply, Colonel DUNNE called attention to the present system of Army contracts, which he contended was altogether defective, and to the expenses incurred for foreign troops, which, in his opinion, gave no return in actual services for the immense sum spent upon them. He moved that the contracts should be referred to a Select Committee.

Mr. MONSELL defended the contract system.

Mr. RICARDO demanded fuller explanations

Lord PALMERSTON deprecated further discussion of the subject at that moment as inconvenient, and called upon hon. members to go into Committee.

Sir DE LACY EVANS accused the Government of sharp practice, in endeavouring to force the estimates upon the House at six-and-thirty hours notice, seeing that they amounted to £36,000,000, upon an entirely new arrangement.

Mr. WILLIAMS moved that their consideration should be deferred till Monday.

After some further discussion, the House went into Committee of Supply, when Mr. MONSELL asked for supplemental votes of money, for expenditure already incurred in connection with the Ordnance department, and especially for the large supply of ammunition sent out to the British army and the Turkish Contingent, preparations for the Baltic campaign of the present year, and the great mortar equipment for Sebastopol. With reference to the military estimates generally, he observed that they were lower than those presented to Parliament during the three concluding years of the past war; and he also remarked that it was intended to give to the new Order of Valour a retrospective effect. With regard to the number of men, he should ask the House to vote 246,716, being an increase of 30,378 on the preceding year. Of this number 224,587 were British troops, and 22,119 Foreign Legionaries. The increase in the militia was from 38,500 men last year, to 66,317 men this year. After going in detail through the military estimates for the ensuing financial year, he concluded by asking the House for a vote on account of various items, which was agreed to.

JEWISH DISABILITIES.—Mr. M. GIBSON obtained leave to bring in a Bill to abolish the Oath of Abjuration.

## THE COURT.

On Monday the Queen and Prince Albert, accompanied by the Princess Royal, Prince Arthur, and the Princess Alice, honoured Mr. Burford by a visit to his panorama, in Leicester-square, of the Falland Interior of the City of Sebastopol Later in the day her Majesty received Viscount Palmerston at an audience; and in the evening the Queen and his Royal Highness, accompanied by the Princess Royal and Prince Alfred, honoured the Olympic Theatre with their presence.

On Tuesday the Queen and Prince Albert went to Woolwich to inspect the trophies captured at Sebastopol. Her Majesty afterwards inspected, in the committee-room, a number of wounded soldiers recently returned invalided from the seat of war. The Prince of Wales and Prince Alfred visited Colonel Colt's manufactory of revolvers, at Thames bank.

### THE LEVEE.

The Queen held a Levee (the first this season) on Wednesday afternoon at St. James's Palace. Her Majesty and his Royal Highness Prince Albert arrived from Buckingham Palace at two o'clock, attended by the Ladies and Gentlemen-in-Waiting, and escorted by a detachment of the Life Guards Green.

Her Majesty first granted audiences to Count Björnstjerna, Chamberlain to the King of Sweden and Norway, to take leave; and to the Marquis of Aitchison, on receiving the insignia of the Order of the Thistle, worn by his late father: and then, accompanied by the Prince and attended by a brilliant Court, entered the Throne-room.

The Queen wore a train of blue velvet, with white silk brocade, trimmed with white blonde, and a white satin petticoat, trimmed with white satin ribbon and white blonde. Her Majesty wore on the head a diamond and ruby circlet.

His Royal Highness the Duke of Cambridge and his Serene Highness Prince Edward of Saxe-Weimar were present.

The general arrangements in the diplomatic circle were of an ordinary character. Of the general company presented a large majority were officers who have been engaged in the Crimean war.

## MONETARY TRANSACTIONS OF THE WEEK.

*(From our City Correspondent.)*

THE leading feature in the Money-market this week has been the announcement of a new English Loan for £3,000,000, and the funding £9,000,000 Exchequer Bills. The terms proposed by the Chancellor of the Exchequer, on Monday, have not been considered very tempting; yet the whole amount has been subscribed for through Messrs. Rothschild, under the impression that about 89 will be offered for it. The original contract, amounting to twenty per cent, was to be made on the 26th instant; but, from representations made to the Chancellor, it has been found necessary to make it only ten per cent; hence the amended periods for payments stand thus:—

| | | | | |
|---|---|---|---|---|
| 10 per cent deposit | .. | .. | .. | Tuesday, February 26. |
| 25 per cent instalment | .. | .. | .. | Monday, March 3. |
| 15 | ,, | ,, | .. | Tuesday, March 11. |
| 25 | ,, | ,, | .. | Saturday, March 22. |
| 15 | ,, | ,, | .. | Thursday, April 10. |
| 15 | ,, | ,, | .. | Thursday, April 24. |

The payments on the funding of Exchequer Bills will be as follows:—

| | | | | |
|---|---|---|---|---|
| 15 per cent deposit | .. | .. | .. | Tuesday, February 26. |
| 10 per cent instalment | .. | .. | .. | Monday March 3. |
| 20 | ,, | ,, | .. | Tuesday, March 11. |
| 20 | ,, | ,, | .. | Saturday, March 29. |
| 20 | ,, | ,, | .. | Thursday, April 10. |
| 15 | ,, | ,, | .. | Thursday, April 24. |

As might be expected, prices have fluctuated considerably since we last wrote; and strong efforts have been made by the leading operators in the Stock Exchange by means of large sales both for Money and Time—to depress the quotations, in order, no doubt, to lower the value of the new loan. These attempts, however—though prices have ruled about one-and-a-half per cent lower than in the early part of last week have been unsuccessful. This is a remarkable feature, because we have complaints on all sides of the scarcity of money, of the high rates of discount, and the continuous outflow of gold. Evidently there is at present a healthy feeling notwithstanding the immense demands upon it, than has been generally supposed.

The dealings in Consols for Money on account of the public have rather increased; but the operations of bankers and others on making advances with great caution, and only upon the best paper. At the Bank numerous applications have been made, and the majority of them have been successful. In Lombard-street the best short-dated paper has been done at ½ to 0⅝; ninety days, at 0⅝ to 7 per cent. Treasury Bills, forty days, have been taken at 6 per cent.

The imports of bullion this week have been under £150,000; but nearly half a million sterling—mostly in silver—has been shipped to India and China. To the Continent very few parcels of gold have been forwarded; but we learn that nearly the whole of the supplies of gold close at hand from Australia will go to Paris. The last returns of the Bank of England show a slight increase in the stock of bullion

On Monday the Consols market was excited, owing to the proposals being made on that day for the New Loan and the funding Exchequer Bills: —Bank Stock realised 213⅜; The Three per Cents Reduced varied from 90⅝ to 90⅜; Consols, for Money, 91⅛ to 91⅜; Ditto, for the Account, 90⅞ to 91⅛; New Three per Cents, 91⅜ 91⅛; Long Annuities, 1860, were done at 3⅜; Ditto, 1885, 16 11-16; India Stock, 223 to 226; Exchequer Bills, par to 6s. discount. Exchequer Bonds, 97⅛ to —. The market on Tuesday was less excited, and the quotations were rather lower than towards the close of Monday's business. Bank Stock, 213½ to 214. Three per Cents Reduced, 90⅝ to 91⅛; Three per Cent Consols, 90⅜ ⅝; Ditto, for Account, 90⅝ to 91⅛; New Three per Cents, 91⅛ to 91⅜; New Two-and-a-Half per Cents, 74; Long Annuities, 1885, 16⅛; India Stock, 226; India Bonds, 2s. dis. Exchequer Bills, par to 5s. dis; Exchequer Bonds, 97⅛ to 98. On the following day (Wednesday) the Consol and the transactions for the account were very moderate:—Bank Stock marked 214 to 215; Three per Cents Reduced, 90⅝ to 91⅛; Consols for Money, 90⅝ to 90⅞; New Three per Cents, 91⅛ to 91⅜; New Two-and-a-Half per Cents, 74 to 74½; Long Annuities, 1885, 16⅛; India Stock, 223½ to 90⅝; Long Annuities, 1860, 3⅜; Ditto, 3 6 16; Ditto, 1885, 16⅛; Indn. Stock, 224; India Bonds, 7s. to 3s. discount; Exchequer Bills, par to 5s. dis.; Ditto Bonds, 1858, 97⅝ to 98. On Thursday the Consol-market was heavy, and prices steadily improved:—The Three per Cents, for Money, opened at 90⅝, and closed at 91. Consols for Account were 90⅞ 91 to 91⅛; the New Three per Cents ranged from 91⅛ to 91⅜; and the Reduced 90⅝ to 91⅛; Exchequer Bills, 1s. to 5s. discount; Exchequer Bonds, 97⅝ to 98; India Stock was 224. No change took place in the Bank rate of interest.

Miscellaneous Securities have sold as follows:—Canada Company's Bonds, 1 1; Ditto, Government Six per Cents, 109½; Crystal Palace, 2½; Ditto Preference, 6; General Steam Navigation, 2⅞; General Screw Steam Shipping Company, 1⅞; London Omnibus, 4; North of Europe Steam, 15½; Victoria Docks, 18; Electric Telegraph, 2⅛; London Docks, 100½; Southampton, 37½; St. Katharine, 84. Dealings have taken place in Stourbridge Canal Shares at 290; Loughborough, 800; Ditto Stamford and Worcester, 420. Hungerford-bridge Shares have been 12; Waterloo, New £7, 26; Vauxhall, 20¾

The transactions in the Foreign House have been small, compared with the previous week; yet the quotations almost generally have continued firm. There have been dealings in Brazilian Five per Cents (Small) at 103; Ditto, New, 103; Ecuador, 5; Granada One-and-a-Half per Cents Deferred, 6¾; Mexican Three per Cent, 20⅝; Russian Five per Cents, 105; Spanish Three per Cents, 42⅜; Ditto, New Deferred, 20⅜; Ditto, Passive, 6¼; Turkish Six per Cents, 9⅝; Turkish Four per Cents, 103½; Venezuela Four-and-a-Quarter per Cents, 20⅞; Ditto, Deferred, 12 per Cents, 5⅛; Three per Cents, 74⅞; Ditto, Five per Cents, 42⅝; Ditto, New Deferred, 20⅛

LIFE PEERAGES.—THE ASSISTANT-KEEPER OF THE RECORDS READING THE PEERAGE PATENT AT THE BAR OF THE HOUSE OF LORDS.

## THE READING OF THE PEERAGE PATENTS IN THE HOUSE OF LORDS

This part of the proceedings in the Wensleydale Peerage Case was performed by Mr H. G Sharpe Assistant-Keeper of the Rolls, who, when called to the bar on Tuesday week, produced the original patents of creation of two peerages of the reign of Richard II.—Guiscard D'Angle, created Earl of Huntingdon; and De Vere, Earl of Oxford, created Marquis, and then Duke, of Dublin. He also gave in a list of several others, which have been printed in the series of national records containing the patents of peerage. The patent of the Earl of Huntingdon was almost illegible from age and discolouration, and the witness read the contents of the parchment roll from the printed volume of the Records The creation of this Peer was for life The patent of the Earl of Oxford was also a creation for life only. While Mr. Sharpe was reading the letter patent he was interrupted by Lord Ellenborough, who requested him to read clearly and slowly, as the House could not follow the old law Latin when read rapidly Earl Grey said it was a waste of time to read the Latin text of these old patents, as they had all been printed by public authority, were known to every one and easily accessible. After some conversation, a list of patents in several reigns and of rolls of Parliament to be so examined was put in and read. Our Artist has sketched this stage of the proceedings.

The Committee having adjourned till Monday last,

Mr Smith, Assistant Keeper of the Seal of the Records, who was then called and examined by Lord Lyndhurst, said:—

I have made copies of journals of 1660, and produce them [handed in]. They relate to the case of the Earl of Banbury I produce copies of journals relating to the Purbeck case in the same year; also relating to the case of the Marquis of Worcester in the same year. I have also a copy of the journals relating to Peers being summoned during the lifetime of their fathers; also, relating to the case of summons by writ to the Ormond case; and also to the case of the Dukes of Hamilton and Brandon, and the Fermoy case I have also copied an extract relating to the creation of the Dukes of Acquitain and Bedford in the time of Richard II.

Mr Sharpe: The extracts from the journals produced at the last sitting of the Committee have been translated and copied by Mr. W. Hardy, of the Duchy of Lancaster. He is not here.

Lord Lyndhurst said that he supposed their Lordships would require the person who made the translation to be here.

The Lord Chancellor thought this was quite unnecessary, as they had the original Latin

Witness: All the extracts on which I was interrogated on the previo day have been put in, and are on the table.

WRECK OF "THE AMELIA," ON THE HERMITAGE ROCKS, JERSEY.—(SEE PRECEDING PAGE.)

## MADAME CELESTE.

On referring to a brief memoir of Madame Celeste, we find that she was born in Paris on the 6th of August, 1814, and was entered at a very early age as a pupil of the Académie Royale de Musique. She made a rapid advance in her profession, and in her fifteenth year received an offer of an American engagement. She accepted it, and in the United States visited almost every city, and speedily became a favourite with Brother Jonathan. During her residence in the New World she married a gentleman named Elliot, since dead. By this marriage she had a daughter, a very amiable lady, who is married to Mr. Johnsen, of Baltimore, a member of the eminent banking firm of Lee and Johnsen.

In 1830 Madame Celeste left America, and, sailing from New Orleans, arrived in this country, when she appeared at the Theatre Royal, Liverpool, as *Fenella* in "Masaniello," and exhibited those lights and shades of excellence which have since characterised her acting in so extraordinary a

MADAME CELESTE.

degree, though, at this particular period, she was almost wholly ignorant of the English language. After this we find her in the list of actresses at the Theatres Royal, Glasgow, Edinburgh, Dublin, and, finally, at Drury Lane. At this last house she made her appearance in a ballet, but unsuccessfully. Her talents, however, were appreciated, and she almost immediately obtained an engagement at the Queen's Theatre, where she appeared in "The French Spy," and her representations drew extraordinary houses for an immense number of nights.

At the termination of her engagement at the Queen's Theatre she acquired the reputation of an excellent actress. She at once became a sort of constellation at the minor theatres. In melodramatic pieces, and in all the motley mixture of pantomimic entertainments, she gave the greatest satisfaction to the audiences flocking to the Surrey, the Coburg, and the New Strand at all of which houses she afterwards appeared. She soon acquired such a degree of reputation as to induce the manager of a patent house to enrol her among the members of a regular *corps dramatique*. In 1832 she visited her native country, and also Italy and Germany; and on her return to England she made her appearance in Dublin, which city she left for Edinburgh, when under the management of Mr. Murray; and such was her great popularity that an extension of her engagement was necessary to satisfy the supporters of the theatre. In March, 1833, she made her *début* at Drury Lane, at the same time as Mdlle. Duvernay, and in the same operatic ballet of "The Maid of Cashmere;" and on her reappearance at Drury-Lane Theatre—so arbitrary is public taste—she was triumphantly received in the choregraphic exhibition that, but a few years before, had been pronounced a failure. She played in "The Maid of Cashmere," "Prince Le Boo," and "The Revolt of the Harem."

At the conclusion of the Drury Lane engagement she again resolved on visiting the United States of America, where, in the period of three years, she realised upwards of £40,000. Her popularity with our Transatlantic neighbours exceeded anything that in England we can form any idea of. Saluted by the soldiery, cheered by the populace whenever she made her appearance, and elected a free citizen of the States, she was the goddess of American idolatry. In Kentucky all the seats were taken weeks before her arrival; and in Washington the late General Jackson introduced her to the Cabinet, who offered her the congratulations due to her on attaining the honour of being elected a free citizen.

Crowned with honours, fame, and wealth, she returned to the land of her adoption, and, on the 7th of October, 1837, made her appearance before a British public, for the third time, on the boards of Old Drury: the play was "The Child of the Wreck." Though her part in it was a dumb one, ample scope was given for the display of her peculiar powers, and her speechless exertions secured for the play as much applause and success as an entertainment of that description could deserve and obtain. She became a very powerful attraction, and so decided a favourite with the playgoing people of the metropolis, that "The Child of the Wreck" was repeated for thirty nights successively, and always preserved its popularity.

She now assumed her just position on the theatrical boards, notwithstanding all rivalry from older and more experienced performers. Her simple and fascinating manners cast, as it were, a charm over everything she played. On the expiration of her engagement at Drury Lane she went to the Haymarket, and then to the Adelphi, making trips occasionally into the provinces, where she was, and is still, an immense favourite. She was for a short time, in conjunction with Mr. Webster, lessee of the Theatre Royal, Williamson square, Liverpool. In the autumn of 1844 she returned to the Adelphi Theatre, the direction of which she retains to the present time.

The evergreen "Green Bushes" presented her in a character hitherto unattempted on the stage: and the poor Indian girl, *Miami*, has taken a place in the memories of playgoers not readily to be effaced. Among her more recent impersonations have been *Janet Pride*, *Marie Ducange*, *Eulalie*, Molière's *Elmire* (in "Tartuffe") and *Harlequin*—yes, *Harlequin!* She is the first actress that ever impersonated that motley gentleman upon the English stage; and we believe it is admitted by all who have witnessed her performance that nothing more delicate or graceful can be conceived, and therefore it is that, as originating a new and beautiful idea, we have great pleasure in gracing our pages with her portrait, the more so as we are acquainted with the generous motives (by some misunderstood and misrepresented) which compelled her to this novel and arduous undertaking.

We have spoken of Madame Celeste in her capacity of actress only, but this sketch would be considered incomplete by all who have the happiness to know her as a friend, or to be guided by her as a directress, did we not say—briefly, but most honestly—that one more amiable, kind, considerate, and generous, does not adorn any class of society.

EXTERIOR OF THE PAVILION THEATRE, WHITECHAPEL.

## MR. PETER CUNNINGHAM, F.S.A.

Mr. Peter Cunningham (whose Portrait from a photograph by Mr Cundall we engrave this week) delivered a lecture on Monday last, at the

MR. PETER CUNNINGHAM, F.S.A.—FROM A PHOTOGRAPH BY CUNDALL.

Sherborne Literary Institution—the subject, "Temple-bar." The Sherborne Literary Institution was founded by Mr. Macready, the great actor, who, on his retirement from the stage (some six years ago), sought at Sherborne "that lettered retirement which Garrick sought at Hampton, and Kemble at Lausanne." Here Mr. Macready delights to entertain his old friends, and coax them into a lecture in support of his institution. The subject of Mr. Cunningham's lecture was, we believe, suggested by Mr Macready. "News Letters" from Sherborne informs us that the lecturer was well received—that his account of the famous Bar was listened to with great attention, and that the only complaints made were that the lecturer was too rapid in his delivery, and his lecture too short. By the kindness of a local correspondent we are enabled to give one of the striking features of the lecture:—

I have known two persons who had seen "the grinning honours" of Temple-bar—one was a lady, the other a gentleman. The lady I knew much earlier in life than I had the good fortune to know the gentleman. She was a Mrs. Black, the wife of the learned editor of the *Morning Chronicle* newspaper, and sister of that engraver and publisher whose admiration of "Stothard" was the means of giving us the glorious engraving of the "Canterbury Pilgrims." She belonged to a larger class of ladies than those commemorated by the poet who never tell their ages—she belonged to that class of ladies who never tell their ages. Now that she is no more I will own that my dear friend always appeared to me and to my brothers awfully old. Her dress added to the appearance of age. Her milliner's bill seriously affected (when past seventy) the finances of her husband. She delighted in wearing old flannel dresses, and still older fantastic flannel caps. Still more did she delight in purchasing and *secreting* new and expensive caps, gowns, and bonnets. She actually hid dresses in magpie-kind of places; and for the last twenty-five years of her life was from home very rarely more than once a year. Her health was excellent, and her exercise up and down her rooms was constant. I remember her additionally with pleasure, because her envied power of distributing daily two free orders of admission to each of the London theatres—to say nothing of her particular liking for me—enabled me to see that really great actor, my friend, your friend, who has sought in Sherborne that lettered retirement which Garrick sought at Hampton and Kemble at Lausanne. May he long enjoy it

REMAINS OF THE PAVILION THEATRE, AFTER THE FIRE.—(SEE NEXT PAGE.)

I shall not readily forget the time when I first heard that my dear old friend Mrs Black had seen what to me (as a boy) appeared so thrilling a sight. I was in Westminster Abbey, in the dusk, when every verger and sub-verger had disappeared. I was a boy of seven—barely seven. Sir Francis Chantrey and my father were erecting that fine statue of Francis Horner still to be seen in the north transept. That eager and innocent love for historical association which I have ever cherished, and which I shall cultivate and enjoy, was even then strong within me. Before the headless effigy of King Henry V. (in the Chapel of the Confessor, then twilight-lighted), my father, again suddenly stopped (we had seen all that was interesting in the Abbey, for no common man was my conductor). He told the boy of seven and the boy of eleven the story of Henry V.; the story of the missing head of the hero of Agincourt. On our way home he enumerated several political executions; adding, mysteriously, as if to frighten us, that old Mrs. Black had seen, when a girl, human heads fixed on spikes on Temple-bar. We were both silent. My elder brother (now no more, who has left behind him an historical name) looked with wonder at me; not, I fear, from at that age any horror at such public exhibitions, but from wonder at our knowing a person thus privileged. We resolved on asking her about the Bar as she had recollected it. We asked—rather he asked, and I looked up asking. She took us aside, and said (still in the mysterious way of flannels), "Don't ask me, boys. Why do you ask me?" We then told her, as I told her at. She said, collectedly, and, as usual with her, without any parade of telling the story she had to relate, "*Boys, I recollect it well.*" I have seen on that Temple-bar, about which you ask, two human heads—men's heads—traitors' heads—spiked on iron poles. There were two. I saw one fall. Women shrieked at it fell; men, I have heard, shrieked; one woman near me fainted. Yes, I recollect seeing human heads upon Temple-bar."

The other person who remembered to have seen human heads upon spears on Temple-bar was one who has just (at a ripe old age) disappeared from among us; one who enjoyed the pleasures he sang so well till within three years of his death, in December last year, at the age of ninety-three. I allude to Mr. Rogers. "I well remember (he said) one of the heads of the rebels upon a pole at Temple-bar—a black shapeless lump. Another pole was bare, the head having dropped from it." Mr. Rogers, I take it, was the last surviving person who remembered to have seen a human head on a spike on Temple-bar

Mr. Cunningham is the third son of Allan Cunningham, the poet and biographer, the friend of Scott and Southey, of Chantrey and Wilkie—and, indeed, of all who in his time were distinguished in either literature or art. He was born in Pimlico, on the 7th of April, 1816, in a cottage near the Wine Vaults, and within less than a stone's throw of the studio of Chantrey, to whom his father was then, as long after, first assistant, or, not to use fine words, foreman of the works. He received his early education at a day school at Chelsea, kept by a Mr. Law, who still survives to rejoice in the regard and love borne by many of his pupils; for under his rod and eye were educated men distinguished in very different paths: Captain Cunningham, known by his excellent "History of the Sikh Wars;" Mr. Hudson Turner, famed for his insight into English records, and his admirable volumes on "Early English Domestic Architecture;" Mr. Wright, the versatile actor, and favourite of every judge of good acting; Mr. Leigh Murray, the *gentleman* Murray, both on and off the stage; and, lastly, the subject of this brief memoir, the author of "The Hand-Book for London"

From Mr. Law's school Mr. Cunningham was removed, at the age of nine, to Christ's Hospital, where he was more distinguished for the possession of abilities than for the display he made of them, being content. it is said, to have other schoolfellows to make his Latin verses and themes, so that he was allowed to revel in the books he borrowed from other boys, from the libraries adjoining the school, and from his father's shelves. Notwithstanding this absolute inactivity, he rose to the rank of a Deputy Grecian, and might have remained as a Grecian in the school, had not his love for other pursuits than the Church have added fresh indolence to what was then apparently inherent idleness. It may be said, however, in defence of Mr. Cunningham, that neither Charles Lamb nor Leigh Hunt rose to higher honours at the same time school than were attained with ease by Mr. Cunningham; and here we may be pardoned for mentioning what we have heard Mr. Cunningham relate with proper and modest pride—his having sat beside Charles Lamb and Leigh Hunt, and chatted with both about Christ's Hospital, and more especially the close to which all three had belonged—that of the Deputy Grecians.

Of his course of education after leaving Christ's Hospital we are wholly uninformed. He probably went to private tuition; but, more, we suspect, to his own thirst for knowledge. It is easy to see from his writings that he was an early and a constant reader, but chiefly, we see reason to believe, in books (no narrow one) illustrative of the literature of his own country. He was without a pursuit; we found member him at the time when his calling seemed likely to be between a lawyer and a bookseller. He is said to have had a taste of both pursuits, and to have profited by both—not in money, but in knowledge. He was destined, however, for a less anxious life than either; Sir Robert Peel, in the year 1834, finding a clerkship for him in the Audit office—a situation which he still holds, with credit to himself and advantage to the public.

Though only eighteen when he obtained his Government appointment, he had previously appeared in print: his first work, "The Life of Drummond, of Hawthornden," prefixed to a graceful selection of his poems, being dated in 1833. Nor did the Audit-office interfere with his literary exertions. His next work—and it was the first he published after his appointment—was two volumes of "The songs of England and Scotland," dedicated to his father; and, being published anonymously, is now, as it was then, constantly mistaken for the work of the father.

After this he was for some time lost to the public by name; but his hand and course of reading were soon recognised in the pages of *Fraser* and the columns of the *Athenæum*. It was evident that he was *training* to be thoroughly acquainted with English literature, and with the lives of English worthies; and in this belief, and relying on his skill, Mr. Campbell, in the year 1840, intrusted the editorship of the new edition of his specimens entirely to his care. This was Mr. Cunningham's first connection with the house of Mr. Murray, of Albemarle-street, with which he has ever since, as an author, been most intimately and usefully connected

Mr Cunningham's great work (at present) is his "Handbook for London," of which a second edition is already before the public, and a third, with illustrations, is understood to be in the press. He is at present engaged on the edition of Goldsmith's works; and has been called in by Mr John Wilson Croker to his assistance in the long advertised edition of Pope. Mr. Cunningham, it is understood, has made great progress in collections of British poetry, and has large collections for that much needed work, a Biographia Britannica

It is remarkable that the four sons of Allan Cunningham have all been distinguished either in literature or arms, and sons in both. The eldest (Joseph), the author of the "History of the Sikh War," is most honourably mentioned in Lord Hardinge's despatch from Sobraon, and in Sir Harry Smith's despatch from Aliwal. The second (Alexander) fought at Chillianwallah, and was made a Brevet Major for his services on that day. He is also celebrated as the best numismatist in India. Of the third son (Peter) we have spoken above. The fourth son (Francis) was with Sale, in Jellalabad, and inherits (in common with an only sister) all his father's taste for literature, and all his brother Peter's activity in research

Mr. Cunningham is married to a daughter of Mr. John Martin, the distinguished painter of "Belshazzar's Feast," and other noble works.

## TOTAL DESTRUCTION OF THE PAVILION THEATRE BY FIRE.

On the morning of Wednesday week, at a few minutes before eight o'clock, the Royal Pavilion Theatre, in Whitechapel, was discovered to be on fire. Scarcely had the news been given than smoke in dense bodies burst through a small window over the stage, which at once convinced the inmates of the surrounding houses in Baker's row, Princes-street, and Caroline court, that unless timely assistance arrived, their own habitations would be destroyed as well as the theatre

In the course of a few minutes [illegible] arrived, as well as that of the brigade from Wellclose-square. By that period the whole of the fire were in a blaze, and the burning dragon was falling thickly upon the [illegible] lines were set to work from an adjacent supply [illegible] ed by the East London Company. Before, however, a drop of water could touch the fire, owing to the many lengths of hose required to be stretched to the engines, the flames had extended to [illegible] and nearly the whole of the West of England Insurance Company [illegible] Ross road. Lambeth, now arrived, under the direction of Mr Superintendent Braidwood, Mr. Fogo, the foreman of the A district, and Mr. Connorton, the foreman of the West of England office; the firemen went to work in an admirable manner; and, by conveying the hose through the different entrances to the theatre, and over the roofs of the surrounding houses, the brigade were enabled to throw the water in the right direction; but, notwithstanding, the work of devastation continued, and in less than half an hour after the first appearance of the fire the flames had seized upon the pit, and also the boxes and proscenium To stop the fire at those places the firemen exerted themselves to the utmost, but, unfortunately, without the least success, and in the course of a few minutes the conflagration laid hold of the roof, and, seizing the chandelier, it suddenly fell into the middle of the pit, where the crystal drops soon became reduced to molten masses

The flames, by a quarter to nine o'clock, were at their height, for every part of the theatre, except the dressing-rooms in Baker's-row, presented one immense body of flame; the roof suddenly fell in with a loud noise, which so alarmed the inmates of the surrounding houses that they rushed out of their premises into the street. The flames, on the roof falling, mounted so high into the air as to be visible for miles distant, although daylight; and by ten o'clock every part of the establishment was reduced to a heap of smoking ruins. Mrs. Connorton, the proprietress of the building, was insured for the machinery, wardrobe, and theatre, in the Phœnix and Monarch fire offices. Messrs. Elphinstone and Neale, the lessees, who have lost a vast quantity of property by the disastrous event, were entirely uninsured.

As to the origin of the misfortune, nothing that can be depended upon can be ascertained. The previous night a piece called "The Red Crow" was performed, which terminated with the burning of the Robin Hood Tavern; and it is not unlikely that some of the burning embers may have remained smouldering till the next night.

By six o'clock in the evening the firemen succeeded in getting the ruins sufficiently cooled to allow an inspection to be made; but so extensively was everything within the walls burned that it was impossible to tell how, or even in the slightest degree, the fire had commenced.

We regret to learn that the whole of the performers employed on the establishment have lost their wardrobes, and none of the artistes or others employed in the theatre were insured. We understand that Mr. Douglass, the respected proprietor of the Great National Standard Theatre, Shoreditch, and some other managers, intend to get up benefits in aid of the families of "the burnt-out performers."

The theatre was, it is understood, originally erected for a floorcloth factory; but in the year 1828, after the Brunswick Theatre fell down in order to afford amusement to the East-end playgoing public, it was converted into a large and commodious place of entertainment. Amongst the various parties who have been lessees since the theatre has been erected were Messrs. Wyatt and Bunn, E. Yarnold, Connorton, Denvil, and, finally, Elphinstone and Neale.

A sub-scription has been opened on behalf of the performers Mr. E. T. Smith, the lessee of Drury-lane Theatre, has forwarded to the committee £5 worth of admission tickets for the theatre for three particular evenings, by which benevolent means about £20 will be placed at the disposal of the committee. Mr. Anderson, of Covent Garden, has given £20; and the lessees of the Victoria, Standard, and City of London Theatres have announced their intention of giving up their respective houses for one night for a free benefit in aid of the relief fund. Among the subscribers is Mr Albert Smith.

## *NATIONAL SPORTS.*

THE Derby opponent of Fly-by-Night, after finding that his emissary had only succeeded in poisoning a degenerate four-year-old, brother of West Australian, which had sunk down to hack's estate, has now the satisfaction of learning that a £200 reward is put on his head, with the promise of a free pardon (provided the John Scott interest can possibly procure it) to the actual poisoner, if he will only breathe his name. Of fear that such a promise will be held out in vain, as no man (with the fate of a certain ex-jockey before his eyes) will choose to mark himself for life as a deliberate horse poisoner, when he is certain to be so heavily paid to keep quiet. Tattersall's seems likely to come to a very sensible understanding at last, on the subject of P.P. betting; viz., that it ought to extend only to certain great weight-for-age races, and handicaps where the first forfeit is not below five guineas. The total abolitionists will not thank Admiral Rous for so completely checkmating them and their crude notions Forty-four horses out of sixty, headed by King of Trumps, the last of the Velocipedes, who is entering on his sixth racing season, have accepted for the Doncaster St. Leger, which, as the entry only was filled again, a £100 handicap plate is to be substituted for it. Amaroo's Boy has won again at Derby this week, and seems likely to make a good spring of it.

Arthur Wellesley has gone to the Rawcliffe paddock. Sweetmeat's subscription is announced as full, and two of the first of Stockwell's foals have fallen to the lot of Lord Exeter, who has replaced him at Burleigh, by the Flying Dutchman's own brother, Vanderdecken. Messrs. Stebbing and Morris have also been fortunate in their choice of their early two yearlings; most of them are by Flatcatcher, but his stock have as yet not shown sufficient running to ensure them a long price at the hammer.

The North Warwickshire hounds, after killing, or rather drowning, their gallant Tankerville, of pig-sticking celebrity, with Mr Baker's, near Shughborough, last week, and ran a ring with them before they could be stopped. Sportsmen seldom witness this sort of thing, but we remember a beautiful in-tance of it many years ago, when the Quorn hounds ran to a cover which just then was full of water, with a pond in the middle. The fact with which each of the huntsmen drew his own hounds to his side, as they came out of cover, was, in the opinion of the 300 rival "comrets" present, the "prettiest thing of the season."

The Carmarthen meeting comes off on Monday, and includes four steeplechases on its list—a sport for which the wall jumping Welchmen have always felt a peculiar zest. Liverpool Spring Meeting comes, sandwich-like, on Wednesday, between the two days of the Waterloo Coursing; but there is now, alas! no Earl of Sefton to give the word of command to the steeplechase jockeys at Aintree; or to sally forth each day, with his silver couples slung over his shoulder, at the head of the first coursers of England, on to the plains of Altear.

In addition to the Waterloo Meeting, which will not, we trust, be stopped by a "supplementary winter," the coursers will be out at Brin-y-Fys and Belsay on Monday. Hawkstone Meeting is also fixed for Tuesday; Knipersley and Ardrossan for Wednesday; Brough Cattterick for Wednesday and Thursday; and Nithsdale and Galloway open for Friday. We have heard no betting for the Waterloo Cup, but we believe that Judge, Black Cloud, and Ben-my-chree will be among the principal northern entries.

### TATTERSALL'S—THURSDAY EVENING.

LIVERPOOL STEEPLECHASE.—8 to 1 agst Sir Peter Laurie (t), 9 to 1 agst Emigrant (t), 10 to 1 agst Lucky Escape (t); 10 to 1 agst The Scout (t), 10 to 1 agst Jean de Quiroz (t), 18 to 1 agst Jumpaway (t); 22 to 1 agst Fourandee (t); 25 to 1 agst Potter (t); 40 to 1 agst Little Charley (t); 50 to 1 agst Rosamond (t); 50 to 1 agst Minerva (t)

TWO THOUSAND GUINEAS.—10 to 1 agst Yellow Jack; 10 to 1 agst Fly-by-Night (t), £50 each between Yellow Jack and Fly-by Night (t)

CITY AND SUBURBAN.—10 to 1 agst Yorkshire Lad (t); 25 to 1 agst Fairlie (t); 50 to 1 agst Lady Tart (t); 50 to 1 agst Kai pygo (t).

DERBY.—7 to 1 agst Wentworth (t); 10 to 1 agst Fly-by-Night (t); 17 to 2 agst Thornton (t), 100 to 1 agst Newington

### DERBY SPRING MEETING.—TUESDAY.

Harrington Plate—Little Tom, 1. Romeo, 2
Scarsdale Stakes—Jerry Boy, 1. Red-Knightsence, 2.
Selling Plate of 20 sovs.—Little Tom, 1 Ida, 2
Midland Steeplechase. Hopeless Star, 1. Oldham, 2.
Handicap Hurdle Race. Sandboy, 1. Heedhunt, 2.

THE LONDON ORPHAN ASYLUM.—The forty-first anniversary festival of the London Orphan Asylum at Lower Clapton was celebrated on Tuesday evening by a grand banquet at the London Tavern; the chair was taken by the Duke of Cambridge His Royal Highness was supported by the Rev. Dr. Croly, and a large number of influential gentlemen. From the last report it appears that, since the general meeting of 1855, 60 children have left the institution, 3 have died, and 77 have been admitted—viz., 8 by purchase, 31 by presentations through the Commander-in-Chief, as orphans of [illegible] sailors and officers whose fathers have fallen in war, and 65 by election. At the present time the 20 children elected on the 24th inst., there are 426 orphans (137 girls and 289 boys) under the protection of the charity, making the total number benefited by it 2253. In addition to this, arrangements are pending with the authorities of the Horse [illegible] admission of the three other children of non-commissioned [illegible] ed by the subscribers. While the legacies are fewer than in [illegible] subscriptions are slightly in excess—a proof of the undiminished confidence of the public, "although it must be borne in [illegible] exceeds the report, "as an incentive to renewed exertions, that the [illegible] expenses are [illegible] schools

## AMUSEMENTS, &c.

THEATRE ROYAL, HAYMARKET.—Monday, THE LADY OF LYONS, LEND ME FIVE SHILLINGS, and the Pantomime of THE BUTTERFLY'S BALL. Tuesday and Wednesday, THE BUSY BODY, THE LITTLE TREASURE, and the Pantomime. Thursday (last time), THE BRAVO OF VENICE, LEND ME FIVE SHILLINGS, and the Pantomime. Friday and Saturday, THE BUSY BODY, THE LITTLE TREASURE, and last night but four of the Pantomime.

ROYAL PRINCESS' THEATRE.—Monday, the MERCHANT of VENICE; Tuesday and Friday, HENRY VIII.; Wednesday (last time this season), HAMLET. Thursday, LOUIS XI., Saturday, the CORSICAN BROTHERS; and the PANTOMIME Every Evening

GREAT NATIONAL STANDARD THEATRE, Shoreditch.—Proprietor, Mr. JOHN DOUGLASS. Great Novelty, and attractive Production of MARKS AND SPENCER, with new Scenery, and great Hit of THE LUCKY HORSE SHOE. The Great National Standard Pantomimist, Drumming, with its Thousand-Guinea Transformation to be. New Tricks, new Dresses, &c.

THE EXHIBITION of the WAR, illustrated by Pictures painted from Sketches and Photographs made on the spot by officers, is NOW OPEN, at Messrs. DICKINSON'S GALLERIES, 114, New Bond-street.

MR. W. A. WOODIN AS RACHEL IN "LES HORACES."
W. S. WOODIN'S OLIO of ODDITIES
EVERY EVENING at EIGHT, at the POLYGRAPHIC HALL
King William-street, Strand. Box-office open from Eleven to Five. Morning Performance every Saturday, at Two o'Clock.

MISS P. HORTON'S new and popular ENTERTAINMENT, consisting of Musical and Characteristic Illustrations, embracing a variety of Amusing and Interesting Scenes from Real Life, with English, French, and Italian Songs, EVERY EVENING (Tuesday excepted), at Three o'Clock. ENTIRE CHANGE OF ILLUSTRATION. 14, Regent-street, commencing at Eight o'clock and terminating at a Quarter past Ten. Prices of Admission, 3s., 2s., and 1s.; Stalls, 5s., which can be secured at the Gallery during the day.

MR. ALBERT SMITH'S MONT BLANC, HOLLAND, UP THE RHINE, and PARIS, is now open every Evening at Saturday, at Six o'clock. Stalls (which can be taken from a plan at the Box-office every day, between 11 and 4, without any extra charge), 3s.; Area, 2s.; Gallery, 1s. The Morning Representations take place every Tuesday, Thursday, and Saturday, at 3 o'clock.—EGYPTIAN HALL.

THE LION-SLAYER AT HOME, 232, Piccadilly.—Mr. GORDON CUMMING DESCRIBES every night except Saturday, at 8, when HE SAW and KILLED in SOUTH AFRICA. Morning Entertainments every Saturday at 3 o'clock. The Pictures are painted by Messrs. Richard Isaacs, Harrison Weir, George Thomas, Wolf, Charles Hagley, and Phillips. The music composed by Mr. J. Calkin. Admission 1s., 2s., and 3s. Private Collection on View during the day from 11 to 6, 1s. Children half price in the Reserved Seats, 2s. and 3s.

DR. KAHN'S ANATOMICAL MUSEUM, consisting of 1000 highly-interesting Models, representing every part of the Human Frame in health and diseases; as, the various Rates of Mortality, Open for Gentlemen only, every day. Kahn's Lectures delivered at Twelve, Two, and Four precisely, and Half-past Eight by Dr. KAHN. Admission, 1s. 6d., Coventry-street, Leicester-square.

SACRED HARMONIC SOCIETY.—EXTRA SERIES.—Conductor Mr. COSTA.—On Friday next, February 29, will be performed for the first time in London, ELI (an Oratorio, composed by Mr. COSTA, and the Words selected by Mr. Bartholomew, from the Holy Scriptures and Mr. Mason Neale's Translation of the Hymns of the Greek Church), and Mr. Mendelssohn's 98th Psalm. For tickets or subscriptions apply at the Society's Office, No. 6 room within Exeter Hall. Post-office orders for tickets to be made payable at the Charing-cross-office to Robert Bowley

ROYAL POLYTECHNIC. — JUVENILE MORNINGS every Wednesday and Friday during Lent, commencing with Mr. Hinchcliffe's Astronomy, by J. H. Pepper, Esq., illustrated with magnificent Dissolving Views. Mr. Hinchcliffe's Musical Sketches, Haydn and Handel; and followed at 3 by Curious Inventions, at 4 by Mr. Pepper's Ghost, and at 5 by Mr. Bachoffner's New and Second Series of the Dazzling Views illustrating the Voyage of Sindbad the Sailor. Admission 1s. Schools and Children half price.

ROYAL PANOPTICON.—HANDEL'S BIRTHDAY will be celebrated on MONDAY, 25th inst., by Performances of a selection from the Oratorios, such as the Messiah (for the 2nd Time), Judas Maccabeus, Israel in Egypt, Samson, Jephtha, Saul, Alexander's Feast, Acis and Galatea, Dettingen Te Deum, &c. Electricity, Chemistry, Nature's Magic, and the other Entertainments as heretofore, open from 10 in the Theatre to Five, and from Seven to Ten. Admission, 1s., Schools and Children half price.

QUEEN CHARLOTTE'S HOSPITAL, New-road.—Patroness, the QUEEN.—A GRAND CONCERT, for the BENEFIT of the above Charitable Institution will take place at EXETER HALL, on WEDNESDAY, next, on which occasion the eminent artistes in London will appear. Full particulars to be had at Cramer, Beale, and Co.'s, 201, Regent-street.

BROOK-STREET RAGGED and INDUSTRIAL SCHOOLS.—New-road, St. Pancras.—THIS DAY EVENING, Feb. 23, 1856, Handel's Oratorio of "THE MESSIAH" will be performed in aid of the Funds of the above Schools, at the MARYLEBONE INSTITUTION, 17 Edward-street, Portman-square. Tickets for the Oratorio, 1s.; Reserved Seats, 2s. 6d., to be had in the Library of the Institution.
JOSEPH BUSH, Hon. Sec.

BRADFORD TRIENNIAL GRAND MUSICAL FESTIVAL, 1856. A Grand Musical Festival will be held in the Worsted Capital, Bradford, Yorkshire, early in the Autumn of the Present Year. Choirs for Miscellaneous Performances, and Bands for the Selection Concerts, are invited to communicate with the Secretary.

THE SISTERS SOPHIA and ANNIE, in their celebrated Entertainment, entitled "SISTERLY FEELINGS TOWARDS NATURE, ON MONDAY, FEB. 25th, and every evening during the week, at 8 o'clock. SHEFFIELD.

NEW SEEDS for the GARDEN can be obtained from the old-established firm of WILLIAM RENDLE and CO., Seed Merchants, Plymouth, Devonshire.—Have published nearly seventy years.

SEEDS for EXPORTATION.—JAMES CARTER and CO., Seedsmen to ten of the principal Royal Families of Europe, and to the Imperial Agricultural Society of France, have the honour to announce that their Autumn Catalogue of Flower, Vegetable, and Agricultural Seeds, which will be forwarded free of charge; and post-paid to all parts of the world, upon application.—James Carter and Co., Seedsmen, 238, High Holborn, London

FLOWER and VEGETABLE SEEDS.—JAMES CARTER and CO., Seedsmen, 238, High Holborn, London, beg to return hearty Thanksgiving to their Twenty First Annual Catalogue of Horticultural, Vegetable, and Agricultural Seeds, which will be forwarded free of charge; and post-paid to all parts of the world, upon application.—James Carter and Co., Seedsmen, 238, High Holborn, London

ORCHIDES.—MESSRS. RANGEL and MACKAY have received a rare and magnificent collection of ORCHIDACEOUS PLANTS, in fine condition, from their Agents in Mexico and Guatemala. Also rare Plants from the Interior of Brazil, now flowering, and other rare Plants, received from the Collectors of H.R.H. Prince Albert, the Royal Horticultural Society, and other Botanical Establishments. Specimens of Plants sent by Messrs. Rangel and Mackay will be forwarded free of charge, and carriage paid to any part of the United Kingdom. Merchants and Botanists desirous of supplied with the above, or other Plants, are requested to favour Messrs. Rangel and Mackay with their commands.—Messrs. Rangel and Mackay, 238, High Holborn, London.

UNDERHILL'S "SIR HARRY" STRAWBERRY. FINE Plants of this greatly-celebrated and hardy Strawberry warranted genuine from runners obtained from the Proprietor, at 10s. per 100, 1s. per dozen, 6d. per half-dozen, 50, 75, 100, 150, 200, 250, 300, 400, 500, 600, 700, 800, 900, 1000, 1100, 1200, 1300, 1400, 1500, 1600, 1700, 1800, 1900, 2000, 2100, 2200, 2300, 2400, 2500, 2600, 2700, 2800, 2900, 3000, 3100, 3200, 3300, 3400, 3500, 3600, 3700, 3800, 3900, 4000, 4100, 4200,

(Continued from page 206.)

enormous mining operations constantly going on in the quarries, which are, in fact, nothing less than Holyhead mountain itself. Upwards of five or six tons of powder, in separate chambers, are usually ignited every week, producing from 50,000 to 60,000 tons of stone at each explosion.

On Wednesday, the 6th inst., in the lower quarries of the mountain a most stupendous and successful blasting operation took place, when the enormous quantity of 18 000 lb. of powder, contained in four separate chambers, were simultaneously exploded by means of the galvanic battery, producing upwards of 70,000 tons of the hardest schistus quartz, of which the Holyhead mountain is composed.

The respective chambers, four in number, were so judiciously charged that the rock, after the explosion, fell in blocks of a size not larger than from one to twenty tons; thus enabling the contractors, without further expense for reducing the stone, to lift the blocks into the iron waggons; and so to convey them from the quarries over the staging, and thence tipped into the sea, or to build them into the cyclopean structure.

To instance how correctly and to what nicety the calculations are made respecting this powerful agent "blasting powder," and how accurately, from the repeated operations and the experience gained thereby, these calculations have been brought to bear upon the stratification of quartz rock, of which the Holyhead mountain consists, we may mention that a kind of battery was erected at not more than 400 yards distance from that part of the mountain which was to be dislodged, and exactly opposite to it: this proved perfectly safe to those who were behind it, and from which the engineer-in-chief, Mr. James M. Rendel, and Mr. Charles Rigby, took their observations.

Since the commencement of blasting operations at these works on a large scale, and which have exceeded 600 in number, the galvanic battery has been invariably used, without a single instance of failure

A visit to the timber staging, upon which five lines of railroad are constructed, and over which the stone is carried and afterwards tipped through the timbers into the sea, is most interesting and instructive This timber staging, or scaffolding, extends at present nearly 6000 feet into the sea, and is nearly 160 feet high from the bottom. The piles are neither driven nor screwed into the bottom of the sea. They have to resist the pressure of an enormous current, and are fixed up on a most ingenious and novel principle The invention of this principle is due to the engineer-in-chief; and, although it was at first much opposed by scientific men, it has proved triumphant, through the perseverance of Mr. Rendel, the chief Admiralty engineer, and Messrs. Rigby, the contractors for the Harbour works.

From fifty to sixty experienced marine carpenters are employed in throwing out and adjusting new lengths of timber staging, the divisions or bays of which are thirty feet apart from each other, and are a great height above the level of the sea. The embankment or dam is formed by tipping from 4000 to 5000 tons of stone daily, or upwards of one million tons annually, through the timber staging. Many distinguished foreign engineers and scientific men from France, Germany, Italy, and elsewhere, have already visited these works, and expressed their wonder at the magnitude of the operations.

The local Government directions are under Mr. G. C. Dobson, who was formerly at the Plymouth Breakwater; the work is being carried out by the Messrs. Rigby, the well-known Government contractors of Westminster and London, who are represented there by Mr. G. C. Reitheimer, the manager of the works.

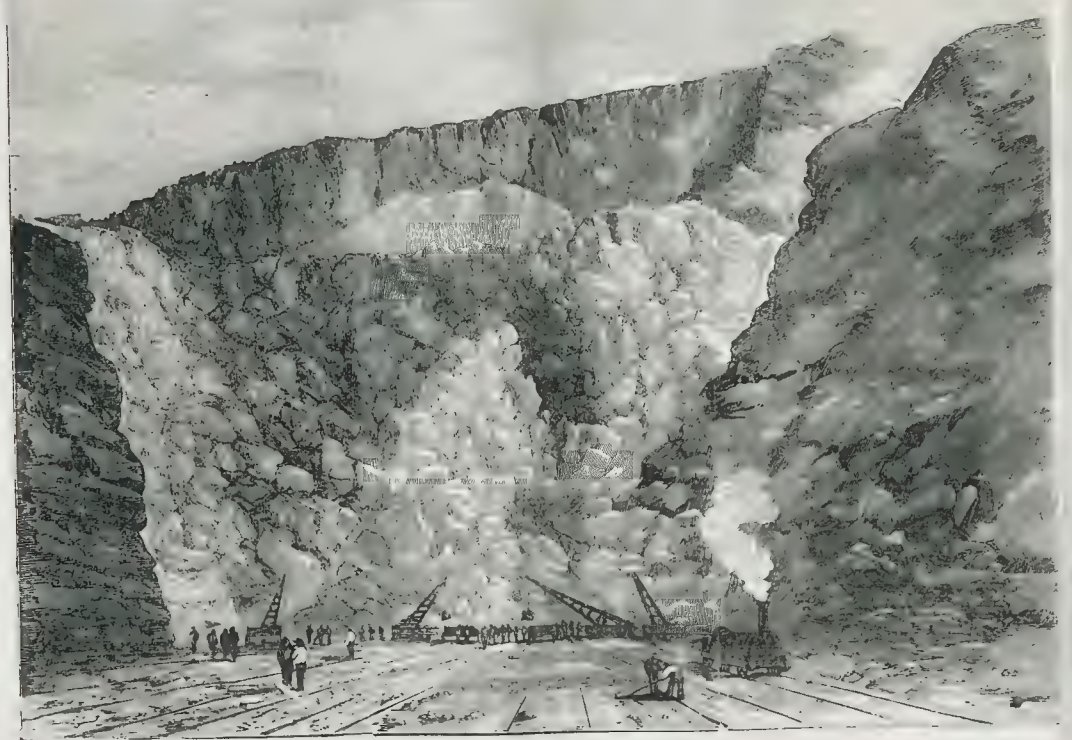
"SANDY," FROM THE CRIMEA, THE DOG OF THE SAPPERS AND MINERS.

## SANDY, THE DOG OF THE SAPPERS AND MINERS.

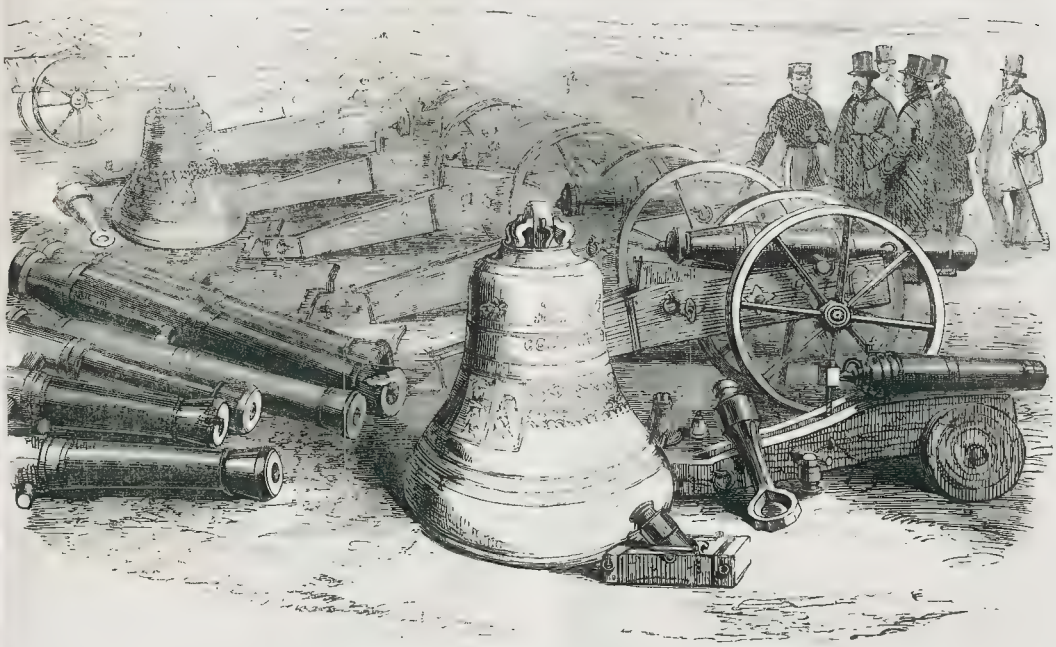
This Dog, who has obtained such notoriety from his adventures in the Crimea and being decorated with a medal, is the property of Lieutenant George R. Lempriere, R.E., the Adjutant of the corps, who bred him—the ...ery being a thoroughbred Scotch terrier, the mother a thoroughbred English bulldog. Sandy is now seven years old, and has travelled ...ngland, where with his master, in ... he went to Gibraltar, whence he took constant trips into Spain. He then came home again, and, after going to several ...tions where ... was quartered ... and the men, at the commencement of the war, for the East, and was constantly with them at Malta, Gallipoli, Constantinople, and Varna—at which latter place being found useful on ... expeditions, and a great favourite with the natives, whose honesty is not ... From Varna Sandy ... Kertch, Kiodout ... and many other ... that coast where the ... was stationed with the Turkish army from time to time. From his being a most excellent water dog he made (which is quite an uncommon thing) great friends with the Turks and Bashi-bozouks; he also greatly distinguished himself on two or three occasions when, in ... off to different vessels, the ... was swamped and capsized, by ... into the most fearful seas and rescuing coats, oars, &c. Thence he went to the Crimea, was present at the battle of Inkerman; received a bayonet-wound, which caused him to go on three legs for some time; from the effects of this wound, although now nearly recovered he is unable to take long continued or violent exercise, and, as will be seen from his portrait, it slightly affects the ... of his seat in repose. His master being compelled from ill health to leave the army, Sandy was taken care of by some of the officers, and returned home some months after on "urgent private affairs," to the great delight of his master, who never expected to see him again. At one place in particular, where the corps were short of supplies, poor Sandy had a narrow escape; serious thoughts were entertained of devouring him—a fate from which he was only preserved by the arrival of supplies—although nearly starved himself.

Sandy always marches out at the head of the men, to whom he has become so attached that he will not follow those of any other regiment. He is well up to all the bugle calls, especially those for dinner, breakfast, and supper, at which hours he generally makes off to one of the barrack-rooms.

Some few months since, before leaving Woolwich for Brompton Barracks, Chatham, he marched into his master's room with a medal round his neck, put on by some one who knew of his having seen active service; but who did so was never found out. This medal being stolen from him, his master procured another for him to appear on parade when Sir John Burgoyne went down to present the men with their medals. From that time he has always worn the medal, on drill parades, attached by a piece of blue ribbon. This second medal was stolen a short time since, but was recovered by some of the men, and the delinquent handed over to the police. The medal is not a real Crimean one, as dogs are not so decorated however distinguished in the service.



RESULTS OF THE GREAT BLASTING OPERATION AT HOLYHEAD, NORTH WALES.



RUSSIAN GUNS AND BELLS FROM SEBASTOPOL, JUST RECEIVED AT WOOLWICH ARSENAL.

## RUSSIAN GUNS AND BELLS, AT WOOLWICH.

In our Journal of Feb. 9 we engraved the wooden sentry-box, and several guns, brought from Hango, by Captain Hall, and recently deposited in the Dial-square, at Woolwich Arsenal. We now engrave several guns, and mortars, and two large bells, brought from Sebastopol, which have since been added to these trophies of the war. They are deposited at the entrance of the Arsenal grounds; some of them are heavy iron guns of large calibre, and of a most singular appearance. The ornamentation of the bells, which bear representations of saints, is tastefully executed. The Dial-square now presents a novel spectacle, having two spaces inclosed, which contain large numbers of Russian implements of war.

On Tuesday last the Queen and Prince Albert inspected these interesting trophies. Her Majesty and his Royal Highness, with the Countess of Desart, the Hon. Beatrice Byng, Major-General Bouverie, and Captain Du Plat, left Buckingham Palace shortly before ten o'clock, in two carriages and four, and on arriving at the Royal Arsenal, viewed the cannon, mortars, and other articles captured in the Crimea and at Bomarsund. The Queen afterwards inspected, in the committee-room, a number of wounded soldiers, recently returned invalided from the seat of war.

A considerable increase has lately been made in the number of labourers employed in the various departments of the Arsenal, at Woolwich. Some idea of the vast amount of labour performed in that establishment, where upwards of 9000 hands are constantly employed, may be formed by stating that the consumption of powder in one day in preparing ammunition for cannon, independently of small-arm cartridges, exceeded 46,000 pounds. Besides the large number of shells cast in this establishment, contracts with the Scotch, Yorkshire, Liverpool, and other foundries are on a very extensive scale. 2000 of these shells are loaded and prepared daily, and 200,000 musket cartridges. The buildings for the standard foundry and the shell factory are progressing rapidly: the spacious area in front of the carriage department having been cleared, and the foundation walls have been commenced.

## SHOEING A REFRACTORY MULE.

In this Sketch our Artist has represented a party of the Land Transport Corps in the rather awkward task of Shoeing a Refractory Mule. The obstinate animal, although laid on its back, appears almost a match for the four sturdy fellows who have taken it in hand.

We are glad to see from recent letters that the health of the Land Transport Corps, as well as that of the rest of the English army, continues excellent. A letter from the Camp, dated Feb. 1, draws the following contrast between the condition of our troops at present and the wretched state of things last winter:—

Last week's return gives 18 deaths (of which 5 are in the Land Transport Corps) in an army of 59,000 men, our present strength in the Crimea, exclusive of the Highlanders, &c., at Kertch. In the corresponding week last year the army here was about 29,600 strong, and there were 533 deaths! Eighteen deaths in 57,000 is about 1 in 3000, or about 1-30 per cent per week, or at the rate of 1 22-30 per cent per annum which would be a low average of mortality in an English population of the same age, all males of say, between 18 and 45 years old.

THE LAND TRANSPORT CORPS BEFORE SEBASTOPOL.—SHOEING A REFRACTORY MULE.—SKETCHED BY J. A. CROWE.

## ANALYSIS OF SOME ENGLISH CASES OF POISONING.

### NO. II. THE WAINWRIGHT CASE.

THE system of defrauding Insurance Societies seems first to have manifested itself in the fraudulent destruction of ships, with their cargoes, or warehouses with their contents. Cases such as these are found often enough to have compelled the attention of our criminal lawyers towards the close of the last century. They were trivial, indeed, compared with the desperate lengths and deadly depths to which in a few short years this new form of crime extended itself. Formerly, we believe, in every office, all the benefits of insurance were forfeited in case of fraud, death by suicide, duelling, or the hands of the executioner. Gradually, but not wisely, most of these provisos for non-payment were abandoned, and soon we hear of various endeavours to deceive and defraud. Lives notoriously unsafe were insured. Suicides, that the premium might descend to the family, strange as it is, have more than once been known to occur; and at last, between the years 1830 and 1835, the various metropolitan offices began to realise the alarming extent to which they were open to the machinations of talented, but unprincipled and designing, men and women. The man by whom this lesson was taught was Mr. Thomas G. Wainwright. He was first known in the literary circles of the metropolis, as an able writer and critic, under the nom *de plume* of Janus Weathercock. It is painful, now that after events have shown the fearful depths to which he fell, to trace in his writings the evil influences which were then plainly operating within. Passionate impulses, not only unchecked but fostered; a prurient imagination, rioting in the conception and development of luxurious and criminal pictures, intimate but too plainly to the moralist the fruit which the sermon of a summer so unhealthy might be expected to produce. In a word, Wainwright was a true specimen of a class thus described by a modern divine of the Church of England:—"There is another and far more numerous class of mankind which claims the credit of a more refined phase of humanity—that in which the animal soul, with its intellectual powers, exercises a supremacy, such as it is, over the body, and controls its animal passions, or, more often, conceals their illicit indulgence. The persons of whom I am speaking rule themselves by the light of nature, of reason, and experience. There have always been considerable numbers of such in every age or the world. Ascending from that perpetual wallowing in the grosser pollutions at which we have reluctantly glanced, they move in an atmosphere less gross. The intellectual but unregenerate man aspires to the higher regions and enjoyments of the psychical soul, refined love, sentiment, the emotions of sensibility, natural perceptions of the beautiful, with many other most mistaken notions of the true and chief nobility and end of man. Literature, art, science, fame, and wealth are the false gods before whom millions who deem themselves the flower of the creation bow down and worship, and to whom they sacrifice the higher hopes and enjoyments of eternity." Men of this class, it may truly be said, are ever trembling on the brink of a precipice: their hour of trial comes and they fall. Such it was with Wainwright. Poverty, that most trying of earthly tests, came upon him, and found him not only unnerved and unarmed, but ready to adopt any means of escape from its galling assaults, however unscrupulous and deadly. An evil imagination, mercilessly forced, and too prolific in the wildest suggestions, flattered him with the means of evasion, nay of obtaining even wealth; and warily and deliberately, but unconscious of an avenger at his heels, he proceeded to carry them into effect.

It is worthy of note that at this period of his history (1825) he ceased to write. The time for action had arrived. I believe it is Sir Edward Bulwer Lytton who has so truthfully remarked that the lives of literary men are, in general, blameless. It is probably difficult to write when conscious crime of any kind is festering at the heart.

We now come to a dark period in the story. Wainwright and his wife (for by this time he was united to an amiable and accomplished woman) went to visit his uncle, to whose property he was believed to be the intended heir. During that visit the uncle died, leaving the property in question to his nephew, by whom it was speedily dissipated.

Shortly afterwards Miss Helen and Miss Madeline Abercrombie, step-sisters to Mrs. Wainwright, fatally for the life of one, and destructively to the peace of all, became inmates of the family. It is, impossible, whatever he our wish, to clear the memory of Helen Abercrombie from the very gravest suspicions. In reverence to the dead, be it supposed she was but a dupe in hands already stained with guilt. Be it supposed that, controlled by a power to which she had fatally rendered herself subservient, it was only intended, when these insurances were effected, that by a fictitious death the means should be obtained from the offices to linger out their lives in some foreign land. Be it supposed that upon that fatal Wednesday at this time really purposed compassing her death is scarcely tenable. She was the most prominent actress in the business, anxious to insure to a considerable extent, and hesitating not at falsehood in the endeavour. It is, therefore, impossible to acquit her of complicity, or to cut wood for gabions, is a mystery to me. It is well known in Sheffield that no manufacturer who makes good articles has any chance of ever obtaining a Government contract for cutlery, as the goods required are so common and so low in price that it is impossible to make an article worthy to receive any maker's name who has any thought for his future standing in trade.

The whole letter is written in an excellent spirit, vindicating the character of the honourable portion of the Sheffield cutlers, while admitting and lamenting that some makers produce worthless articles—worthless because they could only be sold for very little money.

The point which interests the public is the limitation to cheapness consistently with honesty. We are entitled to full weight, and measure, and genuine quality, in all articles exposed to sale in public markets. What, then, determines the minimum of price? The value of every commodity is expressed by the labour it embodies; and if there were no tax it could be sold for that value and yield a living profit to the producer; but if the commodity be loaded with a tax the case is widely different, for a tax adds nothing to the value of the product, though it adds to the cost of production. To express this argument in a simple form—let $x$ represent the value and $y$ the tax; the commodity cannot be sold for less than $x$ plus $y$, whatever they may denote in pounds, shillings, and pence. By this formula let cheapness be tested. If $x$ represent in money four pounds and $y$ two pounds, then the commodity cannot be sold for less than six pounds to give the producer his fair reward, assuming that he gives just weight, measure, and quality. Now introduce a tax, such that six be reduced to five; but is the one which must be subtracted, to be taken from $x$ or from $y$? If from $y$, no complaint will be heard; for $y$ represents the tax, and all rejoice when the tax is lowered. But if the one is taken from $x$ it must be deducted from the profits of stock or the wages of labour, while the tax would remain as high as ever. The first of these forms of cheapness is a real blessing to all classes, for it arises from a direct abatement of fiscal pressure; but the second form is a gross injustice to the producer, for he has now only three pounds to spend on his own wants, whereas he had four pounds so to appropriate. Moreover, it is plain that, under this second form of cheapness, taxation presses relatively with greater force on the producer; for while the tax remains the same, his power to pay the tax is reduced.

Perhaps this view of the subject may explain why food is adulterated and manufactures deteriorated.

A DANGEROUS DEMONSTRATION.—Some time ago took place the funeral of that celebrated sculptor David d'Angers. Amongst the mourners was the poet Beranger. The poet and the sculptor had sat side by side in the Constituent Assembly on the Republican benches; for, although all members professed to be Republicans at the time, yet subsequent events showed that distinctions ought to be made between Republicans from principle and Republicans from necessity. It does not appear that any political demonstration was made at the funeral of the Republican sculptor, and, at all events, no such thing could have been meditated by many in their senses. The appearance of the aged and exceedingly popular Beranger excited the feelings of the attendants, the more so as some abominably gross attacks had just been perpetrated against him by the ultramontane *Univers*. In fact, as Beranger left the cemetery of Pere la Chaise he was treated to an ovation. One man, who cried "Vive la Liberté," was collared by the police, imprisoned and tried, and last week condemned to three months' imprisonment and 100f. fine. The prisoner's admitted offence was that he cried "Vive la Liberté," which was ruled to be a seditious cry. In pronouncing sentence, the Judge said that "the cry of 'Vive la Liberté' preferred under the circumstances could not be explained in the manner pretended by the prisoner, Goudumeche, as homage rendered to a man, but as a seditious manifestation, sufficiently characterised besides by the prisoner's antecedents." It seems that M. Goudoueche formerly edited the *Lanzit*.

## CHEAP PRODUCTS AND NATIONAL INDEBTEDNESS.

DURING the long war between this country and Revolutionary and Imperial France manufacturing industry languished on the continent of Europe, few men of capital venturing to form large establishments which a foreign invader might within a brief period level with the dust. England, secure against a similar calamity, and commanding the markets of the world, cultivated with zeal all the arts of production, and introduced successive improvements into her machinery. When peace was proclaimed, and the sea once more became the highway of industrial exchanges, Britain started in the race of competition with every advantage. Her mercantile reputation was celebrated in every mart of trade in both hemispheres, the superiority of her commodities was universally recognised, and no foreign purchaser doubted the honesty of her weights and measures. But, as years passed on and peace continued, rival industries gradually acquired skill and accumulated capital; our laws prohibiting the export of machinery were repealed; and our mechanics and artisans were exempted from the old penalties inflicted on them when convicted of working in the land of the stranger. British foremen superintended foreign factories, instructed foreign apprentices, and generally imparted knowledge to their new employers. Under such circumstances competition in the markets of the world became more severe.

The doctrine of cheapness was then mooted in England, and became popular. Through its agency we were to undersell all our rivals, and win back that monopoly which we had enjoyed during the war. But the term cheapness was more easily written than understood. Every one desired to sell for a great deal of money, and to buy for very little money, and so an antagonism arose among those who professed to teach the science of political economy; for, as cheapness obviously admitted of two opposite interpretations, it was impossible to please both producers and consumers. He who produced before he could consume wanted many pounds for few articles; but he who could consume without being previously compelled to produce, wanted many articles for few pounds. Cheapness, therefore, did not solve the problem of competition, and suspicions were soon excited that the art of underselling, as the means of securing the home market, consisted in the deterioration of commodities, fraudulent measures, and false weights; the same suspicions were soon extended to the art of defying competition in the markets of the world. What was once suspicion has now ripened into fact, if recent statements in the *Times* are to be credited; but such grave charges are not to be hastily accepted as true. On the contrary, if they can be proved, the delinquency ought to be exposed far and wide, and they who endeavour to conceal this foul taint on manufacturing and mercantile honour should be branded as participators in the crime.

Among other towns inculpated in these dishonest practices is Sheffield. Mr. Mappin, the Master Cutler, addressed a letter to the *Times* on the subject, in which he denies the alleged inferiority of Sheffield wares, where a proper price is obtained, and asserts that foreigners, to make a deceptive appearance in the market, pirate British "marks, labels, and even the colour of the paper." Mr. Mappin, however, does admit that very bad articles are made in Sheffield, and declares that they are specially patronised by the Government. On so serious a charge we must quote the gentleman's own words:—

I refer to knives and forks, gabion-knives, farriers' knives, butchers' knives, &c.; these are made of the very commonest quality that can possibly be imagined. How ever our poor soldiers manage to put their gabions up, or to

I refer to knives and forks, gabion-knives, farriers' knives, butchers' knives, &c.; these are made of the very commonest quality that can possibly be imagined. How ever our poor soldiers manage to put their gabions up, or to cut wood for gabions, is a mystery to me. It is well known in Sheffield that no manufacturer who makes good articles has any chance of ever obtaining a Government contract for cutlery, as the goods required are so common and so low in price that it is impossible to make an article worthy to receive any maker's name who has any thought for his future standing in trade.

The whole letter is written in an excellent spirit, vindicating the character of the honourable portion of the Sheffield cutlers, while admitting and lamenting that some makers produce worthless articles—worthless because they could only be sold for very little money.

The point which interests the public is the limitation to cheapness consistently with honesty. We are entitled to full weight, and measure, and genuine quality, in all articles exposed to sale in public markets. What, then, determines the minimum of price? The value of every commodity is expressed by the labour it embodies; and if there were no tax it could be sold for that value and yield a living profit to the producer; but if the commodity be loaded with a tax the case is widely different, for a tax adds nothing to the value of the product, though it adds to the cost of production. To express this argument in a simple form—let $x$ represent the value and $y$ the tax; the commodity cannot be sold for less than $x$ plus $y$, whatever they may denote in pounds, shillings, and pence. By this formula let cheapness be tested. If $x$ represent in money four pounds and $y$ two pounds, then the commodity cannot be sold for less than six pounds to give the producer his fair reward, assuming that he gives just weight, measure, and quality. Now introduce a tax, such that six be reduced to five; but is the one which must be subtracted, to be taken from $x$ or from $y$? If from $y$, no complaint will be heard; for $y$ represents the tax, and all rejoice when the tax is lowered. But if the one is taken from $x$ it must be deducted from the profits of stock or the wages of labour, while the tax would remain as high as ever. The first of these forms of cheapness is a real blessing to all classes, for it arises from a direct abatement of fiscal pressure; but the second form is a gross injustice to the producer, for he has now only three pounds to spend on his own wants, whereas he had four pounds so to appropriate. Moreover, it is plain that, under this second form of cheapness, taxation presses relatively with greater force on the producer; for while the tax remains the same, his power to pay the tax is reduced.

Perhaps this view of the subject may explain why food is adulterated and manufactures deteriorated.

## LITERATURE.

DOCTOR ANTONIO; a Tale. By the Author of "Lorenzo Benoni." Edinburgh: Constable and Co.

This little tale—for it is comprised in a single volume—is not only one of the most charming works of its class, but is also, as well as its precursor "Lorenzo Benoni," an interesting literary curiosity. Both are from an Italian pen. Their author is Giovanni Ruffini, a distinguished Piedmontese, who was formerly the Sardinian Ambassador at Paris. They are not translations, as might have been expected—not written "in choice Italian," but in the choicest English, with a grace and purity of style, a facility and freshness, and an idiomatic freedom of expression, which are quite marvellous in a foreigner, and could be equalled by few even of our native writers. "Lorenzo Benoni" is already known to the public. The present work is exciting still greater admiration; for it equals the former in the beauty of the composition, while its subject excites a deeper and more general interest. It is not only a tale of true love—one of the sweetest that ever was imagined—but is a heart-stirring appeal to the sympathies of our free and happy country in behalf of the people of Italy, now groaning under a load of tyranny and oppression. We need scarcely add that the author does not include his own fellow-subjects in his gloomy picture of debasement and misery. Thanks to the patriotic Monarch who has just visited our shores, the prosperous inhabitants of Piedmont, rejoicing, like ourselves, in a constitutional Government, present a bright contrast to the dark shades which cover all the rest of beautiful Italy.

The tale of "Doctor Antonio" is full of the most touching simplicity. An English baronet (Sir John Davenne), travelling with his daughter, a young girl in delicate health, has his carriage overturned at a little town near Genoa, and Lucy is severely hurt. The physician of the place gives his professional aid, and tends her during a long convalescence. This is Doctor Antonio, a young man, lately settled there, and adored by the rural population of all the district for his skill and benevolence. His intercourse with the English family his frank and manly character conciliates the proud and reserved Baronet; while the friendship between the doctor and his youthful patient gradually rises to a warmer feeling, and at length becomes on both sides a deep and devoted passion. Nothing can be more beautiful and full of sunshine than the description of the growth of their mutual attachment.

"See what a beautiful carpet Nature has spread out for you!" said Antonio, as he handed Miss Davenne into the garden. The night had been windy, and there was on the ground a thick silvery layer of orange and lemon blossoms out of which came forth in strong relief a profusion of violently red wild poppies. "Will you have any such in store for me when I come to Davenne?"

"Not so rich and gaudy as this," answered Lucy; "still," continued she with some archness, "you will find at Davenne, at all seasons, what my country alone can produce—real English turf, as green as only itself ever is, and as soft as velvet."

"I shall admire it very much," said Antonio, "indeed I feel inclined beforehand to admire everything that is English."

"Do you!" was the reply, in a little joyous, triumphant tone. "Oh, then come to England soon, and I shall be your *cicerone* there."

"In that case I must not go for a long time," said the Italian jokingly "or have you forgotten that you are to stay here, and build a cottage out spite to somebody or other!"

"I wish it were true; I could stay here willingly all my life," said Lucy simply

"Could you, indeed!" exclaimed Antonio, with a thrill in his voice, while a column of blood rushed to his face.

She looked up to him.

"But you can't," he added, gravely, nay, with a touch of despondency "you know you cannot. What would the world say," he went on with an awkward attempt to laugh, "if the daughter of Sir John Davenne were to desert her place in society, and bury herself in an obscure Italian village!"

He paused slightly, it might be for an answer, then continued, "Rank and riches are chains of gold, but still chains. It was Seneca, was it not, who said that a great fortune was a great servitude!"

"I fear so," answered Lucy, with a sigh that would not be kept down.

The couple moved on in silence. It was a treat to see them walk leisurely along—he measuring his steps to hers, and supporting her with such gentle care; she leaning on his arm so confidingly, so complacently—both young, elegant, and graceful—both bearing about them the cast of distinction which characterises refined natures; yet, with so much in common, how different in type! Lucy all golden hues and softness, Antonio all dark shades and energy: her little cherub's head bending gracefully forwards as if in search of a stay, his so resolutely upright upon its shoulder; her step so light and childlike, his so manly and steady, as if at every stride he took possession, in right of some unknown power, of every bit of ground he walked upon. Such a contrast, and yet such a harmony—strength and weakness blended together in love. Every characteristic feature in the one setting forth to advantage and giving zest to that of the other—the fiery black diamond casting lustre over the Oriental pearl, the Oriental pearl in return lending softness to the black diamond!

We must pass over many of these pretty scenes, and come to the occurrence which puts an end to them: the sudden arrival of Lucy's haughty brother, whom Antonio is rushing to Lucy's rescue from—

Well, the reading had been going on for some time, and more than once had the condensed *vis comica* of the inimitable poet brought a faint smile on Lucy's pale face. By degrees, however, her perception of the author's meaning became fainter and fainter, and the rich melodious voice of the reader, soothing her like the murmuring of a brook, lulled the weak girl into that state which is not yet sleep, yet neither is it waking, but a voluptuous compound of the two. All on a sudden a heavy footstep is heard coming up the stairs—Lucy started up—"Who can that be!" faltered she with a shudder. At the same instant the glass-door is flung open with a crash, a colossal figure stalks in noisily, and "Hallos, Lucy, my girl!" roars out a voice like thunder, as the Lying tower stoops down to kiss the prostrate form. "Here you are at last! Heyday! what's all this? By Jove! with your green bonghs and waterings-pots, you look as pastoral as one of the shepherdesses in a ballet. *Une chaumière et ton cœur.* Ah! ah! nothing is wanting to the Idyl, as they used to say at Eton! 6—it, not even the shepherd!"

"Shepherd!" cried Lucy, in a tone of reproach, but could say no more. The oath and witty sally, we need scarcely remark, were aimed at our friend the Doctor. Antonio had received such a violent slap from the door, when Aubrey entered, as to be nearly felled to the ground, and in the effort to recover his balance he had run his head against the wall. The sore sensation at the noise, saw Antonio, and uttered the silly vapid joke about the shepherd.

The eyes of the two men met in no friendly way. Aubrey's haughty scowl, curled lip, and somewhat aggressive demeanour, evinced but little good-will towards the object of his present scrutiny. Antonio, on the other hand, his ashy-pale countenance, and collected look of self-defence, gave evidence of his scenting the near approach of a foe. Thus they stood, confronting each other, types of two fine races, very much as even Greek and Roman would seem one like to the other, fair, rosy, blue-eyed (Lucy's very eyes), the other, dark as a tempest the Englishman taller by nearly a hand than his tall antagonist, square-chested broad-shouldered in proportion, the very *ne plus ultra* of muscular develop ment (Antonio's strength; the Italian less bulky, but as firmly knit, sprungy and supple as a tiger, with iron nerves and sinews, ready servants of the indomitable will betrayed in the sombre fire of his eyes. God grant that they may never meet in anger, for there will be like the meeting of two thunder-clouds!

Aubrey's first survey did not last ten seconds, but even that time sufficed to develop between the two a strong feeling of antipathy. Lucy, woman-like, divined it, and her increasing terror loosened her tongue. "My brother, Captain Davenne—Doctor Antonio, my doctor, papa's best friend." The words broke the spell. Captain Davenne bowed slightly, as did Doctor Antonio. A parting recommendation to Lucy to keep quiet, and to go to bed early if she did not feel better in the evening, and the Doctor withdrew.

The result of this arrival is that the lovers are parted. Lucy is carried to England, and her brother at length forces her into a marriage with an English nobleman. Eight years pass in the unhappiness of an ill-assorted union and undying regret. At length her husband dies, and she returns, broken in health and spirits, to her father's house. Sir John remembers learn the Italian physician who had formerly done her so much good, and proposes another journey to Italy to consult Doctor Antonio. Lucy's own heart seconds the proposal. On reaching the town where he had lived they found that he had long left it, having returned to Sicily, his native country. The lovers meet again and have a gleam of returning happiness. But the revolution of 1848 breaks out. Antonio joins the cause of freedom, and is involved in the consequences of that vain attempt to shake off the yoke of the oppressor. We leave it to our readers to learn the catastrophe from the book itself; only saying that, while it is unspeakably pathetic, it rises to the sublimity of moral greatness.

THE BOOK OF SOLOMON: ECCLESIASTES, OR THE PREACHER. By the Rev. AARON AUGUSTUS MORGAN, M.A. James Bosworth.

The English version of the Holy Bible is, with the exception of the original Hebrew, the most perfect transcription of he Word of God which mankind possesses. As a translation it is the most accurate; as a piece of composition it is the most simple and concise, as well as the most venerable and beautiful in any language. The pious men who, during the reign of James I., undertook and completed this noble work claim not

only our gratitude as divines, but our reverence as men of letters. We have only to take up a foreign Bible and compare it with our own to be convinced of the unmeasurable superiority of the strong, pithy Anglo-Saxon language in which it is rendered. It is almost impossible to improve it. The greatest masters of composition have spoken of it in terms of the deepest admiration, and felt it an honour to bow before the genius and conscientiousness of its authors. The language of the Bible sacred in the eyes of every Englishman. Its touching simplicity and solemnity are entwined around the heart, and are as dear to the imagination as to the judgment; and never can we suffer those familiar narratives and precepts which have served us as guides through life to be divested of the glorious words in which they are enshrined.

Had the Rev. Aaron Morgan been a Frenchman, his attempt at producing a new French reading of the Book of Ecclesiastes might have met with encouragement. But, Englishman as he is, his present attempt is not merely rash but irreverent. It is only with the greatest reluctance that the world will allow the alteration of a single sentence or word in the plays of Shakspeare, although such alteration may be not only warranted but absolutely demanded by the context; how much more reluctantly will it acknowledge the remodelling of a whole book in the Bible? Poets of the highest order would shrink before such a task, and deem its performance alike presumptuous and ungracious. Not so Mr. Morgan, and Messrs. Sherbold and Hopkins. Either Mr. Morgan does not appreciate the beautiful English version of the Ecclesiastes—or, admiring it, imagines he can surpass it. All we can say is that his temerity—like that alluded to by Pope in his celebrated line about "fools" and "angels"—has led him into dangerous ground. The two versions of the Ecclesiastes, the original one and the *amendment*, lie open before us. We have perused both with the greatest attention, and comprised them line for line. Our leaders shall have the benefit of the comparison.

The opening verses of the Ecclesiastes are rendered by the ambitious versifier in the following manner:

> [illegible] Jerusalem's Solomon
> From the world extends exact tedious pain
> [illegible] to toil upon and toil in vain.
> Nor use nor permanence has labours crown
> From the sun's rising to its going down;
> Race after race in stated success on rise,
> Flying an endless round at restless
> *On earth's wide surface, labour as*
> *Its toils remains unrewarded,*
> *Created things a changing lot pursue*
> *Old combinations but renew ones.*

The lines which we have printed in italics are intended as a substitute for the passage (c. i., v. 4) —

One generation passeth away and another generation cometh; but the earth abideth for ever.

Can anything be more beautiful than this passage, or more uninteresting than the paraphrase? And yet both are intended to convey the same idea! This is a remarkable instance of the smothering of a thought with commonplace words, put in for the purpose of filling up a line of verse. It is like pouring wine into mud, and deserves the reprimand of the critic no less than of the Christian. Let us pass to another quotation. In exchange for the affecting verses of the final chapter (verses 17 and 18):

> And I gave my heart to know wisdom and to know madness and folly; I perceived that this also was vexation of spirit.
>
> For in much wisdom is much sorrow; and he that increaseth knowledge increaseth sorrow.

the reader is presented with the following doggerel:—

> Nor could I great diversity detect
> Between excess and want of intellect:
> Since Wisdom's depths an infinite abound,
> And Folly shoots her arrows aimlessly;—
> By neither are we led to realise,
> Wherein Man's greatest advantage lies;
> Why sages' toils are spared the fool and sloth,
> While disappointment crowns the sons of both.

One more extract and we have done. How has the author rendered the often-quoted passage (chap. vii, v. 6)?

> For as the crackling of thorns under a pot, so is the laughter of the fool.

The reader shall see:

> For as the *unsteadi thorn's hysteric* (!) *blaze,*
> So is the servile minion's hollow praise.

Surely a clergyman who loves versifying can find other subjects for the exercise of his ingenuity than high and holy ones like these. Bad verse on any subject is an abomination, but on a divine one it becomes an offence, if not a sacrilege.

We turn with pleasure from the literary to the pictorial aspect of the book. The illustrations—all of them from the pencil of Mr. George Thomas—are finely conceived, and do justice to the reputation of the artist. As regards the 'getting up,' the book has all the appearance of sumptuousness on which neither pains nor expense have been spared; and, in this point of view, demands our unqualified praise.

PRACTICAL HINTS FOR INVESTING MONEY. By F. PLAYFORD. Smith, Elder, and Co.

In an age of speculation like the present, when so many channels are open for the investment of capital, not only in the securities of our own and foreign Governments, but also in joint-stock undertakings of every description, "whose name is legion," the appearance of an elementary and familiar guide or book of advice cannot be otherwise than acceptable to the investing public, and more especially to those who, being unacquainted with the routine of business on the Stock Exchange, have hitherto placed unlimited confidence in their banker or broker. The work throughout is written in a frank, generous, and impartial spirit, and it is replete with sound advice and well expressed directions, especially with reference to the Share-market, which now offers such strong temptations for investment, the more so as land and house property has so greatly fallen in value within the last ten years. The Appendix at the end of the work is also well worthy of perusal, especially the table exhibiting the fluctuations of Consols, and its accompanying commentary as to the political, commercial, or domestic causes, to which such changes might have been ascribed. In fine, we hail the appearance of this little work as very seasonable and extremely beneficial to those who would invest their money to the best advantage.

## *MUSICAL REVIEW.*

POPULAR MUSIC OF THE OLDEN TIME: A Collection of Ancient Songs Ballads, and Dance Tunes, Illustrative of the National Music of England. By W. CHAPPELL, F.S.A. Part V.

The fifth part of Mr. Chappell's truly national work exceeds in interest even those which have already been noticed in this journal. The majority of the very beautiful tunes it rescues from oblivion are either mentioned by Shakspeare, or the ballads to which they belong are introduced in his plays. We have thus the most vivid and the most attractive series of illustrations of our great poet, since, in giving us the opportunity to become familiar with the melodies that were so popular in their time as to be the constant subjects of proverbial allusion throughout his works, or as to be incorporated into the performance of them, it opens a train of association that will make us more at home with the master and his age than any other class of facts or speculations that the researches of antiquaries could present.

We have all experienced how strong a bond of sympathy is music; and popular music, the music of the people, most of any. Who can resist the effect of a well-known tune, whatever the means or whatever the situation in which he may chance to hear it? The tune and the words become as the passes to his daily toil awakens similar associations in the mind of his most polished listener; —the same thought and the same emotion pervade both; a popular air will run in our heads in spite of us.

The power that thus links all classes may equally unite remote ages, and when we hear the "Cheer, boys, Cheer," the "Minnie," the "Now so gently o'er me Stealing," the "You'll remember Me," of two hundred and fifty years ago, we feel identified with the time to which they belong, and with the feelings they embody. Such are the "Light o' Love," "Heartsease," "O Mistress mine," "Green Sleeves," "O Death, rock me asleep," "Willow, willow, willow," and the many others—equally popular in their day, equally beautiful now—contained in the publication before us. The extensive and various reading, by means of which alone such a collection of matter, alike valuable for its associations and its intrinsic interest, could only have been accumulated by one in love with his task, as Mr. Chappell everywhere proves himself, and all who are acquainted with his work will feel that he has rendered no less a service to literature than to music.

Another matter for remark must always be the manner in which the tunes are presented to the reader. A tune depends for its effect upon the harmony with which it is accompanied, as much as does an idea in language upon the words in which it is expressed. The uninitiated are, perhaps, not aware of this fact, but they are none the less influenced by it. It might be very possible so to disguise the character of an air, by inappropriate accompaniment, as to destroy its effect, if not to annul its beauty; and it might be possible to make such accompaniment heighten the character, illustrate the beauty, and thus realise the effect which would else be wanting. How well Mr. Macfarren has discharged this duty the work will itself prove.

## TABLE TALK OF SAMUEL ROGERS.*

(In our Journal of last week we characterised this very attractive work. Although it abounds with anecdotes and bon mots which the reading public are familiar, it is likewise rich in that kind of epigrammatic anecdote which conveys the *personnel* of the subject in a few words. The recollections o great men of the last century, and its public life, are extremely interesting.—ED.

Of Garrick not only once—the part of *Ranger*, in "The Suspicious Husband."—I remember that there was a great crowd, and that we waited long in a dark passage of the theatre, on our way to the pit. I was then a little boy. My father had promised to take me to see Garrick, in *Lear*; but a fit of the mumps kept me at home. Before his going abroad Garrick's attraction had much decreased; Sir William Weller Pepys said that the pit was often almost empty. But, on his return to England people were glad to hear about acting; and Sir William Pepys and several others used frequently to get admission into the pit before the doors were opened to the public, by means of bribing the attendants, who bade them "be sure, as soon as the crowd rushed in, to pretend to be in a great heat, and to wipe their faces, as if they had just been struggling for entrance." Jack Bannister told me that one night he was in the scene of the theatre when Garrick was playing *Lear*;—and that the tones in which Garrick uttered the words, "O fool, I shall go mad!" absolutely chilled him. Garrick used to pay an annual visit to Lord Spencer at Althorp; there, as he always entertained the company by reading scenes from Shakspeare. Thomas Grenville, who met him there, told me that Garrick would steal anxious glances at the faces of his audience, to perceive what effect he was producing; that, one night, Garrick observed a lady listening to him very attentively, and yet never moving a muscle of her countenance; and that, speaking of her next day, he said, "She seems a very worthy person; but I hope that—that -that she won't be present at my reading to-night." Another evening Althorp, when Garrick was about to exhibit some particular stage effect of which they had been talking, a young gentleman got up and placed the candles upon the floor, that the light might be thrown on his face as from the lamps in the theatre. Garrick, displeased at his officiousness, immediately sat down again.

I was present when Sir Joshua Reynolds delivered his last lecture at the Royal Academy. On entering the room, I found that a semicircle of chairs, immediately in front of the pulpit, was reserved for persons of distinction, being labelled "Mr. Burke," "Mr. Boswell," &c., &c.; and I, with other young men, was forced to station myself a good way off. During the lecture, a great crash was heard; and the company, fearing that the building was about to come down, rushed towards the door. Presently, however, it appeared that there was no cause for alarm; and they endeavoured to resume their places; but, in consequence of the confusion, the reserved seats were now occupied by those who could first get into them; and I, pressing forwards, secured one of them. Sir Joshua concluded the lecture by saying, with great emotion, "And I should desire that the last words which I should pronounce in this Academy and from this place might be the name of—Michael Angelo." He descended from the rostrum, Burke went up to him, took his hand, and said,—

> The Angel ended, and in Adam's ear
> So charming left his voice, that he a while
> Thought him still speaking, still stood fix'd to hear."†

What a quantity of snuff Sir Joshua took! I once saw him at an Academy dinner, when his waistcoat was absolutely powdered with it.

I have several times talked to a very aged boatman on the Thames, who recollected "Mr. Alexander Pope." This boatman, when a lad, had frequently assisted his father in rowing Pope up and down the river. On such occasions Pope generally sat in a sedan-chair. When Pope began to publish I got acquainted with an elderly person named Lawless, shopman of Messrs. Cadell and Davies, the booksellers. Lawless told me, that he was once walking through Twickenham with Pope, when a young lady, and a little boy the son of that friend. On the approach of a very diminutive, misshapen, and shabbily-dressed person, the child drew back half-afraid. "Don't be alarmed," said Lawless, "it is only a poor man." "A poor man!" cried his friend: "why that is Mr. Alexander Pope."

Boddington had a wretchedly bad memory; and, in order to improve it, he attended Feinagle's lectures on the Art of Memory. Soon after, he called upon Boddington, and, on the termination of the lecture, told him, he could not recollect it. When I was asked if I had attended the said lectures on the Art of Memory, I replied—"No: I wished to learn the Art of Forgetting."

—

One morning, when I was a lad, Wilkes came into our banking-house to solicit my father's vote. My father happened to have a bag-wig—the hackney-coachmen in vain calling out to him, "A coach, your honour?"

When a young man, I went to Edinburgh, carrying letters of introduction (from Dr. Kippis, Dr. Price, &c.) to Adam Smith, Robertson, and others. When I first saw Smith, he was at breakfast, eating strawberries, and he descanted on the superior flavour of those grown in Scotland. I found him very kind and communicative. He was (what Robertson was not) a man who had seen a great deal of the world. Once, in the course of conversation, I happened to remark of some writer, "that he was a rather superficial—a Voltaire." "Sir," cried Smith, striking the table with his hand, "there has been but *one* Voltaire!" Robertson, too, was very kind to me. He one morning spread out the map of Scotland on the floor, and got upon his knees, to describe the route I ought to follow in making a tour on horseback through the Highlands. The most memorable day I passed in Edinburgh I never forgot. It was Sunday, and, as the weather was favourable, I went, after breakfasting with Robertson, I heard him preach in the forenoon, and Blair in the afternoon, then took coffee with the Piozzis, and supped with Adam Smith. Robertson's sermon was an excellent both for matter and manner of delivery. Blair's was good, but less impressive; and his broad Scotch accent offended my ears greatly.

When Lord Erskine heard that somebody had died worth two hundred thousand pounds, he observed, "Well, that's a very pretty sum to begin the next world with." "A friend asking," said Erskine, "was suffering from a continual wakefulness, and various methods were tried to send him to sleep, but in vain. At last his physicians resorted to an experiment which succeeded perfectly: they dressed him, in a watchman's coat, put a lantern into his hand, placed him in a sentry-box, and—he was asleep in ten minutes." To all letters soliciting his "subscription" to anything, Erskine had a regular form of reply, viz.:—"Sir, I feel much honoured by your application to me, and I beg to subscribe"—here the reader had to turn over the leaf—myself your very obt servant," &c. I think I could recollect all the anecdotes of this kind that were told Erskine used to relate with such spirit and dramatic effect. He had been in the Navy, and he said that he once managed to run a vessel between two rocks, where it seemed almost impossible that she could have been driven. He had also been in the Army; and on one occasion saved the life of a soldier who was condemned to death, by making an earnest appeal in his behalf to the General in command and his wife. Erskine, having got the pardon, rode off with it at full speed to the place of execution, where he arrived just as the soldier was kneeling, and the muskets were levelled for the fatal shot. When he had a house at Hampstead, he entertained the very best company. I have dined there with the Prince of Wales—the only time I ever had any conversation with his Royal Highness. On that occasion the Prince was very agreeable and familiar. Among other anecdotes which he told us of Lord Thurlow I remember these two.—The first was, Thurlow once said to the Prince, "Sir, your father will continue to be a popular King as long as his wife, Erskine, can

FOXHUNTERS REGALING IN THE "*GOOD*" OLD TIMES.—DRAWN BY JOHN LEECH.—(SEE PAGE 214.)

SCENE FROM "SHAKESPEARE," AS PERFORMED BY THE TESSIER FAMILY AT THE ST. JAMES'S THEATRE.—(SEE PAGE 214.)

## SOMETHING ABOUT FOXHUNTING.

Among the pleasantest recollections of a pleasant life are "days with the hounds" stand forth as "white days" in the calendar of memory. Not that we lay claim to the character of sportsmen, or would have it believed that we have kept hounds or boasted of a stud. We have, however, some grateful recollections of an Irish horse that carried us stoutly and well over grass and furrow in the days when George IV. was King, and of other equine acquaintance to which we have been indebted for many a day of healthful exercise and delicious fatigue. We are old and pursy now, and only fitted to fill the easy chair in which we recline, inhaling the fragrant smoke of the Havannah weed, whilst a younger hand than ours jots down the little we would say about fox-hunting. We are not old enough to remember such a scene of the "good old times" as Mr. Leech has presented to us, but we have heard at our grandfather's table similar occasions recalled by men who had been entered to hounds when hunted by the Earl of Castlehaven in the latter part of the last century. Hunting in those days was something to try the pluck of a man, and none but those who had an ardent love for the thing would brave the difficulties and discomfort attendant upon it. Up before the sun to make a tedious toilet (for powdering and clubbing the hair was not the work of minutes), a long ride to cover on bad roads in the cold mists of early morning, for the chace commenced as soon as there was light enough to distinguish a badge from a house; and this early work was necessary, hunting as they did by the drag and the run lasting for many hours. The horse used as a hunter was then a half-bred of considerable power, with great length of neck a head well set on, and the chest high, firm, and slightly curved. From the clownness of the pace the rider could select his ground, and thus nurse his horse, and render him safe at his fences to the last. There is no doubt that for the thorough sportsman of the "good old times" this slow hunting had its charms, for the hounds had opportunities, of displaying those qualities of scent and sagacity which are not generally noticed by riders to foxhounds now-a-days. After a hard day and with the prospect of a long ride home, it is not to be wondered at that certain of the "good fellows" and "jolly cocks" of the hunt availed themselves of the nearest hospitality, whether offered at the squire's hall or at the no less plenteous inn in the next market-town. And so some sporting rhymester sung years ago:—

> And now that bold Reynard we've killed,
> We'll go back to the Dolphin and dine;
> We'll dip his fore-pad in a bumper,
> And drink my Lord's health in good wine
> Singing Tally-ho! Tally-ho!

Fast and furious we have heard such meetings to have been: the bill of fare, one vast substantial joint of mutton or beef, with a fat capon or two, or a noble turkey, and his faithful servitor, a savoury chine; tankards of ale, begotten of honest malt and hop, that flowed into the heart as you drank it (Oh! the villanous compound that now-a-days calls itself ale! Bah!); then magnums of port (fitting symphons for such bacchanalians!) that poured out their ruby contents at the bidding of those sons of Nimrod, who, when full of the good, roared out paeans in praise of the son of Jove and fair Semele until the candles winked with the vibrations of the "hellody" (to borrow O'Keefe's phrase) which they were pleased to consider harmony. Then came the punch bowl, in which lay seething and smoking a thousand headaches for modern topers, but which only filled those seasoned vessels with more stimulus for roaring jokes which continued long after reason had vacated the chair in their distracted globes. Then if no practical joke or offensive word disturbed the good fellowship as it was called—the roysterers, by the aid of landlord, ostler, and chambermaid, were deposited in bed or saddle to meet the next day as they best could. The tired bagmen (they seen roused from his dreams of honest profit and loss by the stentorian snoring of his drunken neighbour, and the quiet hamlet been frightened from its propriety by the boisterous jollity of the excited hunters still celebrating the glories of the chase. *Vulp. log* :—

> 'Twas in stony fields I did run,
> The bloodthirsty hounds did me follow,
> And it made my old coat stand on end
> To hear how that —— huntsman did holloa.
> "Tallyho! Tallyho!"

The "good old times" were not all good, but let us profit by their warning, and make the present better.

It has been observed that a man is more like the age in which he is born than he is like his father and mother, and thank God that it is so! What a troublesome fellow would Squire Western be now in a modern country house with the customs which obtain in these "degenerate days," as it is the fashion sometimes to call them. We could never understand why a love of the chase should be supposed to necessitate the abandonment of all the refining advantages of female society, or why a man who seeks for healthful exercise and elevating sensations amid the vales, and downs, and woodlands of beautiful England, should be more compelled to hard drinking and coarse pleasures than my Lord Tom Noddy, who "hangs" his life away over the rails in Rotten-row, or saunters along Pall-mall as though he had made a walking match with a snail, and were trying to lose it.

*Castæ Diæ!* but a day with the hounds is worth something. The mere sight of a hunting uniform is exhilarating, be the coat a claret-tailed pink or a yeoman's mixture. The boots! Who remembers his first pair of top-boots, perhaps built by ancient Hoby, or the faultless Bartley? Were they not looked at in the front, in the rear, sideways, lengthways—now placed on the chair; and, as though that pedestal were not elevated enough, now on the drawers—and all but worshipped? Did they not present themselves in the feverish dreams of the night which preceded the induction into them? Was not the morning advent of John Ruggles and the hot water desired with an intensity of longing? Mind we speak only of the *rough* pair, and with the recollections of our youth. Then when they were on, and the bright spurs attached, and "a marvellous proper man" reflected in the *cheval* glass, what heart has not swelled with an emotion far more pleasurable than greater occasions could ever produce again? And if you were received in the breakfast-room by a cousin Clara, with black or blue eyes—it matters not the colour so that they sparkled when they saw you, and her rosy cheeks became a little, just a tint, more rosy—what moment of gratified vanity have you known equal to that, though you may now be a Knight of the Garter.

The meet is at Freshfield Green, at eleven, and we have a ride of five miles to reach it. The road lies down this green lane; and pleasant riding it is, over the elastic turf, now and then plashing through patches of water that give assurance that the ground is soft enough to make a fall positively agreeable. As you look around, you see spots of red and black in the distance, which you know are horsemen converging to the same point as yourself. Some you know to be dear old friends, others good neighbours—and all lovers of the chase. Now on your right hand and on your left ride up the red and black spots, and present objects of interest in the shape of good fellows and fine horses; and so in pleasant chat you pursue your way to Freshfield Green, where there is a large farm-house, with stacks of corn and beans, and ricks of hay, that look like security for five years' rent. The stock are shut in the inner yard up to their knees in litter, and apparently deeply interested in the day's proceedings. In the outer yard some of the hounds are straying about, others are clustering round the house door; whilst the huntsman gives his opinion of the farmer's ale, or perhaps tries the strength of his *jumping powder* in the form of a glass of brandy. The Master has now ridden up, and is welcomed by his intimates, and observed with interest by all. Freshfield Green is alive with horsemen enjoying the respectful equality the hunting-field allows. The huntsman trots away with the hounds—the spotted beauties! Their white sterns fairly sparkle as they go! They are to draw Beechly Wood,—so through this gate and down by the hedge-row! What a country! It is too beautiful to particularise; but you feel its influence, and will do so when you sit years after, as we do now, in an arm-chair by a sea-coal fire on a rainy day in smoky London. They are sure to find in Beechly Wood, and, as the wind is from the south (vent your anger, and you will catch the breeze in a moment), the fox will point for Rosterly,—so get we on the other side. Go on! we will follow you down this ride, which is crossed every now and then by a frightened hare or rabbit disturbed by the hounds, whilst the small birds from the same cause flutter about in great commotion, and make the streaks of sunshine still more dazzling. There goes a pheasant blustering through the air and steering away for yonder copse, where one or two tall elms are already purple with buds. "Ware wheat!" How bright and tender the young blades look! May they prosper and become prolific parents of many bushels, and when they are full of ears be gathered in fair weather. Hold hard! There is a hound challenging! He is a finder, rely upon it; for see how the others acknowledge by flourishing their sterns. How the gorse shakes, and the impatient hounds jump over each other in their eagerness to get at him! Another challenge! Another, and another! He's gone away! and so——

Good day, gentlemen, for another pen than ours must describe the run whilst we content ourselves with ruminating for a very brief space on the change which has taken place since Mr. Meynell made fast riding the fashion of the field—now some sixty years ago. Since then the character of the hunter (it is almost needless to say) has greatly changed, and the increased speed of the hound has compelled an increased speed in the horse; so that in Leicestershire, for example, none but a thoroughbred has a chance. There are many advantages arising from this improvement of pace. Later meets, diminution of fatigue, and less temptation to "exercise" afterwards. Men can now dine and return to the drawing-room; and, with such temptations as Mr. Leech has presented to us, who would not prefer to the riotous orgies of the "good old times" the rational enjoyment of our "degenerate days"?

It is generally painful to think that we visit a place for *the last time*; that we shake some friendly hand for *the last time*; that we have enjoyed some favourite pursuit for *the last time*. O Casta Diva! what is it when you feel that you have had your last day with the hounds?

We are compelled to be content now to hunt with Mr. Jorrocks in the covers of *Handley Cross*; but old friends and old scenes connected with the manliest and best of sports come back to us at will, and make us satisfied with riding only hobbies.

We are vain enough to think, and weak enough to hope, that there are some readers of this paper who may not have forgotten many happy meetings which were shared with one who has often signed himself

Tom Moody.

## AUSTRALIA.

*(Extracts from the Private Correspondence of a Lady)*

June, 1855. Something or other is always presenting itself to view here to dispel the dream that one is treading the soil of dear old England. People often say that Melbourne is like London, but it is not so. True enough it is that if we look at the window of a draper's or a grocer's shop, they may not be distinguished from the best of those in London; but next door you will probably see a wooden house, or an unseemly gap in the street, or it may be a splendid hotel of even more pretensions than those you would meet with in the principal streets of London. We are beset with inconsistencies, for it is impossible to close our eyes to objects so un-English as those which continually present themselves to one they would call a new "c a."

June. We have here American-made carriages that are delightfully easy. They seem to be all springs, and in some that I have seen, the driving seat can be pushed over the seat underneath the hood, converting a double-bodied carriage into a single one. Some of the roads round Melbourne are very bad, having water-holes and large boulders in every direction, and sometimes we find the most terrible ruts filled with stones as high as a person's head. In the American carriage we do not find much inconvenience, where in an English one we must certainly have been jerked out. However, the turnpike-roads that are formed are admirable, and in time the others will doubtless be improved.

Aug. This morning as I was walking along, almost fancying myself at home, I was suddenly disturbed from my reverie by a perfectly un-English exhibition. On passing the Roman Catholic College I saw within its inclosure two animals at play—the tame kangaroo and a little dog. You cannot imagine the ridiculous capers of our singularly disproportionate kangaroo its small short fore legs, as compared with its body; and its somewhat enormous tail, which serves it as an assistant spring to enable it to bound, as it does sometimes to the extent of twelve or fourteen feet. This animal belongs exclusively to Australia, is very good eating, and has a pouch in which it can nurse and carry its young. I am told this is a provision of nature, to enable them to carry their young with them when they go in search of water, which is sometimes very scarce in this colony. But it is not so now, for the last few days rain has poured down in torrents. In England you speak of large drops of rain falling: here we may speak of pailfuls, and, by-the-by, with very minute space between them.

Sept. There have been great numbers of Chinese about the city during the last fortnight. Chinese signs are beginning to make their appearance over little shops. A large house in Lonsdale-street is taken by a Chinaman for a boarding house, and they have likewise a very large Emigrants' Home, which I am told is very well conducted. At an inquest the other day on a Chinaman, some Chinese had to give evidence. Their method of taking an oath varies—some break a saucer; others blow out a candle. There is always much curiosity manifested when a Chinaman is sworn. A witness at the inquest I have alluded to was asked how he took an oath? He said, "On the book." The Magistrate asked if he were a Christian? He replied that he was. The Magistrate then inquired what he meant by being a Christian? He said, "Oh, wearing a coat like yours, and being a great swell."

Sept. The hot weather has come on all at once; this is a peculiarity of the Australian climate. Last week was most delightful, but to-day is the fourth hot wind day we have had in succession; and coming on so suddenly it is most overpowering. On such days we keep the doors and windows closed, and the blinds down. If a door be opened a hot blast, very unlike summer heat in England, rushes in, and with it shoals of flies. The flies are so inanimate you cannot shake them off, but are obliged to brush them away. Sometimes after a most oppressive day the wind will suddenly change, and it becomes cold as a March night in England—these sudden changes are very trying. I never heard such a diversity of opinion expressed on any subject as upon the Australian climate: gentlemen who have been here for ten or fifteen years like it, and think it delightful—the majority of those who have been here only two or three, think it inferior, on the whole, to the climate of their native country, whatever that may be; but I never yet heard one lady speak in praise of it.

Oct. All here—ladies and gentlemen too—are on the *qui vive*. Our Mayor has issued 1500 invitations to his ball. It is to be a magnificent affair, I assure you, and we are all to appear in fancy dresses. Think of this, after what I have told you of dress in Melbourne!

Oct. Pray do not imagine that the city is too new to have either splendid buildings within it, or pretty villas about it. I spent three days last week at Mr. M.'s, and was quite delighted with his new house. He has laid out a large garden all round it, and the house is entirely surrounded by a verandah, underneath which we could always find a pleasant and shady seat. I do not see why these appendages should not be more generally adopted in England. They add much to the enjoyment of warm weather, and form a pleasant place for exercise in wet.

Ancient French Poetry.—The *Moniteur* contains a report from the Minister of Public Instruction to the Emperor, recommending that the Government shall undertake the publication of the most ancient poems of France. He regrets that these literary treasures should be buried in libraries, unknown to the public; and he expresses special regret, that whilst upwards of 120 epic poems of the middle ages exist, only 30 of them should *thus far* have been printed, and some of them only in fragments. A decree of the Emperor, based on the report, orders the publication of the proposed work, under the title of "Anne n Poëtes Français," and that the expense shall be paid out of the budget of the Department of Public Instruction and Worship.

## NOTICES OF NEW INVENTIONS, &c.

BY JOHN BOURNE, C.E.

### Ericsson's new Air-engine.

Captain Ericson, of New York, has patented a new form of his air-engine, by means of which he expects to realise better results than he formerly attained. In common with most of Captain Ericsson's contrivances this new form of air-engine exhibits adequate and, perhaps, exuberant ingenuity; but it also exhibits a remarkable ignorance of those physical laws which lie at the root of all mechanical proficiency, and which regulate the operation of all mechanical combinations. Captain Ericsson says, "Experience has demonstrated that, in order to obtain a sufficient supply of air without resorting to a dangerously high temperature, the supply-pump must be of such large capacity that the differential active area becomes too small. Unless, therefore, future experience should suggest some improvement, the power of such engines will always be found insufficient for practical purposes." In his new engine, therefore, Captain Ericsson dispenses with a supply-pump, and, in lieu of it, he places two pistons in the cylinder, which, by their recession from one another, draw in a supply of atmospheric air, and, by their subsequent approach to one another, force the air into the coil of pipes set within a furnace, where it is heated to the temperature required for operating like steam beneath the piston. Now, any type in mechanics would be able to show Captain Ericsson that this arrangement is only a feed-pump in disguise; and that precisely the same power will be consumed in forcing the air into the coil of pipes by this arrangement as if an ordinary supply or feed-pump had been employed. If, therefore, air-engines provided with a feed-pump must necessarily be failures, Captain Ericsson's present engine must inevitably participate in the same condemnation.

For the last quarter of a century Captain Ericsson has been endeavouring to construct an air engine which would be capable of working in an advantageous manner; and, although there have been at intervals various boastful announcements of the wonderful powers of these engines, the gravitation of physical fact has always in the end brought them to the just level of abortive projects. In his earlier attempts Captain Ericsson professed to be able to work an engine without any expenditure of heat at all; and, as power is always capable of producing heat, such an engine would have been a heat-producing engine, and the problem of perpetual motion would have been solved. Such a proposal only manifested the ignorance of its projector. If, of course, never has succeeded, and has since been abandoned as visionary and impossible. Equally visionary, however, is Captain Ericsson's present hypothesis that the power consumed by the feed pump has heretofore hindered the success of air-engines, or that there is any exemption of power on the feed-pump at all that is not afterwards recovered. It is quite clear that if the engine be moved round without the application of heat, the power consumed by compressing the air in the feed-pump is afterwards given out in urging the piston in the cylinder; and this equilibrium continues to subsist after heat has been applied. With such glaring errors in the principle of his invention, Captain Ericsson cannot be accepted as a very safe guide in such undertakings. I do not say that air-engines can never succeed; on the contrary, I believe that the time is approaching when they will supersede steam-engines. But no such result can ever be brought about by any such contrivance as Captain Ericsson's present engine. He is altogether on the wrong track; and, until he abandons it and takes a totally different one his efforts must necessarily be unsuccessful.

### Whitworth's improvements in fire-arms and projectiles.

Until very recently the production of fire-arms has not participated in that general advance of mechanical art which distinguished most other departments of manufacture; but this state of things has now been very much altered, partly by the enterprise of the Americans, and partly by the importation into this neglected field of mechanicans of Mr. Whitworth's remarkable attainments. Mr. Whitworth has taken out patents for his improvements. His latest improvements are a breech-loading apparatus, an improved projectile, and an improved method of boring and rifling the barrels of guns and cannon. The breech loading apparatus consists of a heart-shaped piece of metal, with two chambers, applied at the end of the barrel, and capable of vibrating on a pin situated at the lower point of the heart. When pushed over to its farthest position in one direction one of the chambers containing the powder is brought opposite to the end of the barrel, and when pushed over to its farthest position in the opposite direction the other chamber is brought opposite to the end of the barrel. One chamber is thus always opposite to the end of the gun, and the other projects sideways for relonding. Suitable arrangements are, of course, introduced for keeping up the metallic plate containing the chambers close against the end of the barrel; the lower point of the heart when pushed over to its farthest position in one direction one of the chambers containing the powder is brought opposite to the end of the barrel, and when pushed over to its farthest position in the opposite direction the other chamber is brought opposite to the end of the barrel. One chamber is thus always opposite to the end of the gun, and the other projects sideways for relonding. Suitable arrangements are, of course, introduced for keeping up the metallic plate containing the chambers close against the end of the barrel; the lower point of the heart strikes upon the nipple of that chamber which is opposite to the end of the gun. The new projectile is formed of a polygonal and screw-formed shape, to suit the rifling of the barrel, whereby a hard metal may be used for the formation of the projectile, and none of the force of the powder is lost in overcoming useless friction. The improvements in boring consist in the use of a tubular boring bar with longitudinal grooves on its circumference. The gun is bored in a vertical position, and the cutters enter at the bottom and travel upwards. The lubricant through the centre of the boring-bar, and the lubricating fluid is conducted to the cutters by the external grooves on the bar being forced up by a pump. To prevent the bar from springing it is kept in a state of tension by a suitable tensile strain applied at each end. In rifling it is, of course, necessary to combine a regular motion of the bar with a longitudinal motion; and, by a proper dividing apparatus being introduced, a light cut is taken out of each spiral groove all round the barrel, so that these grooves are all brought up alike, instead of each groove being finished before proceeding to the next. Fire-arms constructed according to Mr. Whitworth's improvements will have an accuracy of firing hitherto unattained.

### Deoxidising power of wood charcoal.

Some recent experiments have been made by M. Moride, in France, which seem to show that recently-calcined wood charcoal has a greater deoxidising power than it has heretofore been supposed to possess, as it produces effects which charcoal from coal and animal charcoal equally fail to realise. If incandescent wood charcoal be extinguished in cold water, and be then plunged into an acid solution of sulphate of copper, the metal is gradually deposited on the charcoal. The solutions of silver in nitric acid, whether neutral or acid, and of choride of silver in ammonia, deposit a beautiful coating of metallic silver, when treated in the same way. Ethers of various kinds may be produced by plunging the newly-calcined charcoal into acidulated liquors.

### Cannon lined with steel.

Mr. E. Wharton has taken out a patent for a mode of lining cast-iron cannon with steel. He introduces into the mould into which the iron is to run a steel tube of the size of the intended bore; and the molten iron flows round this tube and encases it, whereby a steel lining of the bore is obtained. The cannon should be cast in a vertical position, and the metal being run in at the lower end of the mould arises round the steel tube, and gradually incloses it altogether.

### Improved railway spikes.

Mr. G. Hopperhas patented an improvement in the spikes for fastening the chairs of railways to the sleepers. The spikes are twisted spirally, and are turned round while being driven. They do not shake loose.

### Materials for the manufacture of paper.

Mr. Jullion proposes to make paper out of the fibres of the banana or plantain, as also out of the begass or woody fibre of the sugar-cane, left as refuse after the expression of the juice, and out of the various water-flag plants which abound in tropical climates. He cuts them up in a chaff-cutting engine, boils them in a dilute solution of caustic alkali, and bleaches them by chloride of lime. Mr. Simon proposes to use in the manufacture of paper the plants of the family *sparganium*, especially those varieties known as *sparganium erectum* and *sparganium ramosum*. Another proposal, by a different inventor, is to make paper from seaweed. Messrs. Horton have patented a method of making paper from the spent tan which has been used in tanning leather.

### Thief-proof glass.

Mr. Newton has taken out a patent for forming glass which cannot be broken through, by introducing into the heart of a pane a wire-cloth, or metallic grating, so that even if the glass be broken the pieces cannot be detached.

### Brandy from coal.

M. Berthelot, a French chemist, has demonstrated the possibility of producing alcohol from coal; and in the late dearth of brandy in France, consequent on the vine disease, this discovery excited much interest, as furnishing a new source whence good *cognac* may be derived. The mode of procedure is as follows:—Coal is generated in a retort in the usual way, and is conducted into a receiver. The bicarburetted hydrogen which the gas contains is presented to sulphuric acid, which absorbs it; water is then added and the liquid yields alcohol on distillation.

# Memorabilia,

## LITERARY, ANTIQUARIAN, SCIENTIFIC, AND ARTISTIC.

*A little chink may let in much light.*—OLD PROVERB.

### NOTES.

CITY POETS.—In your list of the names of City Poets there are one or two errors: Edmund Gayton is not entitled to that doubtful honour, and the names of Thomas Jordan and Matthew Taubman are printed *Jordon* and *Taubman*. The following is a correct list of all the known City Poets, with the years when their talents were employed in the invention of the pageants exhibited on Lord Mayor's Day:

George Peele, 1585 and 1591, and probably the intermediate years.
Anthony Munday, 1605, 11, 14, 15, and 16; and certainly several years prior to 1605, and between that year and 1611. In his edition of "Stow's Survey" (1618) he states that he had been twenty-six years in the City's service. See "Time's Case is Altered," written 1598, where he is ridiculed under the name of Anto. Bellario, *pageant poet* to the city of Milan.
Thomas Dekker, 1612 and 16-9
Thomas Middleton, 1613, 17, 19, 21, 23, and 26.
Pageants for 1618 and 1622 unknown.
John Squire, 1620.
John Webster, 1624.
No pageant in 1625, probably on account of the Plague.
The pageants for 1627, 28, and 30, unknown.
Thomas Heywood, 1631, 32, 33, 35, 37, 38, and 39.
John Taylor, 1634.
1635 is unrecorded.
From 1639 to 1655 Puritanism, and other matters, weighed too heavily on the City to allow of the exhibition of ungodly shows. A restoration of City pageantry took place in 1655—the inventor, however, is unknown. Edmund Gayton wrote a congratulatory poem of about eighty lines on the revival of the show.
T. B., 1656. (Probably Thomas Brewer, author of the old play of the "Country Girl," 1647, and one or two poems.)
John Tatham, 1657 to 1664.
From 1664 to 1671 no pageants were got up, in consequence of the misery occasioned by the Great Fire and Plague.
Thomas Jordan, 1671 to 1681, and 1684.
The attack on the City by the Court, which ended in the loss of the City's Charter in 1683, probably put the citizens in too much ill humour to care for pageantry, as there was no "triumph" in 1682 or 1683.
Matthew Taubman, 1682 to 1689.
No festivities recorded in 1690.
Elkanah Settle, 1691 to 1708. The pageant for 1703 was not exhibited, in consequence of the death of Prince George of Denmark, on the 28th Oct.)

The City, from this period, appears to have declined the glory of an annual triumph, and poor Elkanah's talents were no longer required. If your correspondents wish to see the descriptive pamphlets of these ancient ceremonials, the following have been reprinted:—Peele's, Middleton's, Webster's, Mr Dyce's editions of those authors: Munday's, for 1605, 15, 16, and Squire's, for 1620, in "Nichols' Progresses of James I.;" Dekker's, 1612 and 1629, Heywood's, 1638, Taubam's, 1660, and Jordan's, 1671 and 1678. In Farmhole's "Account of Lord Mayors' Pageants," printed for the Percy Society. "The Triumph, compiled by the Water Poet" is extremely scarce; I should be glad if any of your readers can tell me where a copy can be seen.—GOG.

BOOK FOUND WITHIN A CODFISH, AT CAMBRIDGE, ANNO 1626.—Joseph Mead (sometimes written Mede) was born in 1586. He became a Fellow of Christ's College, Cambridge, and obtained the reputation of being a theologician, an accurate philosopher, a skilful mathematician, an excellent anatomist, a great philologer, a master of many languages, and a good proficient in history and chronology. In Baker's Manuscripts I find a copy of the following curious letter from him, which I have gladly transcribed for you, omitting only a single paragraph, which is of no importance. The book, said to be found within the fish, has been frequently printed, and may be found in any of the large libraries of the kingdom, but Mead's letter, which I send herewith, has, I am tolerably certain, never yet been printed.

*"To Sir Martin Stutville, Knight, at Dalham, Suffolk.*

"Sir, I will now tell you of an Accident here at Cambridge, rare, if not strange, whereof I was yesterday morning an eye witness of myself. A Hookin Decuno Sexto, of the biggest size, found in the maw of a Codfish, then opened in our Fish-Market, in the presence of many. In the same was 2 pieces of Saile-Cloth, one half an ell at ye leaste, of unequall bredth, but in same part very broad. The other about halfe a yard long, of the bredth of a Pudding-Bag. These found wrapped in the bottome of the Stomach, the Book above them. The tale of the Book being opened was on the top of every Page, *A Preparation to the Crosse:* it was printed in an English letter, and seemed to be written about the end of King Henury the 8th. When I first saw it, it seemed almost turned into Gelly, and stunk very much. The Cover, which had bin of Pearl-bord, was altogether consumed, yet though it were loathsome then to handle, or stand neer, yet finding the Table of the 2 Books of Preparation to the Crosse in the middle parts, and not so slyme, with a tender lifinge with my knife, I reed it (q?. recovered?) thens all, but cleane paper betweene those leaves to preserve them, and since shrobed them al, being the contents of every several Chapter. The first was A Preparation to the Crosse,' and how it must be patiently borne. I saw all with my owne eyes, the Fish, the mawe, the peices of cloth, the Book, and I observed all I have written. Only I saw not the opening of the Fish, which yet many did, being upon the Fish-woman's stall in the Market, who first out of his head, to the maw hanging, and seeming much *stynyed* with sowrnesse, it was searched, and all found as aforesayd. He that had his nose as near as I yester-morning would have bin persuaded there was no imposture here, without witnesse. The Fish came from Lynne How they had him there I know not.

"Christ's Coll., June 24th, 1626. "YOURS, &c., JOSEPH MEAD."

I have taken the above short account of Mead from Rose's "Biographical Dictionary." In the preface to the "Book," as printed, it is stated that the author of it was John Frith, and that the cod is supposed to have swallowed the volume from the pocket of some person drowned in Lynn Deeps.—PISCATOR.

LAFAYETTE.—Lafayette sent for a hogshead of earth from Bunker's-hill to be placed over his body at his interment. The select men of Boston received the application from his agent. It was taken from the spot where General Warren (Dr.) fell, and accompanied with a certificate that it was "genuine," signed by three of the oldest veterans in the town.

A PAINTER'S REVENGE.—The ceiling of the great staircase of Burghley House was painted by Varri. There was a domestic in the house who in some way or other offended him whilst he was at work, and when he came to represent the infernal regions, he put her into hell!

HOW COME USED TO KEEP LENT.—During the present season of Lent, the following account may not be inappropriate or unacceptable. I copy it from Turner's "Remarkable Providences, 1697. "Maude, daughter of Malcolm Canoir, King of Scots, and wife to King Henry I., went every day in Lent time to Westminster Abbey bare foot, and bare leg'd, wearing a garment of hair: she would wash and kiss the feet of the poorest people, and give them bountiful alms, for which, being reprehended by a courtier, she gave him a short answer, which I have out of Robert of Gloucester:—

Madam, for God's love is this well do,
To handle sick unclene kynmnes, and to kiss so!
Fowle wolde the Kyng thynk if that hit he wiste,
And right well abyes hym er he your mouth kiste.
Sur surgit the Queene, he stille, why sayeste thou so,
Our Lord himself ensample yaf so for to do.

She founded the Priory of Christ's Church within Aldgate, and the Hospital of St George's in the Fields She built the bridges over the rives Lea, at Stratford, and over the dyke brook called Channelbridge. She gave much likewise to the repairing of the highways."—SHELDON.

OLD ENGLISH SPORTS.—The following account in verse of the popular pastimes of the time of James I. is found in a rare book published in 1611 Can you or any of your multitudinous readers inform me who is the author?—W. CHAPMAN, Hornsgsham.

Man, I do challenge thee to *Throw the Sledge*,
To jump or *leape* over ditch or hedge;
To *wrestaile*, play at *Stoole ball* or to *Runne*,
To *Pitch the Barre*, or to *shoot off a gunne*,
To play at *Loggetts*, *Nine Holes*, or *Ten Pinnes*,
To try it out at *Foot-ball* by the shances:
At *Tlicktacke*, *Irish Noddie*, *Man and Baffle*,
At *Hot-cockles*, *Leap Frog*, or *Blindman Buffe*,
To drink half-pots, or deals at the whole can,
To play at *Bace*, or *Pen and Inkhorne*, *Gleeke*, *Cousan*,
To dance the Morris, play at *Barley-breake*,
At all exploits that man can think or speake.
"
At any of those, or all these, presently,
Wagge but your finger, I am for you, I.

TERMINATIONS OF THE NAMES OF PLACES.—In the county of Norfolk there are nineteen places ending in *by*, eleven in *stead*, none in *hurst*, 58 in *ham*, twenty-two in *thorpe*, and twenty in *ford*.—H. TURNER.

### QUERIES.

SIR FRANCIS DRAKE.—There is an old tumbledown house in the town of St. Aubins, Jersey, in which the inhabitants maintain Sir Francis Drake was born and spent his childhood. The story goes on to say that the great navigator's name was originally François *Mallard*, "the patos for Drake in Jersey," but that when he became a great man he converted it into Francis Drake. The sad house is still inhabited by a family of Mallards, who pretend to be descended from a brother of Sir Francis. Can any reader inform me where he (Sir Francis Drake) was born, and consequently whether my native isle has the honour of having been the birthplace of such a famed one in England's history!—CELIA YOUNG, Jersey.

SHROVE-TUESDAY CUSTOM.—In many villages in South Wilts, and perhaps elsewhere, it is customary for parties of boys and girls on the evening of Shrove-Tuesday to go from door to door chanting the following doggerel:—

We're come a Shroving
For a bit of pancake
Or a piece of bacon,
Or a little truckle cheese
Of your own making.
Is your pan hot?
Is your pan cold?
Is your bread and cheese cut
Is your best barrel tapped!
We're come a Shroving.

Perhaps one of your correspondents will kindly explain the origin and meaning of this custom, which, without doubt, dates from the old Catholic times?—T. B. L.

ANGLO-SAXON HISTORY.—Will any of your correspondents be kind enough to inform me where to find Anglo-Saxon Manners and Customs best illustrated by plates as to costume, furniture, domestic and ecclesiastical, &c.—WILFRID BELT.

HANDEL'S "HARMONIOUS BLACKSMITH."—Can any of your readers inform me of the origin of Handel's "Harmonious Blacksmith," as I believe there is a story attached to it.—L. M.

PY-CORNER LAW AND PY-CORNER PAY.—What is the meaning of the above phrase? It is used by Pretty Peg in the farcical pamphlet of "Strange News from Bartholemew Fair. By Peter Aratine, circa 1660.—JOHSON.

COSSUMA ALBERTUS.—Who was Cossuma Albertus, Prince of Transylvania, who was murdered while asleep in his coach by his coachman and footboy, on his road to Rochester, October, 1661? I have recently come across several broadsheets giving an account of the event. From these it appears that the coachman was a Jew, named Isaac Jacomb; and that he and his confederates were first examined before the Right Hon. Sir Richard Brown, Knight and Baronet, Lord Mayor of London, but none of them affords any information of who the Prince was, or why he was travelling in this country.—HORTON.

LORD BROUGHAM'S AGE.—In Burke's "Peerage" Lord Brougham is stated to have been born 19th September, 1778. Is not this a mistake? In the *Scots' Magazine* his Lordship's father's marriage appears under the date of May 28th of that year, so that 1779 would seem to be the year of Lord Brougham's birth. Some Edinburgh correspondent should inspect the register. B.

CARTHAGINIAN WOMEN CUTTING OFF THEIR HAIR.—In Dean Liddell's "History of Rome (vol ii., p. 121) he gives the story of the Carthaginian women cutting off their hair. What is the authority for it?—Q.

BANS OF MARRIAGE.—Will you allow me to ask your correspondent C. Egan whether the parenthesis in his extract from Stat. 26 Geo. II., cap. 33, is so in the text. In the direction before the Marriage Service the only words in a parenthesis are "if there be no Morning Service." The real question is, did the statute of Geo. II. alter the time of publication in the Morning Service. Before the year 1764 the Rubric prefixed to the Marriage Service was, "First the bans of all that are to be married together must be published in the Church three several Sundays, or Holidays, in the time of Divine Service, immediately before the Sentences for the Offertory; the Curate saying after the accustomed manner," &c. It depends entirely upon the pointing whether the publication in the Morning Service remains unchanged, and the expression "immediately after the Second Lesson" applies to the Evening Service, if there be no Morning Service in such church or chapel. Acts of Parliament are very loosely worded, as, for instance, the form in which a clergyman is obliged to verify the copies of baptisms and burials is neither sense nor grammar.—T. H.

### ANSWERS TO QUERIES.

GODFREY MEDALS.—There are four varieties of the medal commemorating the murder of Sir Edmundbury Godfrey. That described by H. L. P. is one of the rarest: but it is probably much rubbed, since he has read the reverse—incorrectly (a true reading being "EQUITO: CONSPIRO TUCRI." Godfrey, in his capacity as magistrate, had received the depositions or Titus Oates concerning the Popish Plot, and a few days afterwards was found strangled on Primrose-hill, where, it is said, his body was carried on horseback by night (as represented on the medal), the murder having been committed in the court of Somerset-house, not far from his residence. The application of the legend "Believe in a Horse, O Trojans" is not very clear, but the credulous Trojans are apparently compared with the believers in "The Plot." There is this legend on the edge of the medal—"CERNERE: FRACTA · FIDEM · SUBTULIT · ATLAS SNX (Senex) 1678." One in my possession has the final word XNS (Christmas). The murder of Godfrey is one of those events that will ever be veiled with mystery.—B. N.

THE GREAT BED OF WARE.—"Mirator" will find in Clutterbuck's "History of Herts," vol. iii., p. 265, an engraving of the Bed of Ware, and the following notice:—"It (Ware) has several good Inns, of which one known by the sign of the Saracen's Head, contains a Bed of unusually large dimensions, measuring 12 ft. square, consisting wholly of oak, curiously and elaborately carved. After diligent enquiry I have not been able to meet with any written document or local tradition which throws any light upon the history of this curious bed to which allusion is made by Shakspeare in his play of 'Twelvth Night.' There is a date of 1460 painted upon the back of the bed, but it appears to be more modern than the bed itself, which, from the style of carving, may be referred to the age of Queen Elizabeth."—R. C.

THE PREFIX "UG."—Though the communication of your correspondent, Dr. G. Kaltschmidt, on the subject of the prefix "Ug" is both curious and valuable, I contend that it is not an answer, or at least not a satisfactory one, to the query of your previous correspondent, "A Yorkshireman." I ought, perhaps, to premise that there is no such place as *Ughamby*. The village alluded to by "A Yorkshireman" is *Ugglebarnby*. All the places I can call to mind with the prefix Uggle, Ug, Hug, Houg, and Och, are situated on elevated ridges of land. Ughill, on the Yorkshire moorlands near Wharncliffe; Ugthorpe, in the same locality; Ughill, on the high grounds near Sheffield; Hughgate, on the high Yorkshire wolds; Hougill Fells, masses of slaty rock between Yorkshire and Westmoreland; and the Ochil Hills in Scotland. The prefix Uggle, ignored by your former correspondents, I take as the "key of my position." This prefix, together with the names Hougill and Ochill, exhibit most clearly the Celtic element *uchel* (*elevated*). Ug and Hug are simply abbreviations, and there is every reason to suppose that Ugthorpe is Highthorpe, and Hughgate, Highgate.—JOHN MASON, Sherburn Vicarage, near Malton, Yorkshire.

PRESIDENT BRADSHAW.—"W. B." who stated in the ILLUSTRATED LONDON NEWS that James Edward Bradshaw, Esq., of Fair Oak Park, is the lineal descendant and representative of the President, is under a mistake Mr. Bradshaw, of Fair Oak, is descended from the Bradshaws, of Darcy Lever, near Bolton-le-Moors, who first became possessed of that estate in the reign of Queen Elizabeth, being no doubt a younger branch of the Bradshaws, of Bradshaw Hall, near the same town. The President was also descended from the Bradshaws, of Bradshaw, but his ancestors branched off from the parent stock a century before the Darcy Lever family, and seated themselves at Marple Hall, in Cheshire. He was the youngest son of Henry Bradshaw, of Marple, and, dying without any issue, the wreck of his immense wealth descended to his nephew, Harry Bradshaw, of Marple, who purchased Bradshaw Hall, A.D. 1668, when the head of the family died without male issue; since which time the estates of Marple and Bradshaw have continued in the President's family—having descended, in the female line, to the Bradshaw-Isherwoods. It is not only a "popular belief" in Lancashire, but a notorious fact, that several branches of this great and wealthy family became extinct in the male line soon after the President's death. The parent stock of the family whose bad flourished at Bradshaw since the time of the Conquest for twenty-five generations in uninterrupted succession, became extinct in 1693. The President's own family became extinct in the male line about 1700, when the sole heiress of the family married an Isherwood. The Bradshaws of Chapel-en-le-Frith, failed about the same period. The Bradshaws, now of Barton, ended in a female, the beginning of the last century; and the Bradshaws of Haigh, now represented by the Earls of Balcarres, failed at the same time. To these might be added, the Bradshaws of Makeney, and of Morcharne. Thus, within a century of the President's time, seven different branches at least of his family either became altogether extinct, or merged through females into other families.—B.

## CHESS.

### TO CORRESPONDENTS.

M. DARNHAM.—Simply because we have not space. Solutions, to have a chance of insertion should be sent at the very latest by Saturday in the week.

THETA.—You are quite wrong. 2. "The Chess Players' Handbook," published by Bohn, price 5s.

MEDICUS.—Candidates for admission to the St. George's Chess Club should apply at the Club-House 50 St James's-street.

H. J. ESSEX.—Is recommended, when he writes to a public journal for information, in future, to confine himself to the immediate subject of his inquiry, and to abstain from coarse and irrelevant criticisms on books the merits of which he is evidently incapable at present of estimating. The following are the replies to his three queries—1. There is no probability that the rule which admits of a plurality of Queens will be altered. 2. A King, Bishop, and Knight's move, and a King alone can mate from any position by force. 3. The "Sphinx" problem is unrivalled. The conditions are given at the foot of the very beautiful diagram forming the frontispiece to the "Chess-players' Handbook."

F. R., Derby.—See notice to M. Darnham.

J. C.—Other correspondents seem to be unaware of the well-known privilege every pawn possesses of taking an adversary's pawn *en passant*. She should procure some elementary treatise on the game where this rule and others indispensably necessary for young players to know, are explained.

W. H. A.—The Solutions you require was duly published in the Number for June 23. We cannot possibly spare room for republishing Solutions.

R. J., Bristol's Mount.—The game between Messrs. Ogg and Mercer shall be examined.

F. J. M.—There is no fixed time, but the earlier solutions are sent in the better their chance of appearing.

CHESMATE.—I Buy some book with the first lessons for beginners, or get a friend to teach them to you. 2 The key move is Q to Q R 2nd. Play as Black can, you mate him next move

THOMASINE.—There are none you have yet sent entitled to such distinction; some are very poor indeed, and the best will not for a moment bear comparison with those of our chief composers

SIGMA.—It is decidedly an improvement on your last attempt, and shall be inserted when we can find room.

G. P., (Yoxford).—Quite useless. It admits of an easy mate in three moves

R. M. C.—The conditions of Enigma 969 should be—White to play, and mate in *five* moves.

W. F., Cheltenham.—It admits of two solutions.

J. G. G.—"The Chess Player's Handbook, published by Bohn.

HORATIO.—He cannot.

DISCIPULUS, L. M. N.—You must procure some little work upon the game and learn the rules before you can play.

SOLUTIONS OF PROBLEM No 625, by P. T. M., W. F., B. B., E. B. of Manchester, H. P., Maize-tobps, W. G. S., E. F. of Norwood, A. B., F. S. of Norwich, Omicron, F. T. Derby, Derevon, Alfred H. are correct.

SOLUTIONS OF ENIGMAS, by Derevon, Phiz, Civus, M. P., Major, A. B., Philip, Cowgog, D. W., Gruffus, are correct.

SOLUTION OF PROBLEM No. 626.

| WHITE. | BLACK. | WHITE. | BLACK. |

| 17. Kt to Q Kt 3rd | Q to K B 2nd (g) | 38. K to Kt 2nd | R to K 6th |
| 18. Kt to Q B 5th | Q to Q 2nd | 39. K to B 4th | R to Q B 4th |
| 19. B takes Q B P (h) | Kt to K sq | 40. P to Q R 4th | K to Kt sq |
| 20. B to K 3rd | P to Q Kt 3rd | 41. K to K Kt 4th | K to K B 2nd |
| 21. Kt takes B | Q takes Kt | 42. K to K B 4th | K to K Kt 3rd |
| 22. P to K Kt 4th | Q to Q 2nd (i) | 43. K to K 3rd | R takes P |

The game was protracted many more moves, but terminated in favour of Messrs Staunton and Owen.

(*a*) Not so good a move as it appears

(*b*) Apprehending a triple attack up to the devoted King's Pawn, by White retreating their K Bishop.

(*c*) This threatens much, and greatly impeded the development of Black's game

(*d*) To avoid the consequences of White playing their K Bishop to B 3rd, and then capturing the adverse Kt. We are not sure, however, that Black played the best move. The general opinion was that they should rather have played their King to K 2nd.

(*e*) Threatening, if the Pawn were captured, to move the Kt *instanter* to K Kt 6th

(*f*) They dared not take the Pawn, for the capture would have cost them a Piece, *or, &c.*—

16. Kt takes P | Q to K 2nd | R to Kt sq | Q takes Kt
17. P to K Kt 4th (best) | B takes Kt | &c., &c.

(*g*) This was made without due reflection. They should rather have played P to Q Kt 3rd, to prevent the adverse Kt being moved to Q R 5th, which occasioned, then a good deal of needless trouble.

(*h*) It is not often this Pawn can be taken with impunity; but in the present case White cannot play P to Q Kt 3rd and imprison the Bishop without immediately losing a Piece, through the check of the adverse Queen

(*i*) It was indispensably needful to bring the Queen back, or Black would have obtained a very strong attack on the K's side

(*k*) Threatening to take the K Kt P with their Bishop.

(*l*) Had they gone, to have moved the Rook to Q sq, or the other so Q 5th.

(*m*) The correct move. Black are now obliged either to take the Queen's Pawn (which loses them the "exchange"), or permit their adversaries to establish an irresistible phalanx of Pawns in the centre of the field.

(*n*) Had they played their Queen to K Kt 2nd, White would not have exchanged, but would probably have retreated to Q 3rd, having equally a winning advantage

*(To the Editor of the* ILLUSTRATED LONDON NEWS.)

Will you allow me to inform the Chess community, through the medium of your columns, that I have in my "Chess-Player's Annual" unwittingly inflicted a great personal injury on Mr William Rome. That distinguished strategist is not (as I was informed on what I supposed to be good authority), dead, but is in full possession of health and mental faculties, which I regret to say have not been devoted to the cause of Chess for some years past.

I am, &c., CHARLES TOMLINSON.

12, Bedford-place, Amphill-square, Feb. 12, 1856.

### CHESS ENIGMAS.

No 975.—By an AMATEUR.

London. Printed and Published at the Office, 198, Strand, and Milford House, in the Parish of St. Clement Danes, in the County of Middlesex, by WILLIAM LITTLE, 198, Strand, aforesaid.—SATURDAY, FEBRUARY 23, 1856.

# THE ILLUSTRATED LONDON NEWS

No. 787.—VOL. XXVIII.] SATURDAY, MARCH 1, 1856. [WITH A SUPPLEMENT, FIVEPENCE.

## THE ARMISTICE AND THE CONFERENCE.

THE cessation in the strife of arms which has for some months been enforced by the elements has been extended by the mutual consent of the belligerents. The Conference at Paris has agreed upon an armistice to last until the 31st of March; by which day the articles of pacification must be accepted or rejected. The terms of the armistice have reference to land operations only; the Allies expressly guarding themselves against any relaxation of blockades already established; and against any agreement not to institute and enforce during the period of the armistice any other blockade of Russian ports. Although for the next thirty days the northern forts of Sebastopol will cease to throw their useless shot into the city, the British fleet now on its way to the Baltic will not only be a splendid demonstration of our power and resources, but will, as if an armistice were not concluded, prevent all commercial intercourse with the Baltic ports of Russia. As the fleet makes its way to Kiel it will proclaim to Russia, by the mere fact of its existence, how perilous would be any further resistance to the might of the Allies. So far it will serve a high purpose. Without firing a gun, except for pastime, it will preach peace from ten thousand quiescent throats. Every ship will be an oracle of persuasion, and every gun an advocate for justice, to plead for pacification far more eloquently than all the Cobdens, Brights, and Gladstones who have ever striven to defeat the policy and to paralyse the arms of their countrymen. It would not be matter of much surprise if, while the diplomatists of Paris are debating, the Russian Admirals at Cronstadt should gratify their sailors with a holiday trip to Kiel. An excursion down the Baltic would afford them such weighty proofs of the power of England as might be of wholesome operation for a quarter of a century. A few days ago the mere mention of an armistice excited mistrust. The feeling is no longer existent. The armistice has ceased to be unpopular, for the honour of England and France, and the independence of Europe, are felt to be in safe keeping as long as the British fleet is upon the high seas, and ready to sail or steam into Cronstadt.

It can scarcely be expected, however severely the Czar may have suffered from the war, and however urgent may be the reasons that induce him to wish for peace, that he will not use every exertion to yield as little as he can. Not only the sensitiveness of national pride, which has been wounded in the present, but his plans for the future, which may be retarded or defeated by the severity of the terms exacted, will compel him and his diplomatists to struggle, to wriggle, to quirk, to gloze, and to resist till resistance is hopeless. If England and France are thoroughly united, he will resist in vain. He will be compelled, sooner or later, to yield to the terms which it shall please them to exact. If Austria go thoroughly with England and France on all questions at issue—if she have made up her mind to cast in her lot with them, for good or for evil—Russia will, perhaps, yield sooner, but not the more completely than she would have yielded before. Russia knows all this; and that her best chance of procuring terms more favourable than the fortune of war would have accorded her is to break up the formidable phalanx of statesmanship and of military and naval Powers opposed to her. To sever Austria from the alliance will, perhaps, be the object to which her first efforts will be directed. The means to this end are many. Their common sympathies as despotic Powers—their joint share in the plunder and spoliation of Poland—the superstition existing throughout Central Europe that Russia is the grand Conservatrix of European order, and of the *status quo* the remembrance of benefits rendered or accepted in the hour of difficulty and peril;—these and a thousand other circumstances will be urged by Russia, and acknowledged to a greater or a lesser extent by Austria; but none of them, we are tolerably confident, will be sufficient to separate Austria from the Anglo-French Alliance. But Russian diplomacy does not rest on logic alone. It has a large foundation of bribery and corruption, of cajolery and flattery; and a large array of female as well as of male agents, who ply every art, and resort to every manœuvre that talent can imagine and that wealth can put into operation, to influence opinion, and to oil the wheels and cogs of action. These, also, we venture to predict, will fail of their effect. But, even if they should succeed, there would remain the great alliance of Great Britain and France to withstand Russian opposition, as well as Austrian defection. Of course the secret springs of intrigue will be busily at work in this direction also. Of course the agents of Russia, not only in the cabinets of statesmen, but in the boudoirs and drawing-rooms of well-known countesses and duchesses, and of intriguantes of every grade of fashion and renown, will seek to sow dissension between the despotic ruler of France and the Ministers of free England. They will flatter the French Emperor; they will extol to the skies the bravery and the gallantry of the French nation; they will dilate upon the hereditary animosities supposed to prevail between Frenchmen and Englishmen; they will assert that the objects of France in the war are fully accomplished; that persistency in the war would subserve no interests but those of England; that the interests of France and England are not only not identical but antagonistic; and that it would ill become France to aid her ancient foe in preserving that Indian empire which without such aid might slip from her grasp. But these arguments also

THE SULTAN AT THE FANCY-DRESS BALL GIVEN BY THE VISCOUNTESS STRATFORD DE REDCLIFFE, AT THE BRITISH EMBASSY, AT PERA.—(SEE PAGE 219.)

will fail to sow disunion. The Emperor Napoleon is too just, too prudent, too thoroughly imbued with sound common sense, to be turned from a righteous course of action by such empty palaver—such worthless appeals to a selfishness that, if it existed, would be more worthless still. Against all such dangers there is ample security both in the character of Napoleon III. and his Ministers, and in those of the British representatives at the Conferences. They will neither be bullied nor cajoled by Russia. They know the work they have to do, and the means by which it is to be accomplished. They know the mighty interests at stake. They are fully aware that they have the opportunity in their own hands —that they are the masters of the position, and that the present as well as the future fate of all Europe depends upon the firmness and the righteousness of their decision. Austria might fail them without doing much damage, except to herself; but, if France and England failed each other, Russia would win by her cunning the victory which her arms have been unable to seize, and the civilisation of Europe would be driven back, for we know not how many generations. But such a catastrophe is not to be dreaded. There will be no real difference between the Allied Powers on any point, and Austria will not hold back in any matter of essential importance. It is impossible to believe that the glorious memories of the Alma, the Inkerman, and the Malakoff will be shamed by backsliding, either in Paris or in London.

## *FOREIGN AND COLONIAL NEWS.*

### FRANCE.

*(From our own Correspondent.)*

PARIS, Thursday.

THE general impression here is that peace will be concluded by the 3rd of March, but those likely to be better informed incline to the opinion that, though a pacific *dénouement* is fully to be anticipated, its arrival is not likely to be at all so immediate, and that much discussion is to be looked for before the consolidation of peace.

The chief point of local interest at this moment is the assassination of the Duchesse de Caumont Laforce. Further investigations, however, have added few details to the facts elicited on the occasion of the first examination. The remains of the Duchess have been conveyed to the burying-place of her own family in Belgium, of which country she was a native.

M. de Brunnow has made a tour of visits to all the members of the Imperial family, and to the high functionaries of State. To the Maréchal Vaillant he expressed himself in the highest terms with regard to the conduct of the French army—the Zouaves, in particular, were the objects of his warmest encomiums.

The Grand Vizier, Aali Pacha, is bringing eight magnificent horses, presented by the Sultan to the Emperor and other members of the Imperial family. He is also the bearer of jewels of enormous value as gifts to the Sovereigns of France and England.

The birth of the Imperial Infant is again said to be anticipated early in the ensuing month; in the event of its being a girl, twenty-one salutes are to be fired, and a hundred for a boy, according to ancient custom. The report that the public were to be admitted into the apartments of the Empress after the accouchement is wholly unfounded; none but the presidents of the great political bodies of the State, whose presence in order to attest the identity of the infant may be considered necessary, are to have that privilege.

It is said that the Maréchale St. Arnaud is to be appointed *gouvernante* to the Imperial infant, and not Madame de Turgot, as was first stated. We are told also that the formation of La Maison des Enfants de France has been definitively resolved upon.

The barracks of the Rue Reine-Blanche, Faubourg St. Germain, are fixed upon for the accommodation of the Cent-Gardes, the staff of which has been suppressed. The barracks at Versailles, appropriated to their use, are not to be occupied by the School of Artillery, which preserves the splendid kitchen-garden appertaining to the Palace, at one time spoken of as being the site selected for the building of accommodation for this body. The ancient edifice now forming the porcelain manufactory of Sèvres is also about to be converted into barracks, and the arrangements for this alteration are already in progress in the levelling of the ground destined to the new fabric, which is to be in the Park of St. Cloud.

The French stage has lost one of its most distinguished ornaments, in the person of Madame Allan, of the Théâtre Français. This celebrated actress united to the talent of her profession the virtues of domestic life. Till within a very few years Madame Allan acted with a degree of finesse, tact, and delicacy rarely equalled, the parts of the younger women in that style of light comedy in which the French dram atic school so particularly shines; later she adopted no less felicitously the graver parts of mothers and matrons. Those who have seen her performance in the *rôle* of *Mdme. Desaubiers* in Mdme. de Girardin's "Joie fait Peur" can bear testimony to the wonderful skill and sentiment with which she rendered a conception comparatively new to her, and the grace with which she accepted the different class of parts assigned her. For a considerable length of time Madame Allan had been suffering from the complication of two most dangerous and distressing maladies, but neither herself nor her family was aware of their nature or full extent. Last week a surgical operation was deemed necessary; but, so little was the patient conscious of her danger, that she purposed, on the recovery she anticipated to succeed this operation, to appear in Madame George Sand's new piece, "Françoise," already in rehearsal. On Friday, however, her symptoms proved so alarming, that it was found necessary to suspend the trial in question, and on the same evening she expired almost suddenly at nine o'clock. It appears that, partly in consequence of this event, partly actuated by other motives, Madame George Sand purposes withdrawing "Françoise" from the Théâtre Français; it is also uncertain whether her "Comme il vous plaira" will be performed there or at another theatre.

A considerable degree of excitement has occurred respecting an arrangement entered into by Madame Ristori for her performance in Paris. This celebrated actress hired the Italian Opera-house from the manager, M. Calzado, for four months of this and four months of the ensuing year, with an agreement that he would permit her to put up bills of announcement within and without the building for the two months preceding, and the use of a bureau for the same period. M. St. Salvi, the proprietor of the house, withdrew the bureau, and tore down the bills, asserting that M. Calzado had no right to underlet. A trial between Madame Ristori and M. Calzado has been the consequence, the verdict in which maintains Madame Ristori's rights according to the terms of her agreement, and leaves M. Calzado to arrange matters as he best may with M. St. Salvi. What may be the termination of the affair it is difficult to foresee.

The anniversary of the birth of Washington was celebrated last week by one of the most magnificent balls of the season. Lord and Lady Cowley, Lord and Lady Clarendon, the Baron Brunnow, the Comtes Orloff, Buol-Cavour, &c., &c.; the chief functionaries of State, the principal officers of the French army, the artists and men of letters of this and other nations, were assembled at this fête, which was kept up to a late hour. A long and apparently interesting conversation took place between Lord Clarendon and the American Minister, who seemed to be on perfectly cordial terms.

M. de Lamartine is correcting a new volume of poetry, his last, as he states, which is shortly to appear, under the title of "Désillusion." The Comte Alfred de Vigny is completing a drama in verse, entitled "Mozart."

At the Italian Opera the "Assedio di Firenze" has had but an indifferent success, owing chiefly to the extreme weakness of the libretto. The music displays much science, and the choruses are fine, powerful, and well harmonised. There is, however, a want of originality and of melody that will prevent the work ever taking a high place on the stage. At the Vaudeville *Madame Lovelace* is being played by Madame Doche. The plot of this piece is eminently absurd, but some of the details are sufficiently interesting, and the style agreeable; so that with these advantages, and the admirable acting of Felix and Delannoy, it meets with a tolerably good reception.

The Variétés has an amusing little piece, "Madame Roger Boutemps;" and the Ambigu an interesting drama, "l'Espion du Grand Monde."

### THE WAR IN THE CRIMEA.

The letters from the Camp continue to be without interest. Fort Alexander was blown up by the French engineers on the 11th ult. This work, which was immediately opposite to Fort Constantine, and commanded the approach and entrance to the roadstead, was second only in extent and importance to Fort Nicholas, on the south side. It was constructed of stone, and calculated to mount ninety guns. It is said that all the mines necessary for destroying the Quarantine Battery, and various public works and buildings still remaining in the parts of the town and fortifications intrusted to the keeping of our allies, are nearly finished. Between three and four o'clock p.m. of the same day the English engineers destroyed by a succession of explosions all the groups of buildings, some of them rather massive in character, which occupied the area comprehended within the inclosure formed by the Barrack, or White Buildings. It is said that intelligence has been received, through the secret service, of a very large portion of the Russian force having quitted the north side, and proceeded towards Simpheropol, probably with a view of moving towards Perekop. As many as 25,000 men are stated to have left the north and Mackenzie heights together during the last ten days or a fortnight.

### THE WAR IN ASIA.

Accounts from Erzeroum, viâ Vienna, speak of a battle which it is said took place between the Turks and the Russians, on the 5th of January, near Saydidi. Six Russian battalions surprised a single Turkish battalion. The Turks got off with a small loss in men, but left ten guns and all their baggage in the enemy's hands. The Russians then plundered the town, and set fire to the Prince's palace and the neighbouring villages. Letters of English correspondents at the head-quarters of the Turkish army in Mingrelia, dated five days later than the 6th of January, were received a week ago in London. They make no mention of this battle and loss of guns.

### AMERICA.

The steamer *Arabia*, which left Boston on the 13th ult, arrived at Liverpool on Sunday evening.

In the Senate a motion had been made by Mr. Cass for an increase of the navy; the Secretary of War was requested to report whether any, and, if so, what additional fortifications were necessary for the defence of New York and Brooklyn navy-yards.

The Washington correspondent of the *Courier and Enquirer* says:—

The despatches from the British Cabinet to their Minister are said to be pacific and cordial towards the United States, and to be of such a character as ought to dissipate the slightest shade of doubt that any difficulty endangering the peace of the two nations can grow out of the Central American questions. It is astonishing how calmly the public receive all belligerent demonstrations on these interruptions to the even flow of British and American diplomacy. The discussion in the Senate, illustrated as it has been by the learning, sharpness, and eloquence of the leading members of the body—Messrs. Seward, Clayton, Cass, and Foot—has not even arrested public attention. No one seems to care what the President may say of the war party in Congress have said or may say on the British question. Nobody understands why there is or how there can be any, and the reason, probably, is that most of our grown-up population remember the wretched farce of 50 deg. 40 m., or fight.

The *New York Herald*, in a leading article on Central American affairs, says that in the treaty between Sir H. L. Bulwer and Mr. Clayton the former completely outwitted the latter.

The debate on the Central American question was resumed by Mr. Wilson, who said:—

He gave little heed to the apprehension of war with England; merchants continued their trading without any such fears; it was not very probable the Executive desired a war which would extend from the boundaries of that country to the shores of the Polar Sea, gazed at by Dr. Kane. The only result attained by the Clayton-Bulwer Treaty had been a prolific correspondence and an interminable discussion, which had settled no point in dispute, and led to no result. The treaty had not accomplished what the people of this country expected. They thought this Government had been overreached in negotiation, and that the United States ought to declare it null and void, and stand then just as they stood before it was made. The course of Great Britain justified us in abrogating the treaty altogether. We need not fear her in Central America, let her send as many Anglo-Saxons there as she pleased.

Mr. Butler did not look on this question as likely to issue in a war with Great Britain. He concurred in the American interpretation of the treaty, but hoped the matter would be referred to the Committee on Foreign Relations, instead of being further discussed in the Senate.

Mr. Marcy continued to decline receiving the credentials of Colonel French as Nicaraguan Minister.

President Pierce had ordered the United States' troops to Kansas to preserve order, suppress insurrection, and repel invasion.

The *New York Herald* mentions Mr. Buchanan as a candidate for the Presidency. He will not return to the States, but take a Continental tour.

Affairs at Nicaragua were quiet; the Government had suspended its relations with Col. Wheeler, the United States' Minister.

About one-half of the 3,000,000 dols. due to the Mexican Government, which had been advanced to Santa Anna by certain capitalists of New York, had been paid to Hargrave and Co., and Howland and Aspinall.

The Irish residents of Cincinnati had had a demonstration in honour of the Fillibusters acquitted of an intention to invade Ireland. Much by-talk was indulged in; and, in case of a war between England and the United States, 160,000 Irish-American bayonets were promised.

The Alabama State Convention had passed a resolution denying the right of Congress to legislate on the subject of slavery.

### THE OVERLAND MAIL.—INDIA AND CHINA.

The steamer *Bombay* arrived at Trieste on Wednesday last, at four p.m., in 144 hours from Alexandria. The Indian mail left Alexandria on the 22nd of February, with intelligence from Calcutta to the 24th of January; Bombay, 2nd of February; Hong Kong, 15th of January; Shanghai, 8th of January; Canton, 12th of January. Oude is to be annexed, with General Outram as Chief Commissioner. Lord Canning arrived at Bombay on the 26th of January. There has been a great fire at Macao.

NEW METHOD OF LOWERING SHIPS' BOATS AT SEA.—We are happy to learn that the laudable endeavours of the Emigration Commissioners to clear up the vexed question of the best way of lowering ships' boats has been at last attended with success, and the report of Captain Schomberg, R.N., their officer at Liverpool, appointed to superintend the late trials from the *Commodore Perry*, in the Mersey, is conclusive on the point. After four days' trials with the ordinary crew and with men taken indiscriminately, he states "that everything worked with the most perfect success and uniformity;" and adds, "that in presenting the result of the trials I feel it a great pleasure to state the very high opinion I entertain of the invention. . . I think it simple, practical, and inexpensive, and a very great improvement on the ordinary fitting of ships' boats. It also has the great advantage that any practical seaman can comprehend the working of it at a glance, and I think it well worthy of a very full test at sea." Consequently the Commissioners appointed Captain Lean, R.N., their officer for the port of London, to see this carried out, and the *Sultana*, now in the docks, is to be fitted accordingly, and the apparatus again tested. Captain Schomberg, in his report, states, also, that the entire time taken to unlash, lower, and entirely disengage the boat, though laden with a full crew, was at the longest period *thirty seconds*. Would not such a means have been the salvation of all on board the *Josephine Wilkes*, if at hand? It was ten minutes from the time this ship was struck till she heeled over.

TESTIMONIAL.—On Thursday, at a dinner given at Turnham-green, a handsome testimonial was presented to Jonathan Clark, Esq., a much-respected inhabitant of the parish of Chiswick, as an acknowledgment for the zeal and energy he has displayed as churchwarden; and more especially for his ability and perseverance in investigating the charities of the parish, and placing them before the parishioners in a clear and explicit manner. The testimonial consists of a massive silver salver, with an elaborate border of flowers and scroll-work, the centre bearing a suitable inscription. The salver was made by H. Mills, silversmith, Oxford-street.

## *EPITOME OF NEWS—FOREIGN AND DOMESTIC.*

The Queen has created the Earl of Kenmare in the peerage of Ireland, a Baron of the United Kingdom, by the title of Baron Kenmare, of Castle Rouse, in the county of Kerry.

The Queen has been pleased to present to the London Orphan Asylum, Clapton, the sum of three hundred guineas, to purchase for his Royal Highness the Prince of Wales the right to keep one child always in the Asylum during the lifetime of his Royal Highness.

The Empress of the French gave a private audience on Monday to Count de Bucl, who presented to her Majesty the insignia of the Order of the Star, which the Empress Dowager of Austria, as the head of the Order, had sent to her Majesty as a mark of her friendship.

The illness of the Russian Empress Mother has put an end to all the Court receptions at St. Petersburg, as well as to the rejoicings which followed the marriage of the Grand Duke Nicholas.

At the American ball given for Washington's birthday in Paris, last week, Lord Clarendon walked about with Mrs. Mason, the wife of the American Minister, on his arm. The "public" are, therefore, perfectly certain that there will be no war between England and America.

Aali Pacha has been charged by the Sultan to transmit to the Empress Eugénie and Queen Victoria two diadems in brilliants. The Sultan has also sent to the Emperor Napoleon a sabre, mounted with precious stones.

The Countess de Montijo and the Duchess of Alba are about to visit Paris, in order to be near the Empress at the time of her accouchement.

Count de Bucl, Baron de Hubner, Baron Meysenburg, M. de Kleyel, and other guests, had the honour of dining at the Tuileries on Sunday. A concert afterwards took place in the Galerie de Diane, at which all the other Potentates, the Lord Count Orloff and Baron de Brunnow, were present.

It is said that an Austrian Archduke will visit Paris to represent the Emperor of Austria at the baptism of the future heir to the throne of France.

In a communication addressed to the *Cork Examiner* the honourable member for Dungarvan states that the Duke of Norfolk "was restored on his deathbed, and in his last moments, to that fold which he scandalised by his temporary apostacy."

The French Emperor honoured the Opéra Comique with his presence on Saturday, to witness the first representation of "Manon Lescaut." He stopped until the close of the performance, and both on his arrival and departure was greeted with loud acclamations.

Major-General Sir James F. Love, the Lieutenant-Governor of Jersey, suddenly left that island for England last week, in consequence of a despatch received from the Government.

It is rumoured in Madrid that General Canrobert is to be appointed French Minister in that capital, in the room of the Marquis de Turgot.

The *Gazette* of Verona of the 20th ult. contains the official authorisation for the return of the Princess Trivulzio Belgiojoso into the Austrian States, and the removal of the sequestration of her property.

A letter from Paris mentions, among fashionable gossip, that Count de Morny is about to be married to a rich American lady, a Miss Hatton.

Letters have been received from the Duke of Newcastle and from the Lord Advocate declining to be nominated for the rectorship of Marischal College.

It is rumoured that, if peace be concluded, Count Medem will be Russian Minister in London, and Baron Brunnow at Paris.

The sarcophagus, in porphyry, which King Oscar ordered twelve years ago, from the mines of Elfdahe, for the mortal remains of his father, Charles John XIV. (Bernadotte), has just been completed, and in a short time will be sent to Stockholm.

Major-General Sir J. Chatterton has resigned the chairmanship of the Cork and Bandon Railway Company, which he has held for many years, his military duties rendering it impossible to attend to the arduous duties of that company.

The Archæological Association of Antwerp have elected Count de Caretovitch, Minister of Russia at Brussels, an honorary member.

A letter from Vienna states that General Williams is re-established in health, and will shortly leave Kars for Moscow.

Mr. Glyn, the member for Kendal, has no less than four sons serving their country in the Crimea.

M. Leverrier states, in a letter to the French Minister of Public Instruction, that he is firmly persuaded that a great number of small planets are situated between Mars and Jupiter, and that before 1860 nearly 100 will certainly be discovered.

Dr. O'Shaughnessy has received orders to proceed to Calcutta, *en route* to England and America, whither he is to go in order to perfect himself in telegraphic matters as carried on in other parts of the world.

M. de Girardin is said to be about to reissue his well-known essay entitled "Paix," in which he calls for the immediate destruction of Gibraltar.

Mademoiselle Rachel arrived at Havre on Monday by the *Fulton*. One of the Havre journals says that, she seems to be completely recovered from the illness which compelled her to give up her American engagements.

Rossini, who has published nothing since "William Tell" and the "Stabat," has just written for a favourite pupil, Madame de Lugi, a noble romance melody, entitled "The Separation."

The Archbishop of Avignon, before he left the Eternal City, went to take leave of the Pope, who announced to him his proposed speedy arrival in France, in case the Emperor should have a son. Pio Nono promised to spend two days at Avignon. His Holiness will then proceed to Paris, there to baptise the Imperial infant.

M. Lajay has been elected to the seat in the Academy of the Fine Arts which was vacant by the death of M. David (d'Angers).

M. Lamartine is said to be revising for the press a new volume of poems, entitled "Desillusion."

M. Meyerbeer, the composer, has left Venice, to return to Germany.

The turning of the first sod of the South Staffordshire Waterworks at Lichfield took place on the 22nd ult. The ceremony was performed by Lord Ward, in the presence of a numerous company.

At a recent copyright trial in Paris it transpired that—though the plaintiff, one M. Vieillot, had sold 250,000 copies of "La Lisette," by Béranger, as set to music by Herart, of which song he is the proprietor—more than a million pirated copies of it had been disposed of.

The cause of the resignation of the Liverpool Local Marine Board is said to be a dispute with the Board of Trade as to the salaries of some of its officials.

The *Moniteur* publishes a decree ordering a census of the population of France to be taken, under the superintendence of the mayors, during the course of the present year.

Several custom-house officers in Bristol have been respectively dismissed, suspended, and degraded for culpability arising out of the late robberies of bonded stores in that town.

The Chamber of Commerce of Turin has decided that it would not be advisable at present to hold a Universal Exhibition in that city; but that the sixth Exhibition of the Manufactures of the Kingdom shall take place in 1858 on a larger scale than usual.

The members of the Stamford-hill Cricket Club entertained their friends (to the number of three or four hundred) at a grand ball at the London Tavern on Tuesday evening.

Several political arrests have been made in the French departments. Among other persons a merchant of Marseilles, who was an assistant-mayor in 1848, has been arrested.

The gross earnings of the Southampton Dock Company in 1850 were £20,816; in 1855 they were £38,442. The proprietors now receive a dividend of 4 per cent per annum; for many years no dividends were paid.

The total taken of grain of all sorts imported in 1855 was 5,729,241 quarters; and of flour, 1,922,318 cwt. This presents a considerable diminution on 1854, when the quantities were—of grain, 6,550,498 quarters; and of flour, 3,705,161 cwt.

There are now four vacancies for four participators in the wealthy charity of the Hospital of St. Cross, owing to the deaths of four of the Hospital brethren. The vacancies have not been filled up in consequence of the affairs of the Hospital not being yet settled.

The United States' mails, chiefly for California and Oregon, which passed over the Isthmus of Panama in 18[illegible] were 27 tons, and the amount paid for their transit across the Isthmus was £[illegible].

Mr. William Tatham, the Liverpool stockbroker, who lately cut his throat, died on Sunday from the effects of the wound.

The *Constitutionnel* says that the decoration of the Louvre has occupied more that 1600 sculptors.

The Town Council of Southampton have resolved to petition the Lords of the Treasury to make Southampton a [illegible] port.

## NOTES OF THE WEEK.

EARLY as it is in the Session, the Government has sustained two repulses—not to say defeats. In the Lords, the Wensleydale Peerage decision has compelled Ministers to announce that they will "consider" what is to be done; and in the Commons, the Local Dues Bill, against which so large an amount of Corporation hostility has been put forth, is shelved, after a few stereotyped flourishes by Lord Palmerston—it is referred to a Select Committee. Upon the first topic we have, in the course of the discussion, ventured to intimate our opinion; upon the second we will merely remark that the result is to be regretted. Homage has been paid to the conventional cant about Corporation property, and a manifest injustice has been permitted to endure; and Liverpool, for instance, is to go on taxing shipping and seaborne commerce in order to buy itself organs and pictures of the Emperor Nicholas. However, the sweep will be all the cleaner when it does come, and Justice handles the legislative besom in right earnest. Mr. Disraeli's exultation at the withdrawal of the bill is sufficient proof that mischief has been done, nor is it quite stoned for by the amusement one derives from the spiteful scolding he lavished upon the Cabinet on Tuesday evening.

The armistice which has been signed is to last "of right" until the 31st of this month. It is not to interfere with any blockade that has been made, or that may be established. The advanced squadron has departed for the Baltic, and the state of things put an end to by the winter will, therefore, be resumed. Prussia, so abjectly eager to be allowed to come into the Conferences, did much to neutralise our Baltic blockade last year; and it is to be hoped that the measures then threatened for thwarting her devices will be carried into operation, should there be a chance of the negotiations terminating otherwise than in a peace. It is stated, however, that the Nicolaieff question (to which we adverted last week as raising a parallel case to that which the Jews and impure bookvenders of Holywell-street might raise, if nuisances were agreed to be cleared from the Strand) is to be surrendered by Russia.

The amiable Empress of the French has received a compliment at which it is supposed that she ought to feel exceedingly flattered. The Austrian Court has sent the Empress the Order of the Croix Etoilée (starry cross), which is given only to ladies of unblemished pedigree, and in this case it is supposed to imply a recognition on the part of the Empress-Mother, the Superior of the Order, that the Empress Eugénie is one of "the family of Sovereigns." In a letter, accompanying the badge in brilliants, this recognition is expressed even more strongly; and it is stated to have been written at the express desire of the young Emperor, who is alleged to have conceived an immense admiration for the Emperor Louis Napoleon. When such presents are exchanged by such persons one is always reminded of a couple of enthusiastic lines into which Mrs. Keeley, in "The Forty Thieves," used to break, when *Ooyia's* fraternal affection awoke on *Ali's* discovery of the riches in the cave:—

O! what a blessed sight to see one brother
Disinterestedly believe another!

Sir Hamilton Seymour appears to be unlucky with his travelling arrangements. On leaving Russia it was said that his "things" were seized; and they were certainly detained a long time, though there is no reason to suppose that the late Emperor Nicholas had felonious designs upon Sir Hamilton's dressing-case and hatbox. But he is still worse treated in Vienna, in which capital he was unable to obtain decent apartments, and therefore went to an hotel, where somebody entered his room in the night and stole all his linen, "except one shirt, one pair of stockings, and one pocket handkerchief." It is made matter of remark, and justly, that an Austrian hotel is not the place for an individual who has to receive and forward confidential despatches. Russian and other spies, of high as well as low rank, are to be found everywhere, and they have no hesitation in using false keys or any other means that can attain their object. Servants, of course, can be corrupted with facility; and, in short, if Sir Hamilton has any secrets, he had better trust to his memory, which is remarkable, than to pen and ink and locked key.

The decision of the House of Commons upon the Sunday exhibition question has not arrested the influx of petitions, chiefly the result of religious "demonstrations," against any relaxation of the present observance of the Christian Sunday, which some sectarians wish, it would appear, to convert into a Jewish Sabbath. It may be well, at this moment, for all who have audiences, congregations, or readers, to unite their efforts upon a point which all agree ought to be carried—namely, the discouragement, as much as possible, of ever-work on the week days, and especially to the trying to obtain general cessation of labour upon a portion, at least, of Saturday. We all work far too hard, and far too long. We waste the best part of our lives in almost preternatural efforts to do more than nature sanctions. What Mr. Everett has been saying to the Americans applies, in not much less degree, to the English. He says "they, as a people—at least the professional and mercantile classes—have too little considered the importance of healthful generous recreation. They have not learned the lesson contained in the very word which teaches that the worn-out man is recreated (made over again) by the seasonable relaxation of the strained faculties. The old world learned this lesson years ago, and found out ("Herod." I., 173) that as the bow always bent will at last break, so the man for ever on the strain of thought and action will at last go mad or break down." And, day by day, and week by week, how many among us do break down, and do go mad? and how many thousands upon thousands, who do neither, simply subside into a steady but weary and cheerless monotonous action, which blinds them to the beauties of God's world, and dulls them for active sympathies with his creatures? Surely, this is not a bad time for a general effort which shall in some measure extricate us from the reproach of the eloquent American orator. A league for the enfranchisement of Saturday would leave its mark in the annals of humanity.

The great Turkish Reform was getting on so very fast that those who know the Turks became alarmed at so much expedition. Everything was being placed upon a right footing, and the Christian and Mahometan subjects of the Porte were at once declared perfectly equal, the greatest achievement ever wrought in a country whose faith is based on the Koran. But there is no occasion for over-exhilaration at present. There is a Great Council in Turkey, just as there is a House of Lords here, and Ministers, in each country, may be, or pretend to be, as liberal as they like; but the bill, here, must be passed, and the firman, there, must be "allowed," or the reform goes no further. It appears more than probable that the fanaticism of the orthodox Moslem—we should, of course, use other words were we speaking of the conscientious objections of our Episcopal bench to admitting the Jews to Parliament—will be so aroused by the proposal to elevate the unbelieving Christians to the rank of citizens that the projected reforms will be materially modified, if not abandoned. Turkey is delivered from any immediate fear of her enemies; and, though the Sultan himself is acquiring a taste for European amusements, drinks champagne and plays on the piano, is very polite to the Frank ladies, and has sent very pretty coronets to Empress Eugénie and Queen Victoria, the bigotry of his subjects may be too much for the enlightened Padishah.

CLERICAL APPOINTMENTS.—*Rural Deanery:* The Rev. G. C. Berkeley to Dengie. *Rectories:* Rev. H. F. Hamilton to Langton Herring, near Weymouth; Rev. H. Hall to Semley, near Shaftesbury; Rev. L. P. Prescott to Willingale Doe, near Chipping Ongar; Rev. R. Lovett to Pickwell, near Oakham. *Vicarages:* Rev. R. M. Hope to Eccleshall, Staffordshire; Rev. W. A. Cartledge to St. Peter's-in-the-Willows, York. *Incumbencies:* Rev. A. Carden to Tredington, near Tewkesbury; Rev. M. Wilkinson to Nether Poppleton, near York; Rev. E. Palin to Summertown, near Oxford.

## OBITUARY OF EMINENT PERSONS.

### SIR JOHN GREY.

LIEUTENANT-GENERAL SIR JOHN GREY, K.C.B., of Morwick, Northumberland, a scion of the Greys of Howick, and a distinguished British officer, was the younger son (the elder son, Charles, a Captain in the 45th Regiment, fell at New Orleans) of Charles Grey, Esq., of Morwick, by his wife Katherine, daughter of the Rev. John Skelly, and great-granddaughter of Charles Mordaunt, the famous Earl of Peterborough. Lieutenant-General Sir John Grey's career in the service of his country was long and brilliant. He entered the British Army in 1793, and fought in India against Tippoo Saib. He was at the battle of Mallavelly, and at the siege of Seringapatam; and received a medal for the latter. He was subsequently in the Peninsular war, and was twice wounded at Ciudad Rodrigo.

In the late Indian war Grey's gallantry became again conspicuous. He, with the left wing of the army of Gwalior, defeated a Mahratta force of 10,000 men at Punniar, and captured all their guns, standards, ammunition, and treasure. For this feat of arms he was created a K.C.B. in 1846. At the Battle of the Sutlej Sir John Grey commanded a division. He was appointed Colonel of the 5th Foot in 1849, and became a Lieut.-General in 1851. He was Commander-in-Chief of the East India Company's forces at Bombay, and Second Member of Council there from 1850 to 1852. Sir John Grey married, in 1830, Rosa Louisa, only daughter of Captain Sturt, R.N., but has had no issue.

Sir John died on the 19th ult., at his seat, Morwick Hall, Northumberland. The present Earl Grey is the great-grandson of Sir Henry Grey, the elder brother of the grandfather of the gallant Sir John Grey whose death is here recorded.

### SIR J. F. OUTRAM.

SIR BENJAMIN JONES OUTRAM, M.D., F.R.S., F.G.S., who died, at Brighton, on the 16th ult., was son of Captain William Outram, of Kilham, Yorkshire, and was first employed in the medical naval service in 1794; he rose to the rank of Surgeon in 1799. He was actively engaged in his professional duties during the late war with France, and he received a medal and clasps for the actions in the *Nymphe*, the *Boadicea*, and the *Superb*. He graduated at the University of Edinburgh in 1809, and became a member of the College of Physicians in 1810. He was appointed Inspector of Fleets and Hospitals in 1841, and was made a Knight Bachelor by patent and a C.B. in 1850.

WILLS.—The will of Andrew Colville, Esq., of Crombie, Fife, N.B., and of Eaton-place, London, was proved under £30,000, within the province of Canterbury. John Mercer, banker, of Maidstone, Kent, £80,000. Lieut.-Colonel C. F. Lardy, £8000. Captain Sir Robert Lydston Newman, Bart., who died at Inkerman, £35,000. Major R. F. Phillips, R.A., £3000. Captain H. Mowbray, R.N., £2000. Thomas Fry, of Cannon-street, wholesale [illegible], £40,000. James Edward Mivart (Mivart's Hotel), £30,000. John Joseph Mundell, Esq., of Doctors'-commons, and Hampstead, £9000.

Solar halo on the 24th.

E. J. LOWE.

RESPONSIBILITY OF PARENTS.—At the Town-hall, Chester, last week, Mr. Morgan stated that he appeared by direction of the Secretary of State to prosecute a complaint against the parents of a boy who was now detained at the Reformatory at Bradwell, which had received the sanction of the Government. The boy had absconded from a workhouse for years past, taken to drink, some pawnable clothing. Last reformatories should prove too attractive, the Legislature had wisely determined to levy a pecuniary burden upon parents by whose negligence or connivance children might fall into crime. Mr. Bridgman, for the defendants, consented to an order for the payment of 4s. per week and costs.

THE TIPPERARY BANK.—The Carlow branch of the Tipperary Bank has suspended its payments, the manager having paid off all the cash on hand up to three o'clock on Monday last. The event has, of course, caused great consternation, especially among the agricultural classes, many of the better rank of farmers being depositors to a considerable amount. Mr. Sadlier, it may be recollected, sat for the borough of Carlow from 1847 to 1852, and it is a singular fact that his predecessor in the representation, Major Layard, also died by his own hand. The immediate result of the winding-up petition to Chancery will be a call on the shareholders who are able to pay, and who will, on payment of it, be protected from any hostile proceedings by creditors until another call be made.

COMMITTAL OF A CLERGYMAN.—The Rev. R. M. Benson, Perpetual Curate of Cowley, appeared on Saturday last at the County-hall Oxford, on a charge of having married Richard Pinnell Carey and Sarah Polley, his parishioners, without duly publishing the bans or without any license. It appeared that on the 23rd of May, 1853, Richard Carey and Sarah Polley were married at the office of the Superintendent Registrar. By this marriage these parties had three children, the two first being twins. A month after the birth of the twins the woman applied to be churched, but the defendant declined to do so until she had been married according to the rites of the Church of England. The result was that Carey and his wife agreed to be remarried, and the ceremony was performed by the Rev. Mr. Benson on the 3rd of May, 1855, no banns having been published nor any license obtained. The defendant admitted the facts, but considered that he had neither violated the spirit nor the letter of the law. He was committed to take his trial at the next session, but was admitted to bail, himself in £100, and two sureties of £100 each. The proceedings caused great excitement. The magistrates' chamber was crowded by clergymen of the high church party and others anxious to hear the result of the examination.

THE RUGELEY POISONING CASES.—We stated in our last that it was intended to institute a fresh inquiry into one or more of those cases before the county magistrates, with the special object of making the accused acquainted with the nature of the evidence which would be brought against him on his trial. We understand that Government has approved of that course being taken, and had instructed Mr. Bodkin, the eminent criminal barrister, to attend and conduct the case for the prosecution. Mr. J. H. Hatton, the chief constable, had, we believe, visited several parts of the kingdom, to apprise the additional witnesses whose evidence would be summoned, and the day had actually been fixed for the hearing to commence—namely, Tuesday next. On Friday, however, a telegraphic message was received by the chief constable, to the effect that the hearing was postponed; and we understand it is now probable that any additional inquiry before the magistrates will be altogether abandoned, and nothing more will be done until the trials commence. The Trial of Offences Bill, with amendments, was "reported" in the House of Lords on Thursday last; and this bill, our readers are aware, has been introduced with a view to remove such cases as that of Wm. Palmer for trial from any place where an unfavorable prejudice may be supposed to exist to the Central Criminal Court in London. There, in due time, a full investigation of these extraordinary charges will take place before a tribunal the competency of which cannot be disputed, and whose freedom from prejudice may be fully relied on.—*Staffordshire Advertiser.*

A company on a very large scale for promoting the working of minerals in France is in course of formation. It is to be under French, English, and Belgium directors, and to be called the Crédit Houiller et Metallurgique.

During the night of Saturday last the church of St. Paul, Over Tabley, near Knutsford, [illegible] fire is supposed to have [illegible]

## NAVAL AND MILITARY INTELLIGENCE.

THE CRIMEAN INQUIRY.—On Tuesday, the warrant by which a board of general officers is appointed to investigate the charges against Lord Cardigan and others, contained in the reports of Sir John M'Neill and Colonel Tulloch, was laid on the table of the House of Commons by Lord Palmerston. The general officers named in the warrant are—Lord Seaton, General M'Mahon, Sir John Bell General Rowan, Earl Beauchamp, General Peel, General Knollys.

THE greatest activity prevails in Sheerness Dockyard to complete with all possible dispatch the ships now under fitment there.

A NEW BATTERY is now in course of construction at the dockyard at Pembroke. It is situate at the western side of the establishment, and is intended to mount seven very heavy guns. The contractors are pushing the works on, so that it will soon be ready for mounting.

THE officers commanding the depôts of the 84th Regiment and the 60th Royal Rifles, at Chatham, have received an order from the War-office directing that detachments of those corps are to embark at Gravesend on board the *Earl of Hardwicke* and the *Walter Maurice*, the former for Madras and the latter for Bombay.

THE Board of Ordnance is strongly intrenching Tynemouth Garrison, which, when the extensive works that are now in hand are completed, will be surrounded by the sea at high water. The extensive piers to be built at the mouth of the Tyne by the Improvement Commissioners will be proceeded with this spring, but will take several years to complete.

IN about a fortnight or three weeks' time about 250 gun and mortar boats will be completed. They will be ranged near the northern shores of the Isle of Wight, in front of her Majesty's marine palace, Osborne, from which they will extend up in front of Ryde. Arrangements are making for steam boat and other excursions, for the purpose of visiting this remarkable fleet.

AN Admiralty circular has been issued stating that "it is their Lordships' desire that officers of the Navy should not wear beards or moustaches on board her Majesty's ships. By the regulations of the service men are expected to be properly shaved, and it is essential that a good example on this point should be set by their officers."

THERE is a rumour that, in order to relieve the Commanders' list of many old officers, and thus enable Sir Charles Wood to bring forward for employment a number of rising young men, a circular has been issued from the Admiralty to a certain number of Commanders, intimating to place them, after the 1st of July, on the retired list of captains, with a half-pay of 10s. 6d. per diem.

IN barracks have been received at head-quarters, Woolwich, from Sir Richard Dacres, commanding the Royal Artillery at the Camp before Sebastopol, in which he reports that seventeen companies of the siege train, consisting of 790 officers and men of the Royal Artillery Corps, would leave the Crimea for England shortly after the 5th ult. The Commandant is consequently ordered to prepare barrack accommodation for the men, who are detailed as follows: The 2nd, 6th, 7th, and 8th companies of the 11th battalion; the 1st, 2nd, 3rd, 4th, and 7th companies of the 12th battalion; the 4th company of the 2nd battalion, the 8th company of the 4th battalion, and the 1st company of the 5th battalion.

THE General Screw Company have received orders to prepare their four large ships—viz., the *Argo* (No. 31), the *Calcutta* (No. 186), the *Queen of the South* (No. 135), and the *Hydaspes* (No. 87), for the reception of horses and troops. These ships are to be fitted to convey the following:—*Calcutta*, 26 officers, 140 men, and 160 horses; *Argo*, 26 officers, 150 men, and 156 horses; and the *Hydaspes* and *Queen of the South* will each convey 28 officers, 120 men, and 200 horses. Each vessel will also have placed on board 10 tons of hay and 200 tons of light stores. All four of these large ships will be ready at Southampton for the reception of their freight on the 3rd instant; but the company have only received information that the *Argo* and *Hydaspes* will receive full pay from that date.

THE officer commanding the depôt of the 22nd Regiment, at Chatham, has been directed to select a certain number of the non-commissioned officers of that corps to be transferred to the 2nd West India Regiment, where they will be appointed to the rank of company sergeant-majors. They are to proceed to the West Indies immediately to join that regiment.

AN order has been received at Chatham garrison, from the Horse Guards, directing that the non-commissioned officers and men belonging to the depôts of the 74th Highlanders and 84th Regiment who have been sentenced in the late Army Regulations of the Enfield rifle at the School of Musketry, Hythe, under Brevet-Major W. Justin M'Carthy, are to embark at Gravesend on Saturday (this day) in the *Earl of Hardwicke*, for the purpose of joining the head-quarters of their respective corps.

IN consequence of the interest felt by the Secretary of State for War in the troops attached to the home stations acquiring a perfect knowledge of the use of the Enfield rifle before the are draughted to foreign stations, instructions have been conveyed to Colonel Lord Jervis, commanding the provisional battalion at Chatham, directing him to select a number of the officers, non-commissioned officers, and privates from depôts of regiments in the British establishment, and to hold them in readiness to proceed to the School of Musketry at Hythe, for the purpose of being instructed in rifle practice, as well as perfecting themselves in a thorough knowledge of that important weapon, in order to act as instructors to other troops.

THE War-office and Admiralty returns of desertions from the regular army, the militia, and the navy, just made up, show a large increase in the offences during the past month, the total number being 731—viz., 326 from the regular army, 230 from the militia, and 147 men from the Royal Navy, including those from the marines. The deserters from the regular army comprise 49 from the Land Transport Corps, 21 from the German and Swiss Legions, 16 from the Household Brigade, 15 from the Royal Artillery and Sappers and Miners, 13 from cavalry regiments, 10 from the Medical Staff Corps, 10 from the East India Company's depôt, at Warley, Essex, and the balance from infantry regiments of the line. Amongst the number of defaulters from the navy are one man and three boys, discharged with disgrace from the service.

ON Friday (last week) Admiral Sir Thomas Sabine Pasley arrived at his residence, Craig Foot, Windermere, from the Black Sea. The gallant commander was received with great applause at the Windermere Railway station; whence, seated in his carriage, he was drawn by fifty stout lads, amidst the shouts of the people, to Craig Foot, which was gaily decorated for the occasion; where the Admiral thanked the people for their enthusiastic welcome.

## FANCY-DRESS BALL AT THE BRITISH EMBASSY AT CONSTANTINOPLE.

*(From a Correspondent.)*

On the 31st January a grand Fancy-dress Ball was given by the Viscountess Stratford de Redcliffe, at the British Embassy at Pera. Great interest was attached to this fête from the diplomatic motives in which it originated, and from its being the first ball at which the Sultan has been induced to appear. It appears that a reconciliation has recently taken place between Lord Stratford de Redcliffe and Mehemet Ali Pacha, the brother-in-law of the Sultan, his Excellency called on the Grand Vizier, and made known his desire to obtain an audience of the Sultan. The audience, of course, was granted, and on the following day Lord Stratford went to the Imperial palace of Tcheregam, where, in a private audience, he solicited the Sultan to honour the ball of the 31st with his presence. His Lordship based his request entirely upon political grounds, and his arguments were of such a nature that the Sultan could not well do otherwise than consent. Preparations on the grandest scale were made at the British Embassy for the reception of the Sovereign of Turkey.

The English artillery stationed at Galata Serail, which is close to Lord Stratford de Redcliffe's residence, fired a Royal salute on the Sultan's arrival, and also on his departure. A guard of the 12th Lancers accompanied his Highness to the door of the Embassy; and the grand marble staircase leading to the ball-room was lined by a body of dismounted cavalry in full dress. The excellent band of the German Legion was stationed in one of the corridors; and the orchestra of the Italian Theatre, which was in the gallery in the ball-room, played the Turkish march and the French and English national airs whilst the Sultan proceeded slowly through the splendid saloons of the Embassy. Lord Stratford, accompanied by his secretaries and dragoman, all in full uniform, received the Sultan at the foot of the grand staircase, and accompanied him to a throne placed for him at the head of the ball-room. The French and English Ambassadors, with the whole *corps diplomatique* present, and the Turkish Ministers, stood in the vicinity of the throne. The ladies of the different Ambassadors and Ministers were then presented to his Highness.

The Sultan looked on at the dancing with evident pleasure. The brilliant fancy dresses of the ladies showed off their charms to great effect. Those who had pretty feet wore the picturesque costumes of Spanish, Swiss, and Italian shepherdesses. [illegible] the gorgeous uniforms of the military [illegible] of [illegible] [illegible] [illegible]

THE SULTAN PROCEEDING TO THE BALL GIVEN BY THE FRENCH AMBASSADOR, AT CONSTANTINOPLE.

the Sultan said, in the most gracious way, that it was his wish to be present. It was thus that the Sultan, with a great deal of tact, managed to confer an equal compliment on both Embassies.

THE BALL AT THE FRENCH EMBASSY.

The Sultan, on the evening of February the 4th, accompanied by his Ministers and the chief officers of his household, arrived at the French Embassy shortly after eight o'clock, nearly an hour earlier than he was expected. The guns placed in the garden of the Embassy fired a Royal salute. The streets of Pera, through which the Sultan passed on his way from Topkana, were illuminated, chiefly with Chinese lanterns and variegated lamps, and the front of the Embassy was brilliantly lit up with large oil lamps; and in different parts of the garden blue lights were kept burning, which flung a bright radiance over all around. The street leading to the gate of the Embassy, and the avenue down to the entrance, were lined with French and Turkish troops. A party of dismounted Cuirassiers in full dress, with glittering helmets and breast-plates, kept guard in the anteroom of the dancing saloon. A throne was placed at the further end of the ball-room, under the portrait of the Emperor. On each side of the throne was a gilded column supporting candelabra containing numerous lights. The Sultan, however, instead of sitting on the throne, sat in the dancing saloon; and, as at the British Embassy, seemed to look with great interest on the quadrilles, polkas, and waltzes, which took place immediately in front of his Highness. The French and English Ambassadors stood beside him, and with the latter his Majesty talked a great deal. Amongst the Turkish Ministers, near the Sultan, was Reschid Pacha, who, though no longer in power, took his place immediately after Aali Pacha, the present Grand Vizier. During the absence of Aali Pacha at the Conferences to be held at Paris his place will be filled by Mehemet Pacha, who was Grand Vizier about twelve months ago, and who was formerly Turkish Ambassador in London.

The ball-room and adjoining saloons were brilliantly illuminated, and the crowds of beautifully-dressed women, and of diplomatists, and military and naval officers in uniform, made the scene one of the most animated that can be imagined. Some of the Pachas were literally covered with em-

CHILDREN'S FANCY-DRESS BALL, GIVEN BY THE VISCOUNTESS STRATFORD DE REDCLIFFE, AT THE BRITISH EMBASSY, AT PERA.

broidery. Baron Prokesch Osten, the Austrian Minister, wore a light blue uniform of a general officer, and the Prussian Minister a white military uniform of the same grade. Lord Stratford de Redcliffe wore over his splendid uniform of Ambassador the red ribbon and insignia of the Grand Cross of the Bath; and M. Thouvenel wore the Grand Cross of the Saviour of Greece and of the Iron Crown of Austria. There were but few English officers present. Amongst them were Lord George Paget, Lord Dunkellin, General Mansfield, General Stokes, and Admiral the Hon. — Grey. Lady de Redcliffe wore a splendid tiara and necklace of brilliants.

The Sultan retired about eleven. During the time of his stay he seemed quite animated and happy. He was saluted by the guns in the garden as at his entry. The soldiers in the ante-room and along the whole line presented arms: and the crash of military music and the acclamations of the crowd added to the excitement of the scene. Most of the Turkish Ministers stopped till late, and the young Turkish Beys who were present remained till the ball broke up at four o'clock in the morning.

Shortly after midnight the supper-room was thrown open, and was instantly invaded by an eager crowd, who found at the buffet a profusion of wines and edibles, the variety and delicacy of which would have done honour to a Soyer.

There was a smoking apartment on the second floor, to which the lovers of chibouks and Turkish coffee retired from time to time.

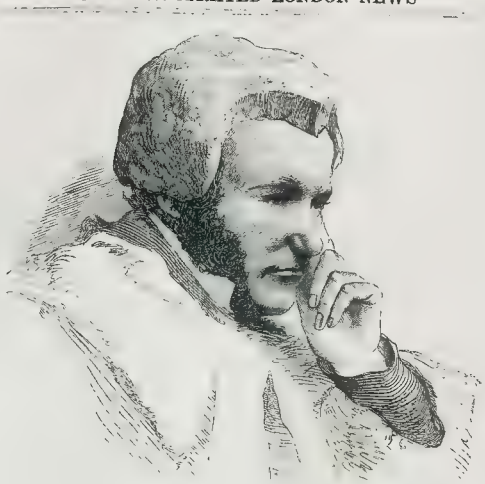
The French Embassy is situated on the declivity of a hill which overlooks the Propontis. If it be not impossible, it is at least dangerous, to descend the avenue from the main street of Pera to the entrance of the Embassy. The Sultan came on horseback. From his palace of Tcheregaun to Tophana he passed in a caique, and from the latter place he rode to the Embassy. There are but very few carriages in Pera, from the difficulty and even danger of using them in the narrow and tortuous streets, or over the broken ways outside the town. Ladies go out in the evening in sedan-chairs preceded by a link-bearer, for the streets at night are as dark as they are ill-paved and dirty. The gentlemen walk, protected from the mud by high boots. As a sedan-chair can only contain one person, the number of them passing through the streets or blocking up the way on the night of an Embassy ball is almost incredible to an inhabitant of civilised Europe. The scene in the hall and at the doors of an Embassy on a ball-night is as odd as can well be imagined. The swearing of the chairmen, the shouting of the link-boys, the occasional screams of an affrighted lady, together with a dingy crowd of servants in wild attire disentangling their masters from their mud boots or squabbling as rival claimants for a pair of goloshes, form the astounding chaos through which the visitor has to pass before he finds himself in the presence of crescents and coronets, stars and ribbons, and all the strange ingredients of an Oriental ball-room.

## CHILDREN'S FANCY-DRESS BALL, AT PERA.

The Viscountess Stratford de Redcliffe gave a children's fancy-dress ball on the 22nd January, at the residence of the British Embassy. An interest attaches to a children's ball in Constantinople unknown in the civilised countries in Europe. Were the 300 little creatures who danced and laughed at Lady de Redcliffe's the other evening to come in their every-day costume, the sight would still have been as varied as an elaborate fancy ball in England. They were real little Turks and real little Greeks, Albanians, Armenians, and Syrians of every race. All were in their richest costumes, chattering each in their own tongue, and dancing after their own fashion. There were the children of diplomatists and of the French colony, dressed in every variety of picturesque costume, and speaking amongst them every language in Europe. Amongst those present were many names well known to the fashionable world in London.

## MR. BARON BRAMWELL.

THE elevation of Sir George Bramwell to the seat in the Court of Exchequer vacated by Lord Wensleydale has given universal satisfaction to the profession and the public. Mr. Baron Bramwell's is one of the few instances of an unbroken career of success at the bar, terminating in its legitimate reward—a place on the Bench. It is understood that he did not receive a University education, and that he was engaged in a mercantile house before he embraced the profession of the law. He was called to the bar in May, 1838; and in a very short time acquired that reputation for knowledge of the law, unceasing attention to business, and largeness of view in relation to legal principles, which have rendered so distinguished the latter years of his continuance at the bar. On the Home Circuit, as well as in town, he acquired that species of business which falls only into the hands of the best lawyers as contradistinguished from great advocates; such a class of business as led to the promotion to the judicial rank of Barons Parke, Alderson, Justices Patteson, Wightman, and Crompton, without having obtained the distinction which the appointment to be a Queen's Counsel confers; a style of business which is above that of the mere special pleader, and which of all others tends to elicit those qualities which go to make up what is technically called a "judicial mind." Mr. Bramwell long held that position at the bar which the profession understands by the term "a middle-man:" that is, the real support of the burden of a cause in all its bearings on evidence and legal requirements, for which purpose a "middle-man" stands between the junior counsel and the leader—always ready in any difficulty that may arise, and prepared from the full stores of his knowledge to supply any deficiency. This position implies the possession of a large amount of chamber business of the very first class of importance. It necessarily leads to considerable employment in cases which are tried in the city of London, where the bar is thoroughly weeded, and only the best men are permitted to flourish. It is a common saying among lawyers that a London common jury is worth a dozen Westminster special juries; and it requires no ordinary powers and no ordinary knowledge of mercantile law to make anything of a figure before the acute and practised men of business who compose the legal tribunals during the sittings at *nisi prius* at Guildhall. From a very early period Mr. Bramwell stood among the foremost counsel in the causes in London, and at length, while still without the bar, obtained the lead in a great many causes. This, with his increasing reputation as a sound, skilful, and tactical, though not showy advocate, induced him, about three years ago, to take a silk gown, since which he has occupied a first-class place amongst the acknowledged leaders of the bar. His manner as a leading counsel was quiet and measured, but occasionally impressive, and his style of speaking neat and correct. His name was always found in all the "heavy causes," at Westminster, in London, and on the Home Circuit. His appearance to argue the case of Baron Rothschild before a Committee of the House of Commons, to inquire whether that gentleman had forfeited his right to sit in Parliament because he had contracted for a loan, was a proof of the general opinion in the City of Mr. Bramwell's capabilities. He has also been not less distinguished as a law reformer than as a lawyer. He was an active member of the commission to inquire into the best means for simplifying the procedure of the Common Law Courts; and to him, in conjunction with Sir John Jervis, Mr. Baron Martin, and Mr. Justice Willes, the country owes the present comparatively simple and inexpensive process in actions at law which has caused the Courts at Westminster to enter into formidable competition with the County Courts, as being, in many instances, the cheaper of the two. Being not only senior in rank as a Queen's Counsel, but senior, by two years, in standing at the bar, to Mr. Justice Willes, some surprise was caused by the latter being promoted to the Bench first; but every one knew that Mr. Bramwell's promotion was only a question of time; and, when he was made a Baron of the Exchequer, no one was sorry that he took his seat in a Court where the celebrity which its Judges have long held, caused a great deal of business to flow into it, and thus afforded a better field for the active display of Mr. Baron Bramwell's acquirements than he could have had in the less busy precincts of the Common Pleas. It has been somewhat jocularly said that Mr. Baron Bramwell will be a useful assistant to his brother commissioner and framer of the Common Law Procedure Act, Mr. Baron Martin, in unteaching the other Barons of the Exchequer their old law, and enabling them to carry out the modern innovations which now prevail. As Sir George Bramwell could hardly have been much above twenty-four or twenty-five years old when he was called to the bar in 1838 he must be, as he looks, in the prime of life. His figure is tall and slight, but he is strongly built and full of vigour. The aspect of his face is grave but good humoured, while there is an acuteness in his deep-set eyes which reminds one of a similar expression in the late Sir William Follett. With every qualification, therefore, there is no doubt that Mr. Baron Bramwell will justify the expectations which have been formed of his future career as a Judge.



MR. BARON BRAMWELL, THE NEW JUDGE, COURT OF EXCHEQUER.—FROM A SKETCH TAKEN IN COURT.

## THE EXTERIOR OF THE NEW BALL-ROOM, BUCKINGHAM PALACE.

THIS is a handsome addition to the southern side of the main body of the Palace, projecting from the side known to the reader as the Dining-room front. The entire length of the building is seen in our Illustration. The throne end of the room abuts upon the garden. The elevation is neat, in the Italian style; the cornice is surmounted and decorated at intervals by vases. The front is relieved by a projection at each end, having two pillars each, and being surmounted by trophies at the angles. Five window light this front. Above them there is a frieze, enriched with a scroll ornament, which gives a finish to the building, which would otherwise look plain. The height of this room externally cannot be less than fifty feet, whilst its length is more than one hundred and twenty feet. The basement floor is a large pile of offices of various kinds for domestic purposes. The whole of this side of the Palace from the Park front has lately been much improved by the addition of a new railing, with stone piers; and some of the open spaces have been planted with shrubs and evergreens.

EXTERIOR OF THE NEW BALL-ROOM, BUCKINGHAM PALACE

TO THE INDEPENDENT FREEMEN AND ELECTORS OF THE BOROUGH OF BOSTON.

GENTLEMEN,—The elevation of Sir Gilbert Heathcote to the Peerage being likely to cause a vacancy in the representation of your ancient borough, I beg to announce myself as a Candidate for the high honour of your suffrages at the next election.

I need not on this occasion enter at any length into the exposition of my political sentiments. I may state generally that I am a supporter of the principles of Civil and Religious Liberty to their fullest extent; and that, on every occasion when my votes in Parliament may be required, it will be given on the side of rational progress, and of the social, moral, and political advancement of the people.

I am a firm friend to a Popular Education; and think it not only cheaper, but more just and more merciful, to spend the public money upon schools, that may prevent the growth of criminality, than upon prisons and penitentiaries, to punish it. I am an advocate for a further reform in our Parliamentary system, and to promotion by merit in all classes and ranks of the public service, not only in the Army and Navy, but in the civil and diplomatic professions, in order that disgrace may not befall the country in the eyes of the world, or that the disaster which springs from incompetency rather than dishonesty may not endanger our position as a leading Power in Europe. I am a friend of economy in all departments of the State; but would not carry economy in any one of them to such a point as to impair efficiency. I am also in favour of an equitable reconsideration of our whole system of taxation, in order that the revenues necessary to the support of the State and of the public credit may not be drawn from those unable to bear the burthen, and that, in their collection they may not prevent the proper growth and expansion of our trade and manufactures at home, and of our commerce with all parts of the world. I am in favour of justice to our Colonies, and of such a system of administration as shall make them a source of strength and not of weakness to the parent country.

While ready to support the Government in any well-considered and well advised projects, having for their object the public advantage in our great towns and cities, I shall decidedly oppose any attempt to interfere with the inherent privilege of Englishmen;—the right of local self-government;—a right which is at the very foundation of our liberties.

On the great question of Peace or War it may be expected that I should express my sentiments. I am, as all Christian men must be, an enemy to war in the abstract, and especially to the wars waged by despots against the rights, the liberty, and the independence of other nations. For this reason I approve of the means taken by Great Britain and France—in their glorious, and as I hope their perpetual alliance—to limit the aggressions of Russia, and to secure the independence of Turkey. While hoping that peace may result from the Conferences now sitting at Paris, I should consider a dishonourable peace as the greatest calamity that could happen to this country and to Europe. In my estimation, the only peace that is worth obtaining is a peace which will effectually restrain the Power whose guilty ambition led to the war; and which will enable the several nations of Europe—and Russia among the number—to prosper in security, developing their resources, extending their system of railroads, and becoming the customers and friends of this country.

Although I have not, of late years, been a resident in Boston, I have not been a stranger to the place of my birth. As many of you know, I have ever been ready to aid any enterprise likely to be of benefit to a town endeared to me by so many associations; and I need scarcely remind you that, if you do me the high honour of returning me as your representative to Parliament, I shall be in a better position than any stranger could be of looking after, and advancing to the utmost extent of my power, your local interests and wants.

In a few days I hope to be able to make a personal canvass, and shall be ready to give a frank and candid expression on all political matters required of me. I have the honour to be, Gentlemen,

Your most obedient, humble servant,
HERBERT INGRAM.

## THE ILLUSTRATED LONDON NEWS.

*LONDON, SATURDAY, MARCH* 1, 1856.

THE railway competition, on which we animadverted in our last, came suddenly to an end on the very day that our remarks were before the public. This result, it is said, was brought about through the intervention of one or two anxious friends of the parties, who, finding a great deal in the propositions made on each side which might be combined or reconciled, and that the chairmen had gone beyond the point of negotiation, managed to put the views of each into a different clothing of words, and to induce the belligerents to sign the proposals they had drawn up.

The parties have agreed that Mr. Gladstone shall divide the traffic of all competing places, the Great Northern being treated as one interest, and the North-Western, Midland, and Manchester, Sheffield, and Lincolnshire, as the other. The traffic of any new line made during the pendency of the agreement, in the district affected by Mr. Gladstone's division of traffic, is to be treated as if no such line were in existence; in other words, the traffic of such line is to be accounted for as part of the common fund for division. The agreement is to last for fourteen years, with permission, however, for the three allied companies to terminate it at any time, in the event of the Great Northern Company invading their district, or of that district being infringed in any other manner. Under this agreement the Great Northern Company would appear to be bound over to keep the peace towards its rivals in the penalty of a recurrence of that competition which has threatened so large an amount of its revenue.

This settlement of differences was as unexpected as sudden, but therefore not the less welcome to the shareholders of the North-Western and Great Northern Companies. The chairman of the latter took credit for the agreement as a mere repetition of a proposition which he made some time ago. We understand that this statement is not exactly correct; but it matters little whether this be so or not since peace has been secured.

The competition ends to-day, after which the public will again have to pay the higher rates of fare which existed prior to the 1st of February. This fact is a conclusive answer to statements that the low fares were producing a larger income to the various companies, for we cannot suppose that, if this were the case, the companies would have been so anxious, as they apparently have become, to bring about a peaceful solution of the quarrel.

This competition, which commenced suddenly, which has been conducted with great heat, as exhibited by the correspondence in the papers, and has ended as suddenly as it began, brings us to the very important question—important alike to the public and the shareholders—of the future policy of Parliament towards railways. Parliament has introduced competition in the construction of railways; but still it is now evident that, wherever combination is possible, competition is impossible. In fact, railway companies, though not so immediately amenable to those commercial laws which guide private undertakings, must, after all, be managed in reference to profit. Three hundred millions of money have been laid out, which produces an average return of little more than three per cent; and it is not to be supposed that the body of shareholders, who are the ultimate court of appeal in questions of dividend, will summit to the sacrifice of their property for the behoof of the public. We assert it as a principle, therefore, that all poor railways must be managed against the interests of the public; and that it is, therefore, not the interest of the public that railways should be poor. We point unhesitatingly to the experience of all those who travel upon railways which have paid a fair dividend in proof of the assertion that those railways have given a larger amount of accommodation, in quick trains, commodious carriages, reasonable fares, and low rates for goods, than has been found on unfortunate lines yielding little return to the ordinary stockholder. To a rich company the dread of losing a profitable return, and the vulnerability produced by high dividends, compel a liberality of management foreign to companies in desperate or decaying circumstances. It being conceded, then, that if the public must have high-class accommodation, and if the working of railways must keep pace with the mechanical progress of the age, in speed and frequency of transit, railways must be made to pay a reasonable dividend—the question arises, how? We reply, clearly not by competition, but by combination. If Parliament has sanctioned three railways between two particular points, and if the shareholders have expended three capitals to give this triple accommodation, it is clear that the shareholders will not long submit to the evil of competition of working, superadded to the original evil of excessive outlay, where a fusion of receipts between the given points, and a fair division under arbitration, as in the case before us, one only carrying them, will save the working expenses of two lines out of three, and thus maximise the net profit to be obtained. Granted that the certain result of all railway working in competition is to produce combination, and that fares and rates, where competing lines exist, must ultimately be equal, be the scale high or low, it is clear that the public obtains no advantage from being able to reach the same point by any one of three separate roads, each charging the same fares, running in the same time, and offering equal accommodation. Railways will combine, then, of necessity, because that fair return which the shareholder insists upon can only be secured by such a system. All the Acts of Parliament in the world, passed in a commercial country, cannot compel capitalists to lend money at less than the current rate of interest (witness the usury laws); and shareholders will not permanently provide great iron roads for a less return than other analogous investments would present. In particular cases, from gross extravagance or mismanagement, they may be compelled, nevertheless, to submit to a less rate of remuneration; but they will always be struggling to get more and more out of the public. The only limit to their charges will be that produce d by reduction of traffic, consequent upon excessive fares and rates.

Combination, then, being inevitable, and that combination being in the most rigid form, the question arises whether it would not be far better to legalise that combination by permitting amalgamation on reasonable terms, the country obtaining some revision of rates, or other practical advantage, as the price. It is clear that money is to be made from combination in the way of developed traffic, and that money is to be saved through combination by reduced working expenses. Railways, therefore, could afford to give to the country, in return for the permission to do legally what they now do illegally, and will continue to do, some portion of those advantages which legalised combination would present to them.

It must be recollected, also, that though the railway system, as regards all the important towns of England, may be said to be amply completed, there are many long lengths of line which might be constructed with national advantage in Scotland, in Ireland, and through central Wales. There is also a wide field for the extension of railways, on a different scale of construction, in agricultural districts remote from these means of conveying produce to market. Such railways should be made at a cost not exceeding some £5000 per mile; the trains upon them should run at slow speeds, with frequent stoppages; and they would, in fact, be used as means of collecting traffic from the intervening districts to be poured along the main lines of communication. These lines would not be profitable *per se*, but would give a fair return working in connection with the general system. It might be then for the interest of the country in permitting amalgamation also to attach to the permission the compulsion to spend a reasonable amount of additional capital in filling up particular districts with these new railways. The condition might be enforced gradually, and in such a manner as not to press too hardly upon the companies concerned.

If, however, the policy of Parliament and the public is to centre in an attempt to reduce the profits of railways, which at present are below the commercial standard—at a standard, in fact, which, if existing *ab origine*, would have prevented that extension altogether—are we likely to have the accommodation of the public improved, to find that railways are extendable, or to secure from their wise and liberal use the whole of the advantages which their construction might lead us to anticipate?

---

THE excitement on the Slavery question in the United States seems to be increasing in violence; but, as long as it is confined to discussion, which "blows off" the elements of explosion, probably only good will come of it. Our efforts, therefore, to assist in making manifest the extinction which awaits slavery may lessen in the planters the desire to retain an institution now plainly injurious to themselves, and of which the preservation for a long period is impossible, and may moderate in their opponents a righteous but exuberant zeal to hasten its end by irritating political attacks more likely to impede than promote the noble object in view. In the comparative progress of the slave and free states, as partially represented by the following figures copied from the "American Almanack for 1855," will be found, we think, irrefragable evidence of the future fate of slavery:—

UNITED STATES.

* Districts and territories are excluded.

Thus, while the total increase of population in the ten years was a little more than 18½ per cent, the increase of the free population in the free states was above 39 per cent; the increase of the slaves was nearly 29 per cent, and the decrease of the free population in the slave states was above 13 per cent. In the ten years there was a decrease of knowledge-gaining power in the slave states of more than one-eighth, and an increase in the same power in the free states of considerably more than one-third. The slaves receive no increase from abroad; the increase is all bred in the States. The free population is continually receiving an increase by immigration. It has been computed by an American authority that more than one-fourth of the present free population, or 5,600,000 out of, say, 20,000,000, consist of immigrants and their descendants, arrived in the States since 1830. In little more than twenty years, therefore, the increase of free persons from abroad has amounted to almost twice the number of the whole slave population. This numerical increase is accompanied by an increase in power, by increase of knowledge, and the development of intellect, denied to the slave—so that the total influence of the free population in comparison to that of the slave population is augmenting in a compound ratio. It is augmenting even more rapidly than this comparison of a combination of numbers and intellect shows. In some slave states there are certain towns which are increasing very rapidly. St. Louis, for example, in Mississippi. The population in the ten years ended with 1850 increased 172.7 per cent; but of the total population, 77,860, only 37,051 were born in the States, and 40,114 were natives of foreign countries. These immigrants are the principal source of the wealth of the town; they are Germans, English, Irish, mechanics, artisans, and merchants; and all these, with all the free population of the other towns in the slave states, ought to be deducted from the number of free men in the slave states interested in slavery. In St. Louis there were only 2656 slaves; and it is not by them, but by the free Germans, Irish, and free Americans, that the town thrives.

The success of a free population in the towns of the slave states, of which St. Louis is an example, is very important, as a proof of the power of such a population, when not subjected to slave institutions, against which they protect themselves, to thrive in the midst of slavery. It is the more remarkable and the more important, inasmuch as in all the old slave states there exists in the agricultural districts a free white population—debased by the slave institutions in which they share, and of which they are proud—ignorant, indolent, poor, and miserable. It is estimated by an American author that the free whites of the South, not connected with the ownership or management of slaves, constitute three-fourths of the whole white population in them. This is, we believe, an exaggeration; but of them at least ten per cent are unable to read and write; and this portion, obtaining very low wages, and having no companionship with the slaves nor share in the property of their masters, withdraw to the outskirts of civilisation, or squat on the land deserted, because it will not pay taxes—a common occurrence in the South—and lead a semi-barbarous life. Like the lower classes of Spanish origin, who occupy in relation to the Indians and their masters in the Republics of South America a kindred condition, they sink to almost the lowest level of humanity. In every way slavery debases all who are subjected to the institutions and practices it makes necessary, and in every way it lessens their power in comparison to that of free men. The existence of slavery is incompatible with progress in knowledge, with inventions in the arts, and with the extension of manufactures; and the progress of these carries with it a provision for the gradual and certain extinction of slavery. They are the great means of creating wealth, and the only means of nourishing and sustaining an increasing population; and, as they have enabled—or, we may say, forced—the European races to plough the red man almost out of existence, so will they, now that they are brought into a conflict with slavery, "machine" it into oblivion. There can be no rational ground to fear the ultimate and not distant triumph of free labour.

Political power, indeed, has hitherto been in favour of the South, which is united and moves as one man. It has held the balance betwixt all the political parties in the North, and turned them to its own purposes. Political power, however, is sure to follow social power, and the growing and aggressive free North has already made itself heavily felt in the South. The South did not begin the political contest. It originated with the North, properly desirous of extirpating slavery. Each federal state had originally an equal right to share in the unoccupied land which

formed the dominion of the United States. Every limitation of that right in the slave states, demanded and obtained by the free states, was an aggression, however much required by humanity. The Missouri compromise and the Fugitive Slave Law were, on this principle, political obstacles thrown by the South in the way of the aggressive North. The opposition to the election of Mr. Banks, a Republican and a Free-soil man, which kept the House of Representatives unorganised for nine weeks, was, on its part, an ineffectual attempt to arrest the further aggression of the North. The present Congress was elected under the influence of the excitement arising out of the contest between free labour and slavery, and the former obtained a majority in the House of Representatives. This majority bent its whole strength to elect Mr. Banks Speaker; the South bent its whole strength to oppose him; and from December the 4th till the 2nd ult. the contest, by the aid of strugglers from both sides voting for several nominees, while the Constitution required the Speaker to be elected by an absolute majority of the members present, was kept alive. It was then, by restricting the candidates, decided in favour of Mr. Banks, and thus was consummated by far the greatest, if not the first, political victory ever achieved in the States by the advocates of free labour. Only a few years have elapsed since petitions for the abolition of slavery were scornfully rejected by Congress, and the party of the abolition is now the majority. The great increase, then, of social power we have noticed is already followed by a great increase of political power, an additional element of hope that slavery is waning and will come to an end.

MR. JAMES FREEMAN, of Birmingham, a gentleman who has devoted much time and attention to the study of questions connected with Bankruptcy Administration, has called the attention of the Lord Chancellor to certain provisions of the Joint-Stock Companies Bill now before Parliament, which appear to be of a highly objectionable nature. When that bill comes into operation a large increase will, no doubt, take place in the number of Joint-Stock Companies, for the purpose of carrying on certain branches of trade now confined to private firms; and it is generally supposed that many of these undertakings will end in failure from want of business knowledge. Ordinary people would suppose that the prospect of such a result under the best possible circumstances would be bad enough, without any additional aggravation; but the framers of the Joint-Stock Companies Bill are not content with that. It appears from certain clauses of the proposed measure that, in case of failure, or stoppage from any other cause, these new companies are to be wound up in the Court of Chancery; and that new officers, somewhat fancifully termed "official liquidators," are to be appointed for the purpose of discharging, in their behalf, the services now rendered by official assignees in bankruptcy.

Now, considering that the Court of Chancery has quite enough on its hands already, as all the world knows, and that the official staff of the present Bankruptcy Court is nearly twice as numerous as the business of the Court requires, such a change as the one proposed seems most unwarrantable. Mr. Freeman appears to have taken great pains to show how much better it would be to leave the winding-up of such companies to the Bankruptcy Court, of which the following are well worthy of serious attention:—

The Courts of Bankruptcy are situated in all the great centres of population and business, so that creditors, solicitors, and other parties can conveniently give their personal attention to any proceedings in which they are interested. The accordingly would be solicited withdrawn by confining the official transactions to London, and the effect would be that everything would have to be done through the agency of London solicitors, a course which would lead to continual error and delay.

The Courts of Bankruptcy are now well acquainted with the details of Bankruptcy adjudication, and can avail themselves of its assistance without delay and without the liability of indefinite expenses and complications; whereas few people are acquainted with the details of Chancery proceedings; and such is the general opinion of their uncertainty, cost, and duration, that few would voluntarily enter upon them for the partial and uncertain recovery of a bad debt.

Bankruptcy proceedings are prompt, decisive, public, and final; while Chancery proceedings are tardy, indecisive, liable to constant reopening and interruption, comparatively secret, and extremely difficult to be brought to a conclusion.

In Bankruptcy there is no difficulty respecting parties to a suit. Beyond proving their debts, creditors are not required to take any part in the proceedings, and no other notices are required than those in the *Gazette*. Whereas, in Chancery, every one must appear through his solicitor; and frequent interruptions occur through death, absence, irregularities as to service of notice, and other similar causes.

The Court of Bankruptcy is accessible to the public; its transactions are always open to the examination of those interested; and there is, consequently, little danger of error, and still less of default. Whereas, in Chancery, it is almost impossible to learn the progress of a case until its conclusion; and then it may happen that numerous errors have been committed which no one has the power to correct.

In Bankruptcy the business proceeds in a uniform and regular course, without any other interruption than that arising from its own difficulty; while in Chancery every one who possesses an equitable right may interrupt the proceedings, and can employ it as a means of occasioning delay and expense, and can easily use it for purposes of extortion.

This is not a mere technical question, or one affecting a limited class of persons. It comes home to the business and interests of the whole community.

A TRUE HERO.—On the night of the 31st Jan. the packet from Dover to Calais, after experiencing very heavy weather, was unable, in consequence of the continued violence of the storm, to enter the port of Calais. Two English travellers on board expressed great anxiety to catch the train for Paris, and insisted on being allowed to land. For this purpose they got into a small boat, with three sailors. The boat had scarcely left the ship's side when she was capsized by a tremendous sea, and the whole five were precipitated into the waves. An English gentleman, who had remained on deck, immediately took off his coat and sprang into the sea, and, at the imminent hazard of his own life, succeeded in reaching two of the unfortunate passengers, and brought them safely to the ship's ladder. He was himself assisted upon deck, little or none the worse—the wetting excepted—for his gallant exploit. On turning round he saw the other three persons struggling in the water, or holding on to the sides of the boat. Once more, in the coolest manner possible, he leaped into the sea, and succeeded, to the admiration of all board, in rescuing them. Thus the whole five were saved. The gentleman, with a modesty as rare as it was noble, refused to give his name, insisting that he had merely done his duty. The circumstances were made known in Calais in the morning; and, when the passengers landed, the authorities of the town presented themselves to thank the hero of the adventure, and to demand his passport. The passport, on being produced, bore the name of Lieutenant-General Sir Stephen Lakeman. The public will remember this gallant soldier in connection with the Kaffir War—for his services in which he received the honour of knighthood. They will also remember his name in connection with the war on the Danube, and his successful maintenance of the rights of the Sultan in the Principalities, when he was Governor of the town of Bucharest. Sir Stephen holds the rank of Lieutenant-General in the service of the Sultan, under the title of Mazhar Pacha. We learn from Calais that the Société de Secours Mutuel, of the Department of the Seine, a Society instituted for the Protection of Lives from Shipwreck, has just named him one of its Honorary Presidents, and forwarded him its gold medal, together with a diploma of membership,—the latter bearing date the 15th of February. The true hero in war is the true hero in peace. All experience teaches this; and the brilliant example of Sir Stephen Lakeman affords another and striking instance of it.

## LATEST INTELLIGENCE.

### THE PEACE NEGOTIATIONS.

The *Dresden Gazette*, in its last number, states that Russia will without difficulty accede to the demand that the islands of Aland shall not be again fortified. On the other hand, she is said not to intend to restore Kars, except on condition of receiving some equivalent. The *Dresden Journal*, which purports to draw its information from official sources, confirms the anticipations entertained—that Russia will yield on that delicate question, the non reconstruction of Bomarsund.

A letter from Berlin, of the 25th ult., in the *German Journal* of Frankfort, says:—

A despatch has been addressed, under date of the 18th, by the Berlin Cabinet, to Count de Hatzfeld, the Prussian Ambassador in Paris. It is said, we are assured, that Prussia is disposed to sign the programme of peace, but that the Western Powers demand more from her than from Austria, when they require that the Berlin Cabinet shall engage to enforce the acceptance of the conditions of peace in the event of the negotiations not proving successful.

A letter from Berlin of the 25th ult. says:—

The negotiations which have been carried on in silence, in order to bring about a complete understanding between the German States as to the common attitude to be assumed by them as regards the eventualities which may arise out of the Eastern question, have just ended in a compromise. This result may be more particularly attributed to the efforts of Bavaria and Saxony. The terms of the arrangement are not yet known; but it is positively stated that Prussia has adhered to the Austrian proposition. What is certain is, that an understanding has been come to, and that a document to that effect has been drawn up.

The following extract from the official journal of Russian military operations in the Crimea, transmitted to the Emperor by General Liders, appears in the *Gazette de St. Petersbourg*, —

From the 26th of January to the 4th of February there was no change in the state of affairs in the Crimea. The artillery of the fortifications of the north, and the Carabiniers in the posts established on Mackenzie's Hill, have continued to fire on the enemy.

In the night from the 28th to the 29th of January, six boats (cutters) endeavoured to pass our guard-vessel in the Bay of Kabardan, near the steamer *Vladimir*. The officer commanding the guard-vessel gave the signal, the batteries of the north side opened fire on the boats, and our troops near the shore stood to their arms, and proceeded towards the ravines. After a cannonade of half-an-hour the boats retired.

## *METROPOLITAN NEWS.*

DINNER AT THE MANSION HOUSE.—On Wednesday last the Lord Mayor and the Lady Mayoress entertained at dinner Lord Elgin and a distinguished party of commercial and other gentlemen, chiefly connected with the American and Canadian trades, members of the House of Commons, and of the Corporation and the Coopers' Company, to meet the American Minister, previous to his departure from this country. Mr. Buchanan, having received an invitation from her Majesty to dine at Buckingham Palace on Wednesday, was not present at the Lord Mayor's dinner.

SOCIETY OF ANCIENT BRITONS.—The hundred and forty-first anniversary festival of this excellent society will be celebrated this evening (Saturday), in Freemasons'-hall, Great Queen-street, in aid of the funds of the Welsh Charity School; the Hon. R. W. Clive, M.P., in the chair. The musical attractions will include a melody by Miss L. E. L. Williams, "the Welsh Nightingale," and performances by Mr. Ellis Roberts on the harp.

STAR CLUB.—The first meeting of the members of this club for the present Session was held on Wednesday last, at Fenton's Hotel. Present:—Mr. Wickham, M.P.; Mr. Digby Seymour, M.P.; Major Reed, M.P.; Mr. Tite, M.P.; Mr. Peel, M.P.; Mr. Lee, M.P.; Mr. Hadfield, M.P.; Mr. Roebuck, M.P.; Mr. Oliveira, M.P.; Mr. White, Colonel Starr, Mr. Rowland Hill, Rev. Geo. Jepson, Mr. John M. Dare, the Master Cutler of Sheffield, Mr. George Powell, &c.

CONVERSAZIONE.—On Wednesday Sir Roderick Murchison, Director-General of the Geological Survey, gave his first soirée for the season, at his mansion in Belgrave-square. The conversazione was brilliantly attended; the company including many of the leading public and members of the principal scientific and literary societies of the metropolis and several distinguished *savans* from the Continent. Among the objects of interest upon the tables were some remarkably fine Silurian fossils, several geological models and maps, and other novelties.

ADMINISTRATIVE REFORM—MARYLEBONE MEETING.—A meeting of the friends of the Administrative Reform Association was held on Tuesday night, at the Literary and Scientific Institution, Edwards street, Portman-square. The chair was taken at eight o'clock by Mr. Jacob Bell; and on the platform we observed Dr. Challice, Mr. Nicholay, Mr. Joseph, Mr. Daly, Mr. D'Ilfinger, and several other leading men of the district. The chairman in opening the proceedings said the parties most interested in removing the existing abuses, and who had the most power to remove them, were the public; and therefore their continuance rested with the public. The object of the meeting was, in the first place, to point out that in the administration of the affairs of the country there are abuses of a very grevious nature; secondly, to trace these abuses to their source; and, thirdly, to show that the public have the remedy in their own hands. The association had no desire to embarrass the present, but to put an end to a system which had been carried on by all Governments. The only mode of obtaining a remedy for the evils complained of was by public opinion acting on the House of Commons, and an alteration in the mode of administering the affairs of the country. After adverting to the gross mismanagement of the army in the Crimea and other blunders, he said it had frequently been asked, "What is the use of the Administrative Reform Association, and how will it remove the evils complained of?" Its definite object was to inquire into and investigate the inefficiency, dishonesty, and corruption which existed in the public departments of the State (Hear). The association was a medium for the expression of public opinion, and only required to be backed up by the country to become most efficient (Hear, hear). The association had already produced considerable effect. Many of its principles had already been adopted by the present Government, and he had no doubt that if it persevered a great reform would be the result (Cheers). He would, at the next addressed the meeting, and, referring to the report of the Crimean Commission, said it contained what might hereafter prove to be the fate of this country for weal or for woe. There could be not the slightest shadow of a doubt than an enormous number of lives had been sacrificed by the incapacity of the men under whose command they had been placed (Hear). The Commissioners, after due inquiry, had come to this conclusion, and he would ask was it for the Government to reward the men who had been stigmatised, and who had brought such disasters on our troops? The country ought to say, "We are rich enough to reward, but we are also powerful enough to punish" (Cheers). Why were not Lord Cardigan and Lord Lucan tried by a court-martial? (Cheers.) A stop must be put to such proceedings as had recently been carried on, and it was the object of the Administrative Reform Association to do so. The meeting was afterwards addressed by several other gentlemen; among whom was Mr. Nicholay, who expressed his opinion that the association had not gone far enough, and that it might have done a great deal more. He trusted the association would endeavour to reform Parliament, and then there would be some prospect of putting an end to the existing system of maladministration (Hear, hear).

TERMINATION OF THE RECENT RAILWAY COMPETITION.—On Wednesday last notice was given by the Great Northern, the London and North-Western, the Midland, and the Manchester, Sheffield, and Lincolnshire Railway Companies respectively, that the low fares between London and various places on the two north routes, which have been in operation on the Great Northern line since the 1st inst., and on the Midland and London and North-Western since the 15th inst., would be discontinued on Saturday next. Since the commencement of the competition the traffic in dispute between the three companies, the approaching cessation of the cause have to the metropolis, there has been a great rush to the chief towns at Bradford, Leeds, Wakefield, Doncaster, and other places, and the Great Northern alone have had to provide two trains at each of them in the morning. But notwithstanding heavy lift behind at those stations where additional carriages are not kept in readiness.

BIRTHS AND DEATHS IN LONDON.—The returns of the London registrars continue to show a very satisfactory state of the public health. In the week that ended on Saturday the deaths of 1062 persons—viz., 541 males and 521 females—were registered. In the corresponding weeks of the years 1846-55 the average number was 1209, which, if raised in proportion to increase of population, becomes 1320. Hence the deaths returned last week were less by 258 than would have occurred in the present population under the average rate of mortality at this period of the year. Last week the births of 880 boys and 930 girls—in all 1810 children—were registered in London. In the ten corresponding weeks of the years 1846-55, the average number was 1554.

### *THE COURT.*

A second Levee, an Investiture of the Order of the Bath, and a Privy Council, have given full activity to the Court during the past week. The pressing political duties falling upon the Sovereign have not, however, prevented her Majesty from dispensing a magnificent hospitality "at home" and conferring upon several theatres the honour of the Royal presence.

On Saturday afternoon the Queen honoured the Adelphi Theatre with her presence, when a special performance took place by her Majesty's command. The Queen was accompanied by the Prince of Wales, Prince Alfred, the Princesses Helena and Louise, and Prince Arthur. Several juvenile members of the nobility had the honour of being invited to witness the performance. The Prince Consort rode on horseback to Sydenham, and visited the Crystal Palace.

On Monday the Queen held a Privy Council, at three o'clock, at Buckingham Palace. Her Majesty gave audiences to Viscount Palmerston, the Earl Granville, and Lord Panmure.

On Tuesday the Queen and Prince Albert, accompanied by the Princess Royal and the Princess Alice, and attended by the Hon. Mary Bulteel, Major-General Bouverie, and Captain Du Plat, visited the Zoological Gardens in the Regent's-park. In the evening her Majesty and the Prince Consort, with the Prince of Wales and the Princess Alice, honoured the Princess's Theatre with their presence.

On Friday (yesterday) morning her Majesty and Prince Albert visited the Camp at Aldershott.

Lady Churchill has succeeded the Countess of Desart as the Lady in Waiting. Lord Waterpark and Major-General Berkeley Drummond have relieved Earl Somers and Mr. R. Ormsby Gore in the duties of the Lord and Groom in Waiting to her Majesty.

THE LEVEE.

The Queen held a Levee (the second this season) on Wednesday afternoon, in St. James's Palace. Her Majesty and his Royal Highness Prince Albert arrived soon after two o'clock, from Buckingham Palace, and were received at St. James's by the Lord Chamberlain, the Vice-Chamberlain, and the Clerk Marshal. Viscount Palmerston had an audience of the Queen before the Levee; and Viscount Barrington had an interview to deliver to her Majesty the Riband and Badge of the Order of the Bath, worn by the late Sir Robert Adair.

The Maharajah Duleep Singh was present at the Levee.

The Queen and the Prince Consort entered the Throne-room, attended by the Ladies and Gentlemen of the Court, at half-past two o'clock.

The Queen wore a train of white poplin, embroidered in gold and coloured flowers, and trimmed with fringe to correspond. The petticoat was white satin, trimmed with white satin ribbon. Her Majesty's headdress was formed of emeralds and diamonds.

The diplomatic corps having been introduced, the French Ambassador presented M. le Général Prince de la Moscowa to her Majesty.

The general circle was very numerously attended, and the presentations included many naval and military officers. Among other noticeable names were those of—

Rear-Admiral Hon. Sir R. S. Dundas, on appointment to be Commander-in-Chief of her Majesty's ships and vessels on a particular service, by Sir C. Wood.
Lieutenant-Colonel Hon. C. R. Lindsay, on his return from the Crimea, by General Sir E. Blakeney.
Lord Ashley, R.N., by the Earl of Shaftesbury.
Major-General Sir R. Bentinck, on appointment as K.C.B., and return from foreign service, by Field Marshal Viscount Hardinge.
Vice-Admiral Sir G. Seymour, on appointment to the naval command at Portsmouth, by Sir C. Wood.

His Majesty the King of the Belgians intends to leave Brussels the week after next, in order to visit her Majesty and his Royal Highness Prince Albert. It is said that his Majesty's sojourn will not exceed six days.

Their Royal Highnesses the Duchess of Cambridge and the Princess Mary, and his Royal Highness the Duke of Cambridge, honoured his Excellency the Ambassador of France and the Countess Persigny with their company at dinner on Tuesday evening, at Albert-gate House.

### THE PEACE CONFERENCES—CONCLUSION OF AN ARMISTICE.

The Conferences were opened on Monday, and a most important piece of business transacted—viz., the conclusion of an armistice between the belligerent parties, to last till the end of March—which armistice, however, is not to extend to such naval operations as the Western Powers may deem necessary for the maintenance of their blockade on the Russian ports, whether in the Baltic or Black Sea, or the Sea of Azoff. Though the utmost secrecy will be observed as to what passes within the Conference-room, yet, an armistice being a sort of *fait accompli*, the circumstance of the conclusion of such an arrangement, being, besides, important to merchants and men of business, has been allowed to transpire.

The Plenipotentiaries, all of whom wore the usual morning dress, assembled at half past one at the Ministry for Foreign Affairs. The Sardinian Envoys arrived first, at three minutes past one, both in a brougham. Then came the two Turkish diplomatists in a very handsome carriage. A few minutes afterwards arrived simultaneously a brougham and a closed caleche bearing the Representatives of England and Austria. The Russian Plenipotentiaries came at a quarter-past one. Count Orloff, though almost sixty-nine, seems scarcely to have passed fifty. His hair, though grey, is abundant, and the firmness of his step is in contrast with the somewhat feeble air of the Baron de Brunnow. It was noticed that he ascended the staircase at a run. There was no guard of honour to receive the diplomatists, and the ordinary duty at the Foreign-office was discharged by a company of the 12th Chasseurs-à-pied. The crowd was not considerable at their arrival, but gradually increased towards three o'clock, forming a line to the Pont de la Concorde, to await their departure, which took place about four o'clock. The hall of the Ambassadors, where the Conferences are held, is hung with crimson satin, and decorated with two magnificent portraits of the Emperor and Empress. It is separated from the Minister's private room by an apartment known as that of the attachés on duty. The Conference table occupies the middle of the hall, and twelve chairs are ranged round it. A second table is for the use of the secretary to the Conferences, and a third for the Plenipotentiaries, when any one of them may require to write apart. The eleven diplomatists take their seats to the right and left of Count Walewski, the president—not in the alphabetical order of their kingdoms, according to the precedent of the Congress at Vienna of 1814—but in the order in which they were presented to the Emperor of the French. So that the seats to the right are occupied by Lord Clarendon, Count Buol, Count Cavour, Count Orloff, and Aali Pacha; and those to the left by Lord Cowley, Baron Hubner, the Marquis Pes de Villamarina, the Baron de Brunnow, and Mehemed-Djemil-Bey. M. Benedetti, director in the political section of the department of Foreign Affairs, acted by a sub-director, has been appointed to act as Secretary.

Count Walewski gave a grand dinner on Monday evening to the Plenipotentiaries on the occasion of the opening of the Congress. All the Ministers of Napoleon III., the great officers of the Crown, the Governor of the Invalides, the Préfect of the Seine, and M. Benedetti, were among the guests. At dessert Count Walewski proposed as a toast, "A happy issue to the negotiations this day opened."

In the evening there was a concert, for which 700 cards of invitation were issued. The Princess Mathilde and Prince Napoleon honoured the Minister with their presence. The splendid *salons* of the Ministry of Foreign Affairs blazed with light on this occasion. The concert, conducted by M. Alary, with Mesdames Frezzolini and Borghi Mamo, and MM. Mario, Graziani, and Zucchini, for performers, took place in the drawing-room, which contains the statue of the present Emperor. This room, not being large enough for the whole company, was almost entirely filled with ladies, and all the doorways opening from the neighbouring rooms were thronged with eminent personages. During the evening the Salon des Ambassadeurs, where the Congress is held, which was thrown open to the guests, was inspected in every part with the utmost curiosity. A few inches from the names of the different Plenipotentiaries were written in pencil in front of the chairs which they occupy. It was remarked as curious that the Russian Plenipotentiaries were so placed that the eyes of the portrait of Napoleon III., which hangs in the room, seem directly fixed upon them. In the centre of the table is a magnificent inkstand of the time of the first Empire, the cost of which, as appears from a memorandum engraved inside a secret drawer, was 16,000 francs. This bauble of gold and silver is to be used there merely for ornament. There is no ink in it, and the Plenipotentiaries when they write make use of much humbler vessels.

The second sitting of the Congress did not take place on Wednesday, as had been expected. This fact has given rise to a variety of rumours, none of which are worthy of credence. It was known before the Conferences opened that the sittings would not follow each other consecutively day after day; and that two, three, and perhaps more days might very probably intervene between two sittings. Neither are these sittings fixed beforehand for particular days in each week. They depend a good deal on the progress of the negotiations, and are determined by the Plenipotentiaries themselves. The *Constitutionnel* was therefore mistaken in saying that the Congress would invariably meet three times a week. The members do not know till the close of each sitting the particular day or hour at which the next will be held.

HALL OF THE CONFERENCES, HOTEL OF THE MINISTER FOR FOREIGN AFFAIRS, AT PARIS. (SEE PRECEDING PAGE.)

## THE BRITISH INSTITUTION.

We this week continue our Illustrations from this the first Exhibition of the Pictorial Season. Our *third* Illustration is "The Picture of Innocence," by Mr Alfred Corbould—a picture that tells its own story, and has a touch, both in conception and execution, of Sir Joshua about it. "The Picture of Innocence" is Mr Alfred Corbould's solitary contribution to the Exhibition.

Our fourth and last Illustration (for this week) is by a well-known favourite with the public, Mr. G Lance, to whose talents we have frequently sought to do justice in this paper. He calls it "The Stricken Mallard," and, as it shows him in a new light, so does it exemplify the skill he possesses for any branch of the art he is still cultivating to the satisfaction of his many admirers.

Mr Lance's subject reminds us of an anecdote of Mr. Ruskin's hero, the late Mr. J. M. W. Turner, the distinguished landscape-painter. Mr. Turner's father (a barber, in Covent-garden) inflicted on his son that long alphabet of Christian names which troubled the painter throughout his life. Why he had so many he never knew—and one he could never spell satisfactorily. Generally, he described his second initial as Mallord, now and then as Mallard. To a friend who had been teasing him about his superfluous names he replied by letter, in which he drew his second initial as the *mallard*—giving a representation of the bird, and to this spelling he continued to adhere

Our remaining Illustrations will appear in an early Supplement.

When the British Institution Catalogues sank from a quarto shape into an octavo shape a Royal Academician remarked, with as much malice as meaning, that the interest and value of the Exhibition had sunk in the same degree. The change in the size of the Catalogue was called for, and the reduction in the price, from one shilling to sixpence, was still more unmistakably demanded. But there was no public demand for the falling off of the quality and importance of the pictures composing the annual collections.

The decline of the British Institution as a gallery for the sale of the works of living British artists is mainly attributable, we take it, to the fact that when the Institution was started it was almost the only public channel then open to artists for the sale of their works. Dealers in pictures were not then very numerous—patrons, indeed, were very rare. Now dealers are as plentiful as blackberries; and no artist of name has any reason to complain that he is without patrons, purchasers, or commissions The noble race of Arundels and King Charleses that gave birth nearly 200 years after their time to a Vernon and Sheepshanks progeny of sensible and liberal patrons, and to men like Agnew and Grundy and Gambart, has now spread a liking for art throughout the whole length and breadth of Great Britain. The British Institution is, therefore, less a necessity than it was when first opened on the 18th of January, 1806—now fifty years ago. It has done good service in its day, and its usefulness will be duly recorded in every book of any value that chronicles the history of art in this country.

"THE PICTURE OF INNOCENCE."—PAINTED BY ALFRED CORBOULD.—FROM THE EXHIBITION OF THE BRITISH INSTITUTION.

Photographs of Soldiers and Trophies from the Crimea.—We have been favoured with the inspection of a very interesting series of photographs recently taken by Mr. Mayall, for her Majesty, at Woolwich. First is a group of two figures, representing Sergeant M'Kown and Corporal Murphy, the two soldiers who were intrusted with the care of the Crimean trophies for conveyance to England. Her Majesty, on the occasion of her visit to Woolwich, graciously conversed with the brave fellows—congratulating them upon their return unwounded, and asking a number of questions as to the service they had seen, engagements in the field, &c. Nothing could be more gratifying or touching than the pleasure evidently given and received by their brief narratives, recalling as they did the glories and dangers of the Alma, Inkermann, and the trenches. A group of five figures represents artillerymen who have been wounded in action. Some have been deprived of the use of arms, legs, &c., while others have lost their limbs entirely. A group of four shows a sergeant of the Royal Horse Artillery, a corporal of the Foot Artillery, and two corporals of the Sappers and Miners. They have all seen hard service, and received wounds in action. A group of soldiers round the gun taken at the storming of Sebastopol also represents men of the same important branch of the service (Artillery). Next is a portrait of Major Maude, who saw a great deal of service in the early part of the present war, when he commanded the Royal Artillery. He was severely wounded at Balaclava by the bursting of a shell immediately under his horse's head. On the gallant Major's return to England he was appointed Brigade Major at Woolwich.

A shipment of rather a novel nature, destined for Russia, has arrived at Hamburg in an Italian vessel from Leghorn, accompanied by a Russian gentleman of the name of Weikranch It consists of 148 large cases of Carrara marble, forming the first part of the principal altar for the new cathedral of St. Isaac, at St. Petersburg. There were also two cases containing a couple of magnificent silver vases, to serve as ornaments to the altar.

"THE STRICKEN MALLARD."—PAINTED BY GEORGE LANCE.—FROM THE EXHIBITION OF THE BRITISH INSTITUTION.

## IMPERIAL PARLIAMENT.

### HOUSE OF LORDS.—MONDAY.

THE WENSLEYDALE PEERAGE.

A motion that the report from the Committee of Privileges on the Wensleydale Peerage case be received having been made, Earl GRANVILLE intimated that the Government did not intend to oppose the motion. On behalf of Lord Wensleydale, he begged to assure the House that no attempt would be made to take his seat until full time had been allowed for discussion. Earl Granville expressed a hope that, under no circumstances, would party feeling be allowed to interfere with their Lordships' deliberations.

Lord CAMPBELL expressed a similar hope.

The Earl of DERBY also concurred; adding that, for political functions, the introduction of life peers would be altogether injurious. As regarded advantage to the discharge of judicial duties, he believed that the remedy would prove worse than the disease.

The Marquis of Lansdowne, the Earl of Malmesbury, Earl Grey, and other noble Lords having spoken, the motion was agreed to.

### HOUSE OF COMMONS.—MONDAY.

THE CRIMEAN COMMISSION.—Mr. ROEBUCK intimated that on Friday on the motion for going into supply, he should move a resolution to the effect that the appointment of the proposed board of officers to receive the explanations of the officers implicated by the report of the Crimean Commissioners was only for the purpose of nullifying the effect of the Commission, of cloaking incompetency, and of substituting an inefficient for an efficient inquiry.

THE LOCAL DUES ON SHIPPING BILL.

Mr. LOWE having moved the second reading of the Local Dues on Shipping, &c., Bill,

Sir FREDERIC THESIGER moved, as an amendment, that the bill be read a second time that day six months. He felt that he was justified in taking that course by the absolute refusal of the Government to listen to the fair and just claims of those whose interests were affected by it. He regarded the measure as fraught with the greatest injustice, and attempted to be established upon principles which tended to shake the security of all corporate property. He had heard Mr. Lowe's speech with astonishment and with alarm—and he expressed his surprise that, in the latter period of the nineteenth century, a Government could have been found prepared to act upon such principles as those announced and enforced by the Vice-President of the Board of Trade. Attacks, however, had not been reserved merely for corporate property—an attempt had just been made by the revival of a dubious and obsolete prerogative to assail the hereditary peerage. Sir Frederic proceeded to reply to the leading arguments in Mr Lowe's speech, and to instance the case of individual corporations, beginning with Liverpool, with the view of showing that the dues sought to be confiscated possessed all the characteristics of private property. The same remark applied to the Hull Dock Company and the corporation of Bristol. Several precedents had been adduced by Mr. Lowe, but they failed to make good his case as regarded private property held by corporations. The Trinity-house was a public corporation, established for a public purpose, and its revenues were fair subjects for being dealt with by Parliament. There could be no harm in abolishing the passing tolls, for to do so would not interfere with private property; but the arguments under which in the bill were merely calculated to disguise the large act of spoliation. Sir Frederic maintained that no member could vote for the second reading without admitting the justice of the principle of confiscation and spoliation.

Sir F. BARING objected to the bill on two grounds: first, because it exhibited a determination to interfere with local self-government, and, next, that throughout the House will be recognised a reckless disregard of public and Parliamentary faith.

Mr. LOWE defended the bill against the strictures of Sir F. Thesiger, maintaining that the learned gentleman had considered taxes into private property. The claim set up in defence of Liverpool and some other corporations, on the plea of private property was utterly untenable. Corporations were mere creatures of public utility, and must be modified or abolished according to the dictates of that utility. The sweeping municipal reform of 1835 formed a perfect precedent for the course he asked the House to pursue. It was said that reform over argument was raised which had been conjured up against the proposed extension of the same principle, and which unfortunately was overlooked in 1835. The corporations then existing were not the only parties interested. Those who paid the taxes had a right to be heard.

Mr. HORSFALL, speaking of the case of Liverpool, remarked that, of the £10,500 levied by the corporation, £8,000 was received from the shipping; all the rest came from goods, and that was paid by the consumer. He retaliated upon Manchester the fact that the corporation of that city were levying tolls and applying the money to the reduction of the town dues

Mr. RIDLEY, for Newcastle-on-Tyne, opposed the bill.

Mr. TOLLEMACHE regarded the measure as one which should have been brought forward. The principle upon which it was sought to deal with existing dues was dangerous, unnecessary, and unjustifiable.

Mr. COLLIER, on the part of the constituency he represented, saw no benefit to the Government for bringing forward the measure. He believed it rested upon a sound principle, namely, that the shipping interest should not be called upon to pay dues for purposes from which it derived no benefit.

Mr. HILDYARD remarked that, as member for Whitehaven, he would be doing his constituents a base act if he were to remain silent as no local dues were levied there on shipping, and advantage would arise from the abolition of passing tolls. He could not, however, reconcile it to his conscience to take so summary a course in the matter, and he knew his constituents were too high-minded to purchase relief to themselves at the cost of an act of injustice to others

Mr. HUGE, speaking for Dover, strongly opposed the bill; as did Mr. DEEDES, speaking for Ramsgate; also Mr. J. EWART.

Mr. LIDDELL, in opposing the bill, assigned as a reason that to sanction the principle of the bill, as regarded corporate property, would be to open the door to the like assaults as regarded ecclesiastical property. He described the bill generally as a tissue of spoliation, injustice, and involving a breach of Parliamentary faith.

Mr. INGHAM would support the second reading of the bill, believing that it would effect much good, without committing any breach of the rights of private property.

Mr. CAIRNS had entered the House with every disposition to support the second reading of the bill, but the speech of the Vice-President of the Board of Trade had effectually counteracted that intention. Mr. Lowe had spoken disparagingly of "musty charters;" but, if that right hon. gentleman relied at musty charters, he spoke lightly of the tenure by which all the property in the country was held. For the first time the doctrine had been enunciated in that House that taxes were not property; but his own bill falsified that assertion, for taxes were there spoken of and dealt with as "property."

Mr. BAINES made a reply to the arguments urged against the bill. Much of what had been alleged applied not to the principle of the measure, but to some of the details. His constituents, who were largely engaged in manufactures, objected to having every bale of the raw material taxed by a body with which they had no concern, and over the expenditure of which they exercised no control. With regard to the question of property, there was a great difference between corporation and individual property—a distinction which had been recognised by the Legislature over and over again.

Sir F. KELLY contended that the principle of the bill was neither more nor less than to take away from certain corporations property which they held under the law for the benefit of the inhabitants.

At midnight a division was about to be taken on the question of adjourning the debate; but Lord PALMERSTON suggested that, as the feeling of the House seemed to be in favour of adjournment, it would be better to take that course, and resume the discussion on Friday.

Mr. DISRAELI did not see the necessity of adjourning the debate at all; but, if adjourned, it ought to be put off for so long a time as Friday. There was nothing to prevent the debate from proceeding on Tuesday.

Lord PALMERSTON was quite ready to assent to that arrangement, provided those who had motions to give way.

The debate was accordingly adjourned till next day.

THE ROAD THROUGH ST. JAMES'S-PARK.—After some discussion, Sir BENJAMIN HALL'S motion for "a Select Committee to consider the best means of communication between those parts of the metropolis which lie north of the St. James's-park and those parts which lie south and southwest thereof, and to report thereupon to the House," was agreed to.

### HOUSE OF LORDS.—TUESDAY.

MERCANTILE LAW.—The Lord CHANCELLOR called attention to the second report of the Commissioners of Inquiry into the Mercantile Law. He described the various anomalies and absurdities which this section of the code exhibited, and dwelt at some length upon the necessity of assimilating the commercial contracts and habitudes at present in force in different parts of the United Kingdom.

The Joint-Stock Banks (Scotland) Bill went through Committee.

### HOUSE OF COMMONS.—TUESDAY.

THE CRIMEAN COMMISSION.—Sir J. PAKINGTON gave notice that when Mr. Roebuck's motion respecting the Crimean Commission Report was brought forward, he should propose an amendment setting forth that the report should have been submitted to the Commander-in-Chief before its presentation to Parliament, in which case the necessity of any subsequent reference to a board of officers would have been obviated.—Lord PALMERSTON announced the names of officers who were to constitute this board, and laid on the table the Royal warrant under which they were to exercise their functions

LOCAL DUES ON SHIPPING BILL.

The resumption of the adjourned debate upon the Local Dues on Shipping Bill having been moved

Lord PALMERSTON intimated the intention of the Government to refer the whole question to a Select Committee. Explaining the motives on which this determination was based, and which, he observed, arose chiefly from the complicated nature of the local rights and interests to be dealt with in the measure, the noble Lord added that, under these circumstances, it was considered more convenient, as well as more respectful to the House, to withdraw the present bill altogether.

Mr. DISRAELI congratulated the Government upon the wisdom and prudence evinced in this withdrawal of a measure which had received, and as he believed deserved, the condemnation. He proceeded to offer many sarcastic comments upon the unsuccessful and abortive character of all the proceedings of the Administration, including their violent attempt to vitiate the privileges of the House of Lords, by a Peers, since the present Session commenced. The Government, he contended, had entirely failed to improve the opportunity afforded them by the forbearance of the Lords.

Mr. LABOUCHERE replied to the taunts hazarded by Mr. Disraeli, whom he accused of exhibiting the most unscrupulous party spirit while pretending to regard the bill in such a light as Christian charity. The Government, he asserted, required no forbearance from the Opposition; and he pointed to the enormous preparations made, or making, for the prosecution of hostilities, in the contingency of a renewal of the war, as manifesting the energy and industry with which the various executive departments were administered.

A proposal to refer the question of Shipping Dues to a Select Committee was then agreed to, and the bill withdrawn.

The Charitable Uses Bill was read a third time, and passed.

### HOUSE OF COMMONS.—WEDNESDAY.

CONTRACTORS' DISQUALIFICATION REMOVAL BILL.—Mr. MITCHELL withdrew the Contractors' Disqualification Removal Bill, solely on the ground of the strong feeling in the House against it, at the same time defending the principle on which Ducoomb did not approve of increasing the "great unpaid;" but preferred the system of stipendiary magistracy for the whole kingdom.—Mr. EWART thought the bill sound in principle and that it met a crying evil of the times.—Mr. MUNTZ supported the measure. He preferred the present system to that of stipendiary magistrates. The bill was then read a second time.

ANNUITIES BILL.—The CHANCELLOR of the EXCHEQUER, in moving the second reading of the Annuities Bill, had no doubt of the correctness of the Committee of last Session; but, in deference to some gentlemen of that House, whose opinions were of great weight, who had a doubt on the subject, he would, in Committee, introduce an indemnity clause into the bill, for the protection of those subscribers to existing loans who might be liable to the penalties of the Contractors' Disqualification Act. The bill was then read a second time.

### HOUSE OF LORDS.—THURSDAY.

ROYAL COMMISSION.—The Royal assent was given by Commission to the following bills, viz. —The House of Commons' Offices Bill, and the Metropolitan Police Bill.

The Charitable Uses Bill was read a first time.

The Joint-Stock Banks (Scotland) Bill and the Turnpike Trusts Arrangements Bill were severally read a second time.

APPELLATE JURISDICTION OF THE HOUSE OF LORDS.—The Earl of DERBY rose to move for a Select Committee to inquire whether it was expedient to make any, and, if so, what, provision for more effectually securing the efficient exercise of the functions of the House as a Court of Appellate Jurisdiction, and to report their opinion thereon. The noble Lord disclaimed, in the first place, any intention of taking the question out of the hands of his noble friend (Lord Lyndhurst), who was better able to deal with it than any other person he knew. He did not consider the appellate jurisdiction to be part of the discharge of the other functions of their Lordships' House, as many thought. If a choice was to be made between the dignity of that House and the proper discharge of its judicial functions towards the country, he should have no hesitation in preferring the latter. How was this judicial tribunal practically constituted? Theoretically, the whole House was the tribunal; but that was a mere legal fiction, for, practically, the lay Lords had nothing whatever to do with the judgments passed by that House. There were numerous objections urged against the present system; and amongst these were the necessity of their Lords' the absence of compulsion to attend, and consequent the uncertainty of attention; the fact of the House sitting only half the year; and the want of a proper tribunal in the case of Scotch appeals. Amongst the remedies proposed was the admission of the Judges to sit with their Lordships when they met in a judicial capacity. He was in favour of this suggestion, and thought that the Judges should be allowed to speak and vote on judicial matters. He also advised that the Vice-Chancellors and the Equity Judges should be included, and that certain of the Lords of Session should be summoned in case of Scotch appeals.

Earl GRANVILLE assented to the appointment of the Committee. He, however, moved the addition of certain words in order to enlarge the scope of the inquiry, and to include some of the questions connected with the Wensleydale peerage.

After some discussion the motion was agreed to.

### HOUSE OF COMMONS.—THURSDAY.

Sir J. PAKINGTON said that he had that morning received a letter from Mr. Commissary Filder, one of the officers censured in the recent Crimean report. Mr. Filder complained that Lord Lucan, which he wished to be placed upon the table, inasmuch as he felt that he could not satisfactorily vindicate himself before the new commission.—Mr. PEEL was not aware that a letter had been sent in to Lord Rumsey by Mr. Filder, although Mr. Filder had intimated his intention of forwarding such a letter. There would be no objection on the part of the Government to its production.

THE BRITISH MUSEUM.—In answer to Mr. Heywood, the CHANCELLOR of the EXCHEQUER said that the British Museum was regulated by the Act of George II., and the office of Principal Librarian could not be abolished without the authority of Parliament. Some years ago a commission was appointed, of which Lord Elgin was chairman. The commissioners were unanimous. They recommended two different plans, and the Government, not knowing how to act, referred the matter to the trustees of the British Museum. Plans were suggested, and were embodied in resolutions, which were drawn up by Sir Robert Peel, and accepted. They were considered satisfactory by the Government of that day, and they were laid upon the table of the House in 1850. Under these circumstances it was not the intention of the Government to interfere with the existing arrangements.

THE CRIMEAN COURT OF INQUIRY.—In reply to Mr. Stanley, Lord PALMERSTON said that it was usual to carry on such inquiries with closed doors, but this would be an inquiry of great public interest, and it would be open to the public.

THE MONETARY SYSTEM

Mr MUNTZ moved for a Select Committee to inquire how far the present monetary system is in accordance with the requirements of the country, and to consider if it cannot be improved and amended. He reviewed the monetary system of the time of William the Conqueror to the present day, and remarked that he had not brought the subject before the House for many years, inasmuch as he wished to ascertain what would be the effect of the Bank Charter Act, which was passed in 1844, upon trade. All he asked for was a fair, well-constituted Committee, whose inquiry he believed would have the effect of giving happiness and prosperity to the country

Mr. PEACOCKE supported the motion, and quoted from the works of Mr. James Wilson, the Secretary of the Treasury, in support of his views. He maintained that the Bank Charter Act of Sir Robert Peel had entirely failed. He did not disapprove of the management of the Bank, which he believed was wisely and prudently conducted; but he did not understand why it should not be subject to the ordinary audit of Boards and Companies of other banks (Hear, hear).

Mr. DRUMMOND did not think the proposed Committee would be of any advantage, for no law that could be passed could prevent the precious metals being the sole measure of value

Mr. MALINS adverted to the alterations Sir R. Peel made in reference to the Bank Act—alterations of which he expressed his strong disapproval.

In the course of some further discussion,

The CHANCELLOR of the EXCHEQUER complained of the vague and indefinite nature of the motion. If the inquiry was to be a general one into our monetary system, he thought that a Select Committee was not qualified to go into so extensive and speculative a subject; and if it were to be only an inquiry into the Bank Charter Act of 1844, he admitted that that would be a fair subject of inquiry at a proper time; but he was of opinion that the present was not the time for such an inquiry, and he therefore felt bound to oppose the motion.

The House having divided, the numbers were:—For the motion, 68; against it, 116: majority against the motion, 47.

Mr. J. G. PHILLIMORE moved for copies of the judgment pronounced by Judge Torrens of the Irish Court of Common Pleas, in the case of Talbot *v.* Talbot, before the High Court of Delegates in Dublin, and of the written proceedings and depositions taken in the same cause before the Consistory Court of Dublin. The motion was founded on the allegation that, in the case referred to, the learned Judge had misapprehended the facts brought under his consideration.—Mr. WHITESIDE defended Judge Torrens.—The motion was ultimately withdrawn.

### HOUSE OF LORDS.—FRIDAY.

The Earl of ALBEMARLE moved for a series of returns in reference to the presidency of Madras, with a view of showing the system of torture that had been carried on in that presidency, during the last fifty years, with the knowledge of the East India Company. After a brief discussion the motion was agreed to.

### HOUSE OF COMMONS.—FRIDAY.

Mr. HAYTER moved for a new writ for Boston, in the room of Mr. Heathcote, who resigns his seat.

Mr. LAYARD gave notice that on the next Supply day he would move, with reference to the Crimean Commission, to call the attention of the House to our relations with Persia.

THE CRIMEAN REPORT.—In answer to questions from Mr. Duncombe and Mr. Otway, relative to the position of Sir John M'Neil and Colonel Tulloch before the new Commission, Lord PALMERSTON replied that both the Crimean Commissioners named could be present if they chose, like any other individuals. With respect to their being enabled to call witnesses, he apprehended that such matters would be entirely in the hands of the new Commission, who would, no doubt, frame rules for their own government as they proceeded.

SLAVERY IN TURKEY.—In answer to Mr. Biggs, Lord PALMERSTON replied that her Majesty's Government had made as strong remonstrances as were possible under the circumstances to stop the exportation of slaves from the coasts of the Black Sea and other slave ports in those countries, which had since been abolished, but he did not think they could interfere in the domestic institutions of Turkey.

EDMONTON ROYAL REGIMENT OF MILITIA.—Mr. EVELYN called the attention of the House to the fact that the above regiment had not been drawn out for active service, whilst recruiting mercenaries were going into foreign countries seeking for men, to the imminent danger of producing a rupture with those countries (Hear, hear).—Mr. PEEL answered, that there were seventeen regiments which had not been embodied, and this was one of the number.—Mr. LAYARD rose and stated, amid much laughter, that the gallant officers of the regiment in question made up a nice little family party. The head of the clan had in a sarcastic vein the consanguinity of the officers of the regiment, and most indignantly denounced the whole as a gross job.—Mr. BYNG made some observations on the question, after which Lord PALMERSTON passed some very culogistic remarks upon the militia as a body, and said that they were officered by gentlemen in the counties where they were raised, and he thought it was highly creditable to those gentlemen that they took upon themselves the labour and responsibility of preparing men for the service of the country (Hear). He looked upon the militia and their officers as a connecting link between the English gentleman and those in a lower position in the social scale, and he would be sorry to see that link severed (Hear). He utterly denied the assertion of Mr. Layard that there was any jobbing or impropriety whatever in the case of the Edmonton corps.

THE CRIMEAN REPORT.

On the motion for going into Committee of Supply, Mr. ROEBUCK moved the following resolution:—"That the appointment of a Commission of General Officers to report upon the Report of Sir John M'Neil and Colonel Tulloch, is to substitute an inefficient for a very efficient mode of inquiry; and that the effect of such appointment will be to nide the misconduct of those by whom various departments of our Army have been subjected to the command of officers who have been inadjusted by the Commissioners appointed to inquire into their conduct."

Mr HADFIELD seconded the resolution.

Sir J. PAKINGTON expressed his regret that he was prevented by the forms of the House from bringing forward the amendment of which he had given notice. He could not assent to the motion before the House, as the subject was to be investigated in a public court by a board of officers appointed by Government. While severely censuring the Government for their conduct towards Commissary-General Filder and other officers, he thought it better to abstain from discussing a question that was now open for investigation.

Mr. HADFIELD seconded the resolution.

Mr. PEEL defended the course which he had taken. Although he had not been actively employed during the late war, he had frequently solicited the Government for active service in the Crimea

Mr. F. PEEL defended the conduct of the Government in respect to the officers reflected upon in the Crimean report.

---

MR. RUSSELL GURNEY was on Thursday, at the Common Council, unanimously elected Common Serjeant, in the place of Mr. Bullock, who recently resigned that office. On the same day, the Court resolved to present the freedom of the City to Sir Edmund Lyons, in a gold box value 100 guineas

THE MISSING STEAM-SHIP "PACIFIC."—The following has been posted in the underwriters' room at Liverpool:—"Glasgow, Feb. 27. The *Belvidera* steam-ship, which arrived here 15th inst. from New York, passed, on the 7th inst., a large quantity of broken ice, and in it saw a quantity of broken cabin furniture, fine ornamental doors, with white or glass handles, and a gentleman's portmanteau, all apparently belonging to a first-class ship. The *Pacific* left Liverpool on the 23rd ultimo, and has not yet been heard of as arriving at New York,

ST. PANCRAS WORKHOUSE.—During the past month Dr. Bence Jones, accompanied by one of the inspectors under the Poor law Board, has been making a searching inquiry into the state and condition of the above workhouse and the general treatment of the poor Dr. Jones, in his report, describes the state of the workhouse to be highly unsatisfactory. There are 300 more inmates in the house there were in 1846. The wards are described as being offensive, and almost without ventilation. One sleeping apartment is described as a cellar, where fifteen persons sleep. There was no ablution, and no means of ventilation except one small window in the door. The arrangement for the administration of outdoor relief is depicted as most defective. As many as 600 are sometimes relieved in a day. At half-past five o'clock so many as 100 still remain unrelieved. They had no food all day, and many of them stated that they did not expect any until seven o'clock. Dr. Jones adds, "I cannot sufficiently express the horror which I have formed of the evils which result from the cold, wet, foul air, and fasting, which the poor endure. While endeavouring to obtain outdoor relief they are exposed to disease, and even to death."

ROYAL SWEDISH RAILWAY COMPANY.—A special general meeting of the shareholders of this company took place yesterday (Friday) to take into consideration the alleged issue of Swedish Shares, &c., in the company by the late Mr. Sadleir, and receive a report of the inquiries that had been made in respect thereof. Mr. Rhodes, who presided, stated that the management in England of the affairs of the company had principally been conducted by the late Mr. Sadleir, who, as chairman, undertook all matters relative to the finances of the company. On the discovery that private shares and obligations of the company had been issued and signed, Mr. Sadleir at first absolutely denied that any such issue had been made; but some days afterwards he admitted the fact of his having duplicates in his own possession. This took place on Friday, the 15th February, and Mr Edmonds, on the same day, requested Mr. Sadleir to state the extent to which such issue had been made, and Mr. Sadleir then promised to give an answer by the 18th, a written statement comprising the full account of such issue. The death of Mr. Sadleir took place on Sunday, the 17th; and, therefore, no information or statement was received from him on the subject. A committee of seven shareholders was appointed to investigate the affairs of the company. The meeting was adjourned to the 27th of March, to receive the report of the committee.

ELECTION NEWS.—The Hon. Gilbert Heathcote has accepted the Chiltern Hundreds, and the writ for Boston will be moved for this evening. Mr. Herbert Ingram will in all likelihood be returned.—The Sligo election takes place on Monday. Mr. Somers is, up to this, the only candidate, and is not likely to be opposed.—*Cooke, Friday.*

ADULTERATION OF FOOD.—An interesting lecture was delivered on Monday night at the St. Leonard's Literary Institution, Westminster, by Mr. Jabez Hogg, on "the Application of the Microscope to the Detection of Adulterations in Food." The lecturer commenced by stating that the practice of adulteration was so prevalent that it might be laid down as a rule, that nearly every article was liable to sophistication which it would pay to adulterate, and the adulteration of which it is practicable. The following is an enumeration of the various articles specially treated of:—Plaster of Paris, alum, acetate of copper or verdigris, sulphate of copper, muriate of copper, ammoniacal muriate of copper, arsenite of copper or Scheele's green, carbonate of lead, chromate of lead, red oxides of lead, cinnabar or bisulphuret of mercury, ferrocyanide of iron or Prussian blue, peroxide of iron, Venetian red, hole armenian, &c., sulphuric acid, cocculus indicus, gamboge, and cayenne. The lecture was most attentively listened to by a crowded and most respectable audience. At the conclusion the lecturer invited those interested in the microscope to view a large collection of the various preparations.

THE CENTRAL FARMERS' CLUB.—"The form of agreement best calculated to give a stimulus to agricultural improvement," is the subject for discussion at the club on Monday next, and an animated debate may be expected. The recent correspondence between the Duke of Northumberland and his best tenant, Mr. Wetherall, which ended in Mr. Wetherall resigning his farm rather than sign an agreement for an annual tenancy, full of pains and penalties, foolish and unjust restrictions, will give more than ordinary interest to the discussion The proceedings of the Central Farmers' Club with the view of establishing it in a club-house near one of the principal thoroughfares, are progressing most favourably; and there is little doubt but that before the end of the year what may be called the "middle class" of the agricultural interest will have, at a very low rate of subscription, an establishment worthy of their numbers and social importance At present they are the only class engaged in a pursuit at once scientific and practical which has not founded a club-house in the metropolis. Habits of travelling are increasing every year, and it is well known that the agriculturists who visited Paris last year felt rather ashamed that they had no establishment in London in which they could attempt to return the splendid hospitality they received from our allies.—*From a Correspondent.*

## TOWN AND TABLE TALK ON LITERATURE, ART, &c.

WHAT shall Sir Charles Barry be paid for some twenty years' labour in covering eight acres of ground at Westminster with the new Houses of Parliament? He was glad to begin with a kind of promise that he should have £25,000 in all. This he never had; and now he declines to take three per cent on the actual expenditure. The Lords of the Treasury stick to the three per cent, and the three-per-cent commission is deemed ample remuneration. There is a doubt if engineers get off so well as Sir Charles conceives they do; and Mr. Walker thinks as little of architectural labours as Sir Charles Barry seems to think of engineering ones.

On Tuesday next, in his place in the House of Lords, the President of the Society of Antiquaries is to move an address to her Majesty, praying that her Majesty will be graciously be pleased to take into her Royal consideration in connection with the site for the present National Gallery the practicability and expediency of forming by degrees a gallery of original portraits; such portraits to consist, as far as possible, of those persons who are most honourably commemorated in British history as warriors or as statesmen, or in arts, in literature, and in science. The suggestion is not altogether new, but it is one that deserves to be carried out with as little delay as possible. An historian of England and the President of the Society of Antiquaries is the very person to enforce the propriety of making such a collection. Only start a suitable gallery for the exhibition of portraits of British worthies, and gifts—ay, and good gifts—will be numerous enough. We wish Lord Stanhope every success.

This allusion to portraits of British worthies reminds us that, on Monday next, Messrs. Christie and Manson will have on public view the collection of beautiful enamels made by the late Mr. H. P. Bone. The admirers of Petitot and Zincke, of Rosa and Theobura, should make a point of seeing this collection. On Thursday and Friday it will be scattered by the hammer of the auctioneer.

Though the controversy in the papers respecting photographic facsimiles of old documents has been allowed to drop between M. Claudet and M. Delamotte, it is still maintained in photographic circles, and apparently with a good result; for Dr. Diamond has produced photographs from charters and letters patent, from old but brilliant missals, and from old but faded manuscripts, of every state of mildew, of such unquestionable excellence that antiquaries are on the tiptoe of admiration about them. He can even catch unmistakable indications of colour and gold. We have some before us while we write that are perfect marvels in their way. He is about to give us, "we are glad to hear, photographic facsimiles of remarkable documents; and commences with Shakspeare's Will, and the Warrant for the Execution of Charles I. He will very soon, we may safely suspect, so adjust his light that nature in his hands will transcribe the Vatican MSS. for the benefit of the learned and the religious world.

There is, of course, a difference of feeling about the merits of the recent purchase for the National Gallery. The friends of Sir Charles Eastlake commend his acquisition of the Panl Veronese in terms of almost unmeasured praise. The anti-Eastlakers, headed by Mr. William Coningham, of Kemp Town, condemn it in language just as unmeasured. Here is a letter which we have received from Mr. Coningham on the subject—

*(To the Editor of the* ILLUSTRATED LONDON NEWS*.)*

Sir, I have seen to-day, for the first time, the new picture for the National Gallery attributed to Paul Veronese.

As one of the witnesses examined by the "Committee on the National Gallery" of 1853, and as one of those who, in 1855, signed the "Protest and Counter-statement" against the report of that Committee, I now emphatically protest against the purchase, at any price, of a picture so bad, and so scoured and repainted, as the one in question.

To expend money on so worthless a picture is not only a gross misapplication of public funds, but is also calculated to bring the nation into contempt, as establishing, presumptively, that works of the lowest type are the most congenial to us, and that in selecting even these we are incompetent to distinguish the genuine from the spurious.

It has been stated officially that "*certain additional expenses*" of *fourteen hundred pounds* were paid for this picture. I will venture to assert that no picture-value worthy of credit would appraise it at one-tenth of the sum; but I repeat that, *at no price*, ought it to have been purchased. Even at a *gift*, it would not be worth the space it occupies in the National Gallery.

Kemp Town. WILLIAM CONINGHAM.

Mr. Coningham has a right to be heard on such a question, for he was once a collector of pictures himself, and evinced his knowledge by the choice examples he brought about him. His condemnation is in this instance considerably overdone.

Now that Sir Henry Ellis has resigned the important office of Principal Librarian of the British Museum, the Trustees of the Museum can have no doubt about the person to succeed him. That one man, it so happens, is the individual on whom, by mere standing in the Museum, the right of election should fall. We allude, of course, to Mr. Panizzi. We are not root-and-branch admirers of the present Keeper of the Printed Books in the Museum. We have some lingering dislike to him for his not liking a printed catalogue of the library; but there can be no doubt whatever respecting his great attainments, and his great efficiency as a public officer. His present assistant, Mr. Winter Jones, will, of course, succeed Mr. Panizzi.

This reference to Sir Henry Ellis reminds us that Sir Henry is now one of the few English living authors whose first work was published in the past century. The "History of Shoreditch," by Henry Ellis, was a publication of the eighteenth century.

The novels known as "Bentley's Standard Novels" were, on Tuesday last, tried by the hammer of the auctioneer, and sold at prices beyond the offer which Mr. Routledge is said to have made for them. Mr. Routledge offered five thousand five hundred pounds, and the series sold for six thousand three hundred pounds. Of this sum the Marryats produced three thousand three hundred pounds. "Peter Simple" realised the largest sum; the next in amount was Mr. Albert Smith's "Ledbury."

One of the best pieces of typography with wood engraving that we have seen for some time has just been executed by Messrs. Bradbury and Evans for Mr. Murray, of Albemarle-street. It is a list of Mr. Murray's publications, with specimens of the illustrations they contain. It is an illustrated List, and excellent as a work of art.

Mr. Rogers' "Table Talk" ran into a second edition the very week in which it was first published. Mr. Dyce, it is said, is replying to Mr. Hamilton Gray's uncalled-for attack upon his correctness as a chronicler.

A meeting of the Committee for Removing the Civil Disabilities of the Jews was held on Tuesday at the London Tavern, under the presidency of Mr. Prescott.

Joseph Lockwood, son of Mr. George Lockwood, Arlington, Doncaster, has been committed to the assizes on a charge of setting fire to a wheat-stack in his father's farmyard.

## THE SHADOW.

VERSES FOR MUSIC.

With lofty song we love to cheer
The hearts of daring men;
Applauded thus, they gladly hear
The trumpet's call again.
But now we sing of holy deeds
Devoted to the brave,
Where she, who stems the wound that bleeds,
A hero's life may save;
And heroes saved exulting tell
How well her voice they knew;
How sorrow near it could not dwell,
But spread its wings and flew.

Neglected, dying in despair,
They lay till woman came
To soothe them with her gentle care,
And feed life's flickering flame.
When wounded sore, on fever's rack,
Or cast away as slain,
She called their fluttering spirits back
And gave them strength again.
Her cheering voice, her smiling face,
All suffering could dispel;
With grateful lips they kissed the place
On which her shadow fell.*

When words of wrath profaning rung,
She moved with pitying grace;
Her presence stilled the wildest tongue,
And holy† grew the place.
They knew that they were cared for then,
Their eyes forgot their tears;
In dreamy sleep they lost their pain,
And thought of early years—
Of early years, when all was fair,
Of faces sweet and pale.
They woke—the angel bending there
Was—Florence Nightingale!

Jan. 1856. FRANCIS BENNOCH.

* She could speak to one and to another, and nod and smile to many more, but she could not do it to all; but we could kiss her shadow as it fell, and lay our heads on the pillow again, content.—*Soldier's Letter from the Crimea.*

† "Before she came there was such cursing and swearing, but after that it was as holy as a church."

## *NATIONAL SPORTS.*

THE racing season has produced but little incident as yet; and we are, in fact, loth to allow that it has begun till we read that the Yorkshiremen have met in congress to scan their two-year-olds in the pretty race-meadow at Catterick-bridge; and the corporation bellman has with his sonorous "Oyez! oyez!" solemnly proclaimed the commencement of the sports at Northampton. The Ring have, therefore, three weeks of anticipation still, the first of which will be partly filled up by the Nottingham Meeting, which is fixed for Monday and Tuesday. The handicap is to be run on the first of these days, along with the Two-year-old Stakes, in which Annot Lyle will meet her Lincoln conqueror, Amorous Boy, who will have to carry 5 lb. extra, and not improbably find the tables turned on him. Stork has appeared in good form at Liverpool; and, although he had no very difficult task to achieve, he did it cleverly, and will find many fresh admirers for the Chester Cup. The Steeplechase, for which twenty-one went, was a complete surprise, and three apparently hopeless outsiders fought it out at the finish. The ground was light and the pace very severe throughout. Sir Peter Laurie and British Yeoman broke down; Harry Lorrequer "ran against some people;" Victor Emmanuel and Daniel O'Connell fell; Emigrant got the reins over his head; and Banstead dislocated his shoulder. One third of the horses were thus put *hors de combat*, but the three first finished almost within a length of each other. The quotations about the first two were 25 to 1, and the third, Minos, who was not even mentioned, is the horse which tried the promising dark Derby colt, Verdant Green, on whom many Newmarketers still pin their faith.

Wentworth continues very firm at the head of the Derby betting, and we understand that Sam Rogers is engaged to ride him in case Mr. Harry Hill claims the services of Alfred Day for Rogerthorpe. Marlow will be well enough to ride again this season; and, as Mr. Clarke and Mr. John Stanley are still the first and second masters of Bartholomew, we shall see him on either Vandermeulin or Porto Rico, who may not improbably have a trial together before the day. The rumour that the former sported a looking son of Van Tromp had migrated from Redmarshall to Bisley is at present purely fabulous, and we expect ere long to see him at a much shorter price than 25 to 1. The racing world have been a little taken by surprise at the sudden announcement that Antaplan with his engagements is to be sold at Didcot, of all places, between twelve and one on Saturday, (this day). Although the old horse's legs were rather puffy at the end of last season he has some running left in him yet, and there is bone enough in his 16-hands frame to carry 16st. to hounds. As we have hardly any of the Baron's blood left in the country he would not be dear as a stud horse at 2500 guineas; and it is said that he will fetch a good deal more, as England and France are determined to have a tussle for him. If the latter win we shall have a rare souvenir of him in a very capital engraving after Mr. Harry Hall, of Newmarket, which will shortly be published. Apropos of animal painting, we may mention that a well-known artist, who certainly ranks among the first ten in this branch of the profession, has been obliged to give up his easel in consequence of a severe attack of scarlet fever last May, which carried off two of his children, and impaired the accuracy of his "near sight" for painting purposes. Luckily, he had always given a great deal of attention to farming, and had just got some land (a few acres of which were his own) into thorough condition, almost entirely by his own personal labour, when his calamity overtook him. We believe that he is at present looking out for a situation as farm-bailiff, to any gentleman who has a farm of from 400 to 600 acres of light land, with the management of which he is thoroughly conversant.

The Yorkshiremen have filled up Voltigeur's subscription; and Mincemeat, who has never run in public since she so unexpectedly defeated Meteora for the Oaks, has gone with Clementina to King Tom's paddocks. Mr. Sykes, who never seemed to come to his running till he was nearly six, has also retired; and we hear that Virago will be sent to Orlando.

An attempt, which did not succeed, was made last week to fix the followers of the Clayton barriers with trespass; and the evidence, which was rather conflicting, went to prove that they did not go on to the land in question to look for a hare, but were running a fox when they passed over it. The two Mr. Suttons are showing good sport in Leicestershire, which is swarming with foxes; and when, next season, Lord Stamford enters on the country north, and Mr. Richard Sutton on that south, of the Wreke, it will be more completely hunted than it has been for many a year. The Earl will accept no subscription except for the covers, many of which produce far more to their owners in that shape than if they were cropped; and they are so multiplied that the old straight-going breed of foxes have too often degenerated into mere "ringers."

The coursing meetings for next week commence with Bywall, and "Newcastle, Northumberland, and Durham Union," on Monday; Ashdown-park follows on Tuesday, Wednesday, and Thursday; Spiddall Union and Border (Roxburghshire) on Wednesday and Thursday; and Aldford and Borcalton (Baschurch) on Friday.

LIVERPOOL SPRING MEETING.—TUESDAY.

Trial Stakes.—Stork, 1. Palogist, 2.
Tyro Stakes.—Wells Crawford, 1. Peggy c., 2.
Alntree Plate.—De Ginkel, 1. Pallure, 2.
Optional Selling Stakes.—Little Tom walked over.
Liverpool Spring Cup.—Mary, 1. Little Davie, 2.

WEDNESDAY.

Junior Selling Stakes.—Hopeful filly, 1. Good Girl, 2.
Sefton Handicap.—Mary, 1. Little Davie, 2.
Grand National Steeplechase Handicap.—Weatherader, 1. Minerva, 2.
All-aged Selling Stakes.—Menzie, 1. Little Tom, 2.
Handicap Hurdle Race.—Stamford, 1. Freedom, 2.

TATTERSALL'S.—THURSDAY EVENING.

TWO THOUSAND GUINEAS.—5 to 2 agst Fly-by-Night (t). 3 to 1 agst Yellow Jack (offd) DERBY.—7 to 1 agst Islington offered); 9 to 1 agst Fly-by-Night (t), 25 to 1 agst Vandermeulin (t) 40 to 1 agst Newington (t)

## *MUSIC.*

THE ROYAL ACADEMY OF MUSIC gave its first concert of this season on Tuesday morning, at the rooms of the institution in Tenterden-street. The purpose of these concerts is to exhibit the progress of the pupils, and on this occasion the exhibition was certainly creditable both to the young persons themselves and to the tuition which they receive. The programme (the concert happening in Lent) was made up (except two instrumental pieces) of sacred music. Haydn's Third Mass, a grand and beautiful work, was given entire, and exceedingly well performed, not only by the youthful solo-singers, but by the chorus and the instrumental orchestra. Hummel's fine quintet in E flat for the pianoforte, violin tenor, violoncello, and double-bass, showed to great advantage the abilities of Mr. Waddell, a young pianist of very great promise. Palestrina's solemn and beautiful choral hymn, "I will give thanks," was sung with great precision and purity. Several solo vocal pieces were given in a very good style by Miss Spiller, Miss Whyte, and Miss Mackenzie; but the most remarkable feature of the concert was the performance, by Mr. Isaacs, of the first movement of Mendelssohn's celebrated and enormously difficult Concerto for the Violin. This young gentleman played more like a master than a pupil: his execution of the most arduous passages was free and unembarrassed; his tone was beautiful; his intonation true: his style finished and graceful. It will be this young man's own fault if he do not turn out to be one of the greatest performers of his time. The concert-hall—which has been much enlarged and improved since last season—was full in every part.

COSTA'S new oratorio, "Eli," was performed a second time at Exeter Hall on Friday last week, with increased precision and smoothness, and with undiminished success. This work promises to become one of the regular stock-pieces of the Sacred Harmonic Society.

IT is announced that Benedict and Dr. Wylde are to conduct the concerts of the New Philharmonic Society.

A MUSICAL PRODIGY in his way—though it is a small way—has arrived in London. He is a Signor Picco, calls himself "the Sardinian Minstrel," and "discourses most eloquent music" on a pipe of the smallest dimensions—a sort of flageolet, as insignificant in appearance as a child's halfpenny whistle. He had a private performance at Coventgarden Theatre last week, at which many musical people were present, and certainly surprised his hearers very much; playing variations on popular airs, not only with marvellous brilliancy of execution, but with taste and expression. He has announced a concert this evening at the Hanover-square Rooms, when his solos on his whistle are to be accompanied by the Orchestral Union, under the direction of Mr. Alfred Mellon.

THE judgment of the Court of Queen's Bench in the case of Lumley *versus* Croft has been affirmed, on appeal, by the Court of Exchequer. There were two questions, it will be remembered, involved in this case: first, whether Mr. Lumley had forfeited his lease of Her Majesty's Theatre; and, secondly, whether, if there had been a forfeiture, it had been waived by subsequent acceptance of rent. The Court of Queen's Bench found that there had been a forfeiture, but that it had been waived; and, by the confirmation of this judgment, the question is now definitively settled in Mr. Lumley's favour. The rumour about the opening of Her Majesty's Theatre has been revived; but on no other ground, that we can discover, but this final judgment in favour of the lessee.

THE little English operatic party, of which the Misses Pyne, Harrison, and Stretton are the principal members, are continuing to do great things in the United States. The last accounts of them are from New Orleans, where they were enjoying the warmest favour. The *Picayune* is enthusiastic in describing the perfections of Louisa Pyne; and we might suspect the critic's grandiloquent language, if we did not know that it is scarcely possible to speak too highly of that charming young singer. By the way, what flowers of eloquence might be culled from the rhapsodies of the Transatlantic critics! The following, from a New York paper, *Dwight's Journal of Music*, is by no means an extraordinary specimen. Speaking of Rossini's "Semiramide," the journalist exclaims:—"And what sumptuous, voluptuous music it is! What an abounding wealth of melodic invention, at the same time that *every character sings in the same strain, as if true to the gorgeous purple and gold mendacity of Eastern life!*"

## *THE THEATRES, &c.*

ASTLEY'S.—As we approach Easter the spirit of theatrical enterprise decreases in activity, and the playgoing world suspends its interest in favour of the forthcoming entertainments of the holidays. Expectation regards too much the future, and the present is of little account. There is, therefore, scarcely any novelty stirring; and, as the pantomimes take off, the theatres subsist on revivals, stock pieces, and benefits. Here and there, however, a dashing speculator will, even in these dull seasons, attempt something to vary the prevailing uniformity. The management of the equestrian theatre have made a successful venture of the kind, and we have to record the production of a new spectacle. It is entitled "The Arab of the Desert and his faithful Steed." This interesting drama is in two acts, and relates to the despotism of a decapitating Pacha, whose taste for decoration appropriate to all the theatres honest Arabs are strangers to, and who in the end is slain by the outraged husband. In all this the hero is much aided by his white horse, whose services in the various combats and incidents are conspicuous. This dumb agent is represented by Mr. Cooke's favourite steed "Reindeer." The concluding tableau, in which the faithful animal forms the centre of the victorious group, is exceedingly picturesque. The feats of the elephants also demand praise since they extort wonder; for, according to the poet, "wonder is involuntary praise."

COVENT GARDEN.—Professor Anderson has announced what he calls a "Farewell Benefit" to take place on Monday next. The performances will consist of the farce of the "Great Gun Trick," the opera of the "Somnambula," the drama of "Time Tries All, the new squib of "What Does He Want?" the melodrama of "Gilderoy," and the pantomime of "Ye Belle Alliance; or, Harlequin and the Field of the Cloth of Gold." This extraordinary combination of entertainments is to commence on Monday forenoon, and continue till midnight. The cast will on this occasion consist of the united houses of Covent Garden, Drury Lane, and the Strand Theatre; and we have no doubt that the stupendous performance will meet with a corresponding success. The carnival is to be concluded on Tuesday night by a grand *bal masqué*.

ON Monday and Tuesday evenings, at the Town-hall, Newark, Mr. W. Boutcher, the artist, attached to the last Expedition to Nineveh and Babylon, gave his Arabian Nights' Entertainments; being a description of a tour through Turkey, Arabia, &c., to the sites of the above named cities. The lecture was illustrated with sculptures and paintings of the more interesting portions of the countries through which Mr. Boutcher and his companions had passed.

## THE WRECK OF THE "POLYPHEMUS."

THE *Polyphemus*, war-steamer, sailed from Hull on Sunday, the 27th of January, having only a few days previously arrived at that port from the Baltic. On the following Tuesday, about ten in the morning, the vessel was driven on shore about seven miles south-west of Hantsholm Lighthouse, on the coast of Jutland. Minute-guns of distress had been fired for some time, to call the attention of a vessel which was seen at a short distance, but, owing to a thick fog which prevailed, no assistance could be obtained from her. The cutter and second gig were lowered, and a number of the crew jumped into them, but, not being able to pass the breakers, they pulled out to sea, in the hope of reaching the vessel before mentioned. Nothing has been heard of the men in either of these two boats.

Mr. Herbert, master, and other twelve men, launched the paddle-box boat, but she swamped almost immediately, and only two of those on board of her were saved. The remainder of the crew were landed by a party of Danish coast-guard men who had been watching the vessel for some time. A hawser was made fast to the pinnace before lowering her into the surf. A large cask was slung to the hawser, and thus the men were enabled to reach the shore one by one.

The men found the country covered with snow when they landed, and the lakes and rivers all frozen over. Lieutenant Frederick Pyne, Messrs. Warrington, Jones, Burnett, Stracey, Morris, and Chambers, officers, together with thirty-four sailors and eight marines, set off instantly for Hamburg, travelling through Jutland, Schleswig, and Holstein in open carts—the only vehicles they could obtain.

Captain Hay, Dr. Everest, Lieutenant England, Mr. Wood, chief engineer, and twenty-seven of the crew, remained for some time at the village of Thisted. On the 1st February, three days after the shipwreck, the *Polyphemus* was totally dismasted, full of water, and breaking up. Captain Warren and the chief engineer expected to save some of the machinery.

## BELVEDERE-CRESCENT REFORMATORY.

THOSE who have occasion to pass southward over Hungerford-bridge may observe a large board, surmounting a building on the Lambeth side of the river, on which are inscribed the words "Industrial Home for Outcast Boys." Should curiosity, or a better motive, induce them to pay a visit to this place, a spectacle will present itself to their notice which it will be good for them to have witnessed. One caution, however, must be given —they must not be disappointed at finding but slight resemblance to the well-appointed boarding school for the scions of gentility or even of respectability. Neither must they be surprised if there should be little to remind them of institutions redolent of patrons and governors. They must attend chiefly and mainly to the tone of the inmates, remembering

A "CITY ARAB."—FROM A PHOTOGRAPH TAKEN BEFORE ADMISSION TO THE BELVEDERE-CRESCENT REFORMATORY.

who and what they were, and inspect the nature of the influences brought to bear upon these most refractory of pupils. That the once filthy, vagrant, emaciated, idle, reckless, and obscene, should not only present an appearance of cleanliness and comfort, but actually come to be industrious, prudent, and moral, is a phenomenon well deserving the attention of those who are able to appreciate the difficulty of the process, and the reality of its achievement.

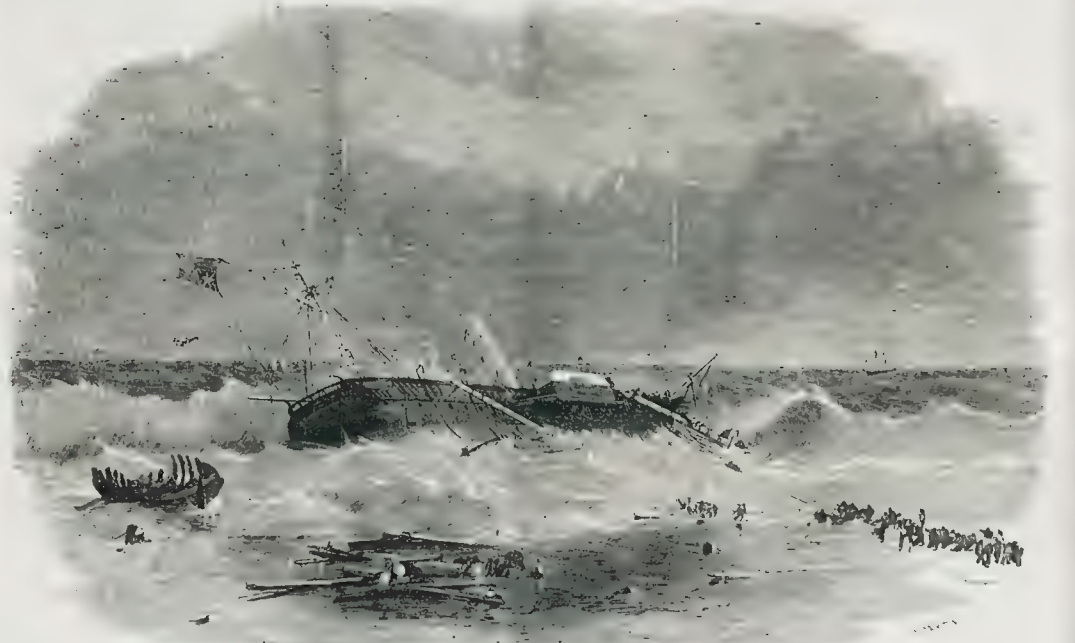
The best, and perhaps only, account of the means by which so happy a result has been effected is contained in the words of the founder and superintendent of the institution, Mr. William Driver. He lives among them, and shows them how to live. By way of illustration of this remark, a slight sketch of his history since he first began to labour among the outcasts of society may be acceptable. Originally a draper's assistant, Mr. Driver voluntarily quitted an employment in which, to persons of his intelligence and energy, worldly advancement is not frequently denied, for the seemingly thankless occupation of a ragged-school teacher. In his new vocation he necessarily became familiar with every phase of ignorance, destitution, and vice. Gradually there deepened in his mind the conviction that to the teaching of a school

WILLIAM DRIVER, FOUNDER OF THE BELVEDERE-CRESCENT REFORMATORY.

must be added the influence of a home. So, recognising the old proverb, "what is learned at school is too frequently unlearned at home," to be a rule hardly admitting an exception, where that home is the street, he, with little else of pecuniary assistance than the promise of £15 from some few persons who were aware of his intentions, ventured in July, 1853, to hire a house, close to St. Luke's Church, Berwick-street, where he might be to the outcasts whom he hoped to reform not merely a master, but a father. With this view he sallied forth in quest of inmates for his, as yet, empty house. Seeking them in their well-known haunts, he gave preference to the most destitute and depraved—avoiding, however, except under special circumstances, to have anything to do with such as had parents within reach. A motley collection of seven ragged vagrants was soon gathered together. By degrees a complete change came over them, and those who had opportunities of watching the experiment affirm that a happier family could not have been found. The very straits and perplexities to which they were sometimes reduced seemed but to serve as so many links to bind them the more closely together. With right cheerful alacrity would they work, master and pupils, at the making of paper bags for the greater part of the day, whilst an hour or two in the evening would be devoted to secular instruction—the business of each day being regularly commenced and ended with reading the Scriptures and prayer. On Sundays they attended Divine Service as soon as the kindness of the neighbours enabled them to exchange their rags for less objectionable attire, and, by the unaffected seriousness of their behaviour, they won from their fellow-worshippers a sympathy which has survived their removal from that locality. Before this removal, which took place in the summer of 1855, their number had increased to fifteen, and a committee, chiefly composed of neighbours, interested in their welfare by personal inspection, had been formed for the purpose of basing an institution upon so successful an experiment. The committee selected very suitable premises in Belvedere-crescent, Lambeth, capable of accommodating nearly sixty inmates. At one time since this removal the establishment contained thirty boys; but, failing to secure local support as readily as experience had led them to anticipate, and beset, moreover, by other inevitable difficulties, the committee have been compelled to leave unfilled the vacancies made by emigration and other causes, so that the present number is only nineteen. The main difficulty has been, of course, want of capital. A large dilapidated house had to be put in order by the inmates themselves, their previous remunerative work being entirely stopped for that purpose. This they did with great spirit and ingenuity. It took considerable time, and the value of their labour has been computed by a practical man at about fifty pounds. Having set their house in order, they found that their former industrial occupation was gone, for employers who require their demands to be regularly executed cannot consult the convenience of philanthropic institutions. In this emergency

"CITY ARABS."—FROM A PHOTOGRAPH TAKEN AFTER A COURSE OF TRAINING AT THE BELVEDERE-CRESCENT REFORMATORY.

they aspired to turn the place into a factory of a somewhat more complicated character. Any man of business knows what an uphill task it is to attempt anything of the kind without capital and experience. Nevertheless, the thing has been done. We have no space here for anything like a description. Suffice it to say that, after many disappointments, this Ragged Factory is now systematically at work; and, though still hampered by a debt incurred in its past stages, is steadily progressing towards self-support. All the inmates are employed in making boxes upon contract for certain wholesale establishments. They work at this about nine hours a day; the principle here asserted being that it is of less consequence to prepare them for any special occupation which they are hereafter to pursue than to train them to habits of industry upon some uniform system which shall be most profitable to the institution. It may be that this is the principle which is destined to solve this difficult social problem for a city in the same way as a Reformatory Farm is supposed to have solved it for the country. The misfortune is, that just at present there is a sad apathy in London upon a subject which is so profoundly exciting the provinces. The case we have cited is, to our certain knowledge, but one among several metropolitan instances of intense individual devotion to a cause which the general metropolitan public seems slow to recognise and support.



WRECK OF "THE POLYPHEMUS," OFF HAUSTHOLMEN LIGHTHOUSE.—(SEE PRECEDING PAGE.

PARIS FASHIONS FOR MARCH.

## DISTRIBUTION OF MEDALS AND CROSSES AT PARIS.

A VERY gratifying reward of the bravery of heroes from the Crimea took place at Paris on Thursday and Friday week. The first of these distributions took place in the Bois de Boulogne, when the Emperor of the French presented medals to a number of Zouaves who have recently arrived from Sebastopol. The Emperor shook hands with each Zouave as he gave him the medal. The Zouaves were in full dress, and wore their characteristic white turbans.

A very interesting incident occurred during the proceedings. While the regiment of Gendarmerie of the Imperial Guard was filing before the Emperor, at the end of the review, his Majesty remarked in the last platoon two men who had been wounded, but had not received any decoration, and he called them to him to interrogate them on the subject. The Emperor then spoke a few words to one of his aides-de-camp, who went into the palace, and returned with two military medals, which his Majesty himself attached to their breasts, and at the same time shook them by the hand. On this incident being noticed by the crowd standing near, a loud cry of "Vive l'Empereur!" rose on all sides.

## PARIS FASHIONS FOR MARCH.

THE gaieties of Mid-Lent have brought out a host of Parisian novelties. Balls have already assumed greater brilliancy; and to the costumes worn at these fêtes our chronicle of fashions for March more especially refers.

The Duchesse de Castiglionne, whose beauty has for some time made a great sensation at Paris, wore lately a bandeau of pearls and diamonds, finished with sheaves of the same at the back of the head, the gems mingling with the plaits of her Grace's beautiful light hair. Her robe was of *tulle illusion, à trois tuniques*, all *bouillonnées*, half clear lilac *tulle illusion*, and half white; below each tunic were bows of ribbon, in the middle of which was a little star of diamonds and pearls.

The head dresses are mostly composed of white ostrich feathers, generally held in by diamond hooks, the gems of which harmonize best with the hair. The cactus flower is in great request; and we noticed recently on a brown head of hair a magnificent coiffure of *cactus pourpre*, with a brilliant foliage of *poudre de diamant*, which gave an additional lustre to the flowers. A *bouquet de corsage*, similar to the flowers of the head dress, is also much worn; as are also bouquets disposed in tufts upon the skirt, or in long trains falling on each side of it, and forming a sort of apron on the front of the skirt. Coiffures called *Peruviennes* are much in vogue They are of red velvet; and are composed of tropical red fruits, mingled with coral branches and golden globes, which latter fall down over the shoulders. *Coiffures en ambre jaune* are also much worn. They are disposed in several rows of pearl, either round or *à facettes*, of different sizes.

A robe of sky-blue *tulle illusion à trois tuniques*, each ornamented with three rows of English point-lace, a bouillon tulle, surmounted with a light fringe of white marabouts. *Redites en velours*, either black, pink, or red, with some ornaments on both sides of the head—either feathers, flowers, or velvet of all shades, and often of the two of which the *resille* is composed—are much worn.

At the fancy-dress ball given during the Carnival, and especially the one at the Tuileries, given by M. le Comte—e de ——, Watteau's shepherds were the most numerous. These graceful costumes are composed o silk and black velvet, which best harmonize with the *coiffure poudrée*. Great historical costumes were rarely worn at these fêtes. They were seldom faithful.

### THE ILLUSTRATIONS.

*Toilettes de Ville:* Chapeau *en peuil de soie*, and squares of jet, with

DISTRIBUTION OF MEDALS, BY THE EMPEROR OF THE FRENCH, TO THE ZOUAVES FROM THE CRIMEA.

trimmings of tufts of feathers; the edge trimmed with black velvet ribbon. Mantelet of black velvet, with a braid trimming, serving for heading to a deep lace flounce. On the shoulders another row of narrow braiding supports a lace flounce, also narrower. Robe of maroon silk. Chapeau of rose taffetas, trimmed with a row of black velvet, with black ostrich feathers on both sides. Robe of pearl-grey *Broquet de soie*, with a single plain skirt. The corsage *à basques*, with braces formed with a trimming of feathers *posées à plat*. The sleeves are *à deux poignets*, also formed by similar feathers. A trimming of velvet buttons closes the front of the robe.

*Girls:* Chapeau of white taffetas, with the under part of blonds. Robe en taffetas of blue; the corsage, open in front, shows a white muslin chemisette, over which is passed a black velvet ribbon in squares. The sleeves are high, ornamented with a bow of ribbons to match. The waistband is made of similar ribbons, but wider.

Evening Dress for girls, of rose taffetas. The skirt has two flounces, both trimmed with black velvet; below a lace. Sleeves, ornamented with black ribbons, have two wristbands. The waistband hangs down behind in ends. The fichu, *à la Jeannette*, is held in by a pin. The under part of the sleeves is of embroidered muslin. In the head-dress is a row of ribbons, to match the waistband.

## MONETARY TRANSACTIONS OF THE WEEK.

*(From our City Correspondent.)*

THE market for nearly all National Securities has been very sensitive this week; and, no doubt, it will continue so during the sitting of the Peace Conference at Paris. In its early part prices improved under the influence of ready money purchases of Stock; but they have since become lower, owing to some large Lots having realised. The whole of the Loan has now been allotted, and we understand that the applications to the contractors for it rather exceeded £25,000,000; consequently, large amounts of deposit money have been returned to the applicants, and which have led to a principle of some ease in the discount market. It would be a matter of considerable difficulty to obtain advances upon short-dated bills in Lombard-street under six per cent; but in the Stock Exchange short loans have been freely offered on Government Securities at four per cent. We may observe, however, that this figure does not represent the state of the discount market in the Exchange generally, because it is well known that from seven to eight per cent has been paid for accommodation; of course, upon other security than Consols.

The imports of the precious metals have been very limited, and the shipments to the Continent have not increased. From a most favourable change having taken place in the exchange at New York, it is inferred that the next two packets from that port will bring large supplies of gold; and we may now expect the arrival of from £700,000 to £800,000 from Australia, as several vessels having gold on board are now overdue.

The Board of Trade returns for the month ending the 31st of January exhibit not at all unfavourable results. The total exports amounted to £7,005,839 against £5,709 268 in 1855, and £5,813,093 in the corresponding month in 1854.

On Monday the following quotations were realised in the English Market:—Bank Stock, 213; Reduced Annuities, 92¾; Consols, 91¾; New Three per Cents, 92¼ to 93; Five per Cents, 114; Consols for Account, 91¾ to 93; Long Annuities, 1885, 16⅛; India Stock, 224; Consols, Scrip, 1⅞ pm.; Exchequer Bills, 3s. dis. to 1s. pm.; Ditto, Scrip, 1⅝ ⅞ pm.; Exchequer Bonds, 1858, 98. On Tuesday there was an improvement in the quotations, and a steady business was transacted:—Bank Stock marked 215; the Reduced Three per Cents were 92¾ ⅞; Consols, 92¾ to 91¾; Ditto for Account, 91¾ ⅞ to 92; Consols, Scrip, 2¼ ⅛ pm.; New Three per Cents, 93¼ to 93; New Two-and-a-Half per Cents, 71¼; Long Annuities, 1885, 16⅛; Ditto, 1885, 16 5-16; India Bonds, under £1000, 6s. dis.; Exchequer Bills, 3s. dis. to 2s. pm.; Ditto, Scrip, 1¼ dis.; Exchequer Bonds, 98¾. The market on Thursday was rather heavy, and prices drooping. The Three per Cents for the Account opened at 91¾ ⅞, and closed at 91¾ ⅞. The Reduced were 91¾ to 91¾. The Scrip was 1¼ 2 pm. New Two-and-a-Half per Cents, 71¼ to 72⅜; and the Reduced, 91¾ to 92. Exchequer Bills, 3s. to 2s. pm. Bank Stock, 213½ to 215; India Stock, 222; Long Annuities, 16 3/8; Ditto, 1885, 16 5-16.

No little excitement has been produced in City circles on the subject of the numerous forgeries committed by the late Mr. Sadleir. The committee of the Stock Exchange have announced that no further transactions in the Bonds or Signatures of the Royal Swedish Railway Company be recognised until further notice, it being impossible to ascertain the exact numbers of the forged bonds in the hands of dealers. It is supposed, however, that the losses will principally fall upon parties residing in the provinces and in foreign parts.

There has been a firm market for nearly all Foreign Bonds, and prices have further improved. It is stated that the greater portion of the last instalment of the new Spanish loan money (the total amount of which is about 3,000,000 dollars—will be realised by the bondholders here: but this intelligence has had very little influence upon the quotations, as the sums now in hand will be absorbed in the payment of the Coupons due on the 1st of March. Chilian Six per Cents, 105¾; Equador Bonds, New Consolidated, 14¾; Ditto, Land Warrants, 6; Portuguese Five per Cents, 83; Russian Five per Cents, 108; Ditto Four per Cents, 94¼; Ditto Four per Cents (Stieglitz), 85; Turkish, Six per Cents, 86⅝; Ditto, Four per Cents (guaranteed), 100¾; Ditto Two-and-a-Half per Cents, 64; Dutch Four per Cents, 95¾; Danish Three per Cents, 83¾; Spanish, One-and-a-Half per Cents, 21; Belgian Four-and-a-half per Cents, 8⅞.

Joint-Stock Bank Shares have been very firm, and prices have continued steady:—Australasia have realised 54½ ex dividend; London, 58½; City, 88; Colonial, 20; London Chartered of Australia, 10¾; Union, New, 14; London and County, 35 ex. div.; London and Paris, 9⅜; London and Westminster, 45; New South Wales, 37½; Oriental, 38½; South Australia, 39; Union of London, 5.

Most Miscellaneous Securities have been steady as to price, but the business done in them has been comparatively small:—Australian Royal Mail, 4⅜; Canada Company's Bonds, 121; Ditto Government Six per Cents, 103½; Crystal Palace, 2¼; Ditto Preference, 6¼; General Screw Steam Shipping Company, 1⅝; London Docks, 100¾; Mexican and South American, 6⅜; North British Australasian, ⅞; North of Europe Steam, 1⅝; Peel River Land and Mineral, 8½; Peninsular and Oriental S eam, 63; Ditto, New, 14; Scottish Australian Investment, 13⅜ ⅝; Ditto, New, 8⅜; South Australian Land, 3⅝; Van Diemen's Land, 1⅝.

Mining Shares have sold slowly:—Cobre Copper at 88; Copper Miners of England, Seven-and-a-Half per Cent Preference, 20⅜; Linares, 7; Santiago de Cuba, 2¾; Tin Croft, 4¾; United Mexican, 3¾.

Most Railway Securities have been steady, at very full prices. It must be a source of satisfaction to learn that the ruinous competition between the London and North-Western Company, and the Midland and Manchester, Sheffield, and Lincolnshire Companies, on the one part, and the Great Northern on the other, has been brought to a conclusion. The following are the official closing prices on Thursday:—

ORDINARY SHARES AND STOCKS.—Bristol and Exeter, 89; Caledonian, 87½; East Lancashire, 72½; Great Northern, 98; Ditto, B Stock, 102½; Great Western, 59½; Lancashire and Yorkshire, 92⅜; London and Blackwall, 7½; London and Brighton, 97½; London and North-Western, 101½; Ditto, Eighths, 1⅛; London and South-Western, 90⅜; Manchester, Sheffield, and Lincolnshire, 24½; Midland, 70¾; North British, 29¾; North Eastern—Berwick, 77¾; Ditto, G.N.R. Purchase, 11¾; South-Eastern, 65¾.

LINE LEASED AT A FIXED RENTAL.—West Valley, 23¾.

PREFERENCE SHARES.—Chester and Holyhead, 16½; Edinburgh, Perth, and Dundee, 79; Manchester, Sheffield, and Lincolnshire, 108¾.

FOREIGN.—Antwerp and Rotterdam, 3⅛; Eastern of France, 38¾; East Indian, 22; Ditto, New, 1⅝; Great Indian Peninsular, 20⅜; Great Western of Canada, 25¾; Madras, New Five per Cent, 15¾; Sambre and Meuse, 9⅛; Sandre Five per Cents, 6.

*Friday Evening*

A RUMOUR having gained currency that Russia has demanded a European Congress to settle her dispute with the Allied Powers, Consols have been heavy and drooping since the morning. The Three per Cents opened at 91¾ ⅞ for the Account; but they have since declined to 90¾ ⅞ 91 and up to 91¾. The Reduced have been done as low as 91¾ ⅞; and the New Three per Cents, 93. An official notice has been issued to the effect that the next issue of Exchequer Bills will be made at the present rate of interest, viz., 2½d. per diem. Consol Scrip and Exchequer Bills Scrip, 1 to 1⅛ pram. Foreign Bonds and Railway Shares have become rather heavy.

## *THE MARKETS.*

COAL EXCHANGE, *Thursday*.—Less pleasure was manifested in business to-day, and by landowners and others who have been waiting for a few days for samples here to be submitted to purchasers, the demands for all kinds rather heavy, at 1s. to 2s. per quarter beneath Monday's prices. The imports of foreign, whose have been under 4000 quarters. For all descriptions we had a very slow sale, at Monday's currency. Fine barley was steady, at full prices, but other kinds were a dull sale. Oats were wholesome in mait, at late rates. The oat trade was inactive, but no change took place. Beans, peas, and flour were dull, at Monday's currency.

Arrivals this week:—

| | Irish. | Foreign. |
|---|---|---|
| Wheat | 1020 | 6 |
| English | Wheat, ... Kent, 66 ... | |
| East Suffolk, 66 to 72s. Rye, 40s. to 43s.; grinding barley, 32s. to 33s.; distilling ditto, 36s. to 37s.; malting ditto, 39s. to 40s.; Lincoln and Norfolk malt, 68s. to 74s.; brown ditto, 62s. to 65s.; Kingston and Ware, 70s. to 74s.; Chevalier, 72s. to 76s.; Yorkshire and Lancashire fed oats, 22s. to 24s.; potato ditto, 21s. to 23s.; Youghal and Cork, black, 20s. to 22s.; ditto white, 20s. to 24s.; tick beans, 33s. to 35s.; grey peas, ... to ...; maple, ... to ...; white boilers, 42s. to 43s. per quarter. Town-made flour, 52s. to 53s. per sack. Foreign, ... to ... per quarter. | | |

Linseed, English crushing, 70s. to 72s.; Mediterranean, 68s. to 72s.; homeseed, 63s. to ... per quarter. Linseed cake, 22s. to 23s. per cwt. Rapeseed, ... to ... per ton. Brown mustard-seed, 30s. to 32s.; white, 12s. to 13s.; tares, 7s. 6d. to 8s. 6d. per bushel. English rapeseed, 48s. to 50s. per quarter. Linseed cakes, English, £13 0s. to £13 5s.; ditto, foreign, £12 10s. to £13 0s. Rape cakes, £6 12s. to £7 5s. per ton. Canary, 60s. to 62s. per quarter.

*Bread.*—The prices of wheaten bread in the metropolis are from 9½d to 10d.; of household ditto, 7½d. to 8d. per 4lbs. loaf.

*Imperial Weekly Averages.*—Wheat, 69s. 2d.; barley 35s. 8d., oats, 23s. 6d.; rye, 45s. 4d.; beans, 43s. 7d.; peas, 43s. 6d.

*The 33s. Duty.*—Wheat, 73s. 11d.; barley, 37s. 6d.; oats, 24s. 11d.; rye, 48s. 10d.; beans, 42s. 9d.

*Seeds.*—Grass Seeds last Week.—Wheat, 90,2—, barley, 7,423, oats, 14,954; rye, ... ; ... 547 peas 1897 quarters.

... There has been an improved feeling in the demand for nearly all kinds of butter, at full late rates, and a genuine. The imports are steady, at full rates. We quote 80s to 82s. landed. In other kinds of provisions only a limited business is doing.

*Tallow.*—The market is steady, and prices are well supported. P.Y.C., on the spot, 50s 6d. to 50s 9; February to March, 50s.; March to April 51s. 6d.; last three months, 51s 6d. Town tallow is 2s. per cwt. net cash. The supply of the latter is very moderate.

*Oils.*—Linseed oil, on the spot, is ... 1 down to 35s 1 ... Palm is quoted at 36s. 6d. to 37s.; brown, 34s. to 35s. 6d. Cocoanut, 34s. to ... Sperm, 98s to 100s. Turpentine supports last week's quotations.

*Spirits.*—Only a moderate business is doing in rum, at about stationary prices. Proof Demerara, 2s. 5d to 2s. 6d.; Leewards, 2s. 3d to 2s. 4d.; East India, 2s to 2s. 1d. per gallon. Brandy moves off slow.—Cognac Ferme, Half and other sorts are dull.

*Hay and Straw.*—Meadow hay, £3 10s. to £5 10s.; clover ditto, £5 0s. to £6 10s.; and straw, £1 3s. to £1 8s. per load.—London.

*Teas.*—The transactions in all kinds of tea continue very moderate. In prices, however, we have no change to notice. Common sound congou, 8d. per lb.

*Sugar.*—The transactions of raw sugars have been in good request this week, and, in some instances, a further advance of from 6d. to 1s. per cwt. has been realised by the importers. Crystalised yellow Manilla has changed hands at 37s. 6d. to 38s. 6d. per cwt. The refined market is steady. Brown lumps, at 43s., and low to fine grocery, 45s. to 48s. per cwt.

*Coffee.*—We have to report a limited inquiry for all kinds, at late rates. Good ordinary Ceylon has realised 80s. per cwt.

*Rice.*—Our market is heavy, and sales have been made at a decline of from 3d. to 6d. per cwt. Ord. to fair cargo, 9s. to 9s. 6d. per cwt.

*Hops (Friday).*—There is not a fair demand for ... Low and middling qualities change hands slowly, at ... Ashes 250 bales of foreign hops have arrived this week. Mid and East Kent pockets, £3 5s. to £6 10s.; Weald of Kent, £3 0s. to £5 15s.; Sussex, £3 5s.

*Potatoes.*—Hamilton, 145; Stradbally, 97s.; Alan Main, 105; Scotch, 85; South Halton, 175.; Regent, 105.; Flukes, ...; Flukey Regents, ...

*Provisions (Friday).*—The supply ... market was not semi-porkers, 6s. 4d. to 6s. 8d.; and large Logs, 5s. 8d. to 6s. 2d. per stone, on the average. Prime Scots, 6s. 6d. to 6s. 8d.; second quality ditto, 5s. 8d. to 6s. 4d.; prime Cumberland and Yorkshire, 6s. 4d. to 6s. 8d.; prime Small Pork, 6s. 8d. to 7s. 2d.; inferior ditto, 5s. 4d. to 6s. 2d. Bacon in fair demand, at 6s. 2d. to 6s. 6d.; second quality ditto, 5s. 8d. to 6s. 2d.; prime Calves, 6s. 6d. to 6s. 8d.; prime Sheep, 6s. 8d. to 7s. 2d.; prime Lambs, 8s. 6d. to 8s. 10d.; large Pigs, 5s. 6d. to 6s. 2d.; small ditto, 6s. 4d. to 6s. 10d. Milch cows were dull, at from £16 to £20 each. Total supply: boasts, 1... cows, 110; sheep, 3890; calves, 239; pigs, 1... Beasts, 9... calves, ... sheep, ... pigs, ...

*Cheese and Leadenhall (Friday).*—The general demand was inactive ... The Kent Bye-day has been somewhat better ... Mid and fine ... at a decline in the prices realised on Monday of quite 2s per 8 lbs. Sheep—the show of which was moderate—were in fair request, at the currencies of that day. Calves—the number penned was small—sold slowly, at 2d. to 3d. per 8 lbs. The supply of calves was good, and the veal trade ruled heavy, at 2d. per 8 lbs. less money. Lambs—the show was ... Milch cows were dull, at ... each. Total supply: boasts, ... prime Scots, &c., at 6d. to 6s. 10d.; second quality ditto, 5s. 8d. to 6s. 4d.; prime Downs, 6s. 6d. to 6s. 8d.; large Logs, 5s. 6d. to 6s. 2d.; small ditto, 6s. 4d. to 6s. 10d.; prime Calves, 6s. 6d. to 6s. 8d.; prime Sheep, 6s. 8d. to 7s. 2d.; large ditto, 5s. 8d. to 6s. 4d.; small ditto, 6s. 4d. to 6s. 10d. ROBERT HERBERT.

TWELVE REASONS WHY EVERYBODY ought to VISIT LOVE'S ENTERTAINMENTS, at the Egyptian Hall, Piccadilly. [illegible] London as well as the Provinces, and the above Entertainments have been honoured with the patronage of the Royal Family. Because [illegible] Because [illegible] Because [illegible]

WROUGHT-IRON RAILWAY-BRIDGE ACROSS THE NILE, AT BENHA.

(*Continued from page 230.*)

The engineer of this fine work is Mr. Robert Stephenson, M.P.; and the contractor for the whole work is Mr. E. Price. This bridge, and another of the same kind at Berket el-Saba, were manufactured at the works of Messrs. Grissell, London, under the entire superintendence of Mr James Wilson, C.E., who also designed the large machinery for turning the centre trams.

## THE ELEPHANT ENGINEER.

THE wonderful sagacity of the elephant has been a frequent theme. In the Island of Ceylon, where these animals in a wild state abound, the Government employ the natives to catch them in immense *kraals* erected in the jungle, into which great herds of elephants are driven; and, after they have been ensnared and secured, they are tamed and made to perform the heavy detail of the various public works, such as piling timber, launching ships, dragging ponderous materials, raising blocks of stone, and pulling waggon loads of road-metal. It is asserted that some of the most sagacious of the elephants, when piling up timber, have been known to retire a short distance to scan the proportions of the heap; and, if the eye detected any deflection from the proper angle, not another stick would they put on until the proper slope was restored. It is a fact that, in building retaining walls, erecting bridges, &c., the masons rely very much upon the efficient co-operation of the attendant elephants—of some of whom it has been said that, with the direction of the keeper alone, and without any artificer or plumb-line, they could pile block upon block with almost human intelligence.

The accompanying Sketch shows in a remarkable manner not only the great intelligence of these brutes, but also their prodigious physical power, which enables them to break down the trees of the forest for food, equally as the feeble reeds of the stream. The great waterworks at present in course of erection upon Messrs. Morton and Tytler's Rajawelle estate, near Kandy, in the Island of Ceylon, would, in more respects than one, command a space in your columns. For the present it is enough to say that the cast-iron piping, extending to a length of nearly two miles (each length of pipe weighing about six hundredweight), has to be carried to the position it has to occupy, across logs of felled timber, over rocky and broken ground, up hills, and across ravines, where cart-roads could not be made, nor the feebly native Coolys possibly carry them. In this dilemma the energetic local engineer, Mr John Brown (an Aberdonian), had recourse to elephants. In the Sketch is seen how the pipes are taken up upon the tusks and trunk by the elephant. By this means the piping will be laid at a moderate cost; though the elephants, from never having been trained, may not be able to screw the pieces together. Still it is interesting to to see how, in a colony where scientific appliances are either not within reach or are too costly, engineering difficulties are successfully mastered.

ELEPHANT ASSISTING TO LAY DOWN WATER-PIPES NEAR KANDY, IN CEYLON.

It may be interesting to add to our Correspondent's letter the following testimony to the services of the elephant as an assistant builder in Ceylon, narrated by Mr. S. W. Baker, in his "Eight Years' Wanderings in Ceylon," just published. The author had purchased a large tract in the Ceylonese highlands, with the view of establishing there a European community, in the Newara Ellia—the sanatorium of the island. Here Mr. Baker erected a church, and had for one of his assistants an elephant whose services he thus acknowledges:—

The most extraordinary part of her performance was the arranging of two immense logs of red keenar (one of the heaviest woods). These were about eighteen feet long and two in diameter, and they were intended to lie on each bank of the stream parallel to the brook, and close to the edge. These she placed with the greatest care in their exact positions, unassisted by any one. She rolled them gently over with her head, then with one foot; and, keeping her trunk on the opposite side of the log, she checked its way whenever its own momentum would have carried it into the stream. Although I thought the work admirably done, she did not seem quite satisfied; and she presently got into the stream, and gave one end of the log an extra push with her head, which completed her task, the two trees lying exactly parallel to each other close to the edge of each bank.

PRESENTATION OF NEW COLOURS TO THE 28TH REGIMENT, BENGAL NATIVE INFANTRY, AT UMBALLAH.—(SEE PAGE 230.)

THE NEW SHIP "CITY OF MOBILE."

## THE NEW AMERICAN MERCHANT-SHIP "CITY OF MOBILE."

THIS noble merchantman has just arrived in the East India Docks, Blackwall, from the United States, with the largest cargo of wheat that has ever left the shores of America, or ever entered this or any other port in the world—the quantity brought being about 9000 quarters, and stowing, besides, an immense quantity of barrelled flour and staves.

The *City of Mobile* was built at New York, for the house of Horbeck and Co., of that city, she is of 1750 tons register burden, and is built throughout with oak. She has been visited and inspected by the captains of some of the most celebrated vessels in the port of London, and pronounced by competent judges to be the best built and fastened ship that has ever been in this port.

The *City of Mobile* is constructed with three decks for cargo, and with passenger accommodation on the upper deck. She is rigged in the newest American style, with double or rather divided topsails, known in the nautical world as Hodge's system—which plan is giving the greatest satisfaction to all who are using them, and they are being now very generally adopted. The main and fore yards are eighty feet in length, with her other yards in proportion: her enormous canvas has been manufactured by the Messrs. Speller and Co., of Wapping. Her length over all is 225 feet, on keel 210 feet, beam 43 feet 6 inches, depth of hold 29 feet 6 inches. She is commanded by Captain Marshall, a gentleman well known and greatly respected in the service; and left Blackwall on Tuesday last for Liverpool, from which port she will make her return voyage.

## MISS P. HORTON'S ENTERTAINMENT.—POPULAR ILLUSTRATIONS.

THIS delightful entertainment—which, under the name of "Illustrative Gatherings," attracted much attention some time ago at St. Martin's Hall, Long-acre—is now being presented daily at the Gallery of Illustration, Regent-street; where the labours of Messrs. Grieve and Telbin, in the pictorial and decorative art, have contributed to produce an *ensemble* such as Madame Vestris would have rejoiced in when the Olympic Theatre was under her tasteful direction. The stage is arranged as a drawing-room, most elegantly appointed, and looking out upon a conservatory, with a garden beyond. The scene thus presented adds greatly to the charm of the entertainment, and produces an effect which at once imparts to it the appearance of novelty, no such advantitious aid having been employed on the occasion of the original performance. As regards the merit of the entertainment, it will be sufficient to say that, clever and amusing as it always was, great improvements have been made, and many new songs introduced, which give Miss P. Horton a more favourable opportunity than she previously enjoyed of displaying her musical accomplishments. Miss P. Horton's powers of impersonation have never been so skilfully or so fully exercised as on the present occasion. The contrasts of character are marked with the most admirable precision; and it is almost impossible to believe that a crabbed spinster of some sixty winters, and a pert charity-boy, who goes through an examination after a fashion which would seem to show that his object is rather to display his ignorance than his learning, are one and the same person. In the first part the various characters are represented as visitors at Holly Lodge, each having a denomination tending to justify the general title of "Flowers Gathered

MISS P. HORTON'S ENTERTAINMENT, AT THE ROYAL GALLERY OF ILLUSTRATION, REGENT-STREET.

from Real Life." Every one of these is individualised with the most consummate skill, and the laughter, no less than the applause, elicited throughout, testified to the manner in which the performances were appreciated by the audience. The second part is called the "Enraged Musician," the object being to depict an aspiring genius in the agonies of operatic composition; and the fun which is produced arises from the continual interruptions he is exposed to by the appearance of a variety of persons who inflict upon him their woes and idiosyncrasies, until at length he is completely bewildered and unable to proceed with his work. These individuals are all represented by Miss P. Horton, and the various characters—from an Italian Wanderer to a Maid-of-all-work, and finally to a French Teacher of Music—are embodied with a degree of excellence which makes each a dramatic picture in itself; whilst the introduction of "Robert, toi que j'aime," by way of finale, offers an opportunity for testing the lady's powers in the execution of a class of music which scarcely admits of burlesque. On the whole, the entertainment is in every respect a musical and certainly a most amusing treat, and there can be no doubt that in this locality it has already proved a source of great attraction.

## THEATRICALS IN THE CRIMEA.

*(From a Correspondent.)*

ALTHOUGH active warfare in the Crimea is temporarily suspended the soldier is not exactly "coddled," as the *Times* would have you believe. During the day he has still plenty of severe work in the shape of fatigue parties, drill, and regimental duty; and no effort is spared to maintain the efficiency and discipline of the army in the highest degree of perfection. But when night sets in, and January's rain, sleet, and snow sweep the Camp, the festivities of a soldier's life commence. Light blazes from the windows of house, hut, and hovel; glimmers from the canvas of the tented plain, and peeps from the crannies of mysterious caves underground. Songs and dance music are heard on every side, accompanied by the clattering of feet in Irish jigs and Highland flings. The French have even instituted a select series of "fashionable balls:" price of ticket, half-a-guinea each: "N.B. No attendance of ladies most respectfully invited." And in spite of the unfavourable reports sent home concerning the female followers of the Camp, no one can justly deny that their occasional appearance adds much to the gratification of life under canvas; and many of them can boast, not merely of skin-deep personal attractions, but of tender sympathies and rare virtues.

The comparison is indeed extraordinary between January last year and the same month in the present year. The Russian guns firing sullenly from the north side upon the giant skeleton of Sebastopol's temples and terraces, alone remind us that we are in the midst of war, recalling for a moment dismal recollections of trenches, quarries, and advanced works, now habituated only by lizards, snakes, and rats of presence ubiquitous. The horrors of the past winter are, however, well nigh forgotten. The dangers, cruel deaths, toils, pestilence, cold, misery and famine, the night sorties, and the yawning graves to which comrades were daily consigned, these are seldom even spoken of. Indeed, the constitution of the soldier's existence appears to be precisely the same now as in the old time when the Simois and Scamander ran blood through the plains of Troy, and Homer's celebrated lines apply with singular truth even at the present hour:—

> The great, the brave, by thousands daily fall,
> And endless were the grief to weep for all:
> Enough, when Death demands the brave, to pay
> The tribute of a melancholy day!"

Amateur theatricals form one of the most popular amusements in the Camp. A statement appeared in the English newspapers a few weeks ago that a French theatrical company had embarked for Kamiesch. But the Theatre Royal, Kamiesch, has been anticipated in various English regiments. More than one successful manager might be named, who with the usual risks attending lessee-ship, can boast the possession of a company of such "unrivalled merit" that even the sage and critical *Polonius* would have approved their "good discretion and excellent judgment." Prelgha from Malta and Constantinople have brought socks and buskins, courtly suits, and bespangled robes, masks and dominoes, *Hamlet's* sables, *Shylock's* Jewish gabardines, *Malvolio's* yellow stockings, and *Desdemona's* handkerchiefs; to say nothing of flowing wigs, fashionable bonnets, bodices, paddings, and satin slippers, wreaths of artificial blossoms, and other appliances supposed to indicate the correct portrayal of the female form divine, as usually exhibited in public. Charles Kean himself might envy our dresses, decorations, and ingenious machinery. Rehearsals are generally take place every afternoon, and a grand performance twice a week. Officers and men are thus making the most of their winter's brief holiday, and we have all passed from "grave to gay." After the heavy tragedy of the last campaign the curtain has drawn up to a "comic interlude;" and, whilst we are having our game, "umour tells us that the busy diplomatists of Europe are also having theirs. Let them take care that they do not pirate our stage effects and perform our plays "without permission:" that they do not suddenly wind up the serious drama now enacting upon the world's stage, and give us comedy and farce by way of afterpiece.

The best theatre in the Camp is undoubtedly to be found in the 2nd Battalion Rifle Brigade. The building, which was comfortably accommodate 250 persons, has been erected solely for the purpose of dramatic entertainments; and the wood and stone which enter into its formation were brought from Sebastopol, the ruins of the magnificent Muscovite theatre furnishing a portion of the materials. The interior of the building is elegantly decorated, and the drop-scene painted by Lieut. Sinclair, Aide-de-Camp to General Eyre, is deserving of especial notice. This scene represents the struggle of Europe for the unfortunate carcase of the sick Ottoman. In the centre appears the wretched invalid writhing in the entanglements of a cord, dislocated on one side by England, France, and Sardinia (represented by a rifleman, a Zouave and Sardinian); strained and twisted on the other side by Russia, Austria, and Prussia.

The latter, however, takes no very energetic part in the struggle, but squats upon the ground grasping tightly a bottle of champagne and feebly leering at his companions-in-arms. In the background appear gabions, earthworks, and embrasures, over which two Muscovites intently watch the progress of the struggle. Other scenes, side-wings, &c., have been painted by officers of the regiment. A landscape by Colonel Macdonnell, C.B., is worthy of especial commendation; and it is only fair to add that to the exertions of Capt. the Hon. Barrington Pellew, who superintended the entire arrangements of decoration and wardrobe, the officers of the battalion are principally indebted for their very elegant and "practicable" theatre. The opening night was on January 29th, and the play-bills announced the following entertainments:—

THEATRE ROYAL,
SECOND BATTALION, RIFLE BRIGADE.
On Tuesday, January 29, 1856,
Will be Performed
A THUMPING LEGACY.

| | | | |
|---|---|---|---|
| Pillippo Geronimo (Innkeeper) | ... | ... | Sergeant March. |
| Jerry Ominous (Nephew) | ... | ... | Assist.-Surgeon Reade. |
| Sambogetti | ... | ... | Sergeant Tapley. |
| Leoni ... | ... | ... | Sergeant Bourne. |
| Brigadier of Carbineers | ... | ... | Lieut. J. C. Moore. |
| Rosetta (Filippo's Daughter) | ... | ... | Lieut. Eccles. |
| (Two Carbineers.) | | | |
| GLEE ... | "Drink to me only with thine eyes." | | |

To conclude with
NUMBER ONE ROUND THE CORNER!

| | | | |
|---|---|---|---|
| Mr. Flipper | ... | ... | Capt. the Hon. B. R. Pellew. |
| Mr. Nobbler | ... | ... | Sergeant Bourne. |
| First-floor Lodger ... | | ... | Sergeant-Major Waller. |

Previous to the performance, a PROLOGUE will be spoken.
Doors open at Half-past 7 o'clock, Performance to commence at 8 precisely.
GOD SAVE THE QUEEN.

Amongst the visitors who early presented their tickets for admission were Major-General Lord William Paulet, Major-General Windham, Brigade-Generals and Mrs. Strangways, Earl Sefton, Captain Lord R. Browne (7th), Major the Hon. L. Curzon, Major the Hon. H. Chichester (77th), Colonel Goodenough (84th), &c. The band of the regiment—one of the finest and most celebrated in the service—formed the orchestra, and, previous to the rise of the curtain, performed the overture to "Guillaume Tell" in splendid style, conducted by Bandmaster Cordielle. The prologue—written by a regimental surgeon—was recited with much taste and feeling by the Hon. Captain Pellew; and the curtain drew up immediately afterwards to the tergiversations of *Mr. Jerry Ominous*, the heir to "The Thumping Legacy." The genuine drollery of Mr. Reade in this part elicited rounds of applause; and the fair *Rosetta*, on her first appearance, gained a host of admirers. She was modestly attired in white book-muslin over a blue satin petticoat, and a shower of curls, falling from a broad and highly-fashionable summer straw hat, revelled upon her graceful shoulders. The lady acted well, but she is yet young, and will doubtless improve upon acquaintance. The bashfulness of her deportment (especially her anxiety to avoid any undue exposure of foot or ancle) was the theme of universal admiration; and after the play, when *Jerry Ominous* led her blushing before the curtain, a tumult of applause greeted the happy pair. The other characters in the farce were well performed, and Mr. Moore, as the *Brigadier of Carbineers*, looked and acted the part to perfection. After the glee, sung with much taste by six members of the band, Colour-Sergeant Kemp went through the "Highland Fling," which was encored, and the curtain again rose to "Number One Round the Corner"—*Flipper* and *Nobbler* keeping the house in roars of laughter. At the conclusion of the performance a large party sat down, in the officers' mess-room, to a supper which may have reflected credit upon even a West-end clubhouse. Wines flowed in profusion, and scarcely a delicacy in or out of season was wanting. An honourable visitor remarked, in the course of a speech, that "the officers of the 2nd Battalion appeared to be revenging themselves for the warm work they had seen in the last campaign." The chairman happily replied, "Yes; and in anticipation of the warm work we are ready to see again!"

W. C.

## KARS.

*(To the Editor of the* ILLUSTRATED LONDON NEWS.*)*

IN vol. xxii of the *Asiatic Journal* there appears a paper entitled "A Hindoo Colony in Ancient Armenia," from which it would seem that Kars, or Kaurs, as the writer of the paper in question calls it, was founded by a colony of emigrants from India upwards of a century before the Christian era, and that it was besieged and captured by a Christian army in the third century. The account of this sangular colony, Monsieur Audall, of Calcutta, the writer in the *Asiatic Journal*, informs us, is derived from an historical work written by Zenobius, a Syrian Bishop, who flourished in Armenia in the beginning of the third century This work was first published in Venice, in the year 1832.

Zenobius, after describing the appearance, manners, and religion of the idolatrous colony, relates that they were driven from their Indian princes, who, driven from their native land, took shelter in the dominions of King Valarsaces,* who bestowed on them the principality of the country of Taron † Three of the sons of these Princes founded villages and called them after their own names—Kaurs, Meghri, and Horsus.

Zenobius goes on to describe the wars that took place between the Christians and the idolaters, and in one of the campaigns, in which he seems to have been present, Kaurs, after a siege of seven years, fell into the hands of the Christians, who razed it to the ground, and removed all its inhabitants as prisoners to Meghri. After this defeat the idolaters retreated, but were afterward rallied by their High Priest, Arzan, who challenged an Armenian Prince to single combat. Arzan was killed and buried on the spot where he fell, which to this day, Zenobius says, is known by his name. This is, in all probability, the Erzngen or Erzin-room of the present day. In a pitched battle fought shortly afterwards the idolaters lost 1036 men, their temples were razed to the ground, and the images of their gods, Kenaca and Anaitis, were thrown into the flames. On declaration of peace the inhabitants of Kaura embraced Christianity, and 5050 men and children were baptised by St. Gregory.

SEPOY.

* Appointed King of Armenia A.M. 3682. † Can this be Tebraun of the present day?
I M. Audall in a note says this, in the Armenian, means idol; but is it more likely to be the Hindoo god Arnum, still a common name among Hindoos.

## THE NAVIGATION OF THE DANUBE.

—Count Picquelmont, who cannot forgive or forget that the British Government in 1848 and 1549 was willing to deprive Austria of a part of her Italian possessions, has just published a work on the Eastern question, which contains a great deal of abuse of the policy of England, and one or two facts worth notice. The Count, who not long before the Hungarian revolution had been Austrian Minister at St. Petersburg, relates that in 1840 the Russian Government organised the project of the freedom of the Danube, and formally pledged itself to keep the Sulina arm in such a state "that there should always be water enough for merchantmen." After the convention between Russia and Austria was laid before the Conference of Nations exchanged, the St. Petersburg Government ordered the naval authorities at Odessa to see that the sand did not accumulate at the entrance to the Sulina, and they for a time obeyed the instructions which had been given them. The importance of the Danube to Austria and Southern Germany was at once seen, and the traffic increased so rapidly that Galatz speedily became a place of importance, and the Russian and Austrian Governments signalised the principality of the Principalities. As soon as the Odessa authorities remarked that Galatz was likely to become a formidable rival, they neglected to remove the sand from the embouchure of the Sulina, and the navigation of the Danube was interrupted. As soon as it was evident that the larger vessels could not pass the bar, a company of speculative Greeks appeared with a little flotilla of lighters, and demanded and received enormous prices for their services, that they could afford to allow a certain salary to the Russian *employés* for their inactivity." Such was the state of things ten years ago, and such it is even now.

IMPORTANCE OF NICOLAIEFF.—Nicolaieff is not merely a port of construction, as is generally believed in Europe, but a port for actual vessels of war. In grave circumstances, the Russian squadron of reserve used to station there; and if that has not taken place during the present war the reason is that Prince Menschikoff must have, from the beginning of the war, under official orders in the port of Sebastopol all the armed vessels which were in the Black Sea. In order, too, that vessels of war should be able to navigate between Nicolaieff and the sea, the Board of Admiralty has had a channel made which the whole way down, from which every rock or impediment has been carefully removed, and in which during eight months of the year there are twenty-three feet of water. This channel becomes considerably greater when the river rises. The Russian fleet in the Black Sea at the commencement of the war consisted of sixteen ships of the line, amongst which only three were of the first class; the others, all of the third class, drew only twenty-two feet of water when fully armed. The arming of these vessels had been effected altogether at Nicolaieff, and they arrived at Sebastopol without the slightest difficult by following the channel above described, having her guns on board, as well as her full complement of men, and an entire supply of provisions and stores. It results from what has just been said, that ships of the line can be built and armed at Nicolaieff, and can then, during the greater part of the year, proceed to sea quite ready to fight. As to vessels of 120 guns and upwards, they can take all their guns on board, with the exception of those of the lower deck, and complete their armament at Sebastopol. It may thus be seen what advantages can be derived from Nicolaieff. Both that place and Sebastopol are classed in Russia among the ports of the Black Sea, just as Rochefort and Lorient, which are some way inland, are in the list of the ports of France. The official name given to Nicolaieff by the Imperial Government speaks more strongly than anything else that can be said. Nicolaieff, according to the literal translation of the name, is "the chief place of the Russian military marine in the Black Sea." The establishment of Sebastopol was only the chief station of the Russian fleet, and the place of assembling when any expedition was in contemplation.—*Monteur de la Flotte.*

A GLOOMY PROSPECT FOR THE SUTLERS AT KADIKOI.—It is curious to hear the diametrically opposite opinions that are emitted:—"Peace is certain, we shall all be home in a few weeks," is the assurance you receive from officers who did not enter the army to fight, and whom honour obliges to no taste for the work, has brought and kept so long here. "The Russians are only trying to gain time," says the next man you meet, a thorough soldier, to whom hardship and danger are as sunshine, and who covets promotion and the higher pay it will bring, for he has a wife and children at home, and little but his pay to maintain them with; "the report of peace is all humbug. See yonder, they are erecting platforms in Balaklava Harbour, to ship the troops to Asia." Each man sees through his own glasses. The platform would serve equally well to ship troops to England. Among the mercantile community in the Crimea, the vendors of wines and spirits, pickles, preserves, biscuits, tea, coffee, hams, cookery, butter, cheese, and a multitude of other groceries and Italian warehouseries, great alarm has been spread by the announcement of probable peace. Forgetting their enormous past profits, they think only of their approaching loss. As far as concerns the English dealers and sutlers at Kadikoi and Donnybrook, and a few isolated shops scattered through the Camp, their cases does not call for, nor is likely to excite, much commiseration. With very rare exceptions they have sold bad things at exorbitant prices. At Kamiesch the French reckon on getting rid of their good qualities of wine to the Russians; but there is a monstrous quantity of *vin ordinaire* (most of it extremely *ordinaire*, and rather logwoody), concerning the disposal of which they are very uneasy, since they know the Russians to be too good judges to buy it, and those they will be obliged to insure the expense of shipping it to Constantinople, where they hope to find customers for it among the principal hotel-keepers, who will bottle it, put seals on the corks and labels on the glass, and retail it at 6*l.* or 8*l.* the bottle as the choicest products of Burgundy and Bordeaux vineyards, sacking, with that peculiar calmness and complacency which are characteristic of your thoroughbred Constantinople shop-keeper, some 500 per cent profit, and grumbling the while at the hardness of the times.—*Letter from the Camp.*

AN UNPLEASANT DISCOVERY.—As Sir Hamilton Seymour has been unable to find a suitable house or apartments, he has been living with his family in an hotel, where he has made the most unpleasant discovery that his goods and chattels are not in safety. A few nights since some one entered his room and carried off all his linen, with the exception of one shirt, one pair of stockings, and one pocket-handkerchief. It must be supposed that the robber was disturbed in his operations, as the writing-desks, containing State papers, money, &c., were untouched. When Government has leisure to think of such matters, it would, perhaps, do well either to purchase a house here, or to take one for a series of years, as a Vienna hotel is no fitting place for a man in whose keeping are State secrets. It is not necessary to say more on this subject; but very singular and authentic stories might be related if prudence did not bid me stay my pen. For a long time a Russian Prince, with a polysyllabic name, which has escaped my memory, had the very next room to that which served the British Minister for his *salon de reception*, and it is highly probable he heard a great part of what was said, as Vienna doors are by no means remarkable for their thickness, or for being good fits.—*Letter from Vienna.*

## ABOUT WENSLEYDALE.

SIR JAMES PARKE is not the first eminent lawyer who has been associated with Wensleydale. It may be interesting to glance at Wensley and its remarkable men. The elevation of this Judge to the dignity of a Peer with legislative functions, but the Peerage to last only for his own life, is an event in the current page of constitutional history which will, in many forms, recur in future controversy. On each occasion, to those who know the scenery and history of the dale, visions of beauty and of awe may arise; while others may inquire, "Where and what is Wensleydale, whose names have become celebrated by a political accident?"

At the bottom of an ancient ocean, with a stream flowing constantly from west to east, like the great Gulf Stream of the Atlantic, lies a floor of limestone rock, which in some dire convulsion was upheaved, and remained a range of hills, with rents, chasms, ravines and dales, breaking eastward through Yorkshire, and westward through Lancashire. Hills more lofty than the rest rose in the convulsion, which in after days men called Pennighent, Pendle Hill, Ingleborough Fell, Whernside Fell, and such like names. These are connected by high moorlands, under the healthy moss of which lie the fossils and floor of the old ocean. But in some parts this floor lies bare over spaces of miles, and shows the action of some ancient gulf stream as distinctly as rocks on the seacoast show the present action of the tide-wave. Into the chasms and ravines issue rivulets from caves, until, fed by surface streams, they become rivers, wasting away and widening the narrow boundaries of rock to grassy meadows and fertile dales.

The Yore (spelt also Ure, and Eure) dashes down from its parent caves in cataracts between whitened walls of rock many hundred feet high, on which are the homes of birds of prey—of hawks especially; whence were once supplied the Royal and many noble falconries of England. Over those cataracts rushes the Yore, till it waters the village of Wensley, the meadows below, and rock-built castle walls still further down in Wensleydale.

The Yore and Swale unite and flow to York, as the Ouse; their journey thither rapid, comparatively free of land labour, and very pleasant on every hand. Not so the journey of the twin drudges Aire and Calder, offspring of the same range of caves and moorlands, hardest toiling of rivers out of Lancashire. These receive at their time of greatest industrial pollution their brother Wharfe, whose bright waters have not been stained by work. Impetuous Wharfe escapes from his mother's lap, and halts not to smooth a ruffled wave for many, many miles, except to loiter for a while about Bolton Priory after passing that abyss the Strid, of which Rogers (just deceased) has chanted in his "Boy of Egremond":—

> Rythe was his song, a song of Yore;
> But where the rock is rent in two,
> *And the river rushes through,*
> His voice was heard no more.

Working Calder, working Aire, impetuous Wharfe of unsolled stream, Yore of Wensleydale, Swale of Swaledale, and gentle Ouse, unite in one; and, receiving Trent from the Midlands, they become sonorous Humber—commercial estuary of the eastern sea. Willfe to the western sea, from the bosom of the same parent caves and moorlands, runs Lune to Lancaster, with a short life and a merry; where, like a spendthrift, he is soon after lost in quicksand. The Colne and Ribble are of the same family, after a youth of delightful wandering, are caught by the men of the dales and made to spin cotton. The Roobe and Irwell, their cousins, are not only put to work young, with Medlock and Irk in their infancy, but are worked to death—boiled into steam at Manchester, their remains putrefying for the next thirty miles till gathered up and salted in the Mersey.

And now of the lords and the men of the dales. Sir James Parke, we have said, is not the first lawyer associated with Wensleydale. In the reign of the second and third Edwards, Henry Scrope, a lawyer, founded a family of peers, and built a house in Wensleydale, which, with a castle built by his successor, were transmitted to a notable posterity in direct line for three hundred years, afterwards through marriage to the Powlets, Marquises of Winchester, and Dukes of Bolton Castle, in Wensleydale. Henry Scroop, in the second year of Edward II., was one of the Justices of Common Pleas; and in the tenth year of the said reign was made Chief Justice of the King's Bench. In the first year of Edward III. he was deprived of his political honours, from the Chief Justiceship to that of Puisne Justice of Common Pleas; "but," says the chronicler, "paid his court so well to the new Sovereign, that in three years he was reinstated in the highest office; and in seven years after, when he died, so well had he employed his opportunities, that he was possessed of many manors." [Then follow a list of his estates and castles.] His successor was a greater lawyer and better man Lord Scroop, Chancellor and Keeper of the Great Seal, builder of Bolton Castle. His son was Richard Scroop, Archbishop of York, headed in the Wars of the Roses. The executioner was se appalled by the dread of decapitating an Archbishop, that he did not sever the head until after five strokes of the axe.

The Scroops were now married into the family of the Nevilles, the King-makers. Sir John Neville, of Wensleydale, kinsman of the Earl of Warwick, had Edward IV. in keeping at Middleham-in-the-Dale, when, on pretence of hunting, Edward escaped by the help of his brother Gloucester (Richard III.). When Edward VI. was in the ascendant, and Henry VI. a fugitive, the latter wandered on the moors between Wensleydale and Bowland, finding shelter with the family of the Pudseys, and longing in his soliloquies that he were a shepherd:—

> Oh God! methinks it were a happy life
> To be no better than a homely swain,
> To sit upon a hill as I do now,—
> To carve out dials quaintly point by point,
> Thereby to see the minutes how they run,
> How many makes the hour full complete,
> How many hours brings about the day,
> How many days will finish up the year,
> How many years a mortal man may live.

On the same moors, and on the fells of Cumberland, the second generation following, the successor to the "bloody Cliffords" of the York and Lancaster wars was secreted as a shepherd, and only emerged from obscurity after twenty-five years of pastoral life. When he was aged sixty the Scotch invaded England, to be overthrown on Flodden Field. An old metrical history tells of the gathering of his forces by this Henry Clifford, the shepherd, thus:—

> From Pennighent to Pendle Hill,
> From Lonton to Long Addingbanne,
> And all that craggy mountain hill,
> They with the lusty Clifford came;
> All Stainforth hundred went with him,
> With arrplings strong from Wensleydale,
> And mickle bold fellows of Bowland,
> From Longstraths eke and Lattondale.

In the next generation Wensleydale held within the grim walls of its Bolton Castle a fair captive—marvellous in beauty, marvellous in her misfortunes—Mary, Queen of Scots. She was allowed to join the chase; but at the outcome, far up the dales, met a disguised stranger more than once—the chivalric Duke of Norfolk, who fain would carry her out of captivity and Wensleydale. But the regal hawk of England heard of this, and ordered her prisoner to be removed to safer custody in Staffordshire.

At Giggleswick, in a cave of the limestone rock from ancient ocean, lived a schoolmaster named Paley. He had a son, William, whom he on horseback, escorted to Cambridge University. The son rode also, and fell so often, that Paley senior ceased to look round, but contented himself, when he heard a sound on the road, by calling, "Take care of thy money, lad!" William Paley, this soft lad (who told the story himself), became the great Archdeacon and famed philosopher of Christianity, whose name and memory the world will not willingly let die.

About the head of Wensleydale, and thence to Bowland, where bows bows and pike-handles were the crops of greatest value in days of old, the natives saw, a few years ago, a young Quaker brushing the dew from the heath at early dawn and late twilight. This was a sickly youth who had been at school in a lower part of Yorkshire, but was removed and sent to the forest of Bowland and Fells, overlooking Wensleydale, in the hope that he might be saved alive in that region of health, of which there was little hope elsewhere. He rambled over those uplands, under guidance of the private tutor for a space of five years. There, on the very ground where peaceful Henry VI. meditated and envied

> the shepherd's homely curds,
> His cold thin drink out of his leathern bottle;
> His wonted sleep under a fresh tree's shade,
> All which secure and sweetly he enjoys.

There meditated, there grew to strength and intellectual vigour, on the shepherd's homely curds and cold thin drink out of a leathern bottle, one of the men of mark in our time—Mr. John Bright M.P. for Manchester. Of other notable persons belonging to that region of romantic scenery, of vigorous health, and wondrous longevity, there is not now convenient space to say much. The Lord Wensleydale, about whose peerage the guardians of the Constitution are now so much concerned, is a native of the vicinage of Liverpool, where his father was a merchant; but maternally, and (it has been said) by still more tender associations than the ties of his maternity, he feels an attachment to Wensleydale

## THE COUNTIES AND BOROUGHS POLICE BILL.

Local Government is dear to Englishmen, and any attempt to destroy the spirit of those institutions which have descended to us from the time of Alfred is sure to be unpopular. Such is the fate of Sir George Grey's Bill, which proposes to centralise all control over all the constabulary in every county and borough in the hands of the Secretary of State for the Home Department. The Justices in counties and the Watch Committees in boroughs are to be deprived of all substantial power. The Secretary of State is to nominate a Chief Constable in every county; or, what amounts to the same thing, no person can be appointed to that office without his sanction; and the Chief Constable is to select all the other constables. The second section of the Act authorises the Secretary of State, of his own will and pleasure, and without consulting the local magistracy, to order the division of any county into police districts; nor have the ratepayers, who must pay the police, any right of protest or interference whatever. The fifth section, which relates to the duties or interference whatever. of constables, is vague and undefined, and thus invests the Secretary of State with arbitrary power. No settled rule of conduct or action being laid down, the Secretary, may from time to time, and according to his own political prejudices, prescribe what are and what are not police duties; so that if he has the audacity to despise public opinion and set it at defiance, he may, with the Act in his hand for his justification, actually introduce a spy system. The sixth section gives him power to make rules for the government, pay, clothing, accoutrements, and necessaries of constables—duties now executed by the Watch Committees in boroughs, having local knowledge of these subjects. If the tailoring department is to be given up to the Home Secretary, it is to be hoped that the contracts will be so arranged that the poor women who are now making shirts and trousers for soldiers and sailors may escape that physical and moral degradation to which they are now subjected by the miserable pittance they are compelled to receive for their labour. The eighth section directs that the Chief Constable in each county is to furnish, when called upon so to do, information to the Secretary of State; and as the former functionary is to be the nominee of the latter, should peculiar circumstances arise, it is easy to predict in what spirit this correspondence will be framed. By the tenth section the Secretary of State will be empowered to nominate three inspectors, whose business it will be to frame reports; and thus additional patronage will be thrown into his hands, and a further step made in governing districts through commissionerships. The tenth section holds out a gilded bait to allure into acquiescence with this measure. It proposes to pay one-fourth of the charge for this new constabulary out of the Consolidated Fund; but this grant is only to be made on the certificate of the Home Secretary that the *number* of the police has his approval.

Such is a summary of the principal clauses in this last attempt at centralisation. The mayors of several towns have held a meeting in London on the subject, and condemned the whole scheme in the most unqualified terms. They have had an interview with Sir George, and refused any concessions; and Sir George appears determined to persevere. Whoever looks to foreign countries where local government has no existence will discover one of the main reasons why nationality with them is a feeble principle. There all authority is concentrated in the capital. The rural districts and the smaller towns know no other duty than the duty of obedience. The people have no practical school in which they can learn the elements of legislation and administration even on the humblest scale. In Italy, in Austria, in Prussia, there is no nobility corresponding to our House of Peers, no middle class which can be compared to our country gentleman. The foreigner is quite ignorant of the activity of political life, and never trains himself for functions which he is assured he never will be called upon to fulfil. Continental centralisation deadens intellect, for there is no scope afforded for its honourable exercise, even in the laudable pursuits of ambition. How different is the case in England, where local government opens up a career of usefulness and distinction in every city and borough, and holds out inducements to all to acquire knowledge, and win for themselves a mental qualification for at least some municipal office. It is this certainty of reaching a higher position by almost all who use the right means to attain it that gives strength to national character and national independence. We have seen some fifty or sixty Mayors of towns assemble in public meeting in the metropolis and protest against a Government measure,—what would our astonishment be were an equal number of French Prefects or German Burgomasters to adopt a similar course in their countries?

It is very probable that our provincial system of police requires amendment, and that its efficiency would be improved by a greatly reformed organisation. Let this be granted; still the major question remains, whether all needful improvements may not be secured without breaking in on the ancient principle of local or self government? Gold itself may be purchased at too costly a rate, and a wise conservatism will not rashly lift any of the anchors of the Constitution. A measure of the sweeping character proposed wears on its face the aspect of destructiveness, and from what has transpired at the interview at the Home-office the door is closed against compromise. Such being the nature of the struggle, even should Government triumph, discontent will remain; and the new policy, instead of being welcomed as one of beneficial progress, demanded by the popular voice, will be regarded as anti-national and coercive.

---

The Sound Dues.—It is said that the fresh proposals made by Denmark to the Sound Dues Congress consist in the offer to abolish them for ever on the payment of a sum of thirty-five millions of rix dollars, to be borne in fixed quotas by the Maritime States. The Councillor of State, Tengeberski, accepted this very moderate demand in the name of the Russian Government immediately and without any reserve, although Russia will have to bear nearly one-third of the whole sum. The Mecklenburg and Hanoverian Plenipotentiaries, who have all along supported Russia, also accepted the proposal, subject to the confirmation of their respective Governments, which there is no reason to doubt will be granted, as by that act they will be acknowledging the validity of Denmark's claims to the Sound Dues, and probably calculate on a similar future recognition of the equally-illegal demand for the river dues at Baitzenburg on the Elbe, which bring in about 150,000 dollars to the Treasury of Schwerin, and the Stade dues, which produce double that amount annually to the King of Hanover. If the Danish proposals for capitalisation are generally accepted, it is intended to pay off with the proceeds the foreign debts of the kingdom, contracted during the last war, including the English Three and Five per Cent Loans of 1825 and 1826; so that in future the whole of the national debt of Denmark will be confined to the loans contracted within the kingdom.

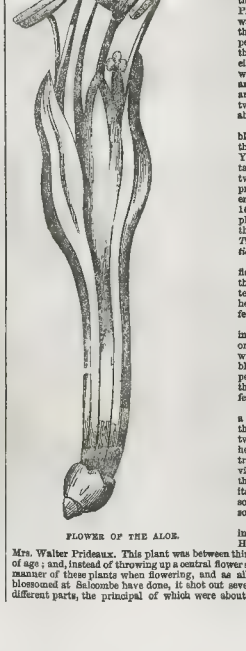
Minie Rifle-rest.—The invention of a rest for the Minie and other rifles has been a want very much felt by all persons who are aware of the precision and steadiness required in taking aim, especially at long ranges. This has just been accomplished by Mr. Charles Wentworth Forbes, of Ealing, in Hampshire. The process is as simple as the effect is remarkable. It consists of a line, which can be drawn out from the end of the rifle, near the muzzle, and placed under the left foot. The line is lengthened or shortened by a self-acting spring in the stock, and steadiness is obtained by the action of the spring resisting the upward pressure. All who have experienced the difficulties attending the clumsy fork-rests in deer-stalking, the seeking a place for a rest in the field, and the greater steadiness obtained by this rest over every other kind hitherto invented, will at once appreciate this valuable improvement, more especially when it is ascertained that no additional weight is added to the rifle. We understand the invention has been highly approved of by gentlemen accustomed to deer stalking and military men accustomed to rifle practice.

## THE SALCOMBE ALOES.

The year just past is rendered remarkable by the fact that no less than *three* plants of that beautiful and interesting exotic the *Agave Americana*, or Great American Aloe, have flowered in the open air, at Salcombe, near Kingsbridge. This place is situated at the extreme south of the county of Devon, and enjoys a climate and shelter unknown in other parts of England. Here oranges citrons, lemons, and limes come to perfection in the open air, and are equal, if not superior to, any that are brought from abroad. One tree, a Seville orange, is known to have attained the age of 200 years. In the grounds of the different

ALOE IN BLOOM, AT SALCOMBE.

seats belonging to Lord Kinsale, Lord Courtenay, and Mrs. Walter Prideaux, they may be seen trained like pesches against the walls, and are only sheltered in the winter nights by a mat hung against them. In these gardens may also be seen healthy and vigorous plants of the American Aloe (*Agave Americana*) and various other exotics, which here flourish in the open ground, though elsewhere they are carefully kept in greenhouses and conservatories.



FLOWER OF THE ALOE.

The first Aloe known to have flowered here did so in 1774, and hundreds of people came from great distances to see it. It was then twenty-eight years old, and grew in the grounds of Cliff House, the seat of Mrs. Walter Prideaux. The growth was very rapid, being at the rate of nine inches per day, until it reached the height of twenty-eight feet; the leaves were six inches thick and nine feet in length, and the flowers on forty-two branches innumerable.

In 1820 a second Aloe blossomed, at Woodville, then the seat of James Yates, Esq., which attained the height of twenty-seven feet, and produced forty-two flowering branches, bearing 16,000 flowers. This plant is fully described in the fifth volume of the *Transactions of the Horticultural Society*.

In 1832 a third Aloe flowered, at the Moult, the seat of Lord Courtenay, and reached the height of twenty-eight feet.

A fourth Aloe flowered in 1835, at Woodville, ornamenting the grounds with its almost countless blossoms and stately appearance: this reached the height of twenty-four feet nine inches.

In the autumn of 1840 a fifth Aloe flowered, at the Moult, and was twenty-seven feet in height. It had been transplanted the previous year, which perhaps threw it into bloom, as its leaves were not quite so large as its predecessors.

In 1842 a sixth came into bloom, at Cliff House, the residence of Mrs. Walter Prideaux. This plant was between thirty and thirty-five years of age; and, instead of throwing up a central flower stem, which is the usual manner of these plants when flowering, and as all the others that have blossomed at Salcombe have done, it shot out seven separate stalks from different parts, the principal of which were about ten feet high. From this circumstance the peculiar character of the plant was lost. Its appearance was, however, extremely beautiful, and it continued in bloom without the slightest protection through the whole of the succeeding winter.

In the autumn of the year 1847 another aloe came into bloom at Woodville. This was a fine specimen, and formed the seventh that had flowered at Salcombe. It was twenty-eight feet high, and had the magnificent central flower-stem which is the characteristic of these splendid plants.

In the year 1855 three Aloes were in flower at once. Of these, one was in the gardens at the Moult, another in a small garden by the side of the sea, and the third flowered at Clifton House.

This plant is twenty five feet in height, and full of splendid blossoms, and was planted in 1836. It forms a beautiful specimen of these noble plants, as may be seen from the Engraving which is copied from a photograph taken in June, and kindly permitted by Mrs Prideaux to be engraved for this Journal. The small engraving is one of the flowers which form the clusters at the end of each branch, and is of the full size. The colour is a delicate pale green.

The other two, which are also yet in blossom, are two noble plants, and, should there be no severe frosts, will no doubt remain until late in the spring, towards the end of which they gradually die away, and are succeeded by hundreds of little suckers, each of which will in its turn become an exact copy of the parent plant.

From the thread of the Aloe that blossomed at Cliff House in 1842, after it had been prepared, numerous little articles in fancy needlework were made, which look extremely pretty.

In the different gardens above named the luxuriance of the New Zealand Flax (*Phormium tenax*) is remarkable, some immense masses being more than seven feet high, and very beautiful. They are in the strongest health, and are uninjured by the severest Devonshire winters. Two smaller plants have blossomed, the flower-stalks being between two and three feet higher than the leaves.

C. P. T. Young.

---

James Punch, says the Cincinnati *Enquirer*, in his one hundred and eighth year, expired in this city on Friday, the 25th of January. Punch was the slave of Colonel Warren Washington, of Virginia, nephew of General George Washington. He came to this city about twenty-five years ago, after having been set free, in company of J. H. Platt, Esq. During our struggle in the Revolutionary War, Punch acted as servant to officers in several of the most important engagements, and often recurred to the sights he had seen, and part of which he was. He died in poverty, and was permitted to be buried at the expense of the county.

St. James's-Park.—We have received a communication from Messrs. Homer and Molesworth, Civil Engineers, of Beaufort-buildings, Strand, who propose to solve the *vexata quæstio* of the road across St. James's-park. We recommend, say these gentlemen, that the communication shall be made by a sunk road, commencing at Pall-mall (between St. James's Palace and Marlborough House), and falling with an inclination of 1 in 24 until it reaches a sufficient depth to pass underneath the roads of the park and the ornamental water. After crossing over to Queen-square, it again rises with an inclination of 1 in 37 until it reaches the level of the street at Broadway. Where it passes through the park it would have retaining walls on each side, coped just above the level of the ground, and surmounted with a light iron railing. Shrubs would be planted against the railing, so as to hide it completely from view. The road would be arched over where it passed beneath the Mall, the ornamental water, and the Birdcage-walk; and a circular opening of fifty or sixty feet diameter would be left in the middle of the water, which might have the appearance of a basin, or rockery on which creepers or shrubs might be planted. The road would thus be kept entirely distinct from, and out of sight of, the park, and would not affect it in any way. The road need not to be sunk lower than is necessary to allow the crown of the arch to be one foot below the surface of the water. The inclination of 1 in 24 would not be inconvenient, being much less than that of Holborn-hill, which is 1 in 20; and it might be decreased still further by slightly raising the roads under which it passes with the materials excavated. Should the sunk road be below the level of the sewers, the drainage might be effected by forming a large receptacle, into which the surface water can flow, and employing a small high-pressure engine to pump it into the sewers. The engine may be placed beyond the park. It will, perhaps, be objected that the cost of this plan would be greater than that of the plan proposed by Government. Undoubtedly it would. Still, when we consider that it gives that *direct* communication which is so much desired, and keeps the traffic entirely out of the park—thus leaving "London's lungs" unaffected—we think that the money would be *well* spent.

The Duchess de Caumont Laforce.—This lady who was assassinated on the night of the other day, was exceedingly eccentric, and had in her life been famous for the strange things she did. Some years ago she chose to separate from her husband, and actually profited by the privilege of pleading her own cause, which she did plead with great remarkable eloquence. Separated from M. de Caumont, her children were left under her care as first, but subsequently taken from her, because it was found out that she positively did not allow them enough to eat. Since then she had led the most curious kind of life, living alone, with the exception of one female servant, in her spacious hotel of the Champs Elysées, and hiring an outdoor servant by the day. On Wednesday night the female attendant was absent, and, therefore, the real circumstances of the murder remain still a mystery. A great noise of screaming was heard by the neighbours, between nine and ten o'clock; the alarm was given, and as a policeman was trying to enter the house a man emerged from it, his face much scratched, and with an air of general confusion about him. He was arrested and instantly avowed himself. The wretched victim was found in a frightful state of mutilation, her head literally dashed to pieces. But the most melancholy part of the story was perhaps that concerning her only sister, the Countess de L'Aigle, who lived close to her, and was her only associate. This poor lady was returning from daily mass, when, not far from her sister's door, she saw a concourse of people, and perceived a man led away by two officers of police. She desired her footman to inquire how what had happened, and the reply was that it was a man who had murdered his mother. "But ask how, and find out some details," continued she; and, as she pressed forward, a person in the crowd said to her, "Oh, no, Madame, that is not it; the man they are carrying away there has just assassinated Madame de Caumont Laforce, who lives at No. 78,—that is the real story." On hearing this horrible announcement, the unfortunate lady rushed forward, and could only just reach her sister's house when a sort of fainting fit seized her, and she was admitted into the courtyard by the commissary of police, who recognised her.—*Paris Correspondent of the Manchester Guardian.*

The American Treaty with Japan.—Our much-vaunted treaty with the Japanese seems to work no better than the boggled Clayton-Bulwer treaty. The Japanese are very strict constructionists, and interpret the treaty as only binding them to admit American vessels in future to put into either of the three ports named for wood and water. Having obtained these, they are expected to depart with the utmost dispatch. The Japanese authorities, in fact maintain that the treaty does not make the ports named in it ports of call for American vessels, but merely ports of temporary refuge; and, consequently, that vessels not under stress of weather, or out of the most indispensable supplies have no right to enter. Our American shipmasters have interpreted the treaty differently; and this is not strange after the amount of fuss and fustian published in the newspapers about Commodore Perry's great naval and diplomatic achievements in breaking down the barrier of exclusion which Japan had long maintained against the ships and commerce of the civilised world. Our practical-minded merchant captains cannot understand the use of the expensive naval parade made in the seas and harbours of Japan, if it was not intended to gain for them something more than the barren privilege of entering certain ports and leaving them as speedily as possible, without holding communication or trade of any kind with the people of the country. The last mail from Europe brought the report of difficulties having sprung up at the port of Simoda between the Japanese and a fleet of American vessels which put in under the treaty to obtain supplies. The Japanese refused to furnish the supplies, and treated the Americans with harshness. The latter were not disposed to submit, and, it is said, took what they wanted, paying for it what they considered a fair price. A collision occurred in consequence of these difficulties, and several Japanese are said to have been killed. It is evident that the Perry treaty requires amendment, and it should be amended as soon as possible, to prevent too much bad blood getting up between our people and the Japanese through disputes regarding their respective rights.—*New York Gun.*

Take Care of Your Wine.—A number of labourers and workmen of Putoaux and the neighbourhood having been observed for several days to be in a state of continual intoxication, and numerous bottles, which had evidently contained wines of the finer sorts, having been found strewed about the roads and fields in that neighbourhood, it was deemed advisable to make an investigation, and it was discovered that a number of labourers, employed in making improvements in the grounds of a gentleman of property, had, on the instigation of a discharged gardener, cut a subterranean passage from the outer wall to the cellar, and had stolen from the latter no fewer than 720 bottles of burgundy, Johannisberg, tokay, and other wines. The gardener and a number of men were yesterday arrested for the robbery.—*Galignani.*

Beautiful Visions.—Prince Augustus of Wurtemberg, a member, by marriage, of the Imperial family, and who has just returned from a military mission to Berlin and Hanover, had a private audience of the Emperor yesterday, and expressed the great satisfaction felt by the Court of Prussia at the adhesion of Russia to the propositions of Austria. The Emperor again expressed his desire to see peace concluded in the interest of the general tranquillity of the world, and in that of the amelioration which he has in contemplation for Russia. It is said that the Czar intends to completely reform the customs régime, and to replace the present system, which is nearly prohibitive, by one framed with more liberal views. People who pretend to be well informed on those intended reforms, say that foreign commerce will hereafter find all the frontiers open. They go even further, and affirm that the commercial treaty between Russia, France, and England is already drawn up and will be signed immediately after the conclusion of peace and the recognition of Alexander II. by the Courts of Paris and London.—*Letter from St. Petersburg, Feb. 12.*

STATE PROCESSION BEARING PRESENTS FROM THE

-GENERAL OF INDIA TO THE KING OF AVA.—(SEE NEXT PAGE.)

## MISSION FROM THE GOVERNOR-GENERAL OF INDIA TO THE KING OF AVA.

*(From a Correspondent.)*

THE Mission to the Court of Umeerapoora, bearing presents from the most noble the Governor-General of India, the Marquis of Dalhousie, to his Majesty the King of Ava, left Rangoon in flats, or large accommodation-boats, towed by two steamers, on the 1st of August; and, after a very interesting journey up the Irrawaddy, and being joined near the frontier by various Burmese officers of State as escort, guides, and entertainers *en route*, were finally met by a deputation from the Court; and, accompanied by a host of war-boats as escort, containing, probably, four thousand men, conducted to the capital, which was reached on the 1st of September.

A very commodious dwelling had been erected as Residency on the eastern bank of the Lake Toungzeman, and every careful and liberal provision made for the wants and comforts of the Mission. Elephants and horses were placed at hand for service; provisions—bread, vegetables, fruit, fish, rice, and such things—were daily sent in; and with equal regularity supplies from his Majesty's larder, consisting of fruit and sweetmeats—the latter said to be prepared under Royal feminine superintendence, and filling eighteen immense silver dishes—were brought to the Residency, a distance of two miles and a half.

The 13th of September was fixed for the public audience with the King. At an early hour of that day eight Burmese officers of State, in their ceremonial robes and caps, assembled at the Residency; and one was attached, as escort, to each member of the Mission. About nine o'clock, the escort and presents having already been sent to the other side of the lake, the Mission quitted the Residency, and embarked in boats; the Envoy accompanying the principal officers in a handsome war-boat, pulled by upwards of fifty men. On reaching the city side—where a score of the finest and largest elephants, with howdahs, were in waiting to convey the deputation to the palace—the procession, of which the Drawing is a representation, formed as follows:—

A small body of the 5th Bengal Irregular Cavalry, with their native officer, Resaldar Meer Wallanet Hoosein, commanded by Captain A. M. Mackenzie, second in command of that corps.

The band of H.M. 90th Regiment.

About eighty men of H.M. 84th Regiment, with their subaltern officers, Lieutenants Hardy and Woolhouse.

The Secretary to the Mission, Captain H. Yule, on an elephant, bearing the Governor-General's letter on a gold salver, surmounted by the Company's jack, carried by a European seaman of the H.C.'s war-steamer *Zenobia*, and followed by two others.

The Envoy, Major Phayre, Commissioner of Pegu, in his tonjon, carried by six Bengal bearers, and escorted by two very beautiful gold kinoob umbrellas—which, it is necessary to mention, form in Burmah the distinguishing mark of rank or dignity, a plurality being always used by those high in station. At his side were two other similar umbrellas, borne aloft by two of the *Zenobia*'s crew, and intended to cover the Governor-General's letter.

Immediately behind the Envoy, or nearly on each side of him, were the two principal officers of State who had accompanied the deputation from the Residency—namely, the Nama-Gee Woon, or Queen's Minister, and the Woondouk, or assistant Minister to the King.

Then followed the gentlemen of the Mission, each on an elephant, and accompanied by the officer already mentioned, as being attached as complimentary escort, viz., Dr. J. Forsyth, Superintending Surgeon; Major Grant Allan, D.Q.M. General, 3rd M.L.I.; Captain J. Rennie, I.N., Commander *Zenobia*; Professor T. Oldham, Geologist; Captain Willis, Commanding Escort, H.M. 84th Regiment; Captain L. Tripe, 12th Regt. M.N.I. accompanying Mission as Photographist; Lieut. Heathcote, I.N. *Zenobia*; Mr. C. Grant, Artist; Mr. R. S. Edwards, Attaché to Mission; Dr. Cholmeley, 26th Regt. M.N.I., Captain Porter, Commander steamer *Nerbudda*; Captain Duncan, Commander steamer *Proserpine*; Mr. Ogilvie, I.N., *Zenobia*.

Beades Burmese functionaries, or subordinate officers of the Government in attendance on the Envoy, riding in gold mounted saddles upon horseback, there followed the Guard from the Residency, about 500 Burman infantry, who closed the cortège.

It was a lively and showy day in Umeerapoora, all the inhabitants of which were assembled on both sides of the road seated (the customary Burmese attitude of respect). The distance of the route from the landing to the palace was upwards of three miles; and the whole crowded on both sides throughout the entire march was lined with the Burman troops—infantry and Cassay horsemen: the former armed with muskets, from the muzzles of many of which projected sprigs of grass or flowers—a very pleasing idea, reminding us of Landseer's beautiful pictures of "Peace" and "War." The horsemen were armed with spears, and mounted on ponies.

After a burning ride of about two hours and a half, the palace was gained; the gates opened, and, after the customary little delay and ceremonies, the audience-hall was entered, where were assembled all the nobles of Ava, and the Mission was received in front of the throne.

In a few minutes a procession and music were followed by the entrance, through a pair of folding doors at the back of the throne, of the King and Queen, who presented a most magnificent spectacle in regal splendour—sparkling in massive robes of gold and innumerable jewels.

The ceremonials consisted in prayer or invocation for the King, reading a translation of the Governor-General's letter, and a list of the presents for his Majesty and the Queen. This done, questions were put to the Envoy, touching the health of the British ruler, the journey, and the seasons; and these being answered, were followed by presents to the Envoy—a gold chain of dignity placed round his neck, a handsome gold cup, a valuable ruby ring, &c.; and to the Mission, gold cups, ruby rings and Burman silk dress pieces called putsos. This being done, and the silent acknowledgments of the Envoy and Mission made by bowing to the throne, their Majesties arose and retired, and the Envoy and Mission withdrew.

The moment represented by the Sketch is that when the procession is drawn up at the gate of the Palace, the gilt spire of which appears in the rear; and the troops of her Majesty's 84th and Irregular Cavalry, with their leader, Captain Mackenzie—his horse taking fright at the appropaching elephants—are saluting the Envoy on his passing between them towards the Palace.

CELEBRATION OF WASHINGTON'S BIRTHDAY.—The Minister of the United States in PARIS and the American residents gave a grand ball on the 22nd ult., in commemoration of the anniversary of Washington's birthday. It took place in the magnificent apartments of the new Hôtel du Louvre. The saloons were thrown open at ten o'clock; before eleven not less than 500 or 600 persons had arrived; and up to an advanced hour company continued to flow in. The ball-room, which is one of the finest in Paris, was most brilliantly lighted up. At the further end, and immediately over the gallery where the orchestra was stationed, hung the portrait of Washington, surmounted by the American eagle, and by clusters of flags, with the well-known "stars and stripes." On the right was the portrait of Franklin, and on the left that of Lafayette, all in richly-gilt frames, and adorned with similar national emblems. At the other extremity, immediately over the entrance, was the portrait of President Pierce. To the right was the full-length likeness of the Empress of the French; and on the left that of the Emperor, habited in military costume, and wearing the Imperial mantle. In the anteroom the Minister of the United States, and the gentlemen who acted as Commissaires—a number of blue ribbons on the breast being the distinctive mark of their office—received the company.—*Letter from Paris.*

M. CABET'S COMMUNIST COLONY IN THE UNITED STATES.—The *Independance Belge* states that the communist republic of Icaria, established at Nauvoo, is in a state of disolution. The President, M. Cabet, is represented as meditating a *coup d'état* against the minority of his adherents, who are in the habit of questioning the expediency of many of his acts, and are therefore enough for him to wish him at Sea were not a common mortal like themselves. M. Cabet declares, in his official journal, that "Icaria is in danger in consequence of the audacity of some ungovernable men plunged in vice;" he then proposes a new constitution in ten articles, by which he is to be invested with absolute authority.

THE ATTEMPT TO MURDER AN ENGLISH LADY AT PAU.—The trial of the Swiss *femme de chambre*, Dufey, for an attempt to murder her mistress, an English lady, Mrs. Brock, has just taken place at Pau. Mrs. Brock, an infirm lady, had, it appears, forty-three gold pieces stitched in her corset, which had attracted the cupidity of her maid. One morning she attempted to smother her mistress, and would have succeeded, had not the latter's cries alarmed a servant, who brought in the landlord of the house in time to recall the lady, who lay senseless, to life. The jury found the woman guilty, and the court sentenced her to twenty years' imprisonment with hard labour.

DISCONCERTING AN ORATOR.—It is an astonishing thing how little a matter will sometimes disconcert a man who is accustomed to speak in public, and to have his thoughts about him and ready at command on almost all occasions. "I was once opening a speech from the stump," said a distinguished western political orator to us recently, "and was just beginning to warm with my subject, when a remarkably clear and deliberate voice spoke out behind me, saying, 'Guess he wouldn't talk quite so bifalicatin' if he knew that his trousers was bu'st clean out behind!' From that moment I couldn't get on. The people in front began to laugh, and there was a loud roar in my rear, and I dared not reverse my position for fear of having new beholders of my condition. I made, or rather invented, an excuse for delay, and sat down. The malicious scoundrel!" continued the orator, "it was only a mean trick, after all. There was nothing under heaven the matter with my unmentionables.—*American Paper.*

## A CALL TO POLAND.

By L. L. SAWASZKIEWICZ. Paraphrased from the Polish by Miss CATHERINE FOSTER.

[These touching lines, written many years ago, are now published for the first time. M. L. L. Sawaszkiewicz is known as an historical and political writer, connected with the press of this country as well as with Continental journalism. He was, after 1848, one of the editors of the daily Parisian paper, *La Tribune des Peuples*, in which capacity he was associated with the late Adam Mickiewicz, the celebrated Polish poet, called by M. Michelet the "Homer of the North." Miss Foster, whose elegant translation or paraphrase of the original Polish we here present to our readers, is known for an able poetical version of the Psalms which she executed some years ago, in conjunction with Miss Collins.]

Or! pardon, island of the generous stranger,
That from the gardens of thy bright and gay
(Ah! never may they know or blight or danger!)
An exile's weary eyes I turn away—
Through those fair fields where I was once a ranger,
In younger, happier days—to bid them stray;
And, passing thy calm heavens no respite make me,
Seek other dearer skies where lower the clouds of war.

Sullen and dark they frown above the land
Whose slaughtered sons unburied rest below;
Sullen and dark, as Nature's mighty hand
Her funeral pall did o'er the sleepless throw.
O, England! fair thy goodly plains expand,
Yet pardon that I seek that scene of woe;
Where, though with anguish pale, on Poland's face,
To cheer her suffering child, a mother's smile I trace.

Still, still to her I sigh across the floods
That rear between us; still I hear in dreams
The hearing of her heart; forgive the moods,
When sick I turn, from all that brightest seems,
Where wave, though but to sigh, my native woods;
Where flow, though mixed with tears, my native streams;
Where stand my native halls, that ruin fills;
Where rise, as in appeal to Heaven—my native hills.

Of all thy slaves, none wretched as their king,
O man! creation's sovereign though thou be
I envy every—ay, the meanest thing
In the vast chain of life through earth and sea.
Thou pilgrim swallow, that dost plume thy wing
To fly th' impending frosts, I envy thee.
For thee the spring shall come again. But oh!
What spring shall ever chase the winter of my woe!

The season of the snows shall pass away,—
Thou shalt return, and find thy home again;
And the same shrub shall shield the walls of clay
Thou knew'st so well ere thou didst cross the main.
But when shall I, on stranger soils that stray,
And waste my soul in longings sad and vain,—
Oh! when shall I once more behold the sea!
Bird of the ever-shifting wing, I envy thee!

Would I were thee—thou most despised of all
That cleave the waters, or the blue air beat,
That proudly tread on earth, or lowly crawl—
Would I were thee—thou worm, beneath my feet!
Unseen, I might have gained my father's hall,
My father's heart—he knows no more its heat!
And mid the wreck of houses, dods o'erthrown
Where its cold ashes lie, well pleased, have left my own.

Lend me your pinions, O ye birds of heaven!
That I may flee away and be at rest -
I envy you, your wings far stretching, given
(Or so I deem) to bear you from the West.
I envy thee, unthinking atom, driven
To light perchance upon my country's breast.
I envy thee, bright tenant of the wave,
Thy fins may find the stream my native fields that lave.

Why have ye wings, ye denizens of air!
You are no sailing pining for your home.
Hard by, yon forest holds your callow care,
There is your treasure—wherefore should you roam!
Lend me your wings, thus struggling frame to bear—
(Where is my heart)—far though yon sea may foam:
From Warsaw's towers—an eagle on my prey
Let me swoop down, and bear the oppressing Russ away.

Far, in some savage howling wilderness,
To cast him out; or on some utmost shore,
Where Nature wears her most horrific dress,
To perish mid the wrecking breakers' roar,
Greedy like him of havoc and distress—
You ship, the wind that ruleth them forbore,
Lies shattered, sunk, 'neath their relentless waves:
So Poland 'tis with thee—enslaved, and laid, by slaves!

Oh, bitterest drop in all that cup of gall,
Which, with averted face, Fate hids thee drink,
Lest pitying tears dilute the draught, and all
Her soul should from its savage purpose shrink!
Oh, bitterest drop, beneath the fall'n to fall!
Oh, bitterest drop, beneath the crush to sink!
Bondage is worse than death, e'en from the free,
But slavery from slaves, what horror equals thee!

Bird of Jove's lightning! Rider of the storm
Cosequat with the thunderbolt of heaven!
And did I ask thy strength-subduing form
With Poland's desolator to have striven!
No—were that horrid vengeance to disarm,
Be Philomela's soul of sorrow given;
To calm, to soften, and—oh! sweet relief—
On Lithuanian plains, dissolve in tender grief.

With eagle wings to cleave the azure flood,
Till I could fold these, Warsaw, o'er thy towers,
With night's sad mantle, charm the watchful eye,
And my own anguish—through the silent hours;
Where all unspeiched, the brave and good
Whiten in heaven's sunshine and its showers.
This were to soothe my yearning heart; but, oh!
Still, still I am but man—that other name for woe.

O Thou, that hast thy seat above the skies!
O Thou, who through infinity art found!—
As mounts to Heaven, unseen of mortal eyes,
The pearly dewdrop that late gemmed the ground,—
So let my tears, O God! to Thee arise,—
My voice of wailing. Thine our resource;
Though 'neath Thy throne the very stars be dust,
Thou hast regard unto the low—and unto Thee I trust.

Thou wilt restore our land—I will not weep,
For the glad presage that my bosom cheers
Thou send'st, an earnest that we yet shall reap
In joy—who long, too long, have sown in tears.
Oh! let me sleep, an adamantine sleep,
Till the fair dawn of that blest day appears,
Make me a rock!—insensible to pain,
'Gainst which the surge of Fate, unfelt, may rise and fall.

THE MISSING TRANSATLANTIC STEAMER.—The anxiety felt for the steam-ship *Pacific* had become intense. For the date of our last advices from New York, she had been out twenty-two days. It is thought that she may, perhaps, have been detained by the foe. If so there is no cause for serious alarm. The United States propeller *Arctic* sailed from New York on the 11th February, for a voyage along the coast in search of the *Pacific*. The *Arctic* is supplied with abundant provisions and stores for the support in comfort of a hundred persons for two months' voyage. Spars, sails, and other rigging is supplied to refit any ship that may have lost theirs by the storms. There are also on board a large quantity of blue lights, Congreve rockets and the like, to signal vessels in distress. The *Arctic* was to sail for the Grand Banks, and stand on and off the usual course of vessels sailing for New York—hailing every vessel for information of the missing steamer.

## THE SUICIDE OF MR. SADLEIR.

The adjourned inquiry into the circumstances connected with the death of Mr. James Sadleir, M.P. for Sligo, was held on Monday last, at the workhouse, Hamistead, where the letters that had been ordered to be produced were brought forward in pursuance of the Coroner's summons. Mr. Keating produced the letters addressed to him, and the letter addressed to Mrs. James Sadleir by Mr. Sadleir.

Mr. Anthony Norris, of 2, Bedford row, solicitor, stated that he left Mr. Sadleir a little after eleven o'clock on Saturday night. He remained with Mr Sadleir half an hour, during which time he received a telegraphic message from Dublin, relative to the affairs of the bank. It did not appear to make any deep impression on his mind. He read it and threw it over to witness to read.

The Coroner having looked over the letter, said every word of it should be read, except the names of certain parties who were mentioned. Several of these persons were said to be ruined by the villany of Mr. Sadleir; and if they were not quite ruined the publication of their names would complete their misery.

Mr. Norris then read the following letter:—

Saturday night.

I cannot live. I have ruined too many. I could not live and see their agony. I have committed diabolical crimes unknown to any human being. They will now appear, bringing my family and others to distress, causing to all shame and grief that they should have ever known me. I blame no one, but attribute all to my own infamous villany. . . . Hundreds of hundreds others have been ruined by my villany. I could go through any torture as a punishment for my crimes. No torture could be too much for such crimes, but I cannot live to see the tortures I inflict upon others.

J. SADLEIR.

Telegraph to ——— and others when you read this.

Mr. R. Keating, M.P. for Waterford, who was next called, said he was most intimately acquainted with the late Mr. Sadleir. The last written communication he received from him was on Sunday week, about eleven o'clock in the morning. He received two letters. He saw him in the City about five o'clock the evening before. It was at the offices of Messrs. Wilkinson, No. 2, Nicholas-lane. There was a great deal of excitement about him, in consequence of the failure of the Tipperary bank. He heard in the morning that one of Mr. Wilkinson's firm was going to Dublin, but he did not know that he had any thing in connection with Mr. Sadleir's affairs. In justice to himself, he (witness) felt bound to say that it was a very painful thing for him to be compelled to produce the letters, as he looked upon them as private and confidential. The first letter was as follows:—

Feb. 16, 1856.

Dear Robert,—James sent me over his title-deeds of Coolnamuck and Kilconnell. I have not used these deeds in any way. I gave Gurney a letter from James, intrusted to me by him, which J. Gurney had sent to him. This letter cannot be acted on by J. Gurney without my brother's express authority

E. Keating, Esq., M.P. J. SADLEIR.

T. Uzzlib has a bank bill, £2000, on which nothing is due; it should be at once cancelled. If on Monday the £2000 is not lodged, £2000 must be paid—to East Kent Railway, for £3 orders, £6200, and the £2000. £2500 must be paid in to Glyn's, to meet order at sight issued to-day. At Carrick Gurney knows the orders falling due on Thursday. All are advised, save the one for £6200, my favour. This must be taken up on Monday, not being advised. I cannot live.

J. S.

Mr. Keating then read the second letter, which was as follows:—

1, Gloster-terrace, 16th Feb., 1856.

Dear Robert,—To what infamy have I come, step by step, heaping crime upon crime, and now I find myself the author of numberless crimes of a diabolical character, and the cause of ruin and misery and disgrace to thousands—ay, to tens of thousands.

Oh, how I feel for those on whom all this ruin must fall! I could bear all punishment, but I could never bear to witness the sufferings of those on whom I have brought such ruin. It must be better that I should not live.

No one has been privy to my crimes. They spring from my own cursed brain alone. I have swindled and deceived without the knowledge of any one. Stevens and Norris are both innocent, and have no knowledge of the fabrication of deeds and forgeries by me, and by which I have sought to go on in the formal hope of retrieving. It was a sad day for all when I came to London.

I can give but little aid to unravel accounts and transactions. There are sections of crimes as to my interest in the Tipperary and other undertakings. Much will be left to the creditors if these cases are not fairly treated. The Great Junction, the East Kent and the Swiss Railways, the Rome line, the Con. Company, are all liable to be entirely lost now, so far as my assets are concerned.

I authorise you to take possession of all my letters, papers, property, &c., in this house, and at Wilkinson's, and 2, Cannon-street. Return my brother his letters to me, and all other papers. The prayers of one so wicked could not avail, or I would seek to pray for those I leave after me, and who will have to suffer such agony, and all owing to my wicked career.

O that I had never quitted Ireland! O that I had resisted the first attempts to launch me into speculations! If I had less talents of a worthless kind, and more firmness, I might have remained in private, honest and truthful, and I would have lived to see my dear father and mother in their old age. I weep and weep now, but what can that avail?

J. SADLEIR.

Mr. Keating, on reaching that part of the letter which related to Mr. Sadleir's father and mother, paused briefly, and a profound sensation was created amongst all present. He said he had received a letter from Mrs. Sadleir (a sister-in-law of the deceased) inclosing the letter which Mr. Sadleir wrote to her the day before he died. It was as follows:—

James is not to blame. I alone have caused all this dreadful ruin. James was to me too fond a brother; but he is not to blame for being deceived and led astray by my diabolical acts. Be to him my honoured all the support you can. O, what would I not suffer with gladness to save those whom I have ruined! My end will prove at least that I was not callous to their agony.

A telegraphic message, which was received by Mr. Sadleir while Mr. Norris was with him on Saturday evening, was handed in. It was as follows:—

Telegraphic message from James Sadleir, 30, Merrion-square, South Dublin, to John Sadleir, Esq., M.P., Reform Club, Pall-mall, London.

"All right at all the branches, only about a few small things refused here. If found, £20,000 to £30,000 over here on Monday morning, all is safe."

Mr. Josiah Wilkinson, of the firm of Wilkinson, Gurney, and Stevens, was examined. His evidence related to the possession of a forged deed given to him by Mr. Sadleir:—"He gave me the deed I have spoken of; and when I found the Tipperary bank was in difficulties, I determined to register it before it could be claimed by the creditors. It purported to be of an estate under the Encumbered Estates Court. I have heard that there are a great many forged deeds in existence, but I have not obtained any of them. I have seen a great many of Mr. Sadleir's lately, and they are all genuine except that which I unfortunately possess. I do not think the matters are so bad as Mr. Sadleir's letters seem to imply."

The Coroner said it would be a question for the jury to consider, whether Mr. Sadleir did really commit the acts of forgeries and frauds alluded to, or whether they were mere delusions. The question with regard to the property was very important; for if Mr. Sadleir destroyed himself in sound mind, all his property, his goods and chattels, would be forfeited to the Crown. Up to the present time he (the Coroner) saw no signs of insanity; but if it could be proved that these documents were written under the delusion that he committed what he considered he never committed, that would be positive proof that he committed suicide in an unsound state of mind. It was due to the deceased, his friends, and to the public at large, that there should be a full enquiry.

The jury expressed themselves desirous of further evidence upon this point, and after some discussion the inquiry was adjourned for a fortnight.

## TO CORRESPONDENTS.

NUMISMATIST.—A sterling of John Count of Hainault, struck for Mona. The best works on coins are—For English: "Snelling on the Coins of Great Britain, France, and Ireland" (1 vol., 4to, 1833); and "Ruding's Annals of the Coinage of Great Britain and its Dependencies" (3 vols., 4to, 1840). For Scotch: "Lindsay's View of the Coinage of Scotland" (1 vol., 4to, 1845)

MARIUS.—Arms of Saunders—Per chev. az. and arg. three elephants' heads erased counterchanged.

A CONSTANT READER.—The Arms of the famous William de Valence, Earl of Pembroke, son of Hugh de Brun, Earl of March, by Isabel, his wife, widow of King John, were "Barry of six, arg. and az. An orle of martlets gu." We cannot trace the Crest (if any) he bore.

A READER.—To almost every shield of arms there is a crest. We have, however, some instances of the contrary. A motto may be adopted at will, but not a crest.

T. S. J., Camelford.—A grandson, in the male line, is entitled to the same coat of arms as his grandfather.

EUREKA.—Application should be addressed to "The Offices in Waiting, College of Arms, London." The fee for a search is trifling.

S. A.—Sir Thomas Gwynne Morgan, the husband of the distinguished writer, Lady Morgan, was a physician. He received the honour of knighthood in 1811, married Miss Sydney Owenson in 1812, and died in 1843. We have no further particulars of his professional career.

GENEALOGUS.—The Viscounty of Baltinglass was conferred 26th June, 1542, on Thomas Eustace, Lord Kilculien, and is now vested (where the attainder removed) in Captain Charles Stannard Eustace, only son and heir of the late Rev. Charles Eustace, of Robertstown, co. Kildare, declared to be heir to the title by the report of H.M. Attorney-General.

NUMMUS.—Apply to Mr. Webster, 17, Great Russell street, Covent-garden.

ANTIQUARY.—Your first coin is a 10 Kopeck piece, of Elizabetha Petrowna of Russia; and the other a billon coin of Victor Amadeus III. of Sardinia.

B. A. C.—By applying to Professor Taylor of Gresham College our Correspondent will ascertain how to become a member of the "Purcell Musical Club, and what qualifications are necessary to obtain admittance.

# Memorabilia,

LITERARY, ANTIQUARIAN, SCIENTIFIC, AND ARTISTIC.

"*A little chink may let in much light.*"—OLD PROVERB.

## CUP, PRESENTED BY HENRY VIII. TO THE BARBER-SURGEONS.

IN a secluded turning, a short distance from the back of the General Post-office, the very name of which (Monkwell-street) carries us back to the feudal times, and seems an appropriate designation for a spot so gloomy and retired, stands the Hall of the once-flourishing Company of Barber-Surgeons.

The Hall itself is not without interest, being a lofty and spacious room, with a handsome semi-circular end, built on a bastion of the ancient London Wall; but it is on what is called the "Court-room"—an admirably-proportioned apartment, built by Inigo Jones, and having a richly-decorated ceiling, that the treasures of this ancient Company are contained. Upon entering the Court-room the visitor is at once struck by a magnificent picture of Holbein's—one of that great master's grandest performances, representing King Henry VIII. Conferring the Charter on the Company. This fine painting is ten feet six inches long, and seven feet high, and fully justifies the admiration with which it has been regarded by the best judges. There is a pleasant story told of the late Sir Robert Peel, who was a frequent visitor to the room, having been so enchanted with this painting, and with one head in it particularly, that he offered 2000 guineas to be permitted to cut out the head in question and substitute another in its place!

Near to Holbein is a masterly portrait of Inigo Jones, by Vandyke; and opposite, over the fireplace, a gorgeous full-length of the well-known Countess of Richmond, by Lely. Surrounding these are well-executed portraits of Sir Charles Scarborough, Chief Physician to Charles II., Dr. Arris, Dr. Green, and other esteemed members of the Worshipful Society.

Here, too, are deposited the curious and valuable records of the Company, and what remains of their once-costly plate. The latter, it appears, has undergone strange perils and vicissitudes—having been sometimes pledged and once sold; but the most interesting portions, consisting of the Royal presentations, have always found their way back to the Company's coffers. It is recorded, that on one occasion the Hall was broken open and all the plate, with a considerable sum of money, carried off; but, one of the thieves confessing, a clue was obtained and good part of the treasure recovered. The plate still preserved consists of a splendid silver-gilt cup and cover, given by Charles II. (engraved in one of our Exhibition Volumes for 1851); a large chased silver punch-bowl, the gift of Queen Anne, four crowns or "gurlands of silver, enamelled, garnished and set forth after the meatest manner:" and various beakers, goblets, flagons, dishes, &c.; and last, not least, the elegant silver-gilt cup which adorns the present column. This cup was given to the Company in 1540, by their great patron Henry VIII. It is richly embossed with ornaments in the style of Holbein—among which occur the rose, *fleur-de-lis*, and portcullis. Four lions' masks are on the bowl, from which depend bells, and in the interior are engraved the arms of the Company.

At the period alluded to above, when circumstances compelled the Society to sell their plate, it is told, to the honour of Dr. Arris, that he repurchased this cup and presented it to the Company. We hope the generous act is not forgotten on those few high days and holidays when the old Hall table is resplendent with the "beakers, goblets, flagons," &c., of which we have been talking, but that on such occasions one toast, from the cup just described, is invariably drunk—"the memory of loving brother Arris!"

### NOTES.

KITTY FISHER'S JIG.—Mr. Rimbault is quite correct in stating that Kitty Fisher flourished in the reign of George II. In my youth I was accustomed to hear a song, of which she and the famous Countess of Coventry, who were rival beauties in their respective lines, were the heroines. As well as I can recollect—for I never saw it in print—the song ran thus:—

> I sang not of wars or invasions,
> I tell you a merrier theme,
> How Fisher and Covey were met, Sir,
> And sent all the people to goal.
>
> The one was a modest-faced sinner,
> The other a quality-hunt.
> * * * * *

The song then alludes to the perambulations of the ladies in the Park, before dinner, and proceeds:—

> But Covey could not bear a rival;
> She thought it a terrible case
> That first they should gaze at Kit Fisher,
> And then come and stare in her face.
>
> "Indeed, if I were but Moll Gunning,
> They might have done just as they chose;
> But now I am married to Covy,
> They shall not thus tread on my toes."

I forgo what immediately follows; but a little farther on the lady says:—

> "I'll make my case known to the King,
> The Monarch I know he adores me,
> And won't suffer any such thing."
>
> Then straightway to Court she betakes her:—
> "I'm come, Sir, to make my complaint;
> I can't walk the park for your subjects,
> They stare without any restraint.
>
> "Shut, shut up the park, I beseech you;
> Lay a tax upon starling so hard;
> Or, if you're afraid to do that, Sir,
> I'm sure you will grant me a guard."
>
> The boon thus requested was granted:
> The warriors were drawn up with care:—
> "With my slaves and my guards I'm surrounded,
> Come, stare at me now, if you dare!"

The circumstance is mentioned in "Mr. Grenville's Correspondence," lately published by the Duke of Buckingham, as having really occurred; and it is an historical fact, curiously illustrative of the state of society and manners in the middle of the last century, that this beautiful but very foolish lady did actually, upon such a plea as that described in the song, obtain a grant of a band of soldiers to attend upon her in her walks in the park, then the favourite resort and fashionable promenade of the aristocracy. Her sister, Elizabeth Gunning, who was, I believe, a much more sensible person, married successively the Dukes of Hamilton and Argyll; and because by her first marriage the ancestress of the Earl of Derby, who was supposed to have a claim, through that succession, to the Dukedom of Hamilton; and, by her second marriage, the present Duke of Argyll is her immediate descendant.—OCTOGENARIAN.

SONG OF THE JOLLY MILLER.—If the inclosed verses, which I believe to be the original stanzas belonging to the song "There was a Jolly Miller, &c.," deserve a place in your Memorabilia, you are welcome to publish them. I found them many years ago written on the fly leaf of an old volume of "Dryden's Miscellany Poems," published by Tonson in 1737.—FALLAL, Islington.

THERE WAS A JOLLY MILLER.

I.

There was a jolly miller once
Lived on the river Dee;
He worked and sang from morn till night,
No lark more blithe than he.
And this the burden of his song
For ever used to be—
I care for nobody, no, not I,
If nobody cares for me.

II.

The reason why he was so blithe,
He once did thus unfold,—
The bread I eat my hands have earn'd;
I covet no man's gold;
I do not fear next quarter day
In debt to none I be
I care for nobody, &c.

III.

A coin or two I've in my purse,
To help a needy friend
A little I can give the poor,
And still have some to spend.
Though I may fall, yet I rejoice
Another's good hap to see.
I care for, &c.

IV.

So let us his example take,
And be from malice free;
Let every one his neighbour serve,
As served he'd like to be!
And merrily push the can about,
And drink and sing with glee.
If nobody cares a doit for us
Why, not a doit care we.

### QUERIES.

WILL you be kind enough to inform me who is the author of the beautiful lines beginning

When my soul flies to the first great Giver

quoted in your columns some two months since as Rogers' (the poet) favourite lines?—R. A. F., Holmfirth.

[The lines occur in Charles Mackay's poem "The Hope of the World," which was dedicated to Mr. Rogers.]

MOXLEY'S SHORT SONGS, TO SING AND PLAY TO THE LUTE, &c., 1600.—Should any of our readers possess a copy of a now very scarce musical work entitled "The first booke of Ayres, or little short songs, to sing and play to the lute, with the base viole, newly published by Thomas Morley, Bachelor of Musicke and one of the Gent. of her Majesties Royal Chappell. Imprinted at London in Little St. Helens by William Barley the assigne of Thomas Morley and are to be sold at his house in Gracious Streete, 1600,"—he will confer a favour by communicating with the Editor respecting it forthwith.

ANTIQUE SPOON.—A friend of mine is in possession of a curious and ancient teaspoon, with the head of Melanethon upon it, with the words "Will God I shall." Can any of your correspondents inform me under what circumstances he made use of these words, or the peculiar reference contained in them?—M.

TAYLOR the Water Poet's "Triumph of Fame and Honour," at the inauguration of Sir Robert Parkhurst, Kt., Lord Mayor in the year 1634. This little tract was sold, at the sale of Mr. West's library in 1733, with another for the year 1636, as noticed in Nicholls's "List of London Pageants." Can you inform me how a copy of it can be obtained?—O. F. A.

[The tract in question is extremely rare, and, if this inquiry meet the eye of any one fortunate enough to possess a copy, we shall be obliged by his communicating with us.]

THE ORIGIN OF MALT LIQUOR.—In an ancient Welsh document, the origin of malt liquor is thus described:—"Ceraint the Drunkard was the first who made malt liquor properly: and the commencement was thus:—After he had boiled the wort, together with field flowers and honey, a boar came there, and drinking of it, cast in his foam, which caused the liquor to ferment. The boar thus prepared was superior to any ever known before, and thence arose the practice of putting barm in wort." I shall be glad to know whether a boar's foam would have the effect described or not!—CYMRO.

### ANSWERS TO QUERIES.

JOHN GILPIN.—In reply to Edmonton's inquiry as to the existence of any written legend respecting *the John Gilpin* who is the hero of Cowper's ballad, I can state that upwards of fifty years since I had in my possession a small octavo volume with a prose history of the birth, parentage, and life of the said John Gilpin. It was bound up together with the ballad, which retains so much of its amusing interest after such a lapse of years. I am causing inquiry to be made in a quarter from which I hope to obtain information as to the possibility of recovering possession of the volume alluded to; and, if successful, I shall have much pleasure in placing it in the hands of Edmonton, through your means, for his perusal.—C. V.

THE CHRISTMAS MUMMERS.—The "guisings," or Christmas mummings, mentioned by your correspondents, may be traced back to the palmers and pilgrims, who, "dressed in chaplets and cloaks covered with many-coloured scalops," were wont to recite to wondering assemblies their adventures in the "holy places" in which they had sojourned. These followed the monks, with their mysteries and miracle-plays; and, although these exhibitions were superseded by the regular drama, Scriptural plays were not entirely laid aside, and are still acted in many parts of Italy and Spain. The "guisings" are still common in various parts of England about Christmas-tide "in Lancashire and Yorkshire," says the late D'Israeli ("Amenities of Literature," ii., 177), "and also in Dorsetshire, families are visited by 'the great Emperor of the Turks,' and St. George of England, or by the Red-hearted Richard. After a fierce onset, ringing their fin swords, the Saracens groan and drop. The Leech appears holding his phial; from some drops the dead survive their fate, and rise for the hospitable supper. The dialogue, however, has not been so traditional as the exhibition. The curious portion of these ancient exhibitions is, therefore, totally lost in the substitutions of the rude rustics." Edward Jones, in his valuable "Musical and Poetical Relicks of the Welsh Bards" (l., 108), says:—"It is customary in North Wales, about Christmas, for the young farmers, both men and maids, to go about to their neighbours' houses disguised in each other's clothes, and sometimes in masks. They are called *Gwrachod*, probably from their assuming old characters or wizards. They act various antic diversions, and dance and sing, for which they get good cheer; or ale, apples, and nuts." He then prints the following curious specimen of a "mumming," which in his time (1788) was still acted in Oxfordshire. A Knight enters with his sword drawn, and says:—

> Room, room, make room brave gallants all
> For me and my brave company!
> Where's the man that dares bid me stand!
> I'll cut him down with my bold hand
> *St. George.* Here's the man that dares bid you stand;
> He defies your courageous hand!
> *The Knight.* Then mind your eye, to guard the blow,
> And shield your face, and heart also.
> [*The fight.—St. George gets wounded and falls.*]
> Doctor, doctor, come here and see,
> St. George is wounded in the knee:
> Doctor, doctor, play well your part,
> St. George is wounded in the heart!
> [*The Doctor enters.*]
> *The Doctor.* I am a doctor, and a doctor good,
> And with my hand I'll stop the blood.
> *The Knight.* What can you cure, Doctor?
> *The Doctor.* I cure coughs, colds, fevers, gout,
> Both pains within, and aches without;
> I will heed him in the thumb!
> *St. George.* O! (will you so!) then I'll get up and run;

[*Some more Mummers, or Minstrels, come in, and they sing the following sonnet, accompanied by the hurdy-gurdy.*]

> My father he killed a fine fat hog,
> And that you may plainly see:
> My mother gave me the guts of the hog
> To make a hurdy-gurdy.
>
> [*They then repeat the song in full chorus and dance.*]

Such is the primitive dialogue handed down to us by tradition, and it is interesting to compare it with the following ancient scrap extracted from Harl. MSS., No. 1197:—

| KNIGHT. | ST. GEORGE |
|---|---|
| I ame a knighte, | Thou marvail wite |
| And comes to fight, | That comes to fight, |
| And armet well am I; | And sette upon me so, |
| Lo, here I stand, | Lo, here I stand, |
| With sword ine hand, | With sword in hand, |
| My manhood for to try. | To dubbelle every blowe. |

EDWARD F RIMBAULT.

| 2. Kt to K 5th | Any move |
| 3. K, R, &c., or P, according as Black played, gives mate | |

The "numerous solutions" our correspondent speaks of are, of course, the same as the above. If the Problem admitted of two solutions, it would be imperfect.

J. D. is thanked for his consideration. We wish other correspondents would exhibit a little of the same—seeing, as they must see, how inadequate the space we have at command is to the calls upon it.

BERKSHIRE AND READING CHESS-CLUB.—The anniversary meeting of this long-established Club is appointed to be held at the New Public Hall, London-street, Reading, on Wednesday, the 5th of March; and on the following day the committee and visitors will dine at the George Hotel. Applications for tickets should be made to Mr. W. Rodgers, Reading.

PEBBLES.—The Solution you ask for is as follows:—

| WHITE | BLACK. |
|---|---|
| 1. Kt to K B 5th (ch) | R takes R |
| 2. Kt to K 6th (dis ch) | |

If Black take the Kt, then Pawn takes Pawn, discovering ch: and Black, to avoid mate, must take the Q, in doing which he leaves White in a stale-mate. If Black, instead of taking the Kt, play his King to Kt sq. White then takes the R Pawn with his Kt, checking, afterwards repeating he checks at Kt 6th and K 7th and captures.

E. F., A. B. The first move of the Solution of Problem No 614 should be *Kt* to *K* 7th.

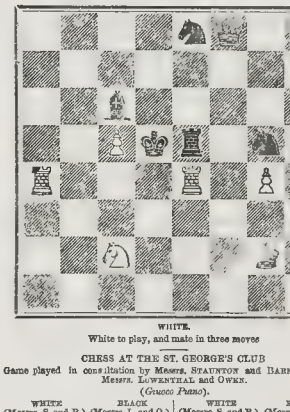
H. S., W. FORD.—We believe, upon again looking at Problem 623, it can be solved in the way you and others suggest—namely, P to Q 4th; R takes P (ch); K to Kt 3rd (ch), &c.

J. C. J. B.—If he had not quitted hold of the Piece he had a right to play it elsewhere.

### PROBLEM No. 628.

By Signor ASPA

BLACK.



WHITE.

White to play, and mate in three moves

### CHESS AT THE ST. GEORGE'S CLUB

Game played in consultation by MESSRS. STAUNTON and BARNES, against MESSRS. BOUCHENTAL and OWEN.

(*Grœco Piano*).

| WHITE (Messrs. S. and B.) | BLACK (Messrs. L. and O.) | WHITE (Messrs. S. and B.) | BLACK (Messrs. L. and O.) |
|---|---|---|---|
| 1. P to K 4th | P to K 4th | 20. K to R sq | R takes K P |
| 2. K Kt to K B 3rd | Q Kt to Q B 3rd | 21. K Kt to K R 4th | Q to K sq |
| 3. K B to Q B 4th | K Kt to Q B 4th | 22. P to Q 4th | P takes P |
| 4. Q Kt to Q B 3rd | P to Q 3rd | 23. Q Kt to Q B 5th | P to Q 4th |
| 5. P to Q 3rd | K Kt to K B 3rd | 24. Q Kt takes Q B | P takes B |
| 6. Q Kt to K 2nd | Q B to K 3rd | 25. Kt takes K R | Q takes Kt (*d*) |
| 7. Q Kt to Q Kt 3rd | P to K R 3rd | 26. Q to K 2nd, | P to Q B 6th |
| (*a*) | | | (*e*) |
| 8. Q Kt to K Kt 3rd | Castles | | "Queens" |
| 9. Castles | P to Q 4th | 27. R takes Q | R takes R |
| 10. P takes P | K Kt takes P | 28. R takes R | R to K sq |
| 11. K B to Q 4th | K Kt to Q 2nd | 29. Q to Q Kt 5th | Q to Q 3rd |
| 12. Q Kt to K 4th (*b*) | K B to Q Kt 3rd | 30. R to K R sq | P to Q Kt 3rd |
| 13. P to Q B 3rd | P to K B 4th | 31. Q to Q B 4th (ch) | K to K R 2nd |
| 14. Q Kt to K Kt 3rd | Q to her 3rd | 32. Kt to K B 5th | Q to K 4th (*e*) |
| 15. Q to Q B 2nd | P to Q Kt sq | 33. Q to K B 7th (*f*) | K to R 3rd |
| 16. K B to Q B 2nd | K Kt to Q 4th | 34. P to K Kt 3rd (*g*) | Q to K 3rd |
| 17. Q to K sq (*c*) | Kt takes Q B | 35. Q to K R 5th | Q to K 4th |
| 18. P takes Kt | P to K B 5th | 36. Q to K Kt 4th | Q takes Q |
| 19. Q Kt to K 4th | Q to K 2nd | 37. Q R to Q sq | Kt to K 4th |

And, in a few moves, White resigned.

(*a*) The opening of this game is very indifferently played by White. In this case they ought to have driven off the Bishop, instead of losing time by retreating.

(*b*) Quite useless; worse than that, indeed, since the Kt, after forcing the adverse Bishop into considerable quarters, remains himself a mark for attack by the K P.

(*c*) They should have taken off the Bishop, but the game as far as White are concerned is evidently conducted without anything like plan or due reflection. As a proof of this take the present instance. It required only to look two moves forward to see plainly that anyone Queen to K sq must cost their best Pawn; and yet they lost her there.

(*d*) To have taken with the King would have been very bad play. For example—

| | |
|---|---|
| 27. K takes Kt | K takes Kt |
| 28. Kt to K Kt 5th (ch) | Q takes Kt |
| 29. Q takes B—With the best game | |

(*e*) Well played. The only really good move made throughout the game. Had they played otherwise, White must have won the disputed Pawn by force.

(*f*) Had they taken the Kt, Black would have answered with R to K 3rd. If, instead of taking the Kt, they had taken the K Kt P, the game would have proceeded as follows:—

| | |
|---|---|
| 33. Kt takes K R (ch) | K to Q R 6th |
| 34. Q to K B 7th | R to K 2nd |
| and wins the Kt. | |

So also if White take the K R P, Black in like manner first attack the Queen with their Kt, and then captures the adverse Kt.

(*g*) Too late. The Pawn should have been advanced long, long ago.

Present Score—Messrs. S. and Ally, 3. Messrs. L. and Ally, 1. Drawn, 1.

### MANCHESTER AND LIVERPOOL CHESS-CLUBS

The Tourney between these clubs came off on Wednesday, the 20th ult., and the result was another decisive victory for the Manchester players. The play took place at the Adelphi Hotel, Liverpool, and began about three p.m. It was arranged that the combatants on each side should not exceed five in number

The following is a list of the players and of the games won by which it will be seen that of ten games played Liverpool scored but one:—

| MANCHESTER.— | GAMES WON. | LIVERPOOL.— | GAMES WON. |
|---|---|---|---|
| Duval .. .. .. | 1 | Sparke .. .. .. | 0 |
| Kipping .. .. .. | 2 | Senz .. .. .. | 0 |
| Chitey .. .. .. | 1 | Sinclair .. .. .. | 1 |
| Cohen .. .. .. | 2 | Jones .. .. .. | 0 |
| Pinder .. .. .. | 3 | Smith .. .. .. | 0 |
| Total .. | 9 | | 1 |

**DIANONIC FLUTE.—By Royal Letters** Patent.—This Instrument is played by Mr. Richardson, Flautist to her Majesty, and many other eminent professors, who all attest its superiority. Full particulars, testimonials, &c., forwarded free.—Manufactory, 135, Fleet-street. A. SICCAMA, Patentee.

**THE PATENT CONCERT CONCERTINA,** unrivalled in tone, and of extra power (suitable for the pianoforte or orchestra), as manufactured for Sig Regondi and the most eminent performers. These Instruments (which only can be relied upon) are so to produce the softest quality of tone) have longer vibrators, and are not so liable to derangement, as inferior to those offered by amateur makers Rosewood concertinas, with 48 keys (double action), may now be had from £4 4s. each.—WHEATSTONE and CO., origins. patentees, 20, Conduit-street, Regent-street

**THE TEN GUINEA HARMONIUM,** with the Improvements manufactured solely by Messrs WHITEFORNE and CO., who obtained the only Prize Medal for this instrument, has the full compass of five octaves, with one stop; a rich, sustained quality of tone, which can be produced by the touch, and at pleasure. Is an excellent substitute for an organ, and does not require tuning. Warren's Tutor for the above, 4s. Illustrated Catalogue, &c., Inventors and Patentees of the Concertina, 20, Conduit-street, Regent-street.

**THE PATENT DUET CONCERTINA,** £1 11s 6d to £2 2s., with well-known improvements, the instrument consists of two 24 sided sets, each having compass of seven octaves, enabling a single performer (without difficulty) to play duets or melodies with an insulated tenor accompaniment. With beautiful, rich, and full quality of tone, and numerous really effective movements. Tutor and music for the above, each by the inventors, WHEATSTONE and CO., Patentees of the Concertinas as used by the most celebrated performers at the public concerts, 20, Conduit-street, Regent-street.

**JULLIEN and CO.'S CORNET-à-PISTONS.** Approved and tried by HERR KOENIG.
No. 1.—The Drawing-room Cornet-à-Pistons (by Cabriolet), used by Herr Koenig ... ... ... ... £5 5 0
2.—The Concert-room Cornet-à-Pistons (by Cabriolet), used by Herr Koenig at M. Jullien's Concerts ... ... 5 5 0
3.—The Military Cornet-à-Pistons ... ... ... ... 5 5 0
4.—The Amateur Cornet-à-Pistons ... ... ... ... 3 3 0
5.—The Ordinary Cornet-à-Pistons (First quality) ... ... 2 2 0
6.—The Ordinary Cornet-à-Pistons (Second quality) ... ... 1 1 0
List of Prices and Drawings of the Instruments, may be had on application.—JULLIEN and Co., 214, Regent-street.

**CHAPPELL'S FOREIGN MODEL PIANO-FORTE,** Price Fifty Guineas.—This Instrument has (unlike the ordinary Cottage Pianoforte) Three Strings, and the fullest Grand compass of Seven Octaves. The three strings to every note is the means to endure the greatest amount of wear, and to stand perfectly in any climate The workmanship is of the best description, the tone is round, full, and rich, and the power equal to that of a Medium Grand. The case is of the most elegant construction, in rosewood, the touch elastic, and the repetition very rapid. Every possible precaution has been taken to ensure its standing well in time. Mr. Chappell especially invites the attention of the public, the profession, and merchants to the Foreign Model, as being assured that no Pianoforte, in all respects comparable, has hitherto been made in England at the same price. Every instrument will be warranted, and if desired) exchanged within twelve months of the purchase.—20, New Bond-street, London.

**ELDER-DOWN PETTICOATS and QUILTS.** W. H. BATSON and CO. respectfully invite Ladies to inspect their new Stock of Elder-Down Quilts, Petticoats, and Imperial Coverlets.—20, Maddox-street, Regent-street.

**MUSLINS of the PAST SEASON.**—The whole of the STOCK of the FRENCH MUSLIN COMPANY to be cleared out at ridiculous prices for such goods. Patterns free.—16, Oxford-street

**LADIES' APRONS.—BAKER and CRISP** have just received 1500 Black Silk Aprons, with Coloured Bayadere Satin Stripes, all at 3s. 11d. each, worth 5s. 6d. Sent post-free for Four Stamps
221, Regent-street (corner of Maddox-street), London.

NOW READY 1!

CHARLES D. SARGEANT, Resident Secretary.
99, Great Russell-street, Bloomsbury, London, 25th Feb., 1856

BOWMAN, DREW AND COMPANY'S
**PURE COD-LIVER OIL WITH QUININE** Quinine is now generally known as the most certain remedy and strengthening agent in cases of ague with the well known virtues of pure cod-liver oil, the value of this admirable remedy is more than doubled by the union of these two ingredients in the form of pills. In this state it is taken with the greatest ease, and the system derives the full benefit of both ingredients. Sold in boxes at 1s. 1½d., 2s. 9d., and 4s. 6d. each, by all Medicine Vendors throughout the kingdom. Manufactory, Hospital Yellow Road Mill, near Bradford, Yorkshire.
"I consider Messrs Bowman, Drew, and Company entitled to the great obtaining and valuable new preparation of Cod-Liver Oil with Quinine. The latter ingredient is combined in a most perfect manner, and I have the greatest confidence in it."
Dr. Granville makes himself a fair trial in the Diseases of Women and Children, to your preparation of cod liver oil and quinine. I consider it the most agreeable form in which the remedies can be exhibited, and I have much pleasure in recommending it to the profession."
FARMER, GRIFFITH, M.D.
Physician, Accoucheur, &c., at St. Thomas's Hos. and Med. Col.
N.B. Can be had in three 4s. 6d. Bottles sent FREE to all parts for stamps or money order.

DR. DE JONGH'S
**LIGHT BROWN COD-LIVER OIL,** prescribed with complete confidence and great success by the faculty for its purity, efficacy, and marked superiority over all other kinds for the treatment of
CONSUMPTION, BRONCHITIS, ASTHMA, GOUT, RHEUMATISM, DISEASES OF THE SKIN, RICKETS, INFANTILE WASTING, GENERAL DEBILITY, AND ALL SCROFULOUS AFFECTIONS.

SELECT MEDICAL OPINION.
A. B GRANVILLE, Esq., M.D., F.R.S.,
Author of "The Spas of Germany," "The Spas of England," "On Sudden Death," &c.
"Dr. Granville has used Dr. De Jongh's Light Brown Cod-Liver Oil extensively in his practice, and has found it not only disagreeable, but uniform, in its qualities. He believes it to be preferable in many cases to the pale Newfoundland oils. It is also much superior to any sample of Dr. De Jongh. Dr. Granville has found that this particular kind produces the desired effect in a shorter time than others, and that it does not cause the nausea and indigestion too often consequent on the administration of the pale Newfoundland oils. The oil being, moreover, more palatable, Dr. Granville's patients have themselves expressed a preference for Dr. De Jongh's Light Brown Oil."

Sold in London by ANSAR, HARFORD, and CO., 77, Strand, Dr. De Jongh's sole agents for this and Consignors, and sent by them, carriage free, to all parts of town.
May be obtained in the Country from many respectable Chemists Should the least difficulty be experienced in procuring the Oil, Messrs Ansar, Harford, and Co. will forward four half-pint bottles to any part of England, CARRIAGE-PAID, on receipt of a remittance of 10s.
Half-pints (10 ounces), 2s. 6d.; Pints (20 ounces), 4s. 9d.; Quarts (40 ounces), 9s. IMPERIAL MEASURE.

London: Printed and Published at the Office, 198, Strand, and Milford House, in the Parish of St. Clement Danes, in the County of Middlesex, by WILLIAM LYTLE, 198, Strand, aforesaid.—SATURDAY, MARCH 1, 1856.

# THE ILLUSTRATED LONDON NEWS

No. 788.—VOL. XXVIII.] SATURDAY, MARCH 8, 1856. [WITH A SUPPLEMENT, FIVEPENCE.

## FREEDOM OF TURKEY.

A GRAND ceremony took place at Constantinople on the 21st of last month. At three o'clock on that day there assembled at the Porte the Grand Vizier, all the Ministers, all the members of the Council of State, all the chief functionaries of the Government, the Sheik-ul-Islam or Chief Mahometan Priest, the Patriarchs, Archbishops and Bishops, who are the heads of the different religious communities in Turkey, a large number of the most conspicuous men resident in Constantinople, of different nations and professing different creeds; and at that hour there gathered round the Palace a considerable crowd from every part of the capital. There and then was read by the Chief Secretary in the office of the Grand Vizier, Halaat Effendi, whose name is worthy of being remembered, an Imperial Firman, or New Grand Charter for Turkey, placing all the subjects of the Sultan, of whatever religion, on an equal footing. After the reading the Sheik-ul-Islam pronounced an appropriate prayer, appealing to the one God who reigns over all and everywhere, who is worshipped by Mahometans as by Christians, to bless and consecrate the freedom and equal rights which the Sultan granted to all his people. A solemn earnestness, a good omen of success, as indicating that all parties felt their responsibility, and that the ceremony was more than show, marked the whole proceeding. Even the crowd outside was awed, and received with veneration the firman signed by the Sultan. Everybody, we are told by eye-witnesses, seemed penetrated with the solemnity of the moment, and to be aware that he was assisting at the birth of freedom for many nations.

The reign of ancient bigotry in the East has been for centuries crumbling to decay. The fiery passions which spread it formerly like a lava stream over the finest countries of the old world, some time ago burnt themselves out, and humanising wants and pursuits have begun to substitute agriculture and commerce for its scorching flame. For a considerable period the political institutions of Turkey have been gradually, though slowly, brought into conformity with these new conditions of society; and, though long-standing habits of arrogance and servility, accompanied by fierce personal and national animosities, cannot be annihilated by decrees, Turkey has made in modern times a great progress towards religious toleration and political freedom. Commerce has carried thither new ideas and new practices: it has been encouraged for the wealth and revenue it yielded, it has given riches and power to those engaged in it, and made it necessary for their ancient masters and enemies not merely to tolerate but to protect them. The trade of England with Turkey—which may be taken as a type of the whole—has been for several years past gradually extending, and it was at once foreseen and predicted, when the war began, that the armies of the West, in saving Turkey from becoming the prey of Russia, would carry with them the wants and the civilisation of the West, and hasten the social improvements which had previously set in. Accordingly, our exports to Turkey, Syria, Palestine, Egypt, Malta (a half-way house), and Balaclava, increased from £3,400,000 in 1853, to £8,900,000 in 1855. This sum does not include the large amounts of specie which of late have been continually flowing into Turkey and the adjacent countries, and have increased the stimulus to industry. They have multiplied wants, and made additional freedom necessary to rouse into existence the energies which only can supply them. It has now become more than ever requisite for Turkey to conform to Western civilization; and the gratitude she has felt for the friends who have rescued her from Russia has increased their influence, and is hastening her political regeneration.

"The consecration which the rights of the empire have received from the benevolent and friendly assistance of the Great Powers, the Sultan's noble allies" is one of the reasons assigned for now extending religious and political freedom amongst all his subjects, of whatever religion or race. All rights and privileges previously granted to non-Mussulman communities are confirmed and maintained. Fixed incomes are to be substituted for ecclesiastical dues, and all the property of Christian and other communities will be placed under their own laymen and clergy. New churches and places of worship may be erected, when police considerations are not opposed to the erection; and all is to be done in "a spirit of charity and tolerance," while the freest exercise of every religion is guaranteed to all. From the official vocabulary all epithets, and from official dealings all distinctions, are to be excluded, which remind classes of old oppressions, and are of themselves rankling insults, and are to be abolished for ever. All offices are to be opened to all the Sultan's subjects, according to their capacities; and, to fit the humblest for the highest places, schools for art and science are encouraged. Justice is to be publicly administered—no longer bought and sold; and men of different creeds will be partly under the jurisdiction and pre-

THE EARL OF CLARENDON (ENGLAND). BARON DE BOURQUENEY (FRANCE).—(SEE NEXT PAGE.)

PLENIPOTENTIARIES AT THE PEACE CONFERENCE.—(SEE NEXT PAGE.)

tection of judges of their own faith. A code of laws and rules for the administration of justice in mixed courts, are promised, and are to be published—not kept locked up in unintelligible jargon, as is the case in one civilised country that we know—in all the languages used in the empire. Prisons are to be substituted for filthy dungeons, and torture is to be abolished, as the slave trade has already been prohibited. All are to be equally liable to defend the country, which implies that all may bear arms; and, while all are made equally subject to taxation, all are to be protected from official robbery. The taxes will not hereafter be collected at the point of the sabre; and, in imposing them, care is to be taken not to make them impediments to the development of trade. Military service may be commuted for money. Roads and canals and banks are all promised; and, under the beneficial influence of private enterprise, some of all these are already begun.

These stipulations, promises, and guarantees are as yet, indeed, little more than words, and men do not now need to learn that the best-drawn charters do not confer freedom. This is rather to be won than granted. Nevertheless, as laying down principles and rules worthy to be followed, as acknowledging limits which ought to be enforced on arbitrary power, and so creating a safe guide to a better future, honoured—at least, nominally—by Pachas and Rajahs, the granting of this Charter is to be set down in our histories as the commencement of a new era in the moral life of all Musaulman nations. Nor can it be otherwise than beneficial in Western Europe that the high principles of its own political morality, which are far more generally taught by its sages than acted on by its rulers, are echoed in the East and come back to affright despotic rulers and encourage people in struggling for freedom. When there is moral progress in Turkey there can be no lagging behind in Christendom. It seems now tolerably certain, from the general craving for moral improvement, from the fact that of late prodigious advances have been made in all the mechanic arts and sciences, and from the fact that one kind of improvement is ever the parent of another—a common growth being necessary to preserve the general harmony—that the coming age is to be one of general moral progress, and of this progress the charter of religious and political freedom now drawn up for Turkey is one of the many signs. We must add, to do proper honour to an individual, that the Grand Vizier, Mehemet Emir Aali Pacha is charged with the execution of the ordinance, and is the Minister to whom the credit is due of having counselled and prepared it.

## PLENIPOTENTIARIES AT THE PEACE CONFERENCE.

### LORD CLARENDON.

AMONG the Plenipotentiaries actually assembled at Paris to deliberate and decide upon the momentous question of the peace of the world none holds a higher place than George William Frederick Villiers, Earl of Clarendon. It is not to his illustrious descent—for to him is fully applicable the "Mœcenas atavis edite regibus;"* nor to the many honours and titles conferred upon him, that he owes that position; but rather to that manly, frank, and English spirit which is his peculiar characteristic. It may be averred that previously to the declaration of war against Russia Lord Clarendon placed too implicit a confidence in the good faith of the late Emperor Nicholas, until his eyes were opened by the despatches of Sir Hamilton Seymour; but it was the error of an honest heart, that harboured neither guile nor deceit.

England could not have selected a more fitting or distinguished representative than the Secretary of State for Foreign Affairs. For some years Lord Clarendon was Envoy Extraordinary and Minister Plenipotentiary at Madrid; he was subsequently Chancellor of the Duchy of Lancaster, Lord Privy Seal, President of the Board of Trade, and Lord-Lieutenant of Ireland. In February, 1853, he was appointed Secretary of State for Foreign Affairs under the present Ministry.

Well versed in the politics of Europe and of England and with every phase of the present negotiations, no better guarantee could be given that the rights of Great Britain and the interests of Europe in general will be well cared for at the Conferences at Paris than his appointment as Plenipotentiary of Great Britain.

Lord Clarendon married, in 1839, Lady Catherine Grimstone, daughter of James Walter, first Earl of Verulam, and relict of John Foster Barham, Esq., of Trerkeom, co. Pembroke, and has a large family.

### BARON DE BOURQUENEY.

Baron de Bourqueney, the adjunct of Count Walewski in the Paris Conferences, is well known as a diplomatist and a writer. Since 1853 Baron de Bourqueney has fulfilled the functions of Envoy-Extraordinary and Minister-Plenipotentiary of the Emperor Napoleon III. at Vienna. In this capacity he took part in the late Vienna Conferences, where England was represented by Lord John Russell. This fact alone would have pointed him out as the person best suited to attend the present Conferences; but, in addition, the French Plenipotentiary possesses a profound knowledge of the Ottoman Empire, where he acted as Ambassador under Louis Philippe.

Baron de Bourqueney was First Secretary of the French Embassy in London in 1840, when the Treaty of July was signed. He was Chargé d'Affaires during the long and critical negotiations which preceded the Treaty of 13th July, 1841, when he ably seconded the policy of Guizot. It was as a recompense for these services that he was given the Embassy at Constantinople.

Previous to this M. de Bourqueney had made his début in diplomacy as Attaché to the French Legation at Washington, and was Third Secretary to M. de Chateaubriand when the latter was Ambassador at the Court of St. James. He was afterwards Secretary of Embassy in Switzerland. Though actually serving the Napoleon dynasty, Baron de Bourqueney was of strong Orleanist principles, and a warm supporter of the late King. His articles in the great Orleanist organ, the *Journal des Débats*, chiefly on foreign politics, acquired for him the reputation of a clear-headed politician; and to the talent he then displayed as a journalist his reputation and subsequent rise to high honours may in a great measure be attributed.

Baron de Bourqueney is one of the veterans of the French diplomatic corps, having served his country in various diplomatic offices for more than thirty years.

ANNEXATION OF OUDE.—An army of 16,000 men is now collected at Cawnpore, and in a few days will be pouring towards Lucknow. No resistance is expected, but Lord Dalhousie never leaves opportunities to the disaffected by any mistimed affectation of security. There are rumours that the Nepaulese are inclined to put in a claim for a slice of the cake, but they are already fully occupied, and Jung Bahadoor understands our policy too well to attempt any insane freak. The King will be dismissed with a pension of a lac of rupees a month (£120,000 a year), and will retain, I presume, his personal immunities. The Jaghirdars will retain their rent-free lands for life, and a new settlement will be immediately commenced. In three years it is expected, according to the official estimate, that the surplus revenue will be £1,500,000 sterling. According to my estimate—the source of which you know—the surplus will be considerably nearer £2,500,000. Oude is one of the richest countries in Asia. The soil is as fertile as that of the Doab, while the eastern districts are as rich in minerals as Cornwall. Under our rule the population will, doubtless, increase as rapidly as that of the north-west provinces, and districts which, like Nanparah, have been recently and wilfully desolated, will recover their prosperity.—*Letter from Bombay.*

* This branch of the house of Villiers is derived from Thomas, second son of William, second Earl of Jersey, and his Countess, Charlotte, grandda.ghter of Henry Hyde, last Earl of Clarendon and Rochester, of that line, which gave a Queen to James II. in the Lady Anne Hyde, daughter of Lord Chancellor Clarendon, and mother of the sister Queens, Mary (consort of William III.) and Anne.

## *FOREIGN AND COLONIAL NEWS.*

### FRANCE.

*(From our own Correspondent.)*

PARIS, Thursday.

THE progress of the Conferences is, of course, the grand interest of the moment. A great *fête* is in preparation for the 13th, connected with the negotiations, and various others are in progress:—indeed, so innumerable are the invitations extended to the foreign Plenipotentiaries, the Russians more especially, that their stay in Paris is an endless succession of *fêtes*.

Count Orloff is the great lion of the day. At seventy-one he has all the strength, activity, and vigour of a man in the prime of life. He is upwards of six feet high, and moderately stout; his face is intelligent-looking, and he has a profusion of dark grey hair, thickly curled. His strength is herculean. An anecdote relates that at a dinner at his house, one of the lady-guests admiring a magnificent bouquet placed on the centre of the table, the Count was about to offer it to her; but, finding the stalks were wet, he took a silver-gilt plate, and, twisting it into a bouquet-holder, presented it to the lady with the flowers. In the *salons* he has a feminine rival, the beautiful Italian Countess G., whose marvellous loveliness is joined to an absence of vanity so entire as to render the wondering homage paid to her beauty a subject rather of embarrassment (she is but eighteen) than of triumph.

On the 1st of March M. Dubois, the accoucheur of the Empress, took up his abode at the Tuileries on the final conditions of not quitting his post until the fulfilment of the expected event, and remaining in the apartments of the Empress at night.

The accouchement of the Empress is supposed to be likely to take place almost any time within the next ten days. The *layette* or outfit of the Imperial infant is to be seen at the establishment of the *lingère* in the Rue Vivienne, where it has been executed. The trimmings are all in blue, the colour reserved to boys in France, that of girls being pink. Three rooms are appropriated to the display. It appears decided that the child, if a boy, is to bear the title of Roi d'Alger, and great preparations are in progress regarding the organisation and government of this important conquest. It is, in the first place, to be established under the viceroyalty of the Prince Napoleon, and all the administration of the colony, now in Paris, is to be transported thither. On the establishment of peace the advancement of this important territory, and its colonisation, will be one of the points to which the Emperor will especially direct his attention. The birth of the infant will be the occasion of a number of promotions in the army: the Generals Canrobert and Bosquet will be elevated to the rank of Marechal.

It appears that there is no doubt that the unfortunate Duchesse de Caumont-Laforce was in a state of insanity, notwithstanding that the attempt made some time since by her husband to establish the fact judicially was rejected. Although possessed of a fortune of 80,000 £., upwards of £3000 a year, she lived, as has been shown, with but one servant, and that a groom; she slept with no covering but a horse-cloth, and for many weeks lived exclusively on dry bread and tablets of chocolate. She had also, it appears, been for some time since in the habit of writing numbers of letters to her friends and acquaintances of a nature which could leave no doubt as to the aberration of her intellect. It has been whispered about that the real cause of the groom's attack was, that she detected him in the act of robbing her; but there seems little ground for such a supposition. It is reported that the hotel where the event occurred is to be pulled down.

On Monday occurred the opening of the theatre of the Hôtel Castellane—an event which was anticipated as much as two months back. Two new pieces, from the pens of MM. Jules Lecomte and Alexandre Dumas *fils* served for the inauguration.

On Friday takes place a splendid concert, at the hotel of the Marquise de Bolsay (late Countess Guiccioli); and the Countess Pozzo di Borgo opens her magnificent mansion, newly decorated from top to bottom, with a grand *bal costumé*. In the midst of all these festivities the Abbé Ravignan, orders a retreat for the younger female members of his flock, comprising the chief portion of the Faubourg St. Germain. The struggle will prove a wonderful test of their fluelity.

Madame Ristori and Mdlle. Rachel have arrived in Paris: the latter, it appears, is about to console the disconsolate public, which laughed in the sleeve with which *La Grande* believed it was wiping its eyes, by reappearing for a fresh series of eternal farewells. Certainly, Mdlle. Rachel has tried all *rôles* with equal success: having triumphed in tragedy and comedy, she turns with undiminished vigour to *farce*. M. Jules Lacroix's new drama, "La Jeunesse de Louis XI," is said to be the piece by which she proposes to make her next début, at the Théâtre Français.

The new work of Victor Hugo, long ago commenced, but delayed in the publication by a variety of obstacles founded on the erroneous supposition of its containing a political tendency, is at last authorised to appear, and is now going through the press. The title is "Contemplations;" and it forms two thick volumes, which will shortly be produced.

On Wednesday Mdme. Ristori commenced her series of representations at the Italian Opera-house with *Mirra*. The appearance of Grisi on Monday in *Semiramide* was more successful than it was expected to be. Here it was reported that La Diva was a complete wreck, and, though numbers of persons attended the representation from curiosity, every one anticipated attending an entire failure. Partly owing, however, to the exaggerations of the rumour, and partly to the good effects of repose, the impression made was much better than the public was prepared for; and it is probable the series of representations will, on the whole, be tolerably successful. M. Bottesini's "Assedio di Firenze" rather gains in esteem, and the performances of this composer on the contre-basse are miracles of art and execution that place him among the first on the list of contemporary musicians. No one has hitherto obtained the same perfection on an instrument generally regarded as merely an aid in accompaniments. The appearance of Madame Marie Cabel, at the Opéra Comique, in MM. Scribe and Auber's new opera of "Manon Lescaut," has been brilliantly successful. The work, as far as the music is concerned, bears not the slightest evidence of the fact that its composer is between seventy and eighty: it is full of vivacity, sentiment, and freshness, and equally suited to the part and the singer. M. Scribe, in endeavouring to render the heroine of the Abbé Prevost a personage presentable to a respectable audience, has falsified the character. Certainly, this was necessary, with a view to this purpose; but why, if such travestissement were needed, take the subject at all? Why not choose, in history or fiction, a heroine who could afford to present herself according to the impression already existing as to her life and character?

### SPEECH OF THE FRENCH EMPEROR.

The Legislative Session was opened on Monday at a few minutes after one o'clock, by the Emperor in person, at the Tuileries, in the Salle des Marechaux. On entering the salle a loud cry of "Vive l'Empereur!" was raised. The Emperor then said, "Gentlemen, be seated," and took his seat himself upon the throne. His Majesty then, in the midst of the most profound silence, delivered the following Speech:—

Gentlemen,—When last I called you together it was a time of serious solicitudes. The Allied armies were being exhausted by a siege in which the obstinacy of the defence made success appear doubtful. Europe, under a sense of uncertainty, seemed to await the end of the struggle before pronouncing on either side. To sustain the war I asked a loan which you voted unanimously, although it might appear excessive. The high prices of commodities threatened the labouring classes with general distress, and a perturbation of the monetary system gave cause to apprehend a decline of the transactions of commerce and manufactures.

But, thanks to your aid, thanks to the energies displayed in France and England, thanks especially to the support of Providence, these dangers, if they have not entirely vanished, are for the most part overcome. A grand feat of arms has decided, in favour of the Allied armies, a war whose intensity is without example in history. Since that event the opinion of Europe has been more openly pronounced. Everywhere our alliances have been extended and confirmed. The third loan has been opened without difficulty. The country has given me new proofs of its confidence by subscribing a sum five times greater than that which I had asked. It has supported with admirable resignation the sufferings inseparable from a dearth of provisions—sufferings which, however, have been mitigated by private charity, by the zeal of the municipalities, and by the ten million francs distributed to the departments. Arrivals of foreign wheats are now producing a sensible diminution of prices. The fears caused by the disappearance of gold are passing away, and employment has never been more plentiful nor the public revenues more considerable. The adventures of war have re-awakened the military spirit of the nation. Voluntary enrolments were never so numerous, nor was more ardour ever exhibited by the conscripts drawn by lot.

To this brief outline of the situation I have to add facts of a high political signification. The Queen of Great Britain, wishing to give a proof of her confidence and her esteem for our country, and to render our relations more intimate, has visited France. The enthusiastic reception which she found here must have convinced her Majesty how profound were the sentiments inspired by her presence, and how well they were calculated to fortify the alliance of the two peoples. The King of Piedmont, who, without looking behind him, had embraced our cause with that vigorous courage which had formerly distinguished him on the battle-field, has also visited France to consecrate a union that was already cemented by the bravery of his soldiers.

These Sovereigns have had opportunities of seeing a country but lately so agitated and disinherited of its place in the councils of Europe, to-day prosperous, powerful, and respected, making war, not with the momentary delirium of passion, but with the calmness of justice and the serenity of duty. They have seen France, which sent two hundred thousand men across seas, convoke at the same time, at Paris, all the arts of peace, as if she had meant to say to Europe, "For me, the war that now rages is but an episode; my mind and my strength are still engaged in the arts of peace; let us neglect nothing to understand each other, and do not compel me to bring all the resources and all the energies of a great nation to bear upon the battle-field."

This appeal seems to have been heard: and the winter, by suspending hostilities, has favoured the intervention of diplomacy. Austria resolved on a decisive step, which introduced all the influence of the Sovereign of a vast empire into the deliberations. Sweden united herself more intimately with England and France by a treaty which guaranteed the wholeness of her territory. Lastly, from the Cabinets, counsels or prayers arrived at St. Petersburg.

The Emperor of Russia—the inheritor of a situation which he had not created—appeared animated with a sincere desire to put an end to the cause which had brought on this sanguinary conflict. He accepted with determination the propositions transmitted by Austria. The honour of his arms having been satisfied, the Emperor did himself honour when he deferred to the clearly-expressed wish of Europe.

The Plenipotentiaries of the belligerent and allied Powers are now met at Paris to decide on the conditions of peace. The spirit of moderation and equity which animates all of them bids us hope a favourable result. Nevertheless, let us await with dignity the end of the Conferences, and be equally ready either to draw the sword, if we must, or to extend the hand in friendship to those who have fairly met us in the field. Whatever may happen, let us occupy ourselves in striving by all proper means to increase the strength and riches of France. Let us draw yet closer, if that be possible, the alliance formed by a community of glory and sacrifices, and the reciprocal advantages of which peace would make yet more apparent. And finally, in this solemn moment of the world's destinies, let us put our confidence in God that He will guide our efforts in the way most conformable to the interests of humanity and civilisation.

The Speech was received with loud and enthusiastic applause, and by loud cries of "Vive l'Empereur!"

### THE WAR IN THE CRIMEA.—THE ARMISTICE.

Just at the very moment when the two belligerent armies in the Crimea were apparently about to recommence active warfare, the news of the armistice arrived at the French Camp.

The *Moniteur* of Thursday states that Marshal Pelissier has informed the Minister of War that the resolution passed by the Plenipotentiaries on the 26th of February last, relative to the armistice, which is to extend to the 31st of March, was known in the Crimea on the 28th of February.

On the 29th of February, at a conference held at Traktir-bridge, between the Chiefs of the Staff of the Allied armies and General Tutchimeff, delegated by the Commander-in-Chief of the Russian army, it was decided that there should be a complete suspension of hostilities.

Some alarm was caused on Thursday by a statement that a large body of French troops—some said 30,000 or 40,000—were about to embark from Marseilles for the Crimea. It is now said that only 12,000 men are to be sent, and that they have been ordered to Constantinople, to support the Sultan in carrying out the Hat-Houmaloun emancipating the Christian populations, and to suppress any insurrectionary movement that may be attempted by the fanatical party.

### AMERICA.

The *Persia* steamer, which left New York on the 20th ult. arrived at Liverpool on Sunday last. Up to the time of her departure nothing had been heard of the *Pacific*. The steamer which had been sent in search of her had not returned.

In the Senate a long-continued party contest as to the election of a printer had at last resulted in a selection. Several discussions without result had taken place respecting the affairs at Kansas. In order to arrange his committees without annoyance, the new Speaker, Mr. Banks, had deserted his usual place of residence, and taken lodgings in some undiscovered place of concealment. The State Department had sent to the Senate a mass of documents bearing on the Central American question as far back as 1850.

The *New York Herald* says:—

We published on Sunday several extracts from the London newspaper press on the Central American question. That from the London *Times* is unexpectedly generous and conciliatory, and the protocol of the Thanksgiving for a pacific settlement of this warlike entanglement is a refreshing novelty in its way. This arrangement, if duly ratified and carried out between the two Governments, would certainly make clear work of the whole business; but we agree with the London *Globe*, that the proposal to root out that alleged gang of pirates and murderers is just the point where the shoe would pinch: there would be no such thing. Those men have expatriated themselves; they are no longer citizens of the United States. We are no longer responsible for their acts, and if, upon a call from one native revolutionary party in Nicaragua acting against another such party, General Walker and his American force goes and conquered the country, it is an affair to be settled by the sovereign people of Nicaragua.

Speaking of the declaration of Lord Clarendon, that the London Cabinet had proposed a reference of the matter in dispute to the arbitration of a third Power, the *Herald* says:—"The United States have no friends in Europe, and therefore reject the idea of arbitration."

The members of the Western Anti-Slavery Society have memorialised the Legislature of Ohio to withdraw from the Union.

Barbour, the witness against the acquitted Irish Filibusters at Cincinnati, had been put on his trial for perjury. The English Consul had given evidence in favour of the veracity of the accused.

Mr. Dallas, the new Minister to England, was to leave in the *Baltic* on the 5th inst.; his son had been appointed Secretary of Legation.

The Governor of Kansas (Shannon) had left for his post, with full instructions to execute and carry out all the laws of that territory. He carried with him instructions to Colonel Sumner, who had charge of 800 troops, stationed at Fort Leavenworth, to hold himself in readiness for any emergency that might arise.

The United States Sloop-of-war *John Adams* had arrived at Panama from the Feejee Islands, where she had been to chastise the natives for cruelties to American seamen. During the cruisings of the *John Adams* five sharp engagements took place between her crew and the Polynesians. Five of their largest towns and all the large canoes therein reduced to ashes. A treaty was ratified between Commander Boutwell and the King of Feejee on behalf of the American Government. The Isthmus of Panama was very free from epidemic or contagion. There had been some slight insurrection in Costa Rica.

In Nicaragua affairs were quiet. General Walker had about 1000 men with him. President Rivas had issued a decree suspending all official communication with the Ministers of the United States. Mr. Manning, Acting Vice-Consul of the British Government at Realejo, had addressed an official letter to the Minister of Foreign Relations at Nicaragua, in which he sympathises with the Provisional Government of Nicaragua in its endeavours to maintain quiet among its disorganised population, and to bring prosperity to a people reduced to want by aimless revolutions. He assures the Executive of the good-will of the British Cabinet while the affairs of the Republic are conducted in accordance with the "usages of the laws of nations;" he also recognises Walker's commission as a General, and promises to transmit to Sir Charles Wyke, English Consul in Guatemala, a copy of the Walker-Rivas treaty.

## TOTAL DESTRUCTION OF COVENT-GARDEN THEATRE.

Last Wednesday morning the Royal Italian Opera House was totally destroyed by fire. So rapid was the work of destruction, that in a few hours from the breaking out of the flames nothing but the bare outer walls remained of that magnificent temple, which, under the management of Mr. Frederick Gye, had become world-famous as the seat of music and of song.

It had always been intended to re-embellish the interior before the opera season of 1856; and the lessees had, consequently, enormously heavy expenses to provide for. The house was therefore let to Mr. Anderson for the performance of legerdemain and pantomime, at a rental of £3000; and after a season of six weeks' duration the Wizard, with a view to reimburse some of the losses he had incurred, announced a "Carnival benefit," to extend over two days, after a fashion too prevalent in America, terminating with a *bal masqué* on Tuesday night. As Gye, whose personal superintendence of the theatre has always been laudably anxious, was in Paris when this announcement appeared; but the moment he became acquainted with the fact he put his veto upon it, and forbade Mr. Anderson to open the theatre for a masquerade. An earnest appeal was made to Mr. Gye to reconsider his decision on this point; and it is understood, chiefly on account of the reverend standing of Mr. Anderson's profession, he consented to do so. In an unfortunate moment he gave an unwilling permission for the masque to take place, and while this revel was proceeding the calamity occurred which has robbed the musical world of its brightest shrine, and London of one of its most magnificent architectural ornaments.

At twenty minutes to five o'clock on Wednesday morning the company had dwindled down to the last dregs. Not more than 300 persons were assembled in front of the temporary orchestra, which, on this occasion, was thrown back to the extreme end of the stage. The ball was nearly completed, and Mr. Anderson, observing the flagging spirits of his guests, gave the signal to his master of the ceremonies to close the revels with the usual finale of "God Save the Queen." At this moment a man who was engaged in conversation with Castles, the fireman, happened to look upwards, and observed a bright light shining through the chinks and crevices of the carpenter's shop, directly above his head. On calling Castles' attention to this, the latter instantly replied, in a low voice, "Why, good God, the house is on fire!" In an instant both left the stage, and hastened up towards the point of danger. Neither their departure nor the object of their errand had been observed, and the crowd below them still kept up their chorus to the music of the National Anthem.

It should here be stated that the carpenter's shop in this theatre extended, with the single exception of a comparatively small space devoted to the scene-painters, from one end to the other of the building, and that it lies between the ornamental ceiling and the roof of the theatre. Through an open space in the floor of this workshop the central chandelier was lighted; and the place itself was generally filled with materials of the lightest and most combustible character. When the two men entered this place they were nearly suffocated by dense black smoke before they had proceeded many yards. Coat-on threw himself on his hands and knees, and endeavoured to crawl towards a smouldering heap which he observed near the centre of the place. The smoke was, however, too much for him, and he was compelled to make a speedy retreat, without having been able to open the fire-mains on this floor. Descending to the next "flies," he succeeded in turning on the mains; but before he could fix the hose the descending fire from the workshop above overtook him, and drove him to the next "flies." The imminent peril was now evident to him. He saw the fire had obtained a power which could not be combatted, and his next step was to cut away and cut away those parts of the scenery most likely to be affected by the increasing fire. The orchestra had not ceased playing the National Anthem when the sudden descent upon the stage of one of the men around which the canvases are rolled gave the first intimation of danger to the motley assemblage below. Immediate alarm was taken by the whole house, and that alarm was instantaneously increased by the pouring down of a shower of sparks upon the stage. "The house is on fire!" resounded from all quarters, and "Where is the fire? where is the fire?" was repeated by a hundred voices. The terror and tumult occasioned by this outcry may readily be imagined. The few remaining masquers rushed precipitately to the doors and entrances of which the police, with ready presence of mind, took immediate possession, and were there enabled to rescue from the effects of the selfish alarm of many of the stronger sex the weaker and more delicate portion of the fair Parisian partners. Several women were trampled on, and some were carried out in a fainting state, but none were seriously injured. There was something fiendish in the rapidity with which the flames laid hold of the building. Already the rush of air towards the roof had fanned the fire into brighter life and fiercer energy. Wreaths of white smoke, with here and there a lurid tinge, began to issue from the entrances of various parts into the body of the theatre. The musicians leaped from their seats and fled, in many cases, without even saving their cherished instruments.

The interior of the house was a picture of dismay for the visitors. The officials were in terror, and totally at a loss what to do. There was no time for thought or plan. The flames rushed forward, and, while the musicians fled at once their several ways, the whole of the male and minor characters of the masque came flying from their dressing rooms into the passages of the theatre, and were in many instances with difficulty forced into safety by the police, who behaved with the greatest coolness and courage. A body of officers, under the direction of Superintendent Durkin, took early possession of the various doors and entrances, and judicious efforts prevented the excited multitude outside from forcing their way madly into the burning house.

It was now hardly five o'clock, and yet in the few minutes which had elapsed the fire had obtained the mastery of the whole building. The flames had burst through the roof, shooting high up into the air columns of fire, which threw out into bright reflection every tower and spire within the circuit of the metropolis, illuminating St. Paul's as if gilded with burnished gold, and shedding a flood of light across Waterloo-bridge, which set out in bold relief the dark outline of the Surrey hills in the distance. This glare was a speedy messenger in forming up the engines, which now arrived from every quarter of London at a gallop. There was no want of water, but by this time nothing would have saved the property. The theatre, blazing within its four hollow walls, was like a well of fire, or rather a vast furnace. An intense heat such as this soon burnt up every timber on the walls, and at half-past five o'clock the roof fell in with a tremendous crash. Showers of fiery sparks were thrown up and poured down upon the streets, which were now crowded with masses of people hurrying from all points. The immediate danger of the houses surrounding and confacing the theatre attracted the earliest efforts of Mr. Braidwood. In Bow-street the Royal Italian Opera Hotel and the adjoining houses were almost on fire several times, and it required the constant application of large volumes of water to cool their blistered fronts. In Hart-street, a narrow thoroughfare, bounding the theatre on the north, great danger was apprehended, and an incessant vigilance applied. At the south side of the theatre, in Bow-street, the back of the police-office had at one time ignited. The Piazza, Tavistock, and Bedford Hotels were all more or less endangered by the fire; and, the wind set from the eastward, nothing could have saved that side of the market.

The value of the property destroyed is something fabulous. An approximate estimate may be formed from the fact that in mounting the two several operas contained in the *repertoire* of the theatre, when under the management of Mr. Bunn, no less than £20,000 was expended, of which the first operas of the "Prophète," the "Huguenots," "Lucrezia Borgia," and "La Donna del Lago," cost £25,000. The valuable dramatic library belonging to the theatre—unique of its kind as gone in the general wreck. The original manuscripts of "The School for Scandal," "The Miller and his Men," the opera of "The Slave," and hundreds of other curious works, were here preserved. The armoury, consisting of more than 100 suits, and occupying a series of rooms, is wholly destroyed. In fact, nothing is spared. Four original pictures by Hogarth, representing the Seasons, which hung upon the walls of Mr. Gye's private room, with only a few pieces of the box-office, could not be saved, so rapid was the progress of the fire.

In Princes-place, the courtyard by which her Majesty entered the house, one attempt at saving the stage was successful. The nicknacks appertaining to the Wizard's tricks were housed in an apartment very near to the stage-door, and those were, in great part, saved. A small quantity of furniture belonging to Mr. Costa, including his piano, was also rescued. While engaged in this duty the police were surprised at the unexpected appearance of a man at one of the windows overlooking the courtyard. He had been asleep, and not even the raging of the fire, or his close vicinity, nor the shouts of the people, had sufficed to awake him, until the room became full of smoke, and breathing difficult. A ladder was brought, and he was just rescued from the perilous position in which he must have lain for an hour, when the flames broke into the apartment. In this particular many scenes several persons exhibited instances of great courage and coolness. Mr Ponteau especially preserved his presence of mind, and only desisted from attempting further exertion when persuaded by the interference of the superior officers of the fire brigade. It is due to Mr. Anderson to say that he energetically endeavoured to render any service in his power. Mr. Francis, the painter to the theatre, and Mr. Nimmo, were also especially prominent in their assistance. But the crown of merit on this occasion belongs to a humble individual named Burgess, the billsticker to the establishment, who, at the imminent risk of his life, pushed his way into the burning building and brought back with him several valuable books and papers. Mr. Hingston, secretary to Mr. Anderson, also exerted himself manfully. It was an affecting incident to see Mr. Lumley, the music librarian, a well known lover of his art, moved even to tears at witnessing the loss of so many objects whose precious value he was so well able to estimate. The music library of the Royal Italian Opera contained the score of no less than twenty-eight operas, many of them written by the composers themselves.

Among the sufferers by the calamity is Mr. Payne, the proprietor of the refreshment department of the Royal Italian Opera. He had contracted to furnish the supper at the *bal masqué*. Everything in the shape of glass and plate which he had in the theatre is destroyed, besides a large quantity of surplus wine. Mrs. Payne narrowly escaped with the money taken during the evening—upwards of £300. There had been a large room re-lived at the doors; £300 for admission and £90 for balcony seats were taken. All this and other cash was got out of the theatre early, and deposited in a place of safety.

At six o'clock, when all hope of saving any portion of the building or its contents was at an end, Mr. Ponteau felt it right to telegraph the fact to Mr. Gye, in Paris, which he did in a few expressive words. The intelligence must have been one of the severest blows that could have befallen him. All his engagements for the forthcoming season were completed, and he had brought together a company of *artistes* exceeding in attractiveness those of any previous campaign, with whom he had arranged to open the Opera on the 29th instant. Mr. Gye left Paris immediately on the receipt of the disastrous intelligence.

The loss to him and his copartners will scarcely bear contemplation. There is no hope looming in the distance. One thing only are they spared, and that is the necessity of keeping their engagements with the *artistes* they have enlisted, a proviso being always inserted in foreign engagements to the effect that, in case of death in the Royal family, the prevalence of plague, or loss by fire, such agreements shall not be binding. It is distressing to think of the misery and inconvenience which the destruction of this theatre will occasion. It is not too much to say that at least one thousand families will be thrown into poverty by it—to say nothing of the national inconvenience which must arise from the loss of an opera which has of late become one of the charms of the London season.

As to the origin of the calamity nothing is known at present. That the fire broke out in the carpenter's shop there can be little doubt, from what has been already stated, but how there is too much reason to fear will remain a mystery. It was the duty of one of the firemen to accompany the gasman when he ascended into the carpenter's shop to light the central chandelier, and this office on Tuesday night fell upon Castles. The latter says he went over the head of the gasmen in the service of Mr. Payne (who has the direction of the lighting of the theatre), and that after completing the duty they tested the safety of their lighting-rod by pouring over the wood a can and the rod a small quantity of spirits of naphtha. The rod was then left suspended over the basin of the chandelier, and Castles and the gasman returned down stairs by the light of a glass lantern. This was done before seven o'clock in the evening, at which hour both these men declare all was perfectly safe. At four o'clock in the morning one of the "flymen" had occasion to ascend to the second "flies," and even then he detected no smell of smoke or indication of danger of any kind. It is clear, however, from the rapidity with which the flames gained head that the fire must have been smouldering for some considerable period. In what manner it originated—whether from carelessness or any other cause—it seems impossible to say. It appears generally admitted that for some time past there has been an unusual escape of gas in the house. Mr. Sloman, who has for many years held the office of machinist and carpenter at this theatre, has been so forcibly impressed with the danger arising from it that he has gradually waited upon two or three of the proprietors—Mr. Surman and Mr. Robinson among others—and represented to them that, if something was not done, he feared the theatre would some day be burnt down. Mr. Sloman had also called the attention of the fireman to the same circumstance, but nothing seems to have been done. Whether the fire originated from a gas leakage or not is, of course, uncertain.

The following *précis* of the history of the theatre is from the Curiosities of London":—

Covent-garden Theatre, Bow-street, was the second theatre of that name. The first theatre was built upon part of the Convent site, by Shepherd, architect of Goodman's Fields Theatre. Covent Garden was opened December 7, 1732, by Quin, the celebrated tragedian; and Hogarth's caricature of "Gin Lane" and "Beer Street, or his Triumphant Entry into Covent Garden," refers to his removal here: it shows one entrance, a magnificent Ionic archway, at the end of the eastern arcade of the Piazza. Here the Beefsteak Society was formed in 1735, by Rich and Lambert the scene-painter. In 1746 Garrick played here for the season. In 1808 John Kemble became a proprietor and stage-manager. On Sept. 20, 1808, the theatre was burned to the ground, and twenty persons killed in the ruins. It was rebuilt by R. Smirke, R.A. The first stone was laid by the Prince of Wales, Dec. 31, 1808; and the theatre was opened Sept. 18, 1809, when the "new price" caused the O. P. (*old prices*) riot of seventy-seven nights, since which "a London audience has been found more captious than they previously had been" (C Dickens). In 1817 John Kemble here took leave of the public; and in 1840 Charles Kemble retired his brother. The house was subsequently leased to Mr. C. Mathews and Madame Vestris, and Mr. Macready. In 1843-45 it was let to the Anti-Corn-law League, who held a bazaar here in 1845. In 1847 the auditory was entirely reconstructed by Albano, and opened as the Italian Opera April 6, by Albano, at a cost of £40,000. The decorations were gold and white; and the ceiling was enriched with allegorical figures. There were six tiers of boxes (210), in part divided by caryatides.

The northern panel has figures of Æschylus, Aristophanes, and Menander; Thalia, Polyhymnia, Euterpe, and Clio, Minerva and Bacchus; Melpomene, two Furies, and Apollo. In the southern panel are figures of Shakspeare and among Caliban, Ferdinand, Miranda, Prospero, and Ariel; Hecate and Lady Macbeth. Also Milton, with Urania and Samson Agonistes, an incident from "Comus," &c.

First Appearances: Indedon, the singer, 1790; Charles Kemble, 1794; Mrs. Glover, 1797; G. F. Cooke ("Richard III."), Oct. 31, 1800; Miss Stephens (Countess of Essex), 1812; Miss O'Neil (Lady Beadley), 1815; Macready, 1816; W. Farren, 1818; Fanny Kemble, 1829; Adelaide Kemble, 1841. Here Edmund Kean last acted, 1833. Braham's first appearance on the stage was at the old Covent-garden Theatre in 17—.

On Thursday the Queen visited the ruins of the theatre. Her Majesty was received by the lessee, Mr. Frederick Gye, and conducted to a point whence she obtained a perfect view of the whole ruin. The Queen graciously expressed her deep sympathy at the catastrophe, and particularly desired to be informed as to the amount of Mr. Gye's personal loss. The Princess Royal accompanied her Majesty. Prince Albert afterwards visited the ruins, on his return from Somerset-house.

Yesterday (Friday) his Royal Highness the Prince of Wales visited the ruins. His Royal Highness the Duke of Cambridge, and numbers of the nobility and gentry, also inspected the scene of destruction.

(Three Views of the late Theatre, as altered for the Royal Italian Opera, appeared in the ILLUSTRATED LONDON NEWS, No. 258, April 10, 1847. Next week we shall illustrate the Conflagration of Wednesday last, and engrave the Ruins of this magnificent Theatre.)

## *METROPOLITAN NEWS.*

THE CITY CORPORATION AND THE POLICE BILL.—The Court of Common Council held a meeting on Monday, when Mr. Woodthorpe produced the report, and, in the absence of the chairman, which is the bill, as creating an infringement of the rights and liberties of the people, increasing the tendency towards centralisation, and making the local authorities of cities and towns the mere agents in the hands of the Minister of the Crown. After several speeches, the council adopted a petition against the bill in the spirit of the report.

YOUNG MAN'S CHRISTIAN ASSOCIATION.—On Wednesday evening, the 27th ult., a *conversazione* of the members of the Bloomsbury branch of this excellent association was held at their house in Queen-square, when the rooms were hung with a collection of the works of eminent modern painters. In the course of the evening Mr. G. Lowe delivered a highly-interesting address on painting, divesting the subject of technicalities, and presenting his leading ideas in a popular form, adapted for his, to appear, juvenile audience. He characterised the essentials of a good picture, illustrating his treatment by reference to the works of the great masters, and showing how many sublime subjects were to be found in the incidents, parables, and Holy Writ. Mr. J. W. Inchbold followed with an address on the same subject, in which he drew attention to the great benefits of the institution, more especially in bringing its members in contact with the great truths of Christianity. Votes of thanks were passed to Mr. Lance and Mr. Inchbold; and the proceedings terminated.

NATIONAL REFORMATORY UNION.—An influential and numerously-attended meeting of the friends of the reformatory movement was held on Saturday last, at the rooms of the Law Amendment Society, Waterloo-place, for the purpose of formally organising an association bearing this title. Amongst those present were Viscount Ebrington, M.P., Lord R. Cecil, M.P., Sir Stafford Northcote, M.P., Lord Lovaine, M.P., Sir T. Winnington, M.P., the Hon. Mr. Liddell, M.P., Mr. Monckton Milnes, M.P., Mr. Adderley, M.P., Mr. Justice Coleridge, Mr. Baron Alderson, Mr. T. B. L. Baker, manager of the Reformatory at Hardwicke, Hitcepiece, Mr. Hoyer, manager of the New-road Reformatory; Prebendary Fane; the Rev. W. Hatch, Chaplain of Wandsworth House of Correction; Captain O'Brien, Inspector of Prisons; and many other distinguished supporters of the movement. Mr. T. B. L. Baker was called on to preside. The following are declared to be the objects of the institution:—To collect and diffuse information bearing on the reformation of criminals; to promote the formation of reformatory institutions where needed, and generally to advance the further practical development of the reformatory movement; to consider and promote such legislative measures as are still required for the better care and reformation of youthful offenders; to assist in the placing out and subsequent guardianship of young persons leaving reformatories; to consider and promote means for the employment and restoration to society of discharged prisoners; to promote the practical training and preparation of efficient masters and teachers for reformatory institutions. Sir S. Northcote read a report from the committee appointed at a preliminary meeting, which stated that they had drawn up and circulated a prospectus explanatory of the objects of the association, and had received the adhesion of a large number of influential persons. The number of those who had already signified their intention of joining the union amounted to upwards of 150. The report was agreed to *nem. con.* A resolution, to the effect that a deputation should wait upon his Royal Highness Prince Albert to request him to become president of the society, was also agreed to, and the deputation nominated accordingly. The election of the other officers then took place; and, some other formal business having been transacted, the chairman closed the proceedings.

PRINTERS' PENSION SOCIETY.—The annual general meeting and thirty-seventh election of this society, which was established in the year 1827, for the relief of aged and infirm printers and their widows, took place at the London Tavern on Monday, for the purpose of receiving the report of the committee for the past year, the election of officers for the year ensuing, and the election of seven pensioners on the funds of the society; Mr. William Scott (of Eyre and Spottiswoode's) in the chair. Mr. Hodson, the secretary, read the report, from which it appeared that the mortality in the number of pensioners had been great during the year, eleven having died, seven men and four women. The amount of the capital stock of the society is £6,807 4s. 6d., invested with the Commissioners for the Reduction of the National Debt, and £754 3s. 7d. Three per Cent. Consols; in addition to which £156 had been invested during the year, and £30 as a legacy of the late Mrs. McArthur received from her executors. The financial statement showed that the annual subscriptions amounted to £498 13s.; annual subscriptions and donations, £38 10s. 7d.; quinquennial subscriptions and donations at the annual dinner, £246; which, with interest on stock and balance in hand last year, made the total receipts £10,075 10s. 9d. The disbursements, including payment of £601 1s. 6d. to quinquennials, invested with the Commissioners for the Reduction of the National Debt £156, leaving, after payment of salaries and other expenses, a balance in hand of £43 7s. 9d. Mr. Holland moved, and Mr. Edwards seconded, the adoption of the report, and that it be printed and circulated. Mr. F. Sedgewick gave notice that at the next annual meeting he should move that the time for eligibility of candidates should be twelve years for men and ten years for widows. The following persons were elected pensioners out of a list of twenty-seven candidates:—W. R. Turtle, 5,711; Sarah Sophia Glasgup, 3,811; Hannah Fry, 3,310; Thomas Roe, 2,667. Unsuccessful candidates—Charlotte Case, 2,605; Sarah Ann Pennington—Wm. Harding, 2,581. Fley Pension—Thos. Needham, 2,254. The treasurer, Wm. Clowes, Esq., the committee, and other officers, having been elected, the meeting terminated.

## *THE COURT.*

The Queen and Prince Albert, with the Princess Royal and the Princess Alice, visited the National Gallery, in Trafalgar-square, on Saturday last. In the afternoon her Majesty inspected forty-three of her Guards, invalided from the Crimea, in the Grand Hall of Buckingham Palace. Ten men of the regiment of the Grenadier Guards were first introduced—Colonel Wood, the commanding officer, naming each soldier to her Majesty, together with the different battles in which they had received their wounds. Sixteen of the Coldstream Guards were then and similarly introduced, and lastly seven men of the Scots Fusilier Guards. Her Majesty questioned all the men about their wounds, the actions where received, and the present state of their health. At the close of the inspection the soldiers were conducted to the lower dining-hall, where dinner was served to them. In the evening her Majesty had a dinner party.

On Monday the Judge Advocate-General had an audience of the Queen, and submitted the proceedings of some courts-martial. Prince Albert rode on horseback in the forenoon with the Prince of Wales and Prince Alfred, and in the evening her Majesty and the Princesses visited the establishment of Messrs. Gray and Davison, in the New-road. In the evening the Queen had a dinner-party.

On Tuesday her Highness the Duchess of Kent visited the Queen, at Buckingham Palace. His Royal Highness Prince Albert rode on horseback, attended by Captain the Hon. Dudley De Ros. The Prince of Wales and Prince Alfred, attended by Mr. Gibbs, visited the British Museum.

On Wednesday evening her Majesty and the Princess Royal honoured the Haymarket Theatre with their presence. Prince Albert went to the meeting of the Society of Arts, in the Adelphi.

THE KING OF THE BELGIANS.—The proximate arrival of the King of the Belgians in this country, on a visit to her Majesty, has been announced. The immediate occasion of the King's visit is in order to be present at the confirmation of her Royal Highness the Princess Royal, who is the Queen of Majesty's god-daughter. The ceremony will take place in St. George's Chapel at Windsor.

## THE LOUVRE AT PARIS.

WE, this week, engrave the New Court of the Louvre, showing that portion which has been most recently finished, and completes the great square contained within the Carrousel, the façade of the old Louvre, and the new constructions. The buildings which join the Tuileries to the Louvre embrace, on the side of the Rue Rivoli, the Pavillon de Rohan, the grand central Pavilion on the square of the Palais Royal, and the Pavillon at the corner, on what was formerly the Place de l'Oratoire. The Pavillon de Rohan, which is used as barracks by a detachment of the Imperial Guard, is now completed, and has been decorated with eight statues representing Generals of the Republican army; viz.—Marceau, Hoche, Desaix, Kleber; and the Marshals of the Empire—Massena, Soult, Ney, and Lannes. During the last year the Pavilion at the corner of the Oratoire has also been finished, as well as the line of buildings which unites it with the ancient palace. It has been decided by the Emperor that the library of the Louvre and the permanent Exposition should be placed in the transverse line of building joining the Pavilion, on the square of the Palais Royal, with that on the Place Napoleon; and a large staircase has been built to give access to the apartments which it contains. Within this square, a portion of which is seen in our Illustration, and which is called La Place Napoleon, two great colosseums, like our squares, have been laid out, which it is intended to ornament with statues. They are already planted with trees, and a principal object in introducing them has been to connect and divergeants with the strict parallel of the Pavilion forming the centre of the old Louvre, and that of the Tuileries. They are separated by a large esplanade, and surrounded by a pavement of granite. A similar pavement runs the whole length of the new buildings. In the midst of the Court of the Louvre is to be erected a colossal equestrian statue of Francis I. The plaster model of this statue stands at present on a temporary pedestal, and affords an opportunity of judging of the effect of this production. The buildings which face the Place Napoleon and the Carrousel are surmounted by a balustrade with sixty-three pedestals, on which are as many allegorical groups of statues representing the Sciences, the Arts, Agriculture, Industry, Commerce, the Seasons, &c. Sixty statues of men illustrious in politics, science, literature, the arts, &c., decorate a portion of the balustrade along the galleries of the first floor, and among them are included the most celebrated architects who have aided at various periods in the construction of the Louvre. Two hundred and sixty-one places of sculpture have been distributed among one hundred and fifty-five artists, and have cost 1,645,000 francs.

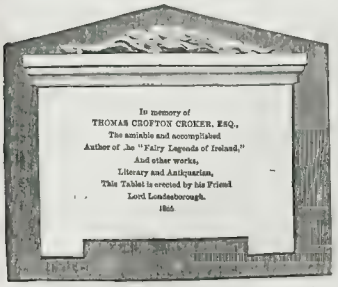
## GRAND BALL GIVEN BY THE MINISTER OF THE UNITED STATES AT PARIS.

THIS splendid fête (engraved at page 249) was given at Paris, in commemoration of the anniversary of Washington's birthday—the 22nd of February. It took place in the magnificent apartments of the new Hôtel de Louvre. The saloons were thrown open at ten o'clock: before eleven not less than 500 or 600 persons had arrived, and up to an advanced hour company continued to flow in. The ball-room, which is one of the finest in Paris, was most brilliantly lighted. At the further end, and immediately over the gallery where the orchestra was placed, hung the portrait of Washington, surrounded by the American eagle, and by clusters of flags, with the well-known "stars and stripes" On the right was the portrait of Franklin, and on the left that of Lafayette, in richly-gilt frames, and adorned with similar national emblems. At the other extremity, immediately over the entrance, was the portrait of President Pierce. To the right was the full-length likeness of the Emperor of the French, and on the left that of the Empress. In the ante-room the Minister of the United States, and the gentlemen who acted as commissaires—a rosette of blue ribbon on the breast being the distinctive mark of their office—received the company. The refreshment-rooms were amply supplied, and the attendance all that could be desired. Among the guests were members of the Cabinet and of the diplomatic corps General Canrobert, who arrived about eleven o'clock, attracted much attention. He appeared in plain evening dress and wore the Star of the Legion of Honour. One of the earliest to arrive was Signor Calderon de la Barca, who was so long Spanish Minister at Washington. On the whole, the fête was one of the most brilliant of the season.

NEW COURT OF THE LOUVRE, PARIS.—(SEE PAGE NO PAGE.)

## THE LATE THOMAS CROFTON CROKER, F.S.A.

The little interesting old church of Kirby Wharf, near Tadcaster, in Yorkshire, stands at the corner of Grimston Park, and is the place of family worship of Lord Londesborough. His Lordship has recently erected in it a tablet, honourable alike to his kindly feeling and good taste,



MONUMENT TO THE LATE THOMAS CROFTON CROKER, F.S.A.

to the memory of the late Mr. Crofton Croker, to whom he had long been much attached, and who was one of the little circle of literary and antiquarian friends whom Lord Londesborough delighted to assemble at his house in the north. This monument, which is placed on the wall exactly opposite his Lordship's pew, is chaste and simple in design, its only ornament being a palm branch.

## EXHIBITION OF PICTURES BY FRENCH ARTISTS.

We are happy to learn that the above Exhibition which has been opened in Liverpool, at the Academy-rooms, Old Post-office-place, has been eminently successful; the rooms being crowded day after day with fashionable visitors.

The "Horse Fair," by Mdlle. Rosa Bonheur, which forms part of the Exhibition, is, of course, the principal attraction. The collection contains 215 pictures, the work of more than one hundred artists, including the most eminent names of the French school. Amongst the pictures are fine specimens of Delaroche, Vernet, Scheffer, Biard, Auguste Bonheur, Pissaan, Dubuffe, Ed. Frere, Isabey, Trayer, Chavet, and others—whose performances we have had the opportunity of appreciating at the Exhibition in Pall-mall. Upon the present occasion we shall direct our attention more particularly to the works by artists who are now exhibiting for the first time in England. Foremost is M. Brion, whose "Raft on the Rhine" occupies the place of honour, and is well worthy of such distinction. The scene is one familiar to all Continental travellers. A large raft, a quarter of a mile long, is descending the river, with its population of Black Forest peasantry; the time is early morning, when the vapours still hang over the horizon, and give a fantastic appearance to distant objects. The muscular figures of the men directing the course of the immense raft are drawn with a vigour, correctness, and originality which reveals at once an artist who is destined to attain a high position in the arts. Equally remarkable is M. Breton, in the "Masquerade of the Portel Archers" on St. Sebastian the patron saint's day. Lake Brion's, his style is novel; and we think them both very valuable additions to the list of contributions to the Exhibition.

In *genre* subjects we remark the "Nursery Scene" of M. Trayer, who reminds us of our own Frith. We engrave a fine work by M. Trayer—"The Industrious Needlewomen."

Amongst landscape painters is M. Tournemine, who has contributed some beautiful little pictures, with figures very correctly painted; they are charming reminiscences of the Danube. Mr. Charles Muller, whose two large pictures formed the chief attraction in the Large Room of the Universal Exhibition in Paris, has sent a fine picture, the subject three ages, drawn in his usual correct manner, combined with fresh colouring and delicacy of expression, which are not often found amongst French painters. Toulemouche, Duval, Pallizi, and others, have contributed works of much interest; and the Exhibition altogether is superior in importance and merit to any former collection of the French school which we have yet seen in England.

## HEINRICH HEINE.

The death of Heinrich Heine, which occurred on the 16th ultimo, leaves a vacancy in the world of Continental literature. Although for eight years he has been reported in a dying condition, his activity has never ceased; and on the arrival of each successive season we have been accustomed to expect the appearance of one more volume from the pen of the most reckless and facile of contemporary wits. Even his lengthened

THE LATE HEINRICH HEINE.

illness had given a new impulse to his fancy; and he who had laughed without scruple at everything which was deemed serious in his fellow-men found also an inexhaustible source of mirth in his own dilapidated state. The wild pleasantries which are attributed to Rabelais on his deathbed are as nothing to the long deliberate scoff with which Heinrich Heine surveyed his own gradual descent into the grave. It was not that he blinded himself to the horrors of his situation; shut up as he was on the second story of a house in Paris, ultimately deprived of the sight of one eye, and concealing having the use of the other, and finding in opium alone a solace to his pain, he actually loved to intensify the consciousness of his own agonies, mental and bodily, by minutely describing them; and then came the strange inward laugh, so often expressed before in mocking verse and epigrammatic prose.

The date of Heine's birth, according to the best authority, was the 13th of December, 1799, and the place where the event occurred was Dusseldorf, on the Rhine. His father, who belonged to the Jewish persuasion, was a merchant in moderate circumstances; but he had a wealthy relative in the person of his uncle, Solomon Heine, the banker of Hamburg, to whom he was indebted for his education. In 1819 he commenced the study of jurisprudence at Bonn; but soon showed a preference of literature to law, which manifested itself both in short poems and in two tragedies, entitled "Almansa" and "Ratcliffe," which but for their connection with a name afterwards rendered famous would now be forgotten altogether. In 1820 Bonn was exchanged for Gottingen; but his career at the latter University was interrupted by a residence of nearly three years at Berlin, where he mixed with fashionable literary society. When he returned to Gottingen, in 1823, he seems to have resumed his legal studies with some vigour, for he quitted the University two years afterwards with the title of "Doctor of Law."

It was in the year 1826 that the literary reputation of Heinrich Heine really commenced. In that year he published the first volume of his "Reisebilder" (Pictures of Travel), which he completed in 1829, and which narrated, in the fantastical manner peculiar to himself, his travels in Germany, Italy, and England, for which last-named country he professed the deepest detestation. The religious sentiment—which is so much more visibly manifested in our island than on the Continent—was naturally distasteful to a wit who was never so well pleased as when he could give loose to his profanity with a freedom on which none of his contemporaries would have ventured.

The "Reisebilder" may be accepted as the type of Heine's general manner, in both prose and verse; for, though he continued writing till within little more than a year of his death, his idiosyncrasy never varied. To know the "Reisebilder," therefore, is to know Heine; and we may take the opportunity of informing those of our readers who, not being masters of German, are still anxious to become acquainted with a writer of such European renown, that a very fair (though not always accurate) translation of the book, by Mr. C. G. Leland, has been lately published at Philadelphia.

In 1827 Heine brought out his "Buch der Lieder" (Book of Songs), in which the short lyrical pieces contained in the first two volumes of the "Reisebilder" were reprinted, together with others that had previously been scattered about in various directions. The poetry of Heine is perhaps even more worthy of study than his prose. In the latter he shows himself to a great degree, a sort of flippant Frenchman; but the mixture of deep feeling and persiflage in his short songs is a peculiarity which is not to be found in any other writer.

"Other bards," says a critic in the *Athenæum*, in an article published about a year ago, "have passed from grave to gay within the compass of one work; but the air of constantly showing two natures within the small limit of perhaps three ballad verses was reserved for Herr Heine. No one like him understands how to build up a little edifice of the tenderest and most refined sentiment for the mere pleasure of knocking it down with a last line. No man like him approaches his reader with doleful countenance,

"THE INDUSTRIOUS NEEDLEWOMEN."—PAINTED BY M. TRAYER.—FROM THE EXHIBITION OF FRENCH ARTISTS.

pours into the ear a tale of secret sorrow, and, when the sympathies are enlisted, surprises his confidant with a horse laugh." It is scarcely necessary to state that the poetry of the "Reisebilder" will be found (for the most part) very well done in Mr. Leland's translation.

In 1831, when the revolution of the preceding year had made Paris the most promising city to the political aspirants of the Continent, Heine visited the French metropolis, which thenceforward became his permanent residence. Here he wrote his "Salon," his "Romantische Schule" (Romantic School); two collections of poems, respectively entitled "Neue Gedichte" and "Romanzen;" a book on Borne, which appeared in 1840; and the "Vermischte Schriften" (Miscellaneous Writings), which he published in 1854. In the mean while the excessive freedom—political and religious—of his productions had rendered him an object of animadversion to the authorities of "fatherland;" and his writings, including not only those already French metropolis, which thenceforward became his permanent residence. Here he wrote his "Salon," his "Romantische Schule" (Romantic School); two collections of poems, respectively entitled "Neue Gedichte" and "Romanzen;" a book on Borne, which appeared in 1840; and the "Vermischte Schriften" (Miscellaneous Writings), which he published in 1854. In the mean while the excessive freedom—political and religious—of his productions had rendered him an object of animadversion to the authorities of "fatherland;" and his writings, including not only those already published, but all that might be published in future, were proscribed by the German Diet in 1835.

Had the offences of Heine been confined to attacks on the German Governments and orthodox religion, he might still have held a high position among the chiefs of the ultra-liberal party. But the manner in which he ridiculed Börne, who was an earnest labourer in the Republican cause, and an exile at Paris like himself, compromised him for ever with the democratic enthusiasts, and he thus found himself isolated altogether—scarcely less obnoxious to the Liberals than to the friends of Absolutism. Even during the lifetime of Börne (after whose death the offensive book was published) charges of venality were made against Heine; and there is no doubt that from 1836 to the fall of Guizot in 1848 he received an annual stipend, derived from the French Government, though this fact alone does not prove that he sold either his words or his silence.

About the year 1850 an opinion was spread about Europe that Heine had renounced the Pantheism of which he appeared so ardent an advocate in his younger days, and had embraced more positive religion, though so vague was the rumour that Catholics and Protestants vied with each other in claiming him as a convert. To this story of conversion he makes special allusion in the "Gestandnisse" (Confessions), which are contained in the first volume of the "Vermischte Schriften," his last published work. The appearance of this book must greatly have disappointed those of the religious world who had begun to exult in the acquisition of so renowned a proselyte; for, in the first place, the creed which he acknowledges is little more than a sort of sentient Pantheism, accompanied by a profound respect for the Mosaic institutions; in the second place, the undiminished levity and profanity of the writer leave room for serious doubt whether he was in earnest about any creed at all, and was not rather bent upon once more mystifying a world he had so often mystified before. An impartial observer will probably come to the conclusion that Heine was never really in earnest about anything.

The London reader may take interest in the fact that about the year 1846 Heine composed a ballet for Mr. Lumley on the subject of "Faust," in which he adheres more closely than Goethe to the old legend. It was never produced—indeed, no manager in his senses would ever think of producing it—but it has been published, with a prefatory disquisition, as a work by itself.

E. J. LOWE.

THE TIPPERARY JOINT-STOCK BANK.—Tuesday being the day appointed for the hearing of the petition filed by Messrs. Murrough and Kennedy, at the suit of Rafferty, a shareholder in the Tipperary Bank, praying that the company might be placed under the provisions of the Joint-Stock Winding-up Act, the Court was crowded by parties interested in the case. After hearing counsel the Master of the Rolls proceeded to deliver judgment, and having reviewed in general terms the case as it was brought before him, pronounced it to be a fraud of so gigantic a character that no living being had ever seen anything like it. He read extracts from the report issued by the bank to the shareholders at a meeting held on the 1st February, 1856, in which it was stated that the assets of the company were equal to £100,000, whereas it appeared to him that their assets would not exceed £35,000. That Mr. James Sadleir, the sole manager and director, had permitted his brother, the late Mr. John Sadleir, to overdraw £900,000, by which the bank had become a defaulter to the amount of £400,000, whilst at that very period, on the 1st February last, Mr. James Sadleir declared the payment of a dividend at the rate of six per cent to the shareholders, carrying over £2000 and upwards to the reserved fund, which was represented to be £17,000, and further representing the bank to be in a flourishing state. In conclusion, his Honour said he could have no difficulty in complying with the petition, that the company should be wound up, and that it should stand dissolved from that day. His Honour referred to the Master to appoint a solicitor in the cause, taking care that no solicitor having connection in any way with Mr. James Sadleir, or with the drawing up of the report of the bank read on the 1st February, 1856, should be appointed to the office

OBSERVANCE OF THE SABBATH.—At the annual meeting of the Manchester Botanical Society, Mr. James Heywood, M.P., moved "That the society's gardens in Old Trafford should be opened to the proprietors and subscribers from 2.30 p.m., until dusk every Sunday." The motion was seconded by Mr. R. N. Phillips, and opposed by the Rev. J. Bardsley, Professor Williamson, and others. A poll resulted in 53 votes for and 362 against the motion As the motion would require, by the rules, a majority of two thirds of the votes, it was consequently lost by a large majority, than the above numbers would indicate. At the first meeting at which the motion was made, some years ago, only three persons supported it; but last year there was a majority for the opening, though not the majority of two-thirds, required by the rules. The advocates for opening the gardens on Sunday have therefore lost ground this year as compared with last. The number of persons voting on the present occasion was 240 for, and 797 against, the motion.—*Manchester Guardian.*

ILL HEALTH OF MR. BRIGHT.—Mr. Bright's health is so unsatisfactory as to compel him to relinquish, for a time, the attention upon his Parliamentary duties. His medical attendant has absolutely prohibited him from attending to business of any description for some months to come. In a letter to the Rochdale Town Council on the subject of his matter is this: for fifteen years I have work'd closely in public affairs, with very little relaxation, and I am fully aware that the brain has had too much exercise and the body too little. I have gone to London twice since the opening of the Session, but have found myself quite unable to attend the House of Commons. My medical advisers strongly urge me to give up all attention to business for three months, and to spend the time in seeking relief in a Continental journey.

GREAT FITMEN'S FEAST.—An extraordinary and interesting demonstration took place at Chilton-moor, near Durham, on Saturday, when Lady Eleanor Mordaunt, Lord Londonderry, assembled nearly one thousand men, employed in her collieries, on the moor, and entertained them with a liberal feast, consisting of an abundance of roast beef and mutton, plum pudding, potatoes, and strong beer. Earl Vane occupied the chair. Lady Mordaunt addressed the company at considerable length, addressing herself especially to the homely sympathies of her hearers, and was frequently interrupted with loud applause. A collbrewer then addressed the Marchioness in the name of his fellow-workmen, and proposed her Ladyship's health, which was drunk with great enthusiasm. (We shall next week present our readers with an Engraving of this stupendous entertainment.)

### CALENDAR FOR THE WEEK.

SUNDAY, March 9.—5th Sunday in Lent. Rizzio assassinated, 1566.
MONDAY, 10.—Sir Hugh Myddelton died, 1632.
TUESDAY, 11.—Benjamin West died, 1820
WEDNESDAY, 12.—St Gregory. Chelsea Hospital founded, 1682.
THURSDAY, 13.—Sir J. Gwyn born, 1764. Dr. Priestley born, 1733.
FRIDAY, 14.—Cambridge Term ends.
SATURDAY, 15.—Oxford Term ends.

FOREIGN POSTAGE.—As newspapers sent to most parts of Europe are subject to a heavy postage, and charged by weight, copies of the ILLUSTRATED LONDON NEWS, printed on *thin paper*, may now be had, if specially ordered, for transmission abroad.

ON SATURDAY NEXT, MARCH 15,
THE ILLUSTRATED LONDON NEWS
WILL CONTAIN
LARGE ENGRAVINGS
(WITH AUTHENTIC PORTRAITS)
OF THE
COUNCIL OF WAR,
AND THE
PEACE CONFERENCE, AT PARIS;
ALSO,
ILLUSTRATIONS OF THE
DESTRUCTION OF COVENT-GARDEN THEATRE BY FIRE,
ON WEDNESDAY LAST.

THE ILLUSTRATED LONDON NEWS.

*LONDON, SATURDAY, MARCH 8, 1856.*

THERE is an interest, entirely apart from local or personal considerations, which renders the Boston election a fitting subject for general notice, and this is the interest which the people of England are gradually learning to take in a due selection of representatives. The excitement of two years of war, the avoidable disasters which have awakened the national indignation, the stern investigations which have followed those disasters, and the unanimous concurrence of the people in the conviction that our administrative system has been grossly and coarsely bad, have united to produce in the popular mind a distrust of a large portion of those who have appropriated to themselves the title of "public men." The plausible conventionality which has so long induced Englishmen to fold their arms, and to trust their welfare and the honour of their country, if not implicitly to any set of Ministers, at least to the presumed vigilance of Parliament in the aggregate, has lost no small part of its influence; and men are disposed to ask themselves what is the rationality of supposing that, while they know numbers of their so-called representatives to be careless, inefficient, prejudiced, or incapable, a united body of such men should be found watchful and intelligent guardians of the public weal.

The simple question which every elector, no matter his politics, should ask himself, when he is considering his reply to canvassers, is this:—What does he want in his representative? Let the elector have the courage to answer this question honestly and in plain language. Does he want a highly-connected gentleman, with pleasant manners and some recollections of the Latin grammar, to rise occasionally in the course of the Session, and deliver a neat speech, with appropriate action, and a welcome quotation? Such men are to be had for the asking, and indeed without it. Does he want a fierce orator, pledged to remodel everything in the world, from the Queen's sceptre to the truncheon of policeman A 450, to make the budget as simple as a bill of parcels, to render the law as clear as a notice to quit, and to reduce the taxation of the country to such duties as shall be so light as to become pleasures? There are also a host of men who will promise him this, and much more, at the briefest notice. Does he want for representative an elegant young officer, whose toilet is rather more irreproachable than his spoken or written language, and whose logic is that of the mess-room, and who fascinates his lady constituents upon the rare occasions when he can bring himself to flutter them by a visit? The service can afford a plentiful supply of such statesmen; and, as we are likely to have rather a glut of Crimean heroes returned upon our hands, there will be ample choice for the intelligent electors. Finally, does he want a barrister, who will get up his speeches as, if their subjects were cases, who will argue them with whatever ability he may possess, and who (according to his temperament) will either assail or support the Minister, until his talents are discovered, and rewarded with a place? There are not above a hundred and twenty of such gentlemen in the present House of Commons; but, if the nation desires more, the Inns of Court swarm with rising men. The elector, therefore, has but to answer the question we have suggested, and then choose from amid the varieties of legislator which will be submitted to his notice.

But, from the present tone of the popular mind, it seems improbable that a candidate of any of the above types will in future exactly satisfy the demand of a constituency which has a will of its own. Its requirement will gradually become larger; and at the same time more and more defined. The House of Commons is felt to be rich enough in orators, dandies, wind-bags, and placehunters. Every man for himself is a good rule, but it may be followed out too far. Electors are learning that it is possible to find representatives who have an honourable ambition to do their fellow-subjects service in the high court of Parliament, and who, also, have practical views as to the mode of rendering such service. From this class of men we apprehend a considerable number of the next Parliament will be chosen; and it would be a platitude to insist upon the importance to the country that a large return should be made of those who enter the House with an earnest resolution to address themselves to the questions of the day, great and small, in the spirit of men who know the work they ought to do, and also believe that they know the way to set about it. Of the election at Boston there are reasons, of course, why we should speak only in the most general terms; but it would be affectation to pass without notice a contest in which the principles for which this Journal has contended were especially urged by one of the candidates as his political profession of faith.

THE result of Sir Do Lacy Evans's motion for a Select Committee "to examine evidence, and report to the House, on the expediency of abolishing the system of sale and purchase of commissions in the Army," must be highly satisfactory to those who take an interest in that question. Much as the House of Commons may dislike to give way to public opinion, even when that opinion is uttered by the universal newspaper press, it has prudently come round to the conclusion that the system must be reformed. The speeches of the gallant General, and of Lord Goderich, who seconded the motion, were unanswerable; and, although Mr. Peel and two or three military members of the House stood up in defence of the system, they were utterly unable to make out a plausible case in favour of it. Of course, Mr. Peel was opposed to the system "in theory." If the whole of our army could be disbanded to-day and reconstituted to-morrow, he would willingly vote in favour of the proposed change; but he entertains the most profound respect for "the majesty of use and wont." The army has existed in its present form upwards of one hundred and fifty years; the system of purchase has coexisted with it during all that time; and, therefore, he does not like to see any innovation. Another argument against alteration—which ought to have come from the Manchester school, rather than from the Treasury bench—is the cost of the proposed reform. Mr. F. Peel tried to frighten Parliament from meddling with the present system because its abolition will cost the country nearly half a million a year more than at present. That consideration may possibly have some weight with men who confound niggardliness with economy; but it is not likely to go far with a people who have seen the cost of the army trebled during the last three years without a word of complaint. What the nation demands is that the army shall be efficient. Let that only be properly secured and there will be no disposition to grudge the requisite cost.

## *CHURCH, UNIVERSITIES, &c.*

APPOINTMENTS.—*Rectories:* The Rev. F. C. Wintour to Haweby, near Grantham; the Rev. R. C. Lovell to St. Swithin's, Norwich; the Rev. J. Homan to Sapcote, Leicestershire; the Rev. H. J. Hordern, M.A., to Kingsdown, near Sittingbourne; the Rev. C. W. Heaton to Plumpton, near Towcester; the Rev. C. Bowen to St. Mary's, Chester; the Rev. E. Rice to Great Risington, Gloucestershire. *Vicarages.* The Rev. T. C. Barker to Spilsbury, near Oxford; the Rev W. Featherstonhaugh to Pamenboys, near Stanhope; the Rev. L. Gregory to Oadby, near Leicester; the Rev. W. W. Kirby to Appledore with Ebony, near Tenterden; the Rev. T. Rowland to Penmint, Montgomeryshire; the Rev. T. H. Button to Newlyn, near Truro; the Rev. J. C. Morris to Fishnaghy, near Coventry *Incumbencies.* The Rev. W. Cobb to Shoulden, near Deal; the Rev. E. Pain to Summertown, near Oxford; the Rev. J. H. Thompson, M.A., to Cradley, near Stourbridge.

A TESTIMONIAL of esteem and respect, amounting to £408 18s., has been presented to the Rev. G. D. Hill, late Assistant-Minister at St. Philip's Chapel, Regent-street.

ACONITE AND HORSERADISH.—With the view of instructing the public in the distinctive appearances between Aconite and Horseradish, there have been placed in the Museum at Kew, specimens of the two roots side by side. In the Museum at the Edinburgh Botanic Garden, also, specimens of the roots of the above plants (in their several states) are an interesting addition, viz., roots of the Aconite from the garden at Dingwall, where the late fatal occurrence took place. The latter were obtained by Dr. Maclagan.

BAZAAR IN REGENT'S-PARK.—The committee of the Hospital for Consumption at Brompton are about to hold a bazaar and fancy fair in aid of the funds of the institution; for this purpose the Zoological Society have kindly granted the use of their rooms as adjoining the Botanical Gardens, Regent's-park. The hospital has lately been enlarged, so that 250 in-door patients are now accommodated instead of 50. So large an increase has necessitated an addition to the expenditure, and the committee hope to aid the funds considerably by the bazaar. Her Majesty has graciously accorded her patronage to the undertaking.

THE PROPOSED ROAD THROUGH ST. JAMES'S-PARK.—The Committee appointed to consider the various plans for making a road through St. James's-park met on Tuesday for the first time. The Committee consists of the following members:—Sir B. Hall (in the chair), Lord J. Manners, the Chancellor of the Exchequer, Mr. Disraeli, Lord R. Grosvenor, Lord Hotham, Sir J. Pakington, Sir R. Stephenson, Sir John Shelley, Mr. Hutchins, Colonel Boldero, Mr. Drummond, Mr. Stuart Wortley, Colonel Wilson-Patten, and Mr. R. M. Milnes. Mr. Page, the architect to the office of Woods and Forests, explained the plans he had prepared for a communication between Pall-mall and Westminster. The first plan was for a road commencing at Pall-mall to the road in the park, the cost of which would be £50,350. This would include a new bridge over the ornamental water in St. James's-park. The Mall would be widened about £20,000, and the whole ten or eleven feet from the water. Another plan was from Cleveland-row, by Lord Hopetoun's house, proceeding in front of Bridgewater House, through Lord Sidney's and Sir John Parsons's, into the Green-park, by return to the south, coming to the front of Buckingham Palace. The expense of this would be £153,290. This line would involve an actual expenditure for the Green-park. The expense would be in the purchase of the property. Another line was proposed commencing at Waterloo place, between the Athenæum and the United Service Clubs, by the Duke of York's Column into the Mall, and thence to Storey's-gate. For that line there were two estimates—one, supposing the Duke of York's Column were left standing, would be £4890, and a second, assuming it to be removed, or to some other spot, would be £7,830. A builder had undertaken to take the column down, and rebuild it on any spot within a quarter of a mile, for £2000. Including the road from the Mall to Storey's gate, the total expense, supposing the Duk of York's Column were moved, would be £..8,0, and not £17,800. After receiving these plans the committee adjourned.

## THE BOSTON ELECTION.

THE active proceedings in the contest for the representation of this borough did not begin till the latter end of last week, the writ not having been moved for till Friday evening. On Saturday Lieutenant-Colonel Sleigh made his appearance in the town, and addressed a small audience from the balcony of the Red Lion inn, at five o'clock; and at seven o'clock he held a public meeting at the Dolphin inn, which was but thinly attended.

On the same evening, at eight o'clock, a large and influential meeting of the supporters of Mr. Ingram was held at the Lord Nelson inn—Captain W. Richardson in the chair.

Mr. INGRAM, having been introduced, rose amidst loud applause, and said:—Mr. Chairman and gentlemen,—This is not the first time I have had the honour to address the inhabitants of this ancient borough, and I sincerely hope it may not be the last by many hundreds (Cheers). I hope in a few days to have to thank you for returning me as your representative in the House of Commons; for the result of my canvass, so far as it has gone, has told me that it is not unlikely you will return me (Cheers). During the last few days I have been out amongst my friends, and I must be allowed to say that I have had nothing but a work of triumph from one end of the borough to the other (Cheers). I have not throughout my canvass heard a single word to give me pain; and, even were the contest to end now, I should have no cause to regret that I have come amongst you to solicit the honour of representing you in Parliament. Indeed, I cannot be too grateful for the very kind and flattering reception which has been accorded me by my old schoolfellows and friends of twenty or twenty-five years since. I am not going to detain you with a long address, but at the same time I think it only right that upon this occasion I should say something as to what you may expect from me, and what I am sure I shall fulfil if you do me the honour to elect me. As I have already stated, you will ever find me in the ranks of the friends of progress. I shall feel it my duty to support by every means in my power the establishment of a system of national education, by which every one may be benefited, the moral and social condition of the people improved, and talent, be it found in what rank it may, be brought forward alike to the advantage of the possessor and the benefit of the country (Cheers). I am a sincere friend to the great principle of local self-government, which has done much to raise this country to greatness, and it will ever be my earnest endeavour to support and extend it (Cheers). I am one of those who believe that great reforms are wanted in both the civil and military departments of the Government, and I shall give my best support to those distinguished members of the House of Commons who have been labouring to effect so good an object, and whose labours, I am sure, will be ultimately crowned with success (Cheers). On the important question of peace or war my sentiments are well known. In common with every true man in the kingdom, I shall be delighted if peace can be secured on fair and honourable terms; but I would rather that the war should be energetically continued—no matter how great the cost—than that the honour of England should receive the slightest tarnish, or the civilisation and liberty of Europe be in any degree infringed upon by despotism and barbarism (Cheers). I am a sincere friend to every proper extension of the franchise, and giving to the elector the best protection for its independent and honest exercise. I need not further detain you with an exposition of the principles upon which I ask your support, for they are already before you; but I may be allowed to add that, if you do me the honour to select me as your representative, you will always find me watching narrowly your local interests, and using my utmost endeavours to further the prosperity of the borough of Boston, with which I have the honour to be connected by local ties and by birth (Cheers). If I have not been resident amongst you of late, it has only been because I have been engaged in the busy walks of life in a more extended sphere of action; but it is not unknown to many of the gentlemen now present that I have ever been ready to assist in carrying out local improvements to benefit the borough and its neighbourhood (Cheers). If, therefore, I should become your representative, you will always find me in my place in the House of Commons, endeavouring to the best of my ability to fulfil the duties which devolve upon me as your representative. I will now only further detain you to thank you for the kind attention you have paid me, and the great support I have met with throughout my canvass, which leads me to the conclusion that I may fairly look to a successful result of the contest (Cheers).

The meeting was afterwards addressed by Mr. Jonathan Duncan, Mr. Watkin (manager of the Manchester and Lincolnshire Railway), Mr. R. Hall, Mr. Mark Lemon, Mr. Tuxford, and other gentlemen.

Mr. Mark Lemon, in the course of a short speech, said it was many years since he first came to Boston, where he resided for some time, and met with so much kindness and consideration that he had always felt the greatest interest in the prosperity of the town. He had come to Boston from a feeling of curiosity to see whether his old friends were changed, and whether they would not make an addition to the Independent members of Parliament by the return of their townsman (Cheers). He had a deep personal regard, as he knew many others had, for Mr. Ingram, and he could not conclude without wishing him every success, and assuring them that they had found an honest, earnest, and energetic man, who, if they returned him to Parliament, would serve them well, and never look to any other interest than that of his constituents and his country (Cheers).

The Chairman having announced that there would be a meeting in the Corn Exchange, on Monday evening, a vote of thanks was given to him for presiding over the meeting. Three hearty cheers were again given for Mr. Ingram, and three for the Chairman, which terminated the proceedings.

## THE MEETING AT THE CORN EXCHANGE.

On Monday evening the Liberals mustered in immense strength within the walls of this spacious building. A powerful array of elected friends thronged the platform, and every nook and corner of the ample hall was crammed. As a mere display of numbers the scene was imposing, but the spirit and enthusiasm manifested from the opening of the proceedings to the termination unequivocally declared that Mr. Ingram was the choice of Boston. Every hand was raised in his favour; every voice hailed his triumph. In his speech he was frank and straightforward, and called on every man to ask him any question on which he entertained a doubt. On the motion of Capt. W. Richardson, seconded by Mr. T. S. Cooke, Capt. W. Wilkinson was called to the chair.

Mr Ingram, who was received with great enthusiasm, adverting to the remark of the *Times*, that he was not sufficiently definite with regard to his principles, said:—"This is a complaint which no one in Boston has made. I am sure no one has said that my principles are indefinite. Let there, however, be no mistake in the matter. Let me tell you what I propose to do, and let me be perfectly understood. I will say distinctly that I am in the main a supporter of the principles which actuate the Government of Lord Palmerston (Cheers). I am not the political adviser of the noble Lord; I am not one who has recently come forward to say that no one but Lord Palmerston can govern the country. When he was attacked in 1850, so far as my humble ability would allow me, I supported him to the utmost, and I was one of those who put down their names to give his Lordship a dinner at the Reform Club (Cheers). I have always believed him to be the man of the country, but I do not propose to go to Parliament to support Lord Palmerston only, but I shall go with the determination to support the cause of the people (Loud Cheers).

Mr. Douglas Jerrold, in an eloquent speech, supported the claims of Mr. Ingram, whom he described as eminently a business man, though not a wordy talker. God knew they had enough of those in the House of Commons (Cheers). He had heard of a bird in India which had a tongue twice as long as his body, and he believed that bird had returned members to the House of Commons (Cheers and laughter). If they wanted long speeches, they got them to their heart's content, and he generally found that the longer the speech, the smaller the sense it contained (Laughter). It was like a baby in very long clothes, an endeavour to make a great show of a very little child (Laughter).

Mr. Watkin supported Mr. Ingram because he knew the interest he took in the progress of the people, in great and extensive works for the improvement of the country, and the advancement of civilisation.

Mr. Shirley Brooks, after adverting to the peculiar claims of Mr. Ingram, went on to say that he had a far deeper and stronger reason for urging the claims of that gentleman to their suffrages. You will all remember that some twenty-two months ago one [illegible] were dispatched from England went forth to the strife in the Crimea. A few months later, and twelve thousand five hundred [illegible] were lying corpses—victims, not to the sword of the [illegible] to an atrocious system of maladministration—[illegible] wickedest folly that ever was permitted to deal with the lives of men. Forgive me if I speak more warmly and earnestly than your brief acquaintance might seem to warrant. I have good right to raise my voice against the system. It robbed me of a young brother. When the excitement of approaching war began to be felt, he, a bold and [illegible] young man, was inspired with a resolution to join the army, and without waiting for advice or assistance, he volunteered into the Rifle Brigade, from which he resisted all attempts to remove him, and sailed with his comrades for the East. He shared in the glories of the Alma, where he did a soldier's duty, but shortly afterwards he was seized with the epidemic of the climate. Had the most ordinary common-sense arrangements been made for the sick soldiery, he would, in all human probability, have survived to serve his country, to witness the brilliant madness of Balaclava, to share in the undying glories of the Soldiers' Battle—Inkerman. But the scoured system of mismanagement was then in full play, there was as yet no Miss Nightingale to shame our authorities into some sense of humanity; and my brother's young life, like the lives of thousands of your brothers' lives, was cast away—he sleeps by the great hospital of Scutari. Against that abominable system the British press has, to its everlasting honour, made unceasing war; and no journal has spoken out more constantly, manfully, and damagingly, than the journal conducted by Herbert Ingram" (Cheers).

The meeting was afterwards addressed by Mr. Staniland, and Mr. Duncan.

The following resolution—moved by H. Harwood, Esq., and seconded by W. Caister, Esq.—was carried by acclamation:—

That the electors here assembled, having heard with great satisfaction the statement of the successful canvass of Mr. Ingram up to this day, pledge themselves to continue their exertions until he has been triumphantly returned to Parliament on the present vacancy.

Mr. Ingram thanked the electors for the very kind reception they had given him, several other gentlemen said a few words as to the canvass, and the meeting broke up with three cheers for Mr. Ingram.

On Tuesday it became known that Lieutenant-Colonel Sleigh had withdrawn in favour of Mr. Adams. In the evening another enthusiastic meeting in favour of Mr. Ingram was held; Mr. F. Groom in the chair. The principal speakers were Mr. Francis Bennoch, Mr. Mark Lemon, Mr. Moore, and Mr. Ingram. A resolution similar in purport to the one passed on Monday evening was carried by acclamation, and the meeting then broke up.

## THE NOMINATION.

The nomination of candidates took place on Thursday, at twelve o'clock, in the Market-place; the candidates and their friends being accommodated in the balcony in front of the Assembly-rooms.

Mr. White proposed Mr. W. H. Adams as a fit and proper person to represent the borough in Parliament, he being an old inhabitant of the town, and a consistent supporter of Conservative and constitutional principles. Mr. Wren seconded the nomination.

Mr. W. Tuxford, sen., proposed Mr. Herbert Ingram, and said that he was a native of the town, a Reformer, and a man of strict honour and determined enterprise. Mr. Thomas seconded the nomination.

Mr. ADAMS said he only presented himself before them as a Boston man; he was a plain man, and could only depend upon his own homespun abilities to recommend him (Cheers). He considered that the war had been drawn upon us by the incapacity of the Government of the day (Loud cheers). Had the Government, when the dispute first began, opposed the encroachments of Russia with firmness and decision, we should not have had war (Cheers). England had drifted into it, for want of a skilful pilot. It would be to the shame of England, and he hoped no Englishman would sanction anything in the shape of peace, if this war was not carried on until the object for which it had been begun was completed (Great cheering). He was in favour of a revision of taxation, of the extension of education, and of army reform; and was opposed to the ballot; and whether they returned himself or his honourable opponent he hoped that they would return the man best calculated to promote the interests of the town of Boston ("Hear, hear," and cheers).

Mr. INGRAM then came forward amidst the most enthusiastic cheering, and said: Mr. Mayor and Gentlemen,—I have the honour to stand on these hustings as a candidate seeking to represent this borough—my native town—in Parliament (Cheers). I am happy to see that I am the popular candidate (cheers)—that of itself is a great satisfaction to me (Cheers). I had great diffidence in coming forward, but I have none now. I can have none whilst I am surrounded by so many friends (Cheers). I feel proud that I have been proposed by my old friend Mr. Tuxford—the old veteran of Boston in the cause of civilisation and freedom (Cheers). I am also much gratified that Mr. Thomas, who was apprenticed at the same time as myself, should have come forward to second my nomination. I am likewise surrounded by very many kind friends, for whom I have the greatest respect (Cheers). I also have the pleasure of knowing that I have the undivided support of the great Liberal party of the borough (cheers), and I may say of the county. (Cheers). During my canvass I have met with many friends of the Conservative party who have promised me their support at the next election, while others have promised not to vote against me at the present one (Cheers). It is but justice to say that I have received the greatest kindness from all parties—especially from my friend Mr. Adams. I came here to ask you for a seat in Parliament, not for the purpose of serving any interest of my own, but to endeavour to advance great Liberal principles; and if you do me the honour of returning me I shall enter the House a thoroughly independent man; and I am sure I shall so faithfully serve you that you will be glad of the opportunity of returning me another time (Cheers). I have spoken so often at the Corn Exchange and other places that I am sure you must, by this time, be fully acquainted with my political sentiments. I will not, therefore, go through them at length, as I am afraid of tiring your patience (Cries of "Go on"); but I will say a word or two on a few important points. I support the principles of that great party of progress in the House of Commons of which, through your kindness, I hope to become a member (Cheers). I think I may say, without vanity, that I have done something in the cause of progress. I have endeavoured for the last ten or twelve years, through the columns of that newspaper with which I have the honour to be connected and in my own private capacity, to support that cause; and I believe I have to some extent assisted in benefiting the people (Cheers). I believe that the assistance I gave to the repeal of the corn-laws had some effect; and all of you have felt the benefit of that measure (Cheers), and will much more when the principles of Free-trade are extended, as they must be, much more, for the advantage of all parties (Cheers). I am also in favour of the Vote by Ballot (Cheers). I am aware that many of my friends object to the ballot, and state that they like to see men stand up and openly vote as they please. But do they always vote as they please? I deny that they can (Cheers). And it is to enable them to do so that I advocate the ballot, the excellent working of which I have seen in the clubs and in the parishes of London (Cheers). I am also in favour of a complete reform in the Army, Navy, and Civil Service of the country; so that every man shall have a fair prospect of partaking of the honours of his profession (Cheers). Gentlemen, I am one of the firm supporters of the alliance between England and France (Cheers), which some statesmen have endeavoured to disturb; and I am determined, as you are determined, to use every effort to ensure the war being carried on with vigour, unless such a peace can be concluded as will be just, honourable, and righteous (Cheers). I will not further detain you. I have been since Tuesday last anxiously engaged night and day canvassing the electors. As yet I have not been enabled to see the whole of them; but I pledge myself to endeavour to do so before the day of election. Standing, as I now do, on the site of my father's house (the late Mr. Ingram's house formerly stood on the spot on which the Assembly Rooms have since been erected) I pledge myself, should you return me to Parliament, to serve you honestly and truly (Long-protracted cheering).

The Mayor having put the names of the candidates to a show of hands, about thirty or forty were held up for Mr. Adams, amidst loud laughter, whilst for Mr. Ingram there could not have been less than three thousand. The result was hailed by the clapping of hands over their heads, and long-continued cheering.

The Mayor having declared the show of hands to be in favour of Mr. Ingram, a poll was demanded on the part of Mr. Adams, which was fixed to take place the next day.

Mr Ingram bowed, and Mr Adams seconded, a vote of thanks to the Mayor, which was given by acclamation. Three cheers, and one cheer more, for Mr. Ingram closed the proceedings.

THE POLLING, FRIDAY.—RETURN OF MR. INGRAM.

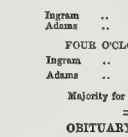
## OBITUARY OF EMINENT PERSONS.

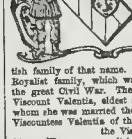
### FRANCES COCKBURN, VISCOUNTESS VALENTIA.

THIS amiable and respected lady died on the 27th January, at High Beech, Essex, at the residence of her maternal aunt, Dame Mary Cockburn, widow of the Right Hon. Sir G. Cockburn, Bart., K.C.B. Frances Cockburn, Viscountess Valentia, was the only daughter of the late Charles James Sims, Esq., who was the eldest son of John Sims, Esq., of North Grove House, Tunbridge Wells, Kent, and Church-hill House, Walthamstow, Essex, by his wife, Frances James; who was a granddaughter and coheiress of Rutherford of Spring Garden, of the great Scottish family of that name. The Simses were the junior branch of an ancient Royalist family, which was ruined by its exertions for King Charles I., in the great Civil War. The Viscountess was widow of the late George Arthur Viscount Valentia, eldest son of the third and last Earl of Mountnorris, to whom she was married the 21st October, 1824. Her Ladyship was the last Viscountess Valentia of the line of the house of Annesley. The remains of the Viscountess have been deposited in the Mountnorris vault in the parish church of Arbury, Staffordshire.



### SIR HENRY HUNLOKE, BART.

SIR HENRY JOHN JOSEPH HUNLOKE, sixth Baronet, of Wingerworth, in the county of Derby, was the only son of Sir Thomas Windsor Hunloke, the fifth Baronet, by his wife, Anne, eldest daughter of Thomas Eccleston, Esq., of Scarisbrick Hall, county of Leicester. He was born the 20th September, 1813, and succeeded to the Baronetcy on the demise of his father, the 19th January, 1816. He never married. He died in Grafton-street, on the 5th ult. The Hunlokes are a very ancient and honourable Derbyshire family. Sir Henry Hunloke, the first Baronet, was so created by Charles I. in 1642, soon after receiving knighthood from that Monarch on the battle-field of Edgehill, in reward for the valour he displayed during the engagement.



### KYRE EVANS, ESQ., OF ASHHILL TOWERS.

THIS gentleman was the representative of the Milltown Castle branch of the noble house of Carbery, being grandson of Thomas Evans, Esq., of Milltown, county Cork, M.P. in 1737 for Castlemartyr, younger brother of George, first Lord Carbery, and one of the heirs in remainder to that peerage. Kyre Evans was born the 23rd May, 1778; and married, the 20th March, 1805, Anna, eldest daughter of the late Robert Maunsell, Esq., of Limerick, formerly a Member of Council at Madras; and by her, who survives him, had issue six sons and three daughters; of the latter two have been married—viz., Mrs. Maunsell Kyre, of Galway, and the Viscount de Montmorency. Mr. Kyre Evans' eldest son Eyre died in 1853, having married, in 1837, the Hon. Sophia Crofton, sister of the present Lord Crofton, by whom he left a son, Kyrans Eyre, now successor to his grandfather, and a minor in his eleventh year. Mr. Eyre Evans died at his seat, Ashhill Towers, county Limerick, on the 29th January. The name of Evans came into this family through the marriage of Anne, the Right Hon. George Evans, of Caherass, in 1670, with Mary, daughter and heiress of John Eyre, Esq., M.P., of Eyrecourt Castle, county Galway.

MILLINERS' AND DRESSMAKERS' PROVIDENT AND BENEVOLENT INSTITUTION.—On Thursday evening a very agreeable musical entertainment was given at the Hanover-square Rooms to the members and friends of this institution. The programme contained the names of Madame Rudersdorff, Miss Messent, Miss Ransford, Mdlle. Matilde Rudersdorff, Mdlle. Weiss, Mr. Sims Reeves, Signor Vercni, Mr. Weiss, &c. The Mdlle. Weiss, Mr. Sims Reeves, Signor Vercni, Mr. Weiss, &c. The music comprised selections from the most popular works of Donizetti, Verdi, Weber, Costa, Muller, Dr. Arne, Meyerbeer, Mendelssohn, Benedict, Hatton, &c. The entertainment, in short, was most efficiently conducted throughout.

THE SOHO MURDERS.—At the Central Criminal Court, on Thursday last, William Bousfield was found guilty of the murder of his wife and three children, on the morning of February 3rd.

## THE BALTIC FLYING SQUADRON OF 1856.

THE campaign of this year in the Baltic has already commenced, the ice having left much earlier than on previous occasions; and the vessels of the advanced or Flying Squadron have again entered the seas, the ports of which they so successfully blockaded last year. This squadron will be composed of the noblest frigates and corvettes in the service, consisting of the *Imperieuse*, 51, Captain Watson, C.B., in command of this squadron; *Euryalus*, 51; *Arrogant*, 47; *Amphion*, 38; *Pylades*, 20; *Falcon*, 17; *Harrier*, 16; the *Driver*, *Dragon*, and *Samson*, paddle frigates, and others. Of these the *Pylades*, *Falcon*, and *Samson*, are already off Elsineur, the mouth of the Sound; and the *Imperieuse* has proceeded through the Great Belt: the other vessels are joining them as fast as they can be got ready for sea. The present destination of the Flying Squadron is Kiel, from which for sea. The present destination of the Flying Squadron is Kiel, from which place the vessels will receive orders for their future movements—the armistice not interfering in any way with the blockade.

At Spithead the squadron of Admiral Dundas is becoming daily more formidable; and in a week or two the fine fleet of first-rates, two-deckers, frigates, corvettes, all steam propelled, with the flotilla of two hundred and fifty gun-boats, mortar-boats, &c., will form in the Solent—by far the grandest naval display that has ever been witnessed in the world.

## SKETCHES IN THE BALTIC FLEET.

*(See the Tinted Engravings in Supplement.)*

WE this week present our readers with a pair of interesting scenes from the inner life of the fleet, from sketches taken by Mr. Carmichael, during his stay last year among the vessels in the Baltic. One Engraving represents the gun room of H.M.S. *Cæsar*, with the midshipmen of that vessel invited to an entertainment with the Admiral. This squadron will be composed of the noblest frigates and corvettes in the service, consisting of the *Imperieuse*, 51, Captain Watson, C.B., in command of this squadron; *Euryalus*, 51; *Arrogant*, 47; *Amphion*, 38; *Pylades*, 20; *Falcon*, 17; *Harrier*, 16; the *Driver*, *Dragon*, and *Samson*, paddle frigates, and others. Of these the *Pylades*, *Falcon*, and *Samson*, are already off Elsineur, the mouth of the Sound; and the *Imperieuse* has proceeded through the Great Belt: the other vessels are joining them as fast as they can be got ready for sea. The present destination of the Flying Squadron is Kiel, from which place the vessels will receive orders for their future movements—the armistice not interfering in any way with the blockade.

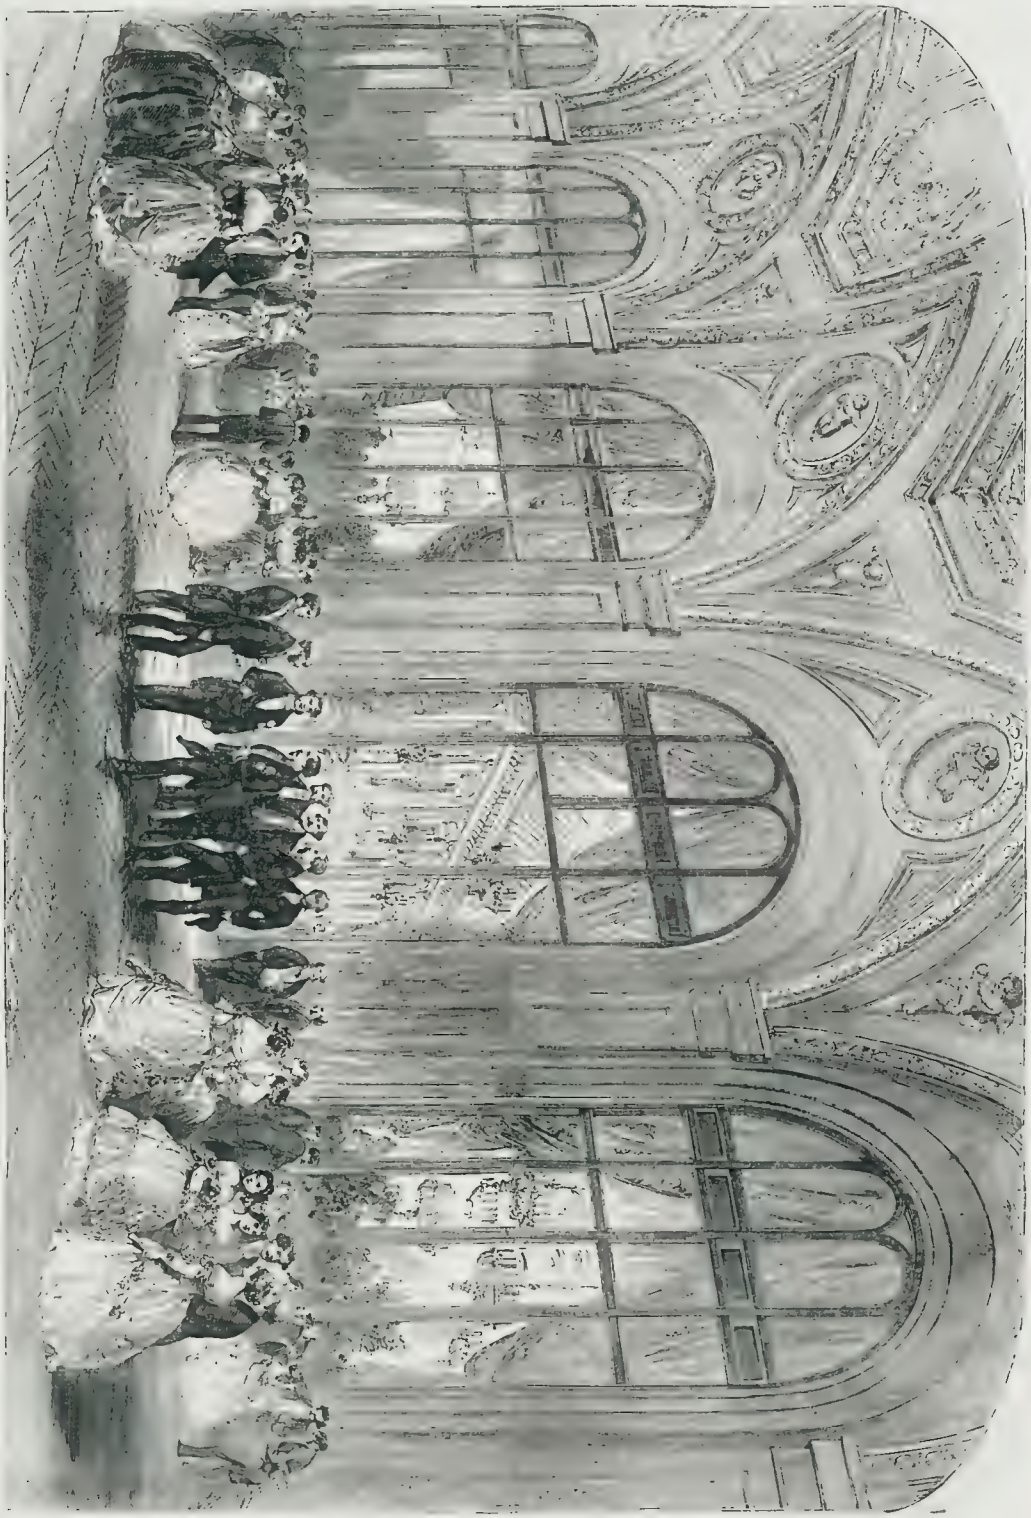
## SKETCHES IN THE BALTIC FLEET.

*(See the Tinted Engravings in Supplement.)*

WE this week present our readers with a pair of interesting scenes from the inner life of the fleet, from sketches taken by Mr. Carmichael, during his stay last year among the vessels in the Baltic. One Engraving represents the gun room of H.M.S. *Cæsar*, with the midshipmen of that vessel invited to an entertainment with the Admiral. This custom is taking rocket. On these occasions—the greatest freedom and good feeling, of course, and other employments—the greatest freedom and good feeling exist among all, rank holding no distinction here at these times, but immediately the allowed period expires all repair to their respective duties, wherever any appearance of form and respect is strictly attended to.

In the other subject above the ward-room officers of H.M.S. *Duke of Wellington* entertain among the Admiral. It is customary for all the officers of every ship to dine in turn with the Admiral, or Captain, as he may invite them; and he in return has the same compliment paid him, by being invited to an entertainment with them. This custom in some vessels happens as frequently as once a week, in others but once a month. At these dinners the guests are in full dress; each officer is attended by his servant—selected from the jack tars; and fine, noble-looking fellows they all are. The ship's band commences playing on the removal of the cloth: music of the highest class is performed, and all your best senses are engaged in the midst of brave and happy men.

THE BALTIC FLYING SQUADRON OF 1856.—(SEE PRECEDING PAGE.)



THE BALL GIVEN BY THE MINISTER OF THE UNITED STATES AT THE HOTEL DU LOUVRE, PARIS.—(See Page 247.)

## *IMPERIAL PARLIAMENT.*

### HOUSE OF LORDS.—MONDAY.

JUDICIAL STATISTICS.—Lord BROUGHAM moved for certain returns on the subject of judicial statistics, setting forth periodically the number and character of the decisions given in the Courts of Common Law, the Criminal Courts, in Bankruptcy, &c.—After a few words from the LORD CHANCELLOR the returns were ordered.

The Commons' Inclosure Bill went through Committee.

### HOUSE OF COMMONS.—MONDAY.

THE CRIMEAN REPORT.

On the motion for going into Committee of Supply,

Sir DE L. EVANS explained, and in some measure apologised for, certain statements he had made during Friday's debate respecting the conduct of Colonel Gordon, the Duke of Cambridge, General Simpson, and other officers. Letters, it appeared, had passed between himself and the representatives of the officers in question, which had resulted in correcting various misapprehensions in the opinions previously entertained by the gallant member, and under this new view of the circumstances he complied with a sense of duty in setting before the House the extent and causes of this misunderstanding in the keenest convictions. Referring to a statement made by Lord Claud Hamilton, that he had, after the battle of Inkerman, advised Lord Raglan to abandon the Crimea, Sir De L. Evans declared himself ready to give full explanations on the subject at a fitting opportunity.

Lord C. HAMILTON, after expressing his satisfaction at the withdrawal of the principal charges against Colonel Gordon, was proceeding to repeat and enforce his accusation against Sir De L. Evans, respecting the suggestion of retreat from before Sebastopol, when the House interposed with so unmistakeable a expression of disapproval, that the noble Lord broke off his remarks on the topic.

MR. A. GORDON also rejoiced to find the character of his relative so satisfactorily vindicated, but was at a loss to understand the attempting to introduce some counter charges against the gallant Member for Westminster.

Lord PALMERSTON suggested the propriety of allowing all personal topics to drop, after the full and satisfactory explanation given by Sir De L. Evans.

MR. DISRAELI having spoken in a similar sense, the subject was permitted to drop.

DIPLOMATIC RELATIONS WITH PERSIA.—MR. LAYARD called attention to the present state of the diplomatic relations between England and Persia. Recapitulating the incidents which had led to the departure of MR. MURRAY from Teheran, and the consequent breach of official intercourse with the Court of the Shah, the hon. member enlarged upon the uncertain position of affairs in Asia, and expressed much fear that, for the sake of following up an unworthy squabble, we were throwing Persia into the arms of Russia.—Lord CLARENDON regretted that, while the Governments were still endeavouring to reconcile the misunderstanding which had arisen between England and Persia, a discreet silence had not been observed in Parliament on a subject which discussion would inevitably surround with augmented difficulties. After stating some particulars of the recent controversy at Teheran, and exculpating MR. Murray, the noble Lord declined to enter into the question as between the two countries, remarking that the dispute was still pending, but announcing that nothing like an actual breach of amicable relations had as yet taken place. Under these circumstances he hoped that the discussion would not be pressed further at the present moment.

PEACE NEGOTIATIONS.—MR DISRAELI, after alluding to the important announcement which had obtained publicity within the last few hours, inquired whether it was true that the preliminaries of peace had been signed in Paris?—Lord PALMERSTON explained that, at the last Conference, it was agreed to put on record the articles which were originally proposed by Austria, and which Russia had given her acceptance *par et simpole*, and to adopt them as being equivalent to formal preliminaries of peace.

SUPPLY.—The House having gone into Committee of Supply, passed several votes on account of the Army and Ordnance services amidst a prolonged and miscellaneous discussion. In Committee of Ways and Means, a vote of twenty-six millions was granted towards the services of the year.

On resuming, the Trial of Offences Bill was read a second time, after a brief conversation. The Annuities Bill and the Exchequer Bills Funding Bill were read a third time and passed. The Mutiny Bill and the Marine Mutiny Bill went through Committee. The Out Pensioners (Greenwich and Chelsea) Bill was read a second time.

### HOUSE OF LORDS.—TUESDAY.

The Turnpike Trusts Arrangement Bill passed through Committee.

The Commons Inclosure Bill and the Metropolitan Sewers Bill were read a second time.

NATIONAL PORTRAIT GALLERY.—Earl STANHOPE moved an address to the Crown, recommending the formation, upon the site of the present National Gallery, of a Gallery of Contemporary Portraits, executed by the most eminent artists, composed chiefly of the likenesses of living celebrities in war, politics, literature, and art.—The Marquis of Lansdowne, the Earl of Ellenborough, and the Earl of Carnarvon, having briefly intimated their assent to the proposition, the motion was agreed to.

### HOUSE OF COMMONS.—TUESDAY.

Lord PALMERSTON laid on the table the papers relating to the fall of Kars

EASTER RECESS.—In answer to MR. SPOONER, Lord PALMERSTON said the House would rise for the Easter holidays on Friday, the 14th instant, and meet again on the 21st.

SALE AND PURCHASE OF COMMISSIONS.

SIR DE LACY EVANS rose to move for a Select Committee to consider, examine evidence, and report to the House on the expediency of abolishing, the system of sale and purchase of commissions in the army. He admitted that the present system of obtaining commissions by purchase had a show of economy, in enabling an officer to retire. But he contended that this was more apparent than real, and besides that, the question ought not to be regarded as one of economy, as great national interests were mixed up with it. He showed that purchase did not exist in the Artillery, and our Artillery was not surpassed in the world. It was said that if purchase were abolished favouritism would supervene; but, even if it did, he thought the personal favour of a commander was as good a recommendation as the possession of a few thousand pounds. He then proceeded at some length, and in a very indistinct tone, to state several instances of the general evils which had arisen from the system of promotion by purchase.

Lord CODRINGTON seconded the motion He considered the system of promotion by purchase as one which tended to under pay the officers, and to give them vested rights which prevented reforms from being carried out, whereas the staff of the officers complained of public money having been broken with them. As a proof that this was no imaginary case, he quoted from the Guards' memorial of the Queen, where the charge of a breach of faith was brought against the Government. It also tended to discourage the education of officers, as promotion did not depend upon professional proficiency. But it was said the system gave a good promotion. He doubted whether that was not be carried too far. Its practical working during the present war was to give generals of seventy and captains of eighteen. He then adverted to the question of promotion from the ranks, since the Duke of Wellington had left the War-office fewer non-commissioned officers and privates had been promoted than before. The middle classes did not go into the army at all, because they had not access to promotion on commissions, and no hope was held out to them of gaining one by desert. He instanced France, Sardinia, and Russia as cases where the army had been organised on a most efficient scale without adopting the system of promotion by purchase. He strongly recommended the adoption of the Sardinian system in this country—a system which provided for the creation of young officers, out of which should be selected the regiments into the army, and then that promotion should take place according to a combined system of seniority and merit.

MR. LEIGH thought they ought not to refuse the inquiry, considering the feeling that was abroad upon this subject.

SIR J. FITZGERALD supported the existing system.

MR. PEEL admitted that the existing system was objectionable in theory, and that if the army was to be created to-morrow for the first time, the purchase system would not find a place in it. But the army was of 160 years' standing, and the system could not have existed so long without bringing to light some advantages which had ensured its existence for so long a time. He contended that the system of purchase was a great convenience in affording an outlet to officers who wished to retire. He was sure that the abolition of the purchase system would require six or seven millions of money to replace it, and he for one considered this would be a wasteful expenditure of public money. For these reasons he was opposed to the motion now before the House

Lord STANLEY was in favour of an inquiry being made into this system at the present moment, while the public feeling was favourable to any reform. If they allowed the present opportunity to pa[illegible] not likely to return.

MR. SIDNEY supported the motion.

Colonel LINDSAY held that the present system led to officers attaining field rank more rapidly, and also that it prevented jobbery or obtaining promotion by interest

MR. [illegible]HILNES was favourable to inquiry, but he did not think a [illegible] was the proper tribunal. He would suggest as a preferable alternative, that a commission composed of civil and military men should be appointed for that purpose.

Colonel SIBTHORP ADAIR was also in favour of the [illegible] motion, though he preferred a commission rather t[illegible] mittee.

Sir S. HERBERT did not think any benefit would arise from inquiry, if it were but to disabuse the public mind of the misapprehension which was entertained as to the effect of purchase. He deprecated handing the question over to a Committee of the House of Commons, as he did not believe they had among them a sufficient number of men conversant with these details. He would much rather have a mixed commission of military men and civilians.

Lord PALMERSTON said his opinion was against the system of purchase in the abstract. As the system had existed so long, and was so interwoven with all the habits of the army, that it was very difficult to abolish it. The great evil of a different system was, that the higher ranks of the army became clogged with a number of officers who were unfit for their duties. To avoid that the country must be at some expense to provide for the retirement of old officers, who now sold out; and they must also compensate those officers who had purchased their commissions. He did not see that purchase prevented them from examining officers any more than he saw how the abolition of purchase would exclude the officers. But he thought the House was agreed that the matter ought to be inquired into; and, while he agreed with those who thought that a Committee was not the fittest mode of inquiry, he would have no objection to a mixed commission. He was ready to adopt that course; and if his gallant friend would withdraw his motion, he would undertake that the Government should issue a mixed commission to inquire into the whole subject.

SIR DE LACY EVANS agreed to the suggestion, and the motion was withdrawn.

TITHES COMMUTATION RENT-CHARGE.—MR. ROBERT PHILLIMORE obtained leave to bring in a bill to regulate parochial settlements, and to provide for a juster and more uniform rating of tithe commutation rent-charges to the relief of the poor.

ANNEXATION OF OUDE. Sir ERSKINE PERRY moved for some returns connected with the annexation of Indian territories. In the course of which he condemned the annexation of Oude.—MR. V. SMITH and Lord JOHN RUSSELL had no objection to the returns, and refused to enter into the question of Oude till the whole papers on the subject were ready to be laid before the House.—After some remarks from Mr. OSWALD against the policy of annexation, and from MR. KINNAIRD in defence of the Governor General, the returns were agreed to.

### HOUSE OF COMMONS.—WEDNESDAY.

ABOLITION OF CHURCH-RATES.

Sir W. CLAY moved the second reading of his bill for the abolition of Church-rates, which he stated was, in its main provisions, the same with the bill he introduced last year on the same subject. He dispensed with saying anything new upon this subject; argument for and against the rate had long ago been exhausted; the time for action had come. He referred to the warning uttered in a former Session by Lord John Russell, that the abolition of Church-rates might shake the other institutions of the country. He regretted to hear the noble Lord make use of warnings which had been raised in opposition to all reforms. Yet these reforms had been carried, and the only effect was that the people were more united, more contented, and more loyal than ever.

The motion having been seconded by

Lord J. MANNERS moved that the bill be read a second time that day six months He admitted as fully and as broadly as the honourable Baronet could do the grievances that were entailed by the present state of the law with regard to Church-rates, but he contended that this was not the proper remedy. The truth was, that the authors of the bill looked at the question as if relief to the great towns, and they took no account of those thousands of rural parishes where the Church-rates were at present paid without a murmur, and where no other provision could be made for the maintenance of the fabrics of the churches.

SIR S. NORTHCOTE seconded the motion.

Sir G. GREY said the Government were prepared to support the principle of this Bill, in so far as that they would consent to the abolition of Church-rates in all those parishes where the rate had been discontinued, so long as to show that there was no chance of its being levied in future. If the Bill were read a second time, he had been hoping to work a second, before the Easter recess, to lay on the table the amendments they meant to propose in accordance with the views he had stated

MR. DARGAN could not say it would be much better if the bill were withdrawn to allow the Government to develop their views in a new measure.

Lord J. RUSSELL regretted that the Government had not dealt more vigorously with this question. He considered that they ought to have introduced a measure of their own, instead of supporting a measure of which they did not approve, and of then hanging it with a series of complicated amendments.

Lord PALMERSTON defended the conduct of the Government Church-rates were now virtually abolished. The rates at present levied were, in point of fact, levied on the voluntary system; and all the Government proposed to do was to recognise the existing facts of the case. It was said that the Government would have rejected this bill, and introduced one of their own; but he held it was their duty, agreeing as they did on the main principles and provisions of this bill, to support it in its present stage

MR. MIALL supported the bill; after which

The House divided, when the second reading was carried by a majority of 221 to 178.

### HOUSE OF LORDS.—THURSDAY.

CHURCH-RATES.—The Bishop of EXETER presented several petitions praying that Church rates be not abolished until an equivalent be provided. The right rev. prelate alluded to the bill introduced in the other House, which her Majesty's Government were prepared to support, on condition that certain amendments be made in it. The grounds alleged for this support were fully explained by the right reverend prelate and their Lordships' House last Session by the Archbishop of Canterbury. He (the Bishop of Exeter) contended that that measure was not sanctioned either by the clergy or by the laity generally; that it had not received a second reading, and that it did not furnish sufficient grounds for supporting the present bill.

THE EXCHEQUER BILLS FUNDING BILL.—Lord STANLEY of ALDERLEY having moved the suspension of the standing orders Nos 27 and 28, with a view to the second reading of this bill, Earl GREY protested against any further increase of the National Debt, which the present bill would accumulated to effect. No less than £22,000,000 had been already added to the Debt during the last Session, and now, with a further sum of £5,000,000 proposed to be added, the enormous sum of £28,000,000 would be added to the National Debt in one financial year. Forty-six millions of expenses had been already incurred for the present war. This was a vast sum. It had been stated at the beginning of the war by the late Chancellor of the Exchequer that the expenses of the war should, so far as possible, be met by the taxation of the country. Now most of the members of the present Administration, and of the Government which the present Chancellor of the Exchequer belonged, and were, therefore, responsible for his opinions. He entirely approved of that proposition.—Lord MONTAGALE also commented at some length upon the financial policy of the Government.—The bill, however, was read a second time, and then passed through its remaining stages

The Consolidated Fund (£1,631,603 18s. 8d.) Bill was read a second time.

### HOUSE OF COMMONS.—THURSDAY.

UNSAFE RAILWAYS.—MR. R. E. BALL asked the Vice-President of the Board of Trade what measure, if any, was part of her Majesty's Government to introduce a bill in the present Session of Parliament giving power to the Board of Trade, in case of any line of railway that may be reported unsafe by their officers, to compel the necessary works to be done for the safety of the public, at the expense of such railway company, and that the certificate of the Board of Trade's engineer shall entitle the party having done such work to immediate payment from such railway company?—MR. LOWE said it was not the intention of Government to introduce such a bill

EDUCATION

Lord J. RUSSELL said he never rose with deeper anxiety than he did on the present occasion. The subject of education had been broached by Mr. Whitbread, by Lord Brougham, and last year by Sir J. Pakington; but little had been done, or trusted that henceforth the standard of education would be raised, and that in that respect we should be placed upon an equality with other nations (Hear, hear). Wherever he [illegible] prevailed, in Switzerland and in the New England States of America schemes of education had been framed with perfect success

In this country, there other [illegible] and plans had been proposed, [illegible] were deprecated, there ought not to be any difficulty in agreeing to a sound and efficient system (Hear, hear). He found by the Census of 1851 that there were four millions of children of the ages of five and ten, and of [illegible] there were only 1,709,000 in the schools which had been inspected by the inspectors appointed by her Majesty's Council. He found that a vast number of [illegible] were employed as teachers between the ages of 15 and 20, [illegible] likely that they would become competent to afford [illegible] like a useful education; in fact many of such teachers were [illegible] ignorance, and of [illegible] conveying common messages. The grants which had been distributed [illegible] Presidents of the Council since 1839 had been productive of great good, especially in the formation of normal schools; and this system he proposed to extend. It was impossible not to admit that, though many advantages had flowed from the system that had been adopted, there were some disadvantages in connection with it. He regretted to find that in the reports of 1854 the [illegible] the inspectors was that of disappointment. (The noble Lord extracts from the reports of the Rev. M. Moody and [illegible] spectors in confirmation of this view.) In many of the [illegible] the grossest ignorance prevailed. Many of the scholars were [illegible] how much [illegible] a day would amount to in a week; they [illegible] know the names of the Evangelists; and, when asked who was the [illegible] who betrayed Jesus, some said Peter, and others Abraham (Laughter [illegible] could now proceed to state what he thought should be the attem[illegible] Parliament on this great subject. Two great principles ou[illegible] could be departed from. First, to ma[illegible] complete; and, secondly, to maintain [illegible] to improve, that which was good in existing systems. He advised a revision and consolidation of the minutes of Council, so that they might have more the air of a systematic plan than at present existed, and that would be the object of the first resolution he should propose—namely, "That in the opinion of this House it is expedient to extend, revise, and consolidate the minutes of the Committee of Privy Council on education" (Hear, hear). The next resolution would affirm that it was expedient to add to the present inspectors of Church schools eighty sub-inspectors, and that England and Wales be divided into eighty districts. The third would affirm that it was expedient to engage as many inspectors not connected with the Church of England [illegible] the fourth would give power to the inspectors to form school [illegible] parishes, in united parishes, and parts of parishes Another resolution would state that it should be the duty of the sub-inspectors to report upon the available means for education of the poor in every school district. He also proposed a resolution to enlarge the powers of the Commissioners of Charitable Trusts for the extension of the means of education for the lower and middle classes; also one to levy rates for educational purposes in districts reported to be deficient in that respect. With regard to the difficult question of religious education, it was his opinion that they could leave no system of national education which was not founded upon Christianity. He proposed that a portion of the Scriptures should be read daily in the schools, supported by rates; but at the same time he thought that no child should be compelled to receive religious instruction contrary to the conscientious objections of its parents. He proposed that children between the ages of nine and fifteen years of age, particularly in factory districts, should be required to attend school a certain number of days or half-days in the year, and that half-yearly their employers should be obliged to furnish evidence of such attendance at the schools, and that they should be compelled to pay for their instruction. As to the children between ten and fifteen who were about the streets doing nothing, he proposed that the education should be given to them free. Having explained certain other details of the system he proposed, the noble Lord concluded by moving his resolutions amid much cheering.

MR. HADFIELD, Lord R. Grosvenor, Mr. Ewart, Mr. G. Butt, and Mr E. Denison, severally expressed their approval generally of the noble Lord's resolutions.

MR. BOSCAWEN was in favour of secular education apart from religious differences.

Sir J. PAKINGTON thought the resolutions of the noble Lord worthy of their best consideration, and promised to give him every support he could consistently with his opinions.

MR. M. GIBSON contended that the proposed plan of Lord J. Russell of reading the Scriptures without note or comment would not satisfy any party. It would be too much for the one class, and too little for the other.

Lord PALMERSTON admitted the full competency of Lord J. Russell to deal with the question, and expressed his confidence that the House at some future day would deal fearly with his resolutions. It was impossible to attach too much importance to the proper education of the lower classes, and, although the views of the noble Lord might not be entirely adopted by that House, he hoped they would be able to come to some satisfactory conclusion as to what should be done in connection

MR. HADFIELD advocated the voluntary system.

After some further discussion the resolutions were withdrawn, with the understanding that Lord John Russell was to move on Thursday, the 10th of April, that the House should resolve itself into a Committee to consider the present state of public education in England and Wales, when he would propose his resolutions formally. In the interim those resolutions were to be printed and placed in the hands of members.

UNIVERSITY OF OXFORD.

MR HEYWOOD moved an Address to her Majesty praying that she will be graciously pleased to withhold her approbation from the regulations and ordinances recently sanctioned by the Oxford Commissioners, and laid before Parliament.

After some discussion the motion was withdrawn.

### HOUSE OF LORDS.—FRIDAY.

ROYAL COMMISSION.—The Royal assent was given by commission to the following bills:—viz., the Exchequer Bills Funding, the Annuities, the Consolidated Fund (£1,631,605 18s. 8d.), and the Joint Stock Banks (Scotland) Bills.

THE PROPOSED PORTRAIT GALLERY.—The Marquis of BREADALBANE brought up her Majesty's answer to the Address of the House of Lords on the subject of a new National Portrait Gallery. Her Majesty said:—

"I have received your Lordships' Address, praying that I shall take into my consideration the expediency of forming a Gallery of Portraits of the most eminent persons in British history. I will direct inquiry to be made as to how the objects which your Lordships have in view may be best attained.

The Mercantile Law Amendment Bill, and the Mercantile Law (Scotland) Bill, were severally read a second time.

The Turnpike Trusts Arrangement Bill was read a third time and passed.

### HOUSE OF COMMONS.—FRIDAY.

ST JAMES'S-PARK.—Sir B. HALL brought up a report from the Committee appointed to consider the communications between the districts lying on the north side of St. James's-park and the south and south-western parts thereof. The Committee had several plans submitted to them, which they had considered with great attention. The plan No. 1 was to make Pall-mall, past Marlborough House to the Mall, and thence by a bridge across the ornamental water to Birdcage walk. The plan No. 2 was for a road from Pall-mall across the site occupied by Lord Spencer's house, which would be taken down, to the Green-park, and thence to Buckingham-gate to the offices of the Duchy of Cornwall. Although the road through the Park, by means of a bridge across the ornamental water, would offer many advantages, the Committee did not think it advisable to recommend the intersection of the Green-park (Hear). They recommended that there should be made a new line of road in plan No. 1 as proceeded from Marlborough-house to the Mall, and thence past Buckingham Palace to Buckingham-gate, the road being inclosed in a manner similar to that in which the Park in Hyde-park was inclosed. The road, including the pulling down and rebuilding the German Chapel, would be about £25,000 They recommended that a footbridge should be thrown over the ornamental water. They were of opinion that the Duke of York's Column should be removed, and a road made from Waterloo-place to Storey's-gate, the cost of which would be about £20,000. They were of opinion that a carriage road through the Park should be made from Trafalgar-square.

CRIMEAN GRAVES.—Sir J. FERGUSSON called the attention of her Majesty's Government to the necessity of taking steps for obtaining a pledge from the Russian Government to secure that the graves of the British officers and soldiers in the Crimea shall be respected, in the event of the present position occupied by the allied armies being evacuated. Peace was in all probability about to be established, in which case an arrangement could easily be made; but, if the war went on, and our troops were compelled on a different spot, it would be impossible to say what might occur. There was a large burying-ground, in which Cathcart, Strangways, and others, were lying, and this would no doubt be protected, but there were many other places, in which the hearts and hopes of many were buried, and which might not receive so much consideration.—Lord PALMERSTON said the question was one which must excite the feelings of all the honourable Members present. The subject should not escape the attention of her Majesty's Government during the negotiations which were now taking place. He did not anticipate that there would be the slightest difficulty in getting from the Russian Government an assurance —"if an assurance were necessary—that monuments which recorded the fact of our brave countrymen who had sacrificed their lives in the Crimea, would receive that respect which, throughout all civilised nations, they commanded. We must do the Russians the justice to say that they had exerted all the war within all its bounds as much as could be expected. The treatment of the gallant men who surrendered at Kars had been most generous and humane (Hear, hear). They had received every attention which the generosity of victors could afford; and there was no reason to suppose that those who had so treated the living would be wanting in due respect to the dead. Sir DE LACY EVANS said that, although the Russians had behaved with the greatest possible generosity to the living, the general population of the Crimea was of a mixed character, not to [illegible] particularly inclined to respect the graves of our soldiers, and [illegible] urge the necessity of obtaining a distinct pledge from the Russian Government.

Lord PALMERSTON gave notice of his intention to move that after [illegible] day [illegible] be taken precedence of notices of motion.

[illegible] JURISDICTION OF THE HOUSE OF LORDS.—On the [illegible] going into Committee of Supply, Mr. BOWYER moved [illegible] resolutions, viz.—"That the present state of the Appellate [illegible] is unsatisfactory." "That a supreme Court [illegible] council to be constituted, presided over by permanent Judges [illegible] Peer." The hon. and learned Member argued at considerable [illegible] of Appellate Jurisdiction [illegible] and in favour of a distinct judicial scheme, founded upon [illegible] —There being no seconder, the motion fell to the ground.

The House then went into Committee of Supply upon the Army Estimates.

---

On Saturday last Sir Charles Wood, First Lord of the Admiralty, accompanied by Rear-Admiral Sir M. F. F. Berkeley, paid a visit to Woolwich Dockyard for the purpose of inspecting the dispatch and gun boats They were joined by the Superintendent of the yard, Commodore Shepherd, and the officers commanding the various vessels under fitment there, over which they were successively conducted. They expressed themselves extremely satisfied with the [illegible] department.

## MUSIC.

THE Concert of the AMATEUR MUSICAL SOCIETY at the Hanover-square Rooms, on Monday evening, was very brilliant, and presented several interesting features. MOZART's fine Symphony in C was played with a precision and effect which did honour to the amateur performers, and their able conductor, Mr. Henry Leslie. The other great orchestral piece was Mendelssohn's Pianoforte Concerto in D minor, the principal part being sustained by "Angelina," in a manner which could have been surpassed by very few of the greatest professional pianists of the day. This young lady considered as an amateur, is nothing less than a prodigy; she is not merely an exquisite performer, but excels in the highest branches of her art. Several excellent original compositions, by members of the society, were brought forward: a romance for the oboe, with orchestral accompaniments, by Mr. Wasley, and played by Mr. Pollock; a vocal trio, "O Memory," composed by Mr. Henry Leslie, and sung by Miss Rainford, Miss Lascelles, and Herr Kumpel; and a brilliant orchestral march by one of our most accomplished amateurs, Lord Gerald Fitzgerald, son of the Duke of Leinster. There were also two pretty songs, "Mine be a cot," and "Years are flested past," both composed by Mr. Val Morris. The room was crowded by the most fashionable company in London.

ON Tuesday evening there was a musical performance of a humbler character than the above, though probably of greater public importance. It was a choral meeting of the "Tonic Sol-fa Association, for the Promotion of Vocal Music in Schools, Families, and Congregations," an establishment of which we have repeatedly had great pleasure in chronicling the progress. This meeting was held, as usual, in Finsbury Chapel, and this great edifice was crowded to the doors by a most respectable assemblage of shopkeepers, and people engaged in industrial occupations, with their families, and young persons in their employment. The number present exceeded two thousand five hundred. The Rev. Mr. Binnie presided; and was supported by the Rev. Mr. Curwen, the founder of the association. The choir, consisting of picked voices from the London schools, sang a selection of hymns, choruses, and secular part-songs—acquitting themselves in a manner which would have done credit to the most regularly-trained choral band. Several of these pieces were of a very high order, and of no small difficulty; there being among them two fine part-songs of Mendelssohn, a choral hymn of Haydn, and Handel's "Hallelujah Chorus." The others were more simple; but all were pure, and in excellent taste. The voices were united by any instrumental accompaniment; and it was equally pleasing and surprising to observe the sweet and tunable quality of the voices (especially the trebles), the correct execution of every part, and the spirit and feeling of the whole performance. It would have gratified the most delicate ear, and it gave the utmost delight to the immense audience, who would have encored every thing had their wishes been complied with. A few appropriate and impressive remarks by the rev. chairman terminated the meeting, which broke up at the reasonable hour of ten o'clock. The admission to these meetings is free, people who are so disposed contributing some trifle towards the support of the singing-schools—the rates charged for tuition being, of course, very low.

THE fourth concert, this season, of the BEAUMONT INSTITUTION, took place on Monday evening. It was attended by a crowded audience, and an elegant selection of music (chiefly vocal) was exceedingly well performed, and received with great applause. Mr. Sims Reeves sang a number of pretty things, nearly all of them being encored. The most remarkable were the Irish melody, "The Last Rose of Summer;" the duet from "Don Pasquale," which he sang with Mr. Farquharson; the ballad, "O, is it not a pleasant thing," from Smart's opera of Berta; a new ballad of Linley's, and "The Bay of Biscay." The other vocal performers were Miss Lucy Escott, Miss Winning, Miss Eyles, and Mr. Miranda. The instrumental pieces were a solo on the flute by Mr. Richardson, on the oboe by "Rousseau's Dream," and Pauer's pianoforte solo, "The Cascade," played by Mr. W. G. Cusins. Both were much applauded, especially Mr. Cusins's performance, which was remarkably brilliant and effective.

THE one hundred and forty-first anniversary festival of the society of ANCIENT BRITONS was held on Saturday last in Freemasons' Hall, under the presidency of the Hon. Robert Windsor Clive, M.P. The following selection of vocal and instrumental music, by the musical performances were under the direction of the eminent composer and pianist Mr. Brinley Richards, who, as usual, gave his services gratuitously. The band of the Grenadier Guards played during the dinner. The National Anthem was sung by Madame Weiss, Mr. Benson, and Mr. Weiss, with the choruses by the children belonging to the Welsh school. Weiss gave his own song, "The Village Blacksmith;" Benson sang "My Pretty Jane;" Lover's pretty ballad, "Oh, native music," was sung by Madame Weiss; Mr. Ellis Roberts, the Welsh harpist, played "Sweet Richard" on the national instrument; and the children sang an ode written for the occasion by Miss Florence Wilson, and adapted to the Welsh melody, "Llwyn Onn," by Mr. Brinley Richards. The assemblage was very large, and a number of ladies graced the festival with their presence.

## THE THEATRES.

PRINCESS'.—A new play in three acts, called "The First Printer," was produced at this theatre on Monday evening last, by Messrs Tom Taylor and Charles Reade—the modern Beaumont and Fletcher. In an introductory note on the play bill we are informed that there are two accounts of the invention of printing; one ascribing it to John of Gutenberg, a citizen of Mentz; the other, to a certain Laurence Coster, a native of Haarlem. The latter version is strenuously upheld by the Dutch, who assert that Gutenberg stole Coster's secret, and fled with his types to Mentz, where he became schoolmaster. The author of "First Printer." Messrs. Taylor and Reade, taking advantage of this tradition, which, whether true or false, has at any rate the merit of being highly interesting, have produced an exquisite—and, what is more—a genuinely successful play. By the introduction of a graceful love story into the rough material of the piece—the rival printers being represented as rival suitors for the hand of a young lady, the beauty of Haarlem—the plot becomes twofold, and the play, by the devotion of the heroine to the Illused Coster, is prevented from being a tragedy.

The story is this:—*Margaret* (Miss Heath), the daughter of the Burgomaster of Haarlem (Mr. Frank Matthews) holding her little court as reigning beauty, is beset with eager suitors, to wit—*Jacob Boris*, a painter (Mr. Gathard); *Vauderlode*, a poet (Mr. Everett), *Otto of Aspren*, a soldier (Mr. H. Mellon); and *John of Gutenberg*, a ruined noble (Mr. Ryder). After the fair *Margaret* has received and acknowledged the tribute of a portrait from the painter, a flattering couplet from the poet, and a vow of eternal fealty from the soldier, *Laurence Coster* (Mr. Charles Kean), to whose love the Burgomaster's daughter is not indifferent, enters and presents his tribute—a piece of printing blurred and crooked *Margaret*, grieved and offended at what she considers a slight, tears the paper to fragments and tramples it under foot; while *Coster*, picking up his bosom the outcast labour of his life, goes home disconsolate amidst the jeers of his rivals. *John of Gutenberg*, however, struck with the conduct and strange words of *Coster*, and determined to become master of his secret and of his lady-love, follows him to his workshop, where he knows that the unfortunate *Countess Jacqueline of Holland* (Miss Murray) will disguised as a boy, repair with the repentant *Margaret*, for the purpose of having copies made of an insurrectionary placard. Things happen precisely as the schemer imagines. While the unsuspecting *Coster* is on his way to affix the treasonable notices on the walls of the town, *Gutenberg* hoists a signal to a body of soldiers waiting outside, destroys the printing-press, pockets the types, and—last stroke of all—induces *Margaret* and her mistress to fly with him, by declaring that *Coster* has betrayed them to the soldiers. The poor printer returns to find his press broken, his fair guests flown, and himself arrested for treason. After the lapse of four years, when *John of Gutenberg*, formally installed as chief of the guild of printers, is about to claim the hand of *Margaret*, *Coster*, released from prison by the death of *Jacqueline*, comes begging to the gates of his despoiler. Learning, however, the name of the person whose bread he begs, he lays wait for *Gutenberg*, crosses his path, and denounces him before his guests, *Margaret* and the betrothed, as "a liar, a villain, and a thief." In proof of his apparently wild statements he produces the fragments of that blurred printing which had been his love-offering in Haarlem; the soldier who arrested him confesses that he did so at a signal from *Gutenberg*—*Margaret* kneels to the beggar, and, praying for forgiveness, offers him her hand, and the curtain descends upon a brilliant and affecting tableau.

Mr. Charles Kean, in the character of *Coster*, has gained for himself another claim to admiration, and has added another name to the long list of imaginary personages who find in him their true embodiment. The part of *Coster* is threefold—a different character for each act. In the first he appears as a disconsolate lover and a crushed enthusiast; in the second, a proud man, boasting of the glory of his invention; in the third, a beggar. In each of these various states Mr. Kean achieved a signal triumph; and—as if every descent of the curtain were the conclusion of a play—was loudly called for at the end of each act. The scene in the Burgomaster's garden, where the poor printer, drawing the dishonoured scroll to his breast, exclaims—"Come to my heart; we will go home together!" was full of pathos and melancholy earnestness, and affected the audience, not to rude applause, but to breathless silence, and perhaps even to tears—an eloquent testimony of approbation which there is no mistaking. *Coster's* meeting with *Margaret* in the courtyard of Gutenberg's house was also very fine; but the finest piece of all, both as regards language and delivery, was the concluding scene, where the beggar challenges his prosperous despoiler, and delivers the denunciation-speech which covers the villain with shame and brings the haughty *Margaret* to his feet. Here the acting of Mr. Kean reached its climax. Those startling words of accusation, so grandly spoken, roused even the audience to a sense of the hero's wrongs; and acclamations resounded on every side, amidst a chorus of prolonged hissing. Of the other performers, Mr. Ryder deserves particular mention for his admirable impersonation of the difficult character of *Gutenberg*. Miss Heath performed the part of the heroine with extreme grace and feeling, and Miss Murray made an excellent cavalier.

## NOTES OF THE WEEK.

THE topic of conversation, in London at least, this week is the repetition on Wednesday of the catastrophe of the 20th September, 1808, when Covent-garden Theatre was destroyed by fire. The magnificent theatre, the finest we had, is in ruins. We have not, however, the species of consolation which the London of 1808 had, in witnessing the destruction of one of its ornaments. The old theatre was burned after the performance of a play, and the conflagration was attributed to an accident legitimately connected with the business of the stage. The play had been "Pizarro," and it was supposed that the wadding of some of the guns fired at John Kemble (when, as *Rolla*, he saved the child) had lodged in the scenery. This was an accident, but it could not be called one for which anybody was to blame. But Smirke's building has fallen disgracefully. A quack benefit, protracted throughout a whole day—Bartholomew Fair-fashion—was followed by the dull folly, and, later, by the vulgar debauchery, of a masked ball. Whether a chandelier, overheated by being kept burning an enormous time, fired the place, or whether some of the vulgarians, who remained drinking and smoking (English notions of a *bal masqué!*) until a late hour, did the mischief with their tobacco-lights, in drunkenness or in mischief, was at first in doubt, but the former cause seems now to be recognised as that which led to the lamentable result. But, in any case, Covent-garden Theatre has fallen the victim to a low device for attracting a crowd; and a disgusting revel (incidents of which may be gathered from Thursday's police-reports) ends the history of the most beautiful *salle* in London—and, indeed, of Covent-garden Theatre; for we can hardly imagine that it will be rebuilt. While we write there is no reason to believe that any loss of life has occurred; and, in this respect, the event is a subject of congratulation when we compare it with the fire of 1808, when no less than thirty persons were killed by the falling of the roof and otherwise. The *Covent-garden Journal* remarks that the Bedford Hotel, and also the Piazza, were saved by the strong party-wall that isolated them from the theatre. It is gratifying to record that, a second time, these celebrated houses have been preserved, alose as was the terrific mass of fire. Let us add—for it is never too early to speak of those who require aid—that the actors and actresses here, as at the recently-burned Pavilion, have suffered severely, as have humbler employés of the house. There seems to have been neglect of their own interests on the part of the proprietory, who are fearful losers from the theatre having been devoted to an unworthy purpose.

The topic of conversation in Paris is the speech of his Majesty the Emperor, on the opening of the Legislative Assembly. The Emperor congratulates his subjects on the improvement in the state of France since he last convoked the Assembly. He alludes to "the great feat of arms which decided a desperate struggle," to the ease with which a third warloan was obtained, and adds that labour never was more active, nor the revenues more considerable. Of the visit of our own Sovereign, his Majesty says: "The Queen of Great Britain, desirous of giving a proof of her confidence, of her esteem for our country, to render our relations more intimate, visited France. The enthusiastic welcome she met with must have convinced her how deep were the sentiments inspired by her presence, and that they were of a nature to strengthen the alliance of the two nations." In referring to the Peace Conferences the Emperor is equally prepared, if necessary, again to draw the sword, or to extend the hand to those with whom we have honourably fought. The announcement that a preliminary treaty of peace has been signed confirms the hopes of those who desire a pacification at the present moment, but may not be, in reality, any very onward step—the battle of the negotiations is yet to come. Meantime the Russians are removing all the buoys and landmarks in the Baltic, and extinguishing all the lighthouses—inhospitable preparations for the reception of our advanced squadron.

The Earl of Albemarle has done a service to humanity in bringing before the House of Lords the subject of the use of torture for the collection of the revenue of the East India Company. That such means were employed, was, when the topic was first brought up, denied by the Company's officials and tools with a solemn audacity that was almost convincing. But still the investigation was pushed, and now the case is proved to the confutation of the most determined asserter of the virtues of the Company—its Chairman himself—at whose "ready indignation" Mr. Roebuck scoffed to his face, the other night, in the most unkind manner, warning the House of Commons to pay no heed to it. Lord Albemarle has demanded returns, which were reluctantly consented to by the Government. They will have to be procured from India, and there will, of course, be no undue speed in furnishing them. If the Lords take up the cause of outraged humanity, they will deserve better of India than her so-called friends, who clamour against the annexation of Oude, or, in other words, the delivery of an oppressed population from a foolish, cruel, and grinding tyranny.

While our own Eastern system awaits reform, it is significant to see Turkey proceeding to the most important alterations in her whole domestic policy. On paper, at least, the Turkish revolution is complete. The Sultan's firman has been read to his subjects, and is an extraordinary document. Equality of rights is given to the Christians; the requirements of their different churches are to be accorded; and, better still, their clergy are forbidden to levy contributions. The public service is to be open to all who are qualified for it; taxation is to be equal; and all the Sultan's subjects are to be liable to the conscription. Christians, and even foreigners, are to be allowed to possess land. Taxes are to be no longer farmed (an immense social step); roads are to be made by the State; and there is to be a Turkish Chancellor of the Exchequer, who is to publish an annual Budget. It is a magnificent firman, and ought to be printed in letters of gold, and hung up in the divan of every believer; for, if a quarter of what is promised be carried out, Turkey has flung back her *kismet* for half a century; and if she can but get rid of her Koran and its faith—a reform which, after this one, seems not impossible—she may take her place as a new Power, about to begin a race instead of ending one.

PRINCE LEO OF ARMENIA.—The pretended Prince Leo of Armenia has addressed a curious printed document from Hamburg to the principal European journals. In this document he first complains to the civil authorities of his illegal imprisonment during 100 days, and claims the immediate indemnity of 100,000 thalers; the dismissal of the head of the police, Stiebe; and the sum of 12,450*l.* for the jewels which, he says, were taken from him at his arrest. He next claims from the [illegible] jewels, which, he states, were [illegible] at a million francs; and, lastly, complains that the [illegible] him on his expulsion from Russia, has never [illegible] to the Prince of Prussia, he affirms that the Prussian Minister at Hamburgh had informed him that the police had committed a great injustice in arresting him.

## EPITOME OF NEWS—FOREIGN AND DOMESTIC.

HER Majesty has given her consent to a new entrance being made into the Regent's-park, opposite the end of Charles-street, Portland Town.

The French Emperor has just given his sanction to the draught of a bill for advancing 100,000,000 francs to agriculturists, to be employed in draining.

Sir William Gomm has taken a final leave of the Bengal army, at the conclusion of a five years' administration.

The Emperor of Austria, "desiring to recognise the services which Baron de Rothschild has rendered to the State," has conferred upon him the decoration of the Second Class of the Iron Crown.

The King of Denmark has opened the Session of the Council of the Kingdom. In his Speech his Majesty expressed a hope that threatening eventualities would be soon removed.

The world counts one Emperor more. Kasa, brother-in-law of one of the petty kings of Abyssinia, after dethroning his relative, has assumed the Imperial crown, under the name of Theodore I.

The French Emperor, at the personal request of Professor Nisard, has pardoned five of the students who were lately sentenced to imprisonment for the disturbances at the Sorbonne.

The Bishop of London has not had a relapse, as has been erroneously stated. The right rev. prelate is, if anything, better, being able to take considerable carriage airings. It is feared that his Lordship will be unable again to attend to the active duties of his episcopate.

The hereditary Prince Albert of Saxony is now at Prague with the Emperor Ferdinand. Prince William Madiswill has been sent by the Court of Prussia to congratulate the ex-Emperor and Empress on the 25th anniversary of their wedding-day.

The successor of Count Colloredo at the Court of St. James's is to be Count Appony. A rumour has gone abroad that Count Colloredo, on having England accepts the embassy to Rome; but the more prevalent opinion is, that he retires to Italy in search of the repose required by his infirm state of health.

Among the persons present at the service held at the Russian chapel in Paris on Saturday last, the anniversary of the death of the Emperor Nicholas, were the grand equerry of the Imperial household; the first aide-de-camp to Prince Jerome; Princess Mathilde, in full mourning; Count Hatzfeld, and all the attachés of the Prussian Embassy. The Princess Mathilde was led into the chapel by Baron Seebach, and conducted to her carriage at the close of the service by Count Orloff.

A Special Court of Common Council will be held in a few days for the purpose of presenting Admiral Edmund Lyons with the freedom of the city, in a handsome gold box, valued at 100 guineas.

Count Orloff, encountering Marshal Baraguay d'Hilliers in the saloons of the Tuileries, is said to have observed smilingly, "Ah! M. le Marshal, it is you, I think, who lately visited our country?" "Yes, Count," replied the Marshal, "it is I who had the pleasure of leaving a card at Sebastopol."

The merchants of Liverpool are making efforts to adorn with *chefs-d'œuvre* of sculpture St. George's Hall. Statues of Peel and Stephenson are already placed; and they have now invited twelve of our most eminent sculptors to send in models for a statue of Archdeacon Brooke. The sum named for the work is £1750.

The Prince of Carini, the Neapolitan Minister at this Court, is expected to return to England in the course of the present month from the Continent, to resume his diplomatic functions. The Prince has been absent from London for several months on temporary leave.

The Count Medem, who has been named as likely to be the Russian Minister in London in the event of peace, is at present the Czar's representative at the Court of the Brazils.

It is rumoured that Prince Gortschakoff is likely to be raised to the rank of Marshal, as a reward for his services on the Danube and in the Crimea.

Cardinal Wiseman has acceded to a solicitation made by the committee of the Marylebone Literary and Scientific Institution to deliver a lecture for its benefit, on Wednesday, April 23. The subject is to be—The Influence of Words on Thought and on Civilisation.

It is said that the widow of Admiral Bruat has been designated for the high position of governess to the expected Infant of France; and that Madame de Brancion, widow of the Colonel killed before Sebastopol, is to be sub-governess.

The long-vexed question relative to the claims of the Military Knights of Windsor will be brought to a final issue in the course of a few weeks, as the case will be put down for hearing before the Master of the Rolls in Easter Term.

Prince Paskiewitsch died worth 70,000,000 Polish florins (the florin is equal to 2*s.* 0*d.*), 30,000,000 of which are bequeathed to his only son, and 20,000,000 to each of his two daughters.

Among the passengers by the *Euxine*, which left Southampton with the India and China mail, was Admiral Sir Michael Seymour, the Commander-in-Chief of the China Squadron.

Mr. John Wood, Chairman of the Board of Inland Revenue, has placed two appointments, annually, in the surveying department of the Excise, at the disposal of the Council of the Society of Arts.

Miss Fredrika Bremer, in the Swedish newspapers, thankfully acknowledges the liberal gift of 12,000 thalers, destined for the establishment of an asylum for old deserving governesses, and sent to her by a lady who wishes to remain unknown.

It is rumoured that Mr. Richard Pemberton Milnes, of Frystonhall, will shortly be made a peer. It is understood that a peerage was offered to him some time ago by Lord Palmerston, but that it was then declined, owing to Mr. Milnes entertaining opinions on public questions at variance with the Government.

The Earl of Southesk has disposed of the Highland estates of Glendye and Strachan to a neighbouring proprietor, at the price of £70,000. These properties were purchased by his Lordship's father, the late Sir James Carnegie, about twenty years ago, and cost, with buildings since erected, about £35,000.

General La Marmora left Turin on the 27th ult. for the Crimea.

On Saturday last the students of Marischal College and University, Aberdeen, elected Mr. Layard Lord Rector for the current year.

The Marchioness of Downshire has lodged £474 3*s.* 2*d.* in the names of the trustees of the Irish Academy of Music, being the amount realised by the concert performances of the Amateur Opera for its benefit.

The *Milan Gazette* announces that Princess Belgioioso has returned to Lombardy, and taken up her residence at her villa of Locate.

The pension of £25 per annum which was granted to the late Joseph Haydn, previously to his death, has been bestowed upon his unfortunate widow.

M. Alexandre Dumas is present, with all his decorations, at the numerous political *soirées* now being given in Paris in honour of the Plenipotentiaries

The sea-serpent is reported to have appeared in an inland freshwater lake, in the parish of Lochs, Lewis (in the Highlands). It is said to be 40 feet long, and to have swallowed a blanket.

The St. Pancras vestry are commencing a movement to obtain for the public the enjoyment of Hampstead-heath and certain adjoining lands as a place of public recreation.

A private letter received from St. Petersburg states that the retirement of Count Nesselrode is at length absolutely decided on.

Sir Thomas Redington has resigned his office of one of the Secretaries to the Board of Control. The office is now a permanent one, unaffected by Ministerial changes, and is, therefore, incompatible with a seat in Parliament, which Sir Thomas seeks, having just addressed the electors of New Ross.

The number of emigrants who sailed from Liverpool during the past month was 5937. Of these, more than 4000 were for the United States, about 800 for Sydney, and 400 for Melbourne.

The *Invalide Russe* announces that it will no longer be an exclusively [illegible] journal. In future it will contain theatrical articles, military [illegible] which are likely to be of sufficient interest to the people.

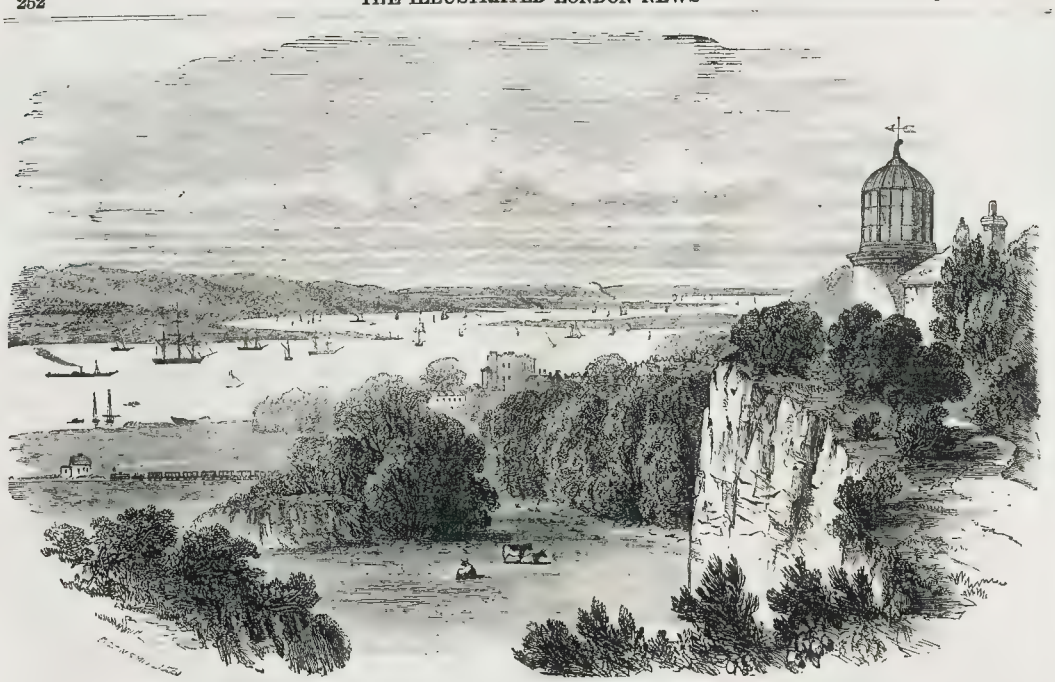
The enlargement of specie to India and China continues heavy. The *Euxine*, which left Southampton for Alexandria the other day, had on board [illegible] than £470,568. Of this, only £22,200 was in gold, the remaining £448,368 consisting entirely of silver.

The cholera is said to be manifesting itself in many districts around Lisbon.

The owners of the United States' mail steamers have notified that the vessels of this line, to avoid the dangers from ice, will not cross the Banks north of 43 degrees until after the 1st of August.

A railway train weighing eight tons crossed the Potomac River on the ice a fortnight ago.

Westron, the murderer of Mr. Waugh, [illegible] by the decision of the Home-office, to be condemned to penal servitude for [illegible]. The Jury, it will be remembered, found him guilty of the murder, but also found that he was "predisposed to insanity."



THE LONDON, TILBURY, AND SOUTHEND RAILWAY.—THE PURFLEET STATION.

## OPENING OF THE LONDON, TILBURY, AND SOUTHEND RAILWAY.

The portion of this line of railway extending from London to Tilbury was opened to the public in April, 1854; a further extension to Leigh, a fishing town on the Thames, in June, 1855; and the concluding part, to the terminus at Southend, was opened on Saturday last, March 1st. The length of the railway is forty-two miles; being thirty-six miles and a half of its own line, and five miles and a half on the Blackwall Railway, to Fenchurch-street, and the same distance on the Eastern Counties line to Shoreditch. A double line of rails is not yet laid down to Southend; but it is stated that, owing to the very favourable nature of the country, the cost per mile will not exceed £12,000.

The railway passes through Stepney, Stratford, Barking, Rainham, Purfleet, Grays, Tilbury, Stamford le Hope, Pitsea, Benfleet, Leigh, and Southend. The construction has been carried on under the joint superintendence of the well-known engineers, Mr. Bidder and Mr. John Fowler. The fares being extremely reasonable, it is expected that Southend—the nearest sea-bathing place to the metropolis—will, in consequence, become a more popular resort.

We have engraved two Views upon this new line—Purfleet, at which there is a station; and Southend, the terminus. The hamlet of Purfleet is on rising ground, and near the mouth of the Mardiich stream, which here forms a little harbour. Here are the Government powder-magazines, consisting of storehouses, barracks, storekeeper's residence, and a good quay. Here are also chalk pits. In the View is shown a portion of the railway, passing very near the river.

Southend, the well-known watering-place and steam boat station, is pleasantly situated near the mouth of the Thames, and nearly opposite to Sheerness. It dates its celebrity as a watering-place from the visit of Queen Caroline and her daughter, the Princess Charlotte, in 1804. The town has several commodious residences and hotels, and the country is fine; its most picturesque feature has been sketched by our Artist, so as to show a portion of the pier, which is a mile and a quarter in length, and has a railway on it for the convenience of passengers to and from the steamers: it cost in construction altogether about £42,000, but was subsequently sold to the Eastern Counties Railway for £17,000.

Tilbury, which is included in the name of the railway, is hedged with associations of the modern-antique, and sets even the railway traveller thinking of the modes communication in other days. There are two villages of the name. Tilbury East, five miles east from Grays Thurrock, is situated near the Thames, below Tilbury Fort. In this parish was the ancient ferry over the Thames: the place being denoted by the famous Higham causeway, from Rochester, by Higham, which is still visible. This is supposed to be the place where the Emperor Claudius crossed the Thames in pursuit of the Britons, as related by Dion Cassius. At Tilbury West, the second village, three miles E by *N* from Grays Thurrock, the four Roman proconsular ways crossed each other. When the Spanish Armada was in the Channel, in 1588, Queen Elizabeth had a camp here; and here she addressed her army in her celebrated speech to her "loving people." In this parish is Tilbury Fort, a regular fortification, which may be termed the key to London. The plan was laid by Sir Martin Beckman, chief engineer to Charles II. Its chief strength on the land side consists in its being able to lay the whole level under water. On the side next the river is a strong curtain, with the water-gate in the middle. The high tower, called the block-house, is said to have been built in the reign of Queen Elizabeth. The platform, bastions, and curtains are planted with guns. To the playgoer the sight of the fort is more likely to recall the inimitable scene from the "Critic" than any real warfare.

SOUTHEND AND PIER.

## MR. BRODERIP.

Mr William John Broderip, who has recently retired from the magistracy of the Westminster Police Court, was born at Bristol, where his father, William Broderip, was one of the principal medical practitioners, and sent his son early to the school kept by the Rev. Samuel Seyer (author of "The History of Bristol") at the Fort in that city. The numerous boys came, mostly, from the west of England; and when young Broderip entered as the lowest boy, Richard Jenkyns, afterwards the Very Rev. Dr. Jenkyns, the distinguished Master of Balliol College, Oxford, and Dean of Wells, was head of the school—a position which the subject of this notice rapidly attained: subsequently, he went to Oriel College, Oxford, where he took his degree. Thence he proceeded to London to study the law with the well-remembered Godfrey Sykes, under whose tuition he was a fellow-pupil with Sir John Patteson and Mr. Justice Coleridge. Mr. Broderip was called to the bar in 1817; went the Western Circuit; published an edition of "Callis on Sewers," and, in conjunction with Mr. Bingham, three volumes of Law Reports. In 1822 he was appointed a police magistrate of the metropolis by Sir Robert Peel.

The time not occupied in his laborious office was devoted by Mr. Broderip to science, literature, and art. During four successive years he was honorary secretary of the Geological Society of London, with Sir Roderick Murchison as his colleague, when that office involved very onerous duties.

Mr. Broderip is the author of the greater part of the zoology and of some of the biography in the "Penny Cyclopædia;" of "Zoological Recreations;" "Leaves from the Note-book of a Naturalist," and of many literary essays and scientific papers—for some of which we may refer to the catalogue published by the Ray Society, to the Transactions of the Zoological and Geological Societies, and to the "Zoological Journal." His fine collection of shells was bought by the nation, and is now in the British Museum, to which institution he presented the celebrated Stonesfield fossil jaw, which, from the discordant opinions which it elicited among the learned, induced a contemporary jocosely to propose the name of *Botheriotherium* for the animal. It turned out, however, to be the jaw of a marsupial animal, as Mr. Broderip, who first named it *Didelphys Bucklandi*, had asserted.

Mr. W. J. Broderip.—From a family painting.

Mr. Broderip is a Fellow of the Royal and many other scientific societies, a Bencher of Gray's Inn, and Master of the Library of that ancient and honourable Society, to which Gascoigne, Bacon, Romilly, and so many other worthies, belonged. He is one of the executors of the will of the lamented Robert Vernon, who did so much for British art, and whose munificent gift to the nation is his best monument.*

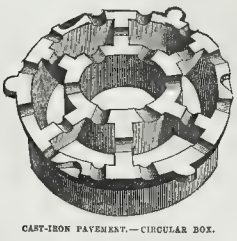
After an unremitted and most able serv ce of nearly thirty-four years, Mr Broderip has retired from office upon a full pension. He has numbered, and still includes, among his many friends, some of the brightest names in science, literature, and art; and he has always been ready to assist his fellow-labourers with any information on documents in his possession, as appears, among other instances, from the dedication to him of the second volume of Sir Charles Lyell's "Elements of Geology" (first and second editions); the notice appended to Dr. Buckland's "Bridgewater Treatise;" the table added to the late Sir Henry de la Beche's "How to Observe;" the preface to Yarrell's "British Fishes;" Sir Roderick Murchison's "Silurian System;" and the note appended to the 54th page of the recently-published third volume of Macaulay's "History of England."

Mr Broderip's benevolence is well known; his patronage of art has ever been liberal, and it can be said of him what can be said of very few of those whose fortunes very far exceed his means—namely, that he never was known even to suggest a less price than that asked by the artist.

## IRON ROADWAY IN LONDON.

In no aspect has the metropolis been more chequered by change of late years than in its roadways; and we have now to illustrate an ingenious addition to the list. The principal material of the invention is iron: not that "iron ways" are a novelty in this age of railroads; but the form of this pavement is altogether new, and its construction presents peculiarities which promise compactness and durability to withstand the wear and tear of the streets by their almost unceasing stream of traffic.

The inventor of this new pavement is General O. K. Knapp, of the United States: the invention has been patented in Great Britain and Ireland: and the pavement has been experimentally laid down in Leadenhall-street, between St. Mary Axe and Aldgate: Cooke and Sons, of Tower Royal, being the contractors; Ransomes and Sims, of Ipswich, the founders: and W. Haywood, of Guildhall, the engineer. The pavement consists of circular boxes, made of iron, and divided into sections so small as not to admit the hoof of a horse; whilst the compartments of iron are so arranged as to strengthen one another and the whole pavement. The boxes are grooved in such a manner as will effectually prevent the feet of horses from slipping. The boxes are also keyed or linked together, and the interstices are filled with asphaltum and a composition made of stone and shells, broken small, and mixed with hydraulic or other cement.

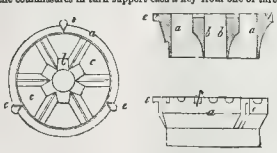


Cast-iron pavement.—Circular box.

* The last of the commissions left by that great patron is now, we understand, in progress under the gifted hand of Mr. Mulready, R.A. The executors have lately placed Sir Edwin Landseer's grand picture, "A Dialogue at Waterloo," in the Vernon Gallery.

The Manchester three-horse omnibus.—(See next page.)

The boxes may be of different forms; but the circular box combines the greatest advantages with the fewest disadvantages. We have engraved one of these boxes. It consists of a circle of cast iron, five inches in height, about one inch in thickness at the top, and twelve inches in diameter, inclosing a smaller circle of the same height and thickness, and five inches in diameter. The intermediate space between the outer and inner circle is divided into six sections, by as many compartments of cast iron; every part of the boxes preserves the same thickness as at the top for the distance of about one inch below the surface, and then gradually diminishes in thickness to the bottom. The whole surface of the box is grooved, to make the pavement, when laid, rough and unlikely to cause slipping. At equidistant points on the outer edge of the box are three keys, supported by shoulders, and set off to prevent the rims of the boxes from coming into immediate contact with each other; and at equidistant points, also, are three commissures for a key of each of the adjoining boxes to lie in; the several keys of each box resting each in the commissure of the adjoining boxes, while the commissures in turn support each a key from one of three other

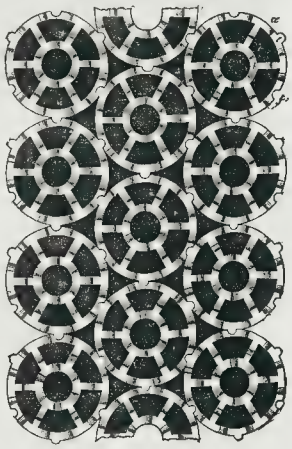


Section of cast-iron pavement.

boxes laid between the first three, and connected in the same manner with them. Thus, every box rests upon the ground, and is also supported by three others, while it in turn is held down and firm in its place by three other boxes, which it also aids in supporting. Thus, the whole pavement is firmly linked together, and it becomes impossible for any one box or more to rise above or settle lower than those around it.

We have also engraved a portion of the pavement, as laid in Leadenhall-street, in addition to the sectional cuts explaining the construction of the pavement: *a*, *a* circle of cast iron; *b*, inner or smaller circle; *c*, section; *e*, key; *f*, commissure. A railroad track may also be laid upon this pavement by a rail being cast in about the surface of the centre of the boxes, and even therewith, connecting three boxes together, the rails being connected at the ends by means of hooks; and all the block comprising the track may be connected in the same manner.

It appears that a piece of this pavement was put down in Boston, U.S., in the autumn of 1852, in Howard-street, not one of the most travelled streets of that city; another piece was laid in the autumn of 1853 in Court-street, "one of the most travelled parts of any city," says the inventor, "and where it has been very thoroughly tested by a constant use of omnibuses and other heavily-loaded carriages; and, so far, not one block has been broken, nor has the pavement in either street settled, or in any



The patent cast-iron pavement, as laid down in Leadenhall Street.

Pike-headed rorqual whale taken in the dart.—(See next page.)

manner given way, although several new locomotives, which, with the carriages on which they were transported, weighed some thirty tons, have passed over that portion in Court-street. The test in Boston, both as to its strength and freedom from injury by frost, has been perfect." Two prizes were also laid down in 1854, in New York, with equal success.

Still, iron pavement is not of United States origin as it is claimed to be; for, so long back as 1826, an experiment of the kind was made on Blackfriars-bridge; and, before that, a foot pavement at the corner of Old-street and the City-road.

One of the advantages of General Knapp's pavement urged by the patentee is the removal of the blocks for gas, water, sewers, &c., at a trifling expense.

## MANCHESTER OMNIBUS.

WHILE the omnibus companies of the metropolis are busied with the many projects in model, and on paper, which have just been submitted to them, it may be interesting to glance at a specimen of this species of public accommodation in the provinces. Such is shown in the accompanying Illustration of one of the three-horse Omnibuses which are used in Manchester. Among them, however, are several variations: that which we have engraved carries seventeen passengers inside and twenty-five outside—two on each side the driver, five on the seat behind, and eight on each side-seat. The raised part in the roof serves as a back to the seats on the sides, and also as a space inside for a good-sized man to walk up the centre of the omnibus. There is no door; the conductor communicates with the driver by means of a bell placed under the seat of the latter. The driver can put the breaks on the wheels to facilitate the sudden stopping, by a treadle on the foot-board. The driver and conductor do not wear any uniform.

## WHALE CAPTURED IN THE RIVER DART

At high water on the north shore of Millbay creek, nearly opposite the Castle, in the Wood, in Dartmouth, on the 18th ult., was discovered at eight a.m. by a cottager a fine specimen of the Pike-headed Rorqual, which has excited great interest in that part of the country. It was nearly dry when found, and the cottager thought that if he left it alone it would soon die for want of water; but, on visiting it again at four p.m., it was as lively as ever, and after trying to stab it with a knife he made no impression on it, when he cut it with a bill-hook over the back of the neck, soon dividing the large vessels, which bled profusely. The creature got into its "flurry," drove the sand up in tremendous hills by the blows of its tail, and death soon put an end to its struggle. The man took it for a Shark, and thinking it of no value sold it for a few shillings. After being exhibited at Dartmouth it was removed to Totnes, with the intention of being taken to Exeter and Bristol for a similar purpose. The animal has been thus described in the *Devon Chronicle*.—

Its dimensions were—18ft. 5in. long, depth 3ft., width across the tail 4ft. 9in., length of lower jaw, 4ft. 7in., length of pectoral fin 2ft. 4in. by 6in. wide, height of the dorsal fin 9 inches, distance of fin from tail 6 feet; and its estimated weight two tons. It was a remarkably handsome fish, devoid of slimy matter or smell. The back was of deep bluish-black—the belly beautifully white, the two boldly commingling along the sides, with not a slight shading off of the black. The remarkable longitudinal lines commenced between the eye and the pectoral fin, and gradually extended from the latter to the extremity of the lower jaw; these lines or furrows were about two inches deep throughout, terminating abruptly in their depth on the belly, but gradually becoming more shallow as they were prolonged towards the lower jaw. On separating these folds, the lower portions of their sides and bottom were found to present a series of minute folds running parallel with the larger ones. When viewed from the surface these folds were about one inch apart, but as we were to be disappointed in the canal to take in a large quantity of water, and consequently of food, into his mouth without putting the skin of the lower jaw on the stretch. The sides of the upper jaw were lined with whalebone, arranged in plates closely packed, having their inner edge, or the portion presented to the tongue, fimbriated, the fringe consisting of fibres of whalebone about the thickness of horsehair. The longest of these plates, commencing at the corner of the mouth, was about six inches long and an inch wide, gradually diminishing in length and width; till they reached the angle of the jaw, where they were about three inches long, and little more than bristles in substance.

The lower jaw projected three inches beyond the upper (hence the name of Pike-headed). The tongue, of firm elastic feel, lay about two feet back in the mouth. The tip of the tongue not more than two inches free, so that it had quite a "tongue-tied" appearance. When the animal was turned on its back and the lower jaw separated, the skin between the tongue and the angle of the jaw fell down in a fold, at least eighteen inches deep. The looseness of the sublingual integuments would enable the animal to bring its indiarubber-like tongue in contact with the whole of the whalebone fringe, and thus effectually crush every portion of its food, which is naturally of a minute character, and abounds in the Northern Seas. The creature feeds in this way: the mouth is opened, an immense mass of water and medusæ enter, the jaws are then closed: the water, aided perhaps by the action of the tongue, is forced through the meshes of the fringe, where the smallest portion of even gelatinous matter would be readily retained.

The presence of the dorsal fin separates the Rorquals from the true whales—they have consequently received the name of Fin Fish, or Razor-backed Whale, or Bunner, from the speed of their movements. Though they attain at times a considerable size, and are common on the coast of Shetland, yet their strength and activity are such that they are seldom hunted for their blubber.

## *NATIONAL SPORTS.*

THE ensuing week is big with promise to the sportsman, and the first four days of it are occupied in succession by the two-day race meetings at Warwick and Salisbury. On Wednesday the steeplechase commences with Market Rasen and Warwick; Diss, Hexham, and Moreton in-the-Marsh have fixed theirs for Thursday; Drogheda stands for the same day, and the men from the Yorkshire Wolds will be found in great force at Driffield on Friday.

Champagne is still in the market; and Polestar—whose name is so associated in the public mind with the fate of the unhappy Mr Cooke is to be sold by order of the executors, along with two others, at Tattersall's, next Monday. The name of the Kanglan has been changed from Didcot to Tattersall's; and there will, no doubt, be some very spirited biddings for him. Rumour at present points to the Emperor of the French and Baron Roth-child as likely competitors; and, of course, mentions Lord Londesborough, who possesses the means as well, and seems hardly likely to buy more of the same blood. Stockwell and West Australian alone cost his Lordship about 8500 guineas, so he is afraid of no price

Cameron and Miss Bowe are gone to the Flying Dutchman's paddocks, along with West Australian's dam, whose Melbourne foals have trained very badly of late; and the dam of Knight of St. George (who all but broke down in training last season) is at Birdcatcher's. Job Marson has received a retainer from Captain Peel's stable; and, unless he is specially required for one of Lord Chesterfield's horses, it is understood that Nat will ride Fly-by-Night for the Derby. For this event the Yorkshiremen (who are beginning to be very fond of Artillery) do not fancy him; but it is generally believed that he will be very hard to shake off for the Two Thousand Guineas.

Coursers are fast bringing their sport to a close for the season, which has been one of the most open they have had for many a long year. Cork Southern Club (Upton) stands for Tuesday; Altcar Club for Tuesday and Wednesday; the Caledonian (open) for Thursday, &c.; and "Count and Loungher," and Belleck (Fermanagh), for Thursday and Friday. The magnificent Black Cloud was beaten for his very first course by Knight of St. George, in the Altcar Stakes; while his old opponent, Judge, the winner of the Cup in 1855, was defeated in the deciding course by Protest. Lord Sefton was not present; but his Superfine kept up the pristine fame of the Croxteth kennel; and, after winning two cup courses, was only conquered in her turn by Judge.

The late Lord Sefton's hunters have been brought to the hammer at Tattersall's, where ten of them averaged 96 guineas. We hear that Lord Stamford has found a purchaser for his favourite old haunch in the country next season; and it seems to be now pretty certain that Mr. Richard Sutton will give him up the whole of the country south of the Wreke, where there is no cub-hunting. Besides the Albrighton and the H. H., the Bicester hounds are now in want of a master, as Mr. Anstruther Thompson is going to resign. The hunt is said to be slightly in financial difficulties about its covers, for which the owners persist in requiring such large rents. Mr. Richard Sutton is spoken of for this country, as well as for two others (after one of which his father was latterly casting a longing eye); but at present they are not declared vacant. The supply of foxes in countries is very variable. One great hunt is almost bereft of them, while we heard, on the contrary, of three being poked out lately of one earth, in a house shrubbery, and killed one after another in short "rings."

Cricket-clubs are beginning to issue their circulars, and look out their bats and stumps, to be in preparation for the coming campaign; and Oxford and Cambridge inaugurate the boating season on Saturday, by their annual struggle from Mortlake to Putney. We may add, for the information of University men, that the boat in which "The Seven" rowed their winning race at Henley in 1843 has been bought for the purpose of being put up into miniature cane waiters, and paper-knives, as mementoes of that glorious day in Oxford racing annals a day which the boating men of the Isis think quite worthy to rank with Thermopylæ.

### NOTTINGHAM SPRING MEETING.—TUESDAY.

**Trial Stakes.—Fisherman, 1. Anthracite, 2.**
Nottingham Spring Handicap.—Fulbeck, 1. Mary, 2.
Grand Stand Handicap.—Lady Golightly, 1. Lady of the Lodge, 2.
Little-John Stakes.—The Doctor, 1. Lotty Queen, 2.

### WEDNESDAY.

Forest Plate.—Follux, 1. Sir Rowland Trenchard, 2.
Farmers' Cup.—Tweedmouth's Filly, Vestiary, 1. Jacky Lath, 2.
Innkeepers' Plate. Sir Rowland Trenchard, 1. Ida, 2.
Great Annual Hurdle Race.—Stamford, 1. Potter, 2.

### TATTERSALL'S—THURSDAY EVENING.

CHESTER CUP.—12 to 1 agst Yellow Jack (1); 25 to 1 agst Coroner (1); 40 to 1 agst Born (1).
(LIST AND SUBLIME (10 to 1 on the field, off.)
TWO THOUSAND GUINEAS.—7 to 4 agst Fly-by-Night (1); 100 to 30 agst Yellow Jack (1).
DERBY.—7 to 1 agst Ellington (off); 15 to 1 agst Rogerthorpe (1), 20 to 1 afterwards laid; 30 to 1 agst Vandermulin (1); 2000 to 30 agst Barbarian (1).

MACAULAY BURNT IN EFFIGY.—The Highlanders of Glenmore, in Inverness-shire, feeling aggrieved and indignant at the slanderous charges brought by Mr. Macaulay against their forefathers, in his last volume of the "History of England," assembled together, and, headed by a piper playing the "Rogue's March," proceeded to the Black Rock, near Glenmore House, and there burnt in effigy the distinguished historian. The assembled crowd gave three shouts of execration as the effigy was consuming. Macaulay, when in the Highlands, resided for a considerable time at Glenmore House.—*North British Mail.*

HEALTH OF LONDON.—The total number of deaths registered in London last week was 1029. Of these, 539 were deaths of males, and 500 of females. The return is satisfactory, as tested by experience; for it is less by 221 than the average number of deaths (corrected for increase of population) in the ten corresponding weeks of the years 1846-55. Last week the births of 1002 boys and 974 girls, in all 1976 children, were registered in London. In the ten corresponding weeks of the years 1846-55 the average number was 1575.

DESTRUCTION OF DARNLEY BY FIRE. The magnificent mansion of Lord Cremorne was totally consumed by fire on Saturday last. The fire broke out about eleven o'clock in the morning, when great exertions were made to extinguish it, and after some time it was considered to be finally put out. Unfortunately, however, such was not the case, for about five o'clock in the evening flames were observed to burst through some of the windows; and, although the country folk gave active assistance, the fire continued to rage with unceasing violence, and very soon all hope of saving the castle was abandoned. By great exertion the paintings, sculpture, and furniture, excepting that of the room in which the fire originated, were saved.

## MONETARY TRANSACTIONS OF THE WEEK.

*(From our City Correspondent.)*

ALTHOUGH money continues very scarce and dear, rather above an average business has been transacted in the Stock-market this week; and, on the whole, prices have ruled tolerably firm, though frequently subject to rather extensive fluctuations. The payment of ten per cent upon the new English Loan has been met without difficulty; but the principal feature in the immediate future operating upon Stocks is the progress of the Peace Congress at Paris. On this subject a variety of rumours have been afloat; but we believe that we may state, with some degree of certainty, that, up to the present time, it has been satisfactory: in other words, that there is every reasonable prospect of peace being concluded in a few weeks from this time. Such being almost the general impression in the City circles, very little opposition has been offered to all Consols; and, at the same time, the operations for a rise in them have not been to say extensive.

The imports of bullion have been nearly £300,000; but we find that upwards of £250,000 has been purchased for exportation to the Continent, and £170,000, chiefly in silver, has been forwarded to India and China; and about £40,000 to other quarters. Until peace is established it would be idle to expect any increase in the value of gold, or any supply of money in the Exchange has rather increased, and rates have ruled easier

The following are the highest quotations of stocks:—On Monday:—Reduced Three per Cents, 93¾; Consols, for Money, 93¾; Ditto, for Account, 93¾; New Three per Cents, 93¾; New Two-and-a-Half per Cents, 74½; Long Annuities, 1860, 3¼; Ditto, 1885, 16 15-16; India Stock, 224½; Consols, Scrip, 1¼ prm.; Exchequer Bills, 3s. dis. to 1s. prm.; Bonds, 1858, 85s.; Ditto, 1859, 85s.; Ditto, 1859, 92. Owing to a notice having been issued to the effect that the next issue of Exchequer Bills will be at the present rate of interest—viz., 2½d. per diem—the market was very heavy on Tuesday, and prices fell off. On the market was steady, and prices generally were well supported:—Bank Stock was done at 214 to 213; Reduced Three per Cents, 93¼ to 93⅜; Consols, for Transfer, 93⅜ to 93½; Ditto for Account, 93½ to 93⅝; New Three per Cents, 93⅜ to 93½; Long Annuities, 1859, were 3⅛; Ditto, 1860, 3⅛; Ditto, 15-5, 17; Consols, Scrip, 1⅝ prm.; India Stock, 222½ to 225; India Bonds, 2s. dis.; Exchequer Bills, 2s. dis. to 1s. prm.; Ditto, advertised, 2s. 3s. dis. The market on Wednesday was decidedly firm. Bank Stock was done at 215. The Three per Cents Reduced marked 93½ to 93⅝; Consols, for Money, 93½ ⅛; New Three per Cents, 93⅜ to 93½; Consols, for Account, 93⅝; Long Annuities, 1860, 3 9-16; Ditto, 1859, 3 5-16; Ditto, 1885, 16⅝ 15-16; India Stock, 225; India Bonds, 2s. to 4s. dis.; Consols Scrip 1⅝ prem.; Exchequer Scrip, 1⅝ prem.; Exchequer Bills, 3s. dis. to 1s. prem.; Ditto, Advertised, 3s. to 2s. dis.; Exchequer Bonds, 99⅝ ⅛. On Thursday there was a steady business doing, at very full prices:—Consols for Account were 93⅝ ⅞; Ditto, Money, 93⅝; Reduced, 93⅜; New Threes per Cents, 93⅜ to 93; Long Annuities, 1885, 16⅝; Exchequer Bills, 2s. dis. to 1s. prem.

Nearly all foreign Bonds have been very firm, and prices generally have slightly improved. Brazilian Five per Cents have realised 104⅛; Chile Seven per Cents, 101: Danish Three per Cents, 83¾; Buenos Ayres Six per Cents, 88; Chilian Three per Cents, 68; Equador New Consolidated, 18⅝; Ditto, Funnisland Loan Warrant, 4⅛; Granada Own-and-a-Half per Cents New Active, 21⅛; Peruvian Four-and-a-Half per Cents, 80 ex div.; Russian Five per Cents, 101⅛ ex div.; Russian Four-and-a-Half per Cents, 93⅛; Spanish Three per Cents New Deferred, 23⅜; Ditto, Passive, 6⅛; Turkish Six per Cents, 96⅛; Ditto, Small, 96⅛; Ditto, Four per Cents (guaranteed), 100⅝; Venezuelan Four-and-a-Half per Cents, 29; Dutch Two-and-a-Half per Cents, 63⅞; French Three per Cents, 76f 90c.; Sardinian Five per Cents, 90.

Joint-Stock Bank Shares have changed hands steadily, as follows:—Australasia, 96; Bank of London, 24½; Ditto, Provincial of Ireland, 5¾; English, Scottish, and Australian Chartered, 16⅛; London Joint-Stock, 28⅜; London and Westminster, 44; Oriental, 4¼; Provincial of Ireland, 6½; Royal British, 5⅛; Union of Australia, 54; Ditto, New, 5.

Miscellaneous Securities have been rather heavy. In prices, however, no material change has taken place:—Australian Royal Mail, 4¼; Canada Company's Bonds, 103; Ditto, Government Debentures, 109; Crystal Palace, 5¾; Ditto, Preference, 5⅞; General Iron Screw Colher, 5; London Docks, 100; London General Omnibus Company, 3⅝; Netherlands Land, 1; New Brunswick and Nova Scotia Land, 2⅜; Peninsular and Oriental Steam, 63½; Ditto, New, 13⅛; South Australian Land, 3¾; Victoria Government Six per Cents, 105. Ashton and Oldham Canal Shares have been done at 145; Derby, 84; Leeds and Liverpool, 470; Loughborough, 250; Rochdale, 290; Stafford and Worcester, 420. Berlin Waterworks have been 6⅞; East London, 104; Grand Junction, 70½; Kent, 75½; Southwark and Vauxhall, 89½; West Middlesex, 93⅜. Hungerford-bridge Shares have been 12; Waterloo, New £7, 3s.; Vauxhall, 9¾.

There has been a steady business doing in most Railway Shares, and prices have had an upward tendency. The total sales for the present month amount to £802,528. The following are the leading quotations for the week:—

ORDINARY SHARES AND STOCKS.—Aberdeen, 26¾; Ambergate, Nottingham, and Boston Extension, 9⅝ ex div.; Eastern Counties, 6¾; Edinburgh and Glasgow, 56¾ ex div.; Edinburgh, Perth, and Dundee, 86¾; Great Northern, 93 ex div.; Ditto, A Stock, 79 ex div.; Ditto, B Stock, 126¾ ex div.; Great Southern and Western (Ireland), 103 ex div.; Great Western, 62 ex div.; Lancashire and Yorkshire, 83⅜; London and Blackwall, 7¾ ex div.; London and Brighton, 99⅜; London and North-Western 100 ex div.; Manchester, Sheffield, and Lincolnshire, 30½; Midland, 70¾ ex div.; North British, 31; North-Eastern, Berwick, 76⅜; Ditto, Extension, 15¾ ex div.; Ditto, Leeds, 18⅜; Ditto, York, 62¾ ex div.; North Staffordshire, 11; South-Eastern, 66¾ ex div.; South Wales, 78.

LINES LEASED AT FIXED RENTALS.—Buckinghamshire, 94 ex div.; Hull and Selby, 104½ ex div.; Midland and Bradford, 92 ex div.; Northern and Eastern, 59¼ ex div.; West Yorkshire, 90.

PREFERENCE SHARES.—Aberdeen, 113; Edinburgh, Perth, and Dundee, 70; Great Northern Five per Cent, 107½ ex div.; Ditto Four-and-a-Half per Cent, 101 ex div.; Great Western, Five per Cent, 99; Ditto Four-and-a-Half per Cent, 92; Midland Consolidated, 134; North British, 100½; Stockton and Darlington, 26½ ex div

FOREIGN.—Antwerp and Rotterdam, 3; Ardennes, 1¾; Dutch Rhenish, 11½; East Indian, 22⅝; Grand Trunk of Canada, A Issue, 11½; Great Indian Peninsular, 21; Great Western of Canada, 26⅝.

Mining Shares have been steady:—Imperial Brazilian have marked 2; Copiapo, 2¾; Santiago de Cuba, 2⅜; Tin Croft, 4¼.

*Friday Afternoon.*

Most national Securities have been flat to-day, and prices have shown a tendency to give way. The Three per Cents for Money have realised 93⅛ ⅜; Ditto for the Account, 93⅛ ⅜; the Reduced, 91½; and the New Threes per Cents, 92⅜. Bank Stock, 215. Exchequer Bills, 1s. dis. to 1s. prem. Consols' Scrip, 1⅛. Exchequer Scrip, 1¼ prem. Foreign Bonds and Railway Shares are flat.

## *THE MARKETS.*

CORN EXCHANGE (Friday).—Although the supply of English wheat on sale in to-day's market was very moderate, we experienced a dull sale for all descriptions at Monday's decline in the quotations. The general quality of the samples was inferior. Rather over 6000 quarters of foreign wheat have come to hand this week. Even the finest samples were very dull in sale, and the value of most kinds was almost nominal. Barley and malt moved off slowly, at Monday's currency. The oat trade was in a sluggish state, at the late decline in value. Both beans and peas sold heavily. In prices, however, no change has taken place. The flour trade was very dull

*Arrivals this Week.*—English: wheat, 3810; barley, 2580; malt, 3190; oats, 310; flour, 1980. Irish: oats, 6830. Foreign: wheat, 6290; oats, 1950; flour, 80 sacks, 4450 barrels.

*English.*—Wheat, Essex and Kent red, 54s. to 70s.; ditto, white, 58s. to 72s.; Norfolk and Suffolk red, 54s. to 68s.; rye, 44s. to 47s.; grinding barley, 29s. to 31s.; distilling ditto, 32s. to 35s.; malting ditto, 36s. to 40s.; Lincoln and Norfolk malt, 68s. to 74s.; brown ditto, 60s. to 63s.; Kingston and Ware, 74s. to 76s.; Chevalier, 72s. to 76s.; Yorkshire and Lincolnshire feed oats, 22s. to 23s.; potato ditto, 23s. to 25s.; Youghal and Cork black, 22s. to 23s.; ditto, white, 19s. to 23s.; tick beans, 32s. to 34s.; grey peas, 34s. to 36s.; maple, 37s. to 38s.; white, 40s. to 43s.; boilers, 40s. to 44s. per quarter. Town-made flour, 51s. to 56s.; Suffolk, 47s. to 49s.; Stockton and Yorkshire, 47s. to 49s. per 280 lbs. American flour, 34s. to 35s. per barrel.

*Scotch.*—Linseed and oakes are in moderate request, at full prices. Most other articles are unaltered in value

*Irish.*—Linseed, crushing, 70s. to 72s.; Mediterranean, 69s. to 72s.; hempseed, 36s. to 38s. per quarter. Coriander, 32s. to 36s. per cwt. Brown mustard-seed, 20s. to 30s.; white ditto, 10s. to 12s.; tares, 7s. 6d. to 8s. per bushel. English rapeseed, 35s. to 36s. per quarter. Linseed cakes, English, £13 to £13 5s.; ditto, foreign, £12 10s. to £13; rape cakes, £5 12s. to £7 5s. per ton. Canary, 60s. to 63s. per quarter.

*Bread.*—The prices of wheaten bread in the metropolis are from 9d. to 9½d.; of household ditto, 7½d. to 8½d. per 4 lbs. loaf

*Imperial Weekly Averages.* Wheat, 62s. 7d.; barley, 33s. 5d.; oats, 23s. 9d.; rye, 47s. 7d.; beans, 41s. 5d.; peas, 39s. 5d

*The Six Weeks' Averages.* Wheat, 78s. 9d.; barley, 37s. 6d.; oats, 24s. 5d.; rye, 50s. 6d.; beans, 42s. 1d.; peas, 41s. 8d

*Aughst Gross Bold Last Week.* Wheat, 113,949.; barley, 83,203; oats, 16,607; rye, 154; beans, 6453; peas, 1668 quarters.

*Trade.*—The business doing in all kinds of tea is very moderate, and some forced sales of common sound congou have been made at 8½d. per lb. The public sales have gone off heavily

*Sugar.*—Our market has been very firm; and some large parcels of raw sugar have found buyers at full prices. Refined goods have sold slowly at from 45s. to 47s. per cwt. Buyers of crushed are coming forward freely, on Continental account. Refined goods have sold steadily, and grocery lumps are worth 50s. to 57s. per cwt

*Coffee.*—The very limited business doing in all kinds of coffee, at barely last week's quotations. Good ordinary native Ceylon is selling at 50s. 6d. per cwt

*Rice.*—Owing to the heaviness in the corn trade, the demand for rice is heavy, at a decline in prices of from 6s. to 9d. per cwt.

*Provisions.*—All the leading articles have met an active demand, at a considerable improvement in the quotations. Inferior kinds have sold steady, at full prices. The bacon-market is steadily firm, at an improvement of 2s. per cwt. Hams are quite as dear as last week; but other kinds of provisions are slow sale.

*Potatoes.*—All the leading varieties have sold at 95s. to 80s.; March, 69s.; March & April, 54s.; April to June, 35s. to 45s. 6d.; October to December, 51s. 6d. per cwt. Town tallow, 34s. 6d. per cwt.; rough fat, 2s. 4d. per 8 lbs.

*Oils.*—Linseed oil is steady, at 34s. 9d. to 35s. and 34s. 6d. per cwt., on the spot. Brown rape is selling at 40s. 6d. to 42s.; pale ditto, 45s.; palm, 37s. to 40s.; cocoanut, 36s. to 37s. per cwt. Sperm, 84 guineas. *Linseed*, £27 10s.

*Metropolitan Cattle Market.*—Monday. The supply of beasts on sale in the Metropolitan cattle-market was moderate, but the demand for all breeds was dull, at Monday's quotations. Most of the sheep were of middling quality, and the trade was heavy. The supply of calves was limited; yet the veal trade ruled inactive, at last week's rates. Pigs of all descriptions, but not choice, were in good request, at 4s. to 4s. 2d. per 8 lbs.

*Newgate and Leadenhall* (Friday).—Per 8 lbs. by the carcass, to sink the offal:—Coarse and inferior beasts, 3s. 4d. to 3s. 8d.; second quality ditto, 3s. 10d. to 4s. 2d.; prime large oxen, 4s. 4d. to 4s. 6d.; prime small ditto, 4s. 8d. to 5s.; large pork, 3s. 2s. to 3s. 10d.; inferior mutton, 3s. 8d. to 4s.; second quality ditto, 4s. 2d. to 4s. 6d.; prime ditto, 4s. 8d. to 4s. 10d.; coarse and inferior veal, 3s. 8d. to 4s.; prime ditto, 4s. 2d. to 4s. 4d.; small pork, 4s. 6d. to 4s. 10d. ROBERT HERBERT.

SOLICITORS.

Messrs. Hughes, Kearsey, Masterman, and Co., London.

BANKERS

Messrs. Hill, Fawcett, and Hill.

The effects of civilisation have been spread far and wide from Europe to the remotest parts of the world, have not failed, in spite of ancient prejudices, to penetrate gradually the Turkish Empire; and it is not too much to say that a complete revolution in the manners and customs of that country is rapidly progressing, and that but a short time will elapse before Turkey and its population will enjoy the advantages of European institutions.

The project now submitted to the public has been for some time under the consideration of leading and influential parties in Constantinople, who have long resolved to have, and still is, deprived of many useful and even necessary provisions for the comfort and ornament of its numerous cities, not excepting even the Capital itself of that; amongst its most urgent requirements must be placed the adoption of gas, now widely known there; and it has been ascertained that the introduction of this admirable and economical mode of public and private lighting will be hailed as a boon by all classes of the population, from the lowest up to its high-minded and enlightened Sovereign, whose munificent patronage it is proposed to place the present undertaking.

The Company, as it affords a wide scope for the operations of this Company, as the following facts will demonstrate. Constantinople has a mixed population of Musselmans, Europeans, Greeks, Armenians, &c., &c., approaching a million of souls: it contains a large number of palaces and public edifices. The Sultan alone has several immense palaces on the Bosphorus, where the Governments affairs are carried on, forms of itself a small city; there are also extensive Barracks, Colleges, Manufactories, Cafés, Theatres, Hospitals, and other places of public entertainment, several hundred Mosques and Bath houses, a large number of which, for the comfort and convenience of the inhabitants, are kept open during the whole night, as the time when they are most frequented by that oriental luxury.

Supe have been taken to procure from the Sultan of Turkey a Firman or Concession, securing to this Company for a term of years the exclusive privileges of supplying with gas all places within the sovereignty and dominions of the Turkish Empire.

Two of the Directors are having an intimate knowledge of the country, the other being practically acquainted with all the details in relation to the manufacture of lighting by gas—have already left this country for Constantinople, with full powers to conclude the necessary arrangements.

Coals are to be had in Turkey, and it is believed that English cannel-coal will work the entire collieries more vigorously than hitherto; but shipping employed extensively between the countries, especially in the Black Sea, always carry coal ballast, in lieu of ballast from England as a moderate rate.

The coals, tar, and other products arising from the manufacture of gas, are sure to meet with a ready market

Calculations have been made so as to the expense of the present mode of lighting with olive oil, and the Directors are enabled to state that gas can be supplied at a rate which will compare so favourably as to render certain its general adoption.

Power will be reserved to take advantage of the provisions of any law that has been or may be passed for limiting the liability of Shareholders in Joint Stock Companies.

The Directors have every confidence that the privileges they are [illegible]

The Governors and Directors have resolved to recommend to the holders of Life Policies effected on the system of Participation in Profits adopted by the Corporation in December, 1841, that a Second Septennial Bonus has been declared in respect of the surplus realised on that account. Such Bonus to all Policies—Whether actually subsequently to 1841 for the whole term of life, on the participating scale of premiums which were subsisting up to the close of the 31st day of December, 1855, and on which three or more annual Premiums had been paid.

The following Table shows the amount of Reversionary Bonus added to British Policies of Fourteen Years standing, for the Sum of £1000 each:—

| Ages when Assured. | Additions made in 1848. | Further Additions in 1856. | Total Additions. | Per Cent per Annum on Sums Assured. | Per Cent on the Premiums Paid. |
|---|---|---|---|---|---|
| | £ | £ | £ | £ s. d. | £ s. d. |
| 30 | 102 | 119 | 221 | 1 15 3 | 30 3 |
| 35 | 108 | 118 | 226 | 1 16 0 | 34 3 |
| 40 | 113 | 121 | 234 | 1 17 3 | 50 5 |
| 45 | 121 | 128 | 249 | 1 19 6 | 46 2 |
| 50 | 130 | 140 | 270 | 2 1 9 | 43 0 |
| 55 | 149 | 154 | 303 | 2 6 9 | 39 7 |
| 60 | 172 | 180 | 352 | 2 12 0 | 37 2 |

Equivalent Reductions have been made in the Annual Premiums payable by those persons who preferred that form of Bonus.

The future divisions of Profit will take place every Five Years.

The Capital now stands at £1,000 000 and the Annual Life Fund this Corporation affords to the Assured a liberal participation in Profits, with exemption from the liabilities of Partnership.—a rate of Bonus equal to the average returns of Mutual Societies. with less guarantee of Capital and Investment in Joint Stock Companies of modern practice, with the security of an Office whose resources have been tested by the experience of nearly a century and a half.

Fire and Marine Assurances are granted on liberal terms.

Tables of Premiums, Prospectuses, &c., may be obtained at the Chief Office of the Corporation, in the Royal Exchange, London, or at the Branch Office, No. 29, Pall-Mall, or from the Agents appointed in the principal Towns in the United Kingdom.

JOHN A. HIGHAM, Actuary and Secretary.

TO THE GENERAL PRACTITIONERS IN MEDICINE, SURGERY, MIDWIFERY, AND THE ALLIED SCIENCES AND ARTS IN ENGLAND AND WALES

THE SOCIETY of APOTHECARIES

Is earnestly invite the attention of their Licentiates to the BILL which has been introduced into the House of Commons to AUTER and AMEND the LAWS regulating the MEDICAL PROFESSION.

The Society have not thought fit in publishing any opinion that they consider in the law which are contemplated by the Bill would prove highly detrimental to the interests of General Practitioners, but entirely to the interests of a great majority of those who are practising the healing art in this country.

The Society, therefore, have appointed a Committee to examine the provisions of the Bill for themselves, and to form their own opinion of its real merits and demerits, and they have, in the meanwhile, against accepting the Bill upon the opinion and recommendation of a prominent feature of the Bill, which will not escape attention, is this, that a person who does not actually exercise the medical art (such as that of Physician, Surgeon, or Apothecary) will be at liberty to practise any branch of the profession without the necessity of undergoing an examination, or receiving any medical education whatever. Consequently, Chemists and Druggists, should the Bill become law, will be entitled to practise each and every branch of the profession. By order of the Society of Apothecaries.

ROBERT D. PETTOR, Clerk to the Society

Apothecaries'-hall, 9th Feb., 1856

WHETHER we consider ROUSSILLON WINE as the household agent of the medical man—the admirable substitute for the Wines of Sauterne, Grave, Hermitage, and Sherry—or whether we consider it as the bonne-bouche of the gourmet—in either case it is not to be excelled. Flavour, aroma, after-taste, colour, and mellowness, recommend it to the fastest gust, stimulating, generous, nutritive, mild, and genial, it recommends itself to the domestic physician. For particulars see Illustrated London News of 11th February, 1854. Dinner Sherry, 20s., 30s.; Standard, or Natural, 36s.; Old East Indies Port, 42s., 48s.; Moselle (muscatel flavour), 30s., 42s.; Sc. Julien Claret, 36s., 42s.; Red Hermitage, 36s., 42s.; Pale Brandy, 42s.; Sparkling Champagne, 42s. Cash. Carriage-free to all Railway Stations in England. Price Lists of all Wines and Spirits forwarded (post-free) on application. Just published, price 2d., post-free, "What is Whisky?" to be had of all Booksellers.—FOSTER and INGLE, Mitre-court, Milk-street, Cheapside.

SOLDIERS' READING-ROOM, ST. MARY'S BARRACKS, CHATHAM.

## SOLDIERS' READING-ROOM, ST. MARY'S BARRACKS, CHATHAM.

THIS extended line of Barracks was built during the Peninsular War, and was first used to accommodate the French prisoners: here it was so many expressed their sense of the great consideration shown them by the Government of this country. When the Barracks ceased to be in requisition for the above purpose they underwent material alteration, and, after being rendered bomb-proof, were converted into extensive powder-magazines, continuing to be used as such for many years. Being at a considerable distance from the other buildings occupied by troops, and great inconvenience arising from this cause, detached powder-magazines, more compact and contiguous to the different stations, were erected; when St. Mary's Barracks were used as stores for the Royal Engineers. As our Indian territory increased a corresponding supply of well-trained young men from the Provisional Battalion became necessary; in consequence of which, during one period of the year especially, the entire space of Chatham Barracks was required for this additional influx, and then it was thought expedient to appropriate a part of St. Mary's for the reception of such regiments as might arrive from foreign stations, or as a temporary barrack for a part of the Provisional Battalion, instead of sending them to Canterbury.

The annual return of between three and four thousand soldiers from India and the British Colonies—who, either from impaired health, or, having served their full term, were considered exempt from further active service—induced the authorities to decide upon St. Mary's Barracks as the fittest place for them, and since the year 1844 they have been exclusively set apart for the temporary quarters of such previously to their final disposal.

The situation of St Mary's Barracks is remarkable for salubrity of air, and the surrounding scenery is exceedingly picturesque On the east, the river Medway extends as far as the eye can reach, studded with numbers of men-of-war, and enlivened by the constant passing of vessels. Towards the south, the rich valley of Gillingham and Rainham presents a pleasing view, which, during summer and autumn, is rendered still more attractive by its numerous cherry and apple orchards. On the west, Upna Castle, with its surrounding panoramic scenery, and the river in the foreground, invariably offers a pleasing prospect. Indeed, St. Mary's Invalid Barracks, standing on a light loamy soil, within the line of fortifications, are capable, with their many natural advantages, of being rendered by a little taste a most desirable station.

St. Mary's Barracks have, of late, been a place of special interest, they having been the receptacle of so many thousands of men—some, after a long and honourable career, to return to the place of their birth, carrying with them the rewards of merit; some, less fortunate, to whom loss of health in a tropical clime has proved a barrier to their promotion; and last, though not least, the fearful number of the wounded, whose military career has been arrested by those many casualties war so necessarily entails. The Barracks have lately been honoured with the visits—first of his Royal Highness Prince Albert, when he became a spectator of the mode of attack scaling of walls, hand-grenading, and the explosion of mines, attending a siege; and next by that of her Most Gracious Majesty the Queen to such of her brave army as returned invalided from the seat of war.

For the use of the invalids in the Barracks, a Library is now being fitted up in one of the rooms of the Upper Gallery, and will form a most important feature of attraction to the soldiers, and a general acquisition to these Barracks. About 800 volumes of historical and miscellaneous works have already been provided. Bookshelves are to be arranged on each side, a table extending down the centre, and the apartment will be lighted with gas. The heads of the different departments of the garrison have been very anxious for this important object; and it will, doubtless, be a great inducement for numbers of the invalids to remain quietly in barracks instead of passing their time so unprofitably in the town.

The accompanying Illustration shows the Reading-room, as far as this very desirable improvement has progressed.

ALTAR-PICTURE FROM A CHURCH IN THE CRIMEA.

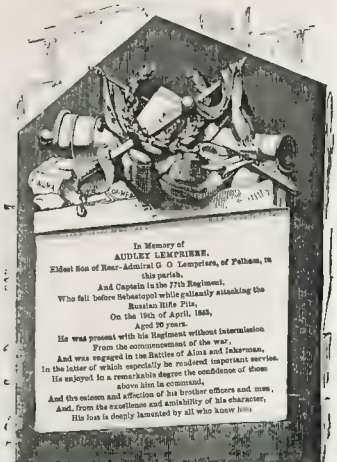
## ALTAR PICTURE FROM THE CRIMEA.

AMONG the many spoils brought from the Crimea have been objects of very opposite character and associations; and in these groups of memorials of conquest it has not been uncommon to see the implement of fierce war lying beside pictures typical of everlasting peace. The Crimean guns in Woolwich Arsenal, and the interesting object we now engrave, would make up such a picture. The latter is of small size, and is stated to have been taken from above the altar of a church in the Crimea. The shrine which one of the figures is presenting bears a resemblance to the form of the monastery at Balaclava. This painting is highly finished and harmoniously coloured, and would be commended by the pre-Raphael community. It was brought from Yalta to England by Mr. D. A. Abraham, son of the architect of that name, and is curious, as showing that art has a large share of patronage in Russian colonies.

RUSSIANS AND THEIR EMPEROR.—The Emperor is the chief business man of the empire. He does everything. Every man who has any authority whatever in the empire gets it from the Emperor direct, and is accountable to him alone. In Russia no man moves without a passport, and every Russian's name is registered in his police district; if he steps beyond that line, it must be by the Emperor's authority. Once a year every Russian has to swear before Heaven that whatever the Emperor does, or may do, is right. The privilege is paid for every twelve months. If a Russian wishes to change his residence, even to the next door, he must have permission from the police, wait three days before he moves, and pay for the privilege of locomotion, as he pays for every official paper he takes out; all of which makes it expensive to breathe, much more to move, in Russia. No contract is binding, no title to real estate can be transferred, except on stamped paper. The percentage that goes to the Government as a tax for the sheet depends on the value of the property. Some of these sheets of paper bring the Government from 500 to 2000 dollars. Every Russian, and everything that belongs to him is the Emperor's. The great estates are held by the nobles; but their titles exist at the will of the Emperor. He can confiscate their property at any instant; and they are as absolutely his slaves as are the meanest of his serfs. [illegible] one great railway is finished in Russia; that is from St. Petersburg to Moscow. The Warsaw road is completed only thirty miles—from St. Petersburg to Gatchen. A portion of the rest of the road is graded, but nothing more has been done to it since the war began. They have no large canals in Russia; those which exist being only short sluices between the rivers, to promote internal navigation.—*Letter from an American*

THE REBELLION IN CHINA.—The *Peking Gazette* says that Lu-chan-fu, after being occupied two years by the rebels, has been recovered by the Government, and that the insurgents of Tsung-yang have also been routed. They wander about the neighbourhood of Wu-chang-fu, the capital of the province. The province of Szechuan is in rebellion, caused mainly by famine, twenty-four districts suffering from that condition. On the other hand, the rebels of Chin-kiang-fu are exposed to a worse visitation—a sort of plague, of which it is said upwards of 100,000 have already died. The disease attacks the throat, which speedily becomes so painful as to prevent food being taken. The teeth turn black, and fall out, and death is sure and sudden. The commandant of Chin-kian having sent to Nankin for reinforcements, a strong body was ordered to move; but it was encountered by the Imperialists, and, after a comparatively severe and bloody struggle, gave way, and retreated to Nankin. Should the communication between the two strongholds of the rebels be cut off, the recapture of Chin-kiang by the Imperialists is pretty certain, and the evacuation of Nankin by the rebels at no very distant period may be regarded as probable. With any other people these cities would have been recovered long ago; but the Chinese prefer patient endurance to fighting, and generally find it effectual in the long run. The roving bands who caused so much alarm about Canton last year are still about the upper part of the province, but their numbers are not formidable.

## MONUMENT TO CAPT. LEMPRIERE, AT NEWTON-VALENCE.



In Memory of
AUDLEY LEMPRIERE,
Eldest Son of Rear-Admiral G. O. Lempriere, of Pelham, in this parish,
And Captain in the 77th Regiment,
Who fell before Sebastopol while gallantly attacking the Russian Rifle Pits,
On the 19th of April, 1855,
Aged 30 years.
His was present with his Regiment without intermission
From the commencement of the war,
And was engaged in the Battles of Alma and Inkermann,
In the latter of which especially he rendered important service.
His enjoyed in a remarkable degree the confidence of those above him in command,
And the esteem and affection of his brother officers and men,
And, from the excellence and amiability of his character,
His loss is deeply lamented by all who knew him

THIS handsome mural Tablet has just been erected at Newton-Valence Church, near Alton, to the memory of Captain Lempriere who, it will be remembered, fell so gallantly on the night of the 19th April at the Rifle Pits before Sebastopol. The Tablet is by Mr. Theed, the sculptor and is a meritorious work.

London: Printed and Published at the Office, 198, Strand, and Milford House, in the Parish of St. Clement Danes, in the County of Middlesex, by WILLIAM LITTLE, 198, Strand, aforesaid.—SATURDAY, MARCH 8, 1856.

ENTERTAINMENT TO ADMIRAL DUNDAS, ON BOARD H. M. S. "WELLINGTON."—BALTIC FLEET

# Memorabilia,

## LITERARY, ANTIQUARIAN, SCIENTIFIC, AND ARTISTIC.

*"A little chink may let in much light."*—OLD PROVERB.

### THE CAMDEN CUP.

The annexed Engraving represents the silver-gilt Standing Cup and Cover, bequeathed by the celebrated William Camden, Clarenceux King of Arms, to the worshipful Company of Painter-stainers. Camden, in his will (proved Nov. 10, 1623), after directing "the sum of eight pounds to be given to the poore of that place (Chiselhurst), when it shall please God to call me to his mercie," continues, "I bequeath to Sir Foulke Greville, Lord Brooke, Chancellor of the Exchequer, who preferred me gratis to my office, a piece of plate of ten pounds; item to Company of Painter-stainers of London to buy them a piece of plate in memoriall of me, sixteene pounds;" the inscription of which is directed to be, "Guil. Camdenus Clarenceux Elmis Sampsonis Pictoris Londonensis dono dedit." This stately and richly-decorated cup and cover is always used on Corporation festivals, in memory of the illustrious donor. In height it is altogether twenty-three inches and a quarter—the cover only being eight inches and three quarters; and the cup, independently of the stand, five inches and a half. The inscription encircles the upper rim of the cup, and directly under it is an engraved escutcheon of Camden's arms. The cover presents an object of much elegance—a richly-ornamented pyramid, based on the heads of birds, the breasts bending gracefully with cartouch ornaments. The pinnacle of the pyramid is surmounted by a female figure, the right hand resting on a shield charged with the same arms as are shown on the side of the cup.

### NOTES.

**RITSON'S SHAKSPEARE.**—As a pendant to your correspondent's notice of "Ritson's Shakspearian Notes," perhaps the following copy of a prospectus issued by that learned antiquary may be worth a place in "Memorabilia." It may be necessary to premise that the work itself never appeared.—EDWARD F. RIMBAULT.

PREPARING FOR THE PRESS, AN EDITION OF THE PLAYS OF WILLIAM SHAKSPEARE. WITH NOTES. BY JOSEPH RITSON.

This edition will be comprised in eight duodecimo volumes, and will be carefully and accurately printed from the only copies of real authority—the two first folios. But although these editions will be the standard of the intended work, such passages in the old quartos as may appear to have been omitted by accident, or with a view to shorten the representation, and every various reading, will be maturely considered, and, if worthy of insertion, be adopted, either in the text or margin, as their importance or merit may seem to require. No variation, however, will be made from the standard editions without apprising the reader of it, unless the difference should consist merely in a slight typographical error. Nor any difference between the various editions in other respects intended to be otherwise than occasionally regarded. The orthography will be reduced with the utmost care to a modern and uniform system, except where a change would be injurious to the author's sense and meaning. Various or doubtful readings will be settled from an attentive examination of the several ancient impressions. The notes—which will be very sparingly introduced, and never but where they seem absolutely necessary or peculiarly proper—will be chiefly extracted, under the names of their respective authors, from the editions of Theobald, Warburton, Johnson, and Steevens; but not to the exclusion of better, though perhaps anonymous, intelligence, if it can be given. It is, however, no part of the editor's design to fill his margin with a view of the corruptions, or a refutation of the errors, of preceding commentators.

The author's life, with the usual documents (particularly a more exact copy of his will than has yet been published), and the prefaces of his various editors, will be prefixed to the work; which will likewise be attended with a new, copious, and accurate glossary. And, in no additional volume, it is proposed to give a complete verbal index, adapted to the intended edition.

This edition will, with regard to the correctness of the text, be infinitely superior to any that has yet appeared. It will possess all the advantages of every former edition, and be as little liable, it is hoped, as possible to the defects of any.

18th April, 1783

*Printed for J. Johnson, in St. Paul's Churchyard.*"

**PORSON AND PALEY.**—"My relation, Dr. Maltby (Bishop of Durham), once invited him (Porson) to meet Paley at dinner. Paley arrived first. When Porson (who had never before seen him) came into the room, he seated himself in an arm-chair, and, looking very hard at Paley, said, 'I am entitled to this chair, being president of a society for the discovery of truth, of which I happen at present to be the only member.' [Query, the only member present?] These words were levelled at certain political opinions broached in Paley's works."—*Parsoniana*, in *Rogers's Table Talk*. A Scotch paper, the *Inverness Courier*, adds to this anecdote:—"One of this learned party—to the benefit of society and the delight of his friends—still survives; and we learn from the venerable Bishop of Durham that the meeting took place at the house of the late Dr. Davy, Master of Caius College, Cambridge. Paley was very anxious to see a man so extraordinary as Porson, and Dr. Maltby obtained permission from his friend Dr. Davy (to whom he was then on a visit) to invite them to his Lodge. 'I was in some respects a curious meeting,' says the Bishop; 'but it did not give occasion to so much conversation between two men very eminent in different ways as I anticipated and wished.'"

**AN OLD SAYING REVIVED.**—"When I was asked if I had attended the said lectures on the Art of Memory (Venalgie's Lectures), I replied 'No: I wish to learn the art of forgetting.'" *Rogers's Table-Talk*. Turn to Langhorne's "Plutarch" (Life of Themistocles), and in a note will be found this saying, preserved by Cicero—"When Simonides offered to teach Themistocles the art of memory, he answered, 'Ah, rather teach me the art of forgetting; for I often remember what I would not, and cannot forget what I would.'"—M.

**A LITERARY MALEFACTOR.**—Some of the old newspaper notices are curious. Here is one extract:—"Monday, Feb 20, 1749. On this day were executed at Tyburn, [the notorious] Terence Connor, and Joseph Mapham, for filing gold money. Gahagan and Connor were Papists of considerable families in Ireland. The former was a very good Latin scholar, and editor of Bradley's edition of the Classics. He translated Mr. Pope's "Essay on Criticism" into Latin verse; and, after his confinement, "The Temple of Fame," and "The Messiah," which he dedicated to the Duke of Newcastle in hopes to obtain a pardon. In a poem addressed to Gahagan (in the Ordinary of Newgate's account) are the following verses:—

Who not condole with thee 'twixt fear and hope;—
Who not admire thee thus transating Pope!
Translating Pope in never-dying lays,
Bereft of senses, of liberty, and ease;—
Translating Pope, beneath several doom,
In numbers worthy old Augustan Rome,
Whose ashes sons might glory in thy strains,
Tho' sung in massy, dire, incumbring chains.

The Irish ear of this encomiast is finely displayed in his rhyme of *ease* for case.

**RAMPANT WHIG LOYALTY.**—I subjoin two more of these newspaper gleanings:—"Last Sunday Dr. Sacheverel preached a virulent and railing sermon at St. Clement's Church, in the Strand. He was attended by a numerous mob, who testified their high approbation of his Billingsgate discourse by huzzaing him to his coach, so that we find other Princes have savage beasts to govern, as well as the Czar of Muscovy."—*Weekly Journal, June* 1, 1717.—"This is to give notice to all disaffected persons, whether Papist, Jacobite, or Tory, that William Marvel, executioner-general of Great Britain, is preparing a great quantity of whipcord for the gentle flogging of those pretty women who shall make themselves oak-gowns, with curious needlework, representing oak-leaves, both in colour and form, against the anniversary of the Restoration of King Charles II., in order to revive their old tumults."—*Weekly Journal, May* 11, 1717.—T.

**LIBERALITY OF AN OLD PUBLISHER.**—BURNS AND CREECH.—In an unpublished letter by Burns, addressed to a friend in Edinburgh, the poet says:—"Ha (Creech) wrote me a fine, fair letter, telling me he was going to print a third edition: and, as he had a brother's care of my fame, he wished to add every new thing I had written since, and I should be amply rewarded with—a copy or two to present to my friends! He has sent me a copy of the last edition to correct, but I have as yet taken no notice of it, and I hear he has published my name. You know, and all my friends know, that I do not value money; but I owed the gentleman a debt which I am happy to have it in my power to repay." The irate bard and his publisher made up matters afterwards.—INQUIRER.

### QUERIES.

**THE FAMILIES OF FFRANCE AND FFARINGTON.**—I beg to appeal to your numerous readers for the reason why the families Farington and France use the small "f" when signing the name, in opposition to general usage. No doubt it is an old custom with them, but whence comes it?—FRAGER.

**YEOMEN OF THE GUARD IN CROMWELL'S TIME.**—Can any of your historical correspondents inform me what became of the Yeomen of the Guard during the protectorate of Cromwell? I have found no account of them whatever in my history of that time. Their duty was to attend the King's person—did Cromwell make use of their services?—E. R. J M

**VALUE OF A BAD EAR.**—Can any of your readers inform me what Englishman of mark in the olden time it was who said he cut waked a bad ear, because it enabled him to enjoy bad music as well as good? Lord Herbert of Cherbury, Hobbes, Andrew Marvel, Fletcher of Saltoun, are among the characters who have been consulted as likely, but without success.—T.

**THE GOOD COUNTESS OF MONMOUTH.**—Will your correspondent "Carpe Diem," who states that a pane of glass on which was the inscription, "The chamber of the good Countess of Monmouth, &c.," was found in an old house now pulled down, at Watford, in Hertfordshire, give a more particular description of the house and the time when this pane of glass was found? Although well acquainted with Watford and its celebrities, I had not heard previously that the Countess of Monmouth had either lived or died there.—R. C.

**ANECDOTE OF PRINCE GEORGE OF DENMARK.**—A romantic incident, resembling the well-known ballad of "The King and the Miller of Mansfield," is told of the reign of Queen Anne. "Prince George of Denmark, having landed unexpectedly at Bristol, and not having been recognised by the merchants who were at the time on the pier where he was walking, was accosted by a poor artisan, who asked him if he were not the Queen's husband, expressed his regret that so little respect had been shown to him, and invited him to partake of his own humble fare. The Prince dined with the artisan, who was afterwards sent for by the Queen, invited to Court by the Queen, and himself knighted, and his wife presented, if we remember rightly, with a watch." Is this story, which is thus related in Wright's "Literature and Superstition of England in the Middle Ages" (ii., 173), given by any contemporary annalist? EDWARD F. RIMBAULT.

### ANSWERS TO QUERIES.

**SIR FRANCIS DRAKE.**—Sir Francis Drake was born at Tavistock, in Devonshire, a country which produced several Elizabethan heroes, among them Sir Francis's "worthy companion, both in life and death, Sir John Hawkins." Sir Walter Raleigh, Sir Humphrey Gilbert, and others of less note. Sir Francis died in 1596, off Nombre de Dios, on the Isthmus of Panama, upon whose death one wrote thus:—

The waves became his winding-sheet, the waters were his tomb;
But for his fame, the ocean sea was not sufficient room.—H.

**SIR FRANCIS DRAKE.**—Devonshire has the honour of giving birth to the great circumnavigator. He was born in a farm-house in the parish of Musbury, about three miles from Axminster. This was originally the family seat, and there is not a question as to the fact I state. If proof, however, be required, I can refer your correspondent to my friend, the Rev. George Roberts, the Rector of Musbury, an accomplished scholar of great research, who will readily furnish conclusive evidence.—FRED. TOLFREY. P.S. The monuments of the Drakes are in the parish church of Musbury.

**GRAMMATICAL QUERY.**—One of your correspondents, defending Charles Mackay from a critic, asks whether are liberty to use in poetry either forgot, or forgotten; broke or broken. Forgot is undoubtedly an extensive use, both in colloquial speaking and composition, and is sanctioned by the most undoubted grammarians; hence we find it in Murray and Lennie. Walker, that ruling lexicographer of his time, has "forgot, or forgotten, past part.;" and it is to be found in later authors, and in the first productions. Pope, in his translation of Homer's "Odyssey," has—

"In pomps or joys, the palace or the grot,
My country's image never was forgot."

W. T., Daventry.

**LORD BROUGHAM'S AGE.**—In answer to your query of Lord Brougham's age, I find that this nobleman was born 19th September, 1778, and that his Lordship's father married, May 22nd, 1777. The mistake consists in the year of the marriage, not in that of the birth.—H. T.

**CARTHAGINIAN WOMEN.**—C. will, I believe, find the circumstance of the Carthaginian women cutting off their hair to make ropes for the catapults in Strabo lib. xvii. Compare Cæsar Bell. Civil. lib. ii. Vegetius de re. Mil. iv. 9. Vitruvius, lib. x. c. 16, says—"Nam quæ funt in capitibus feminarum, per corporis spatia contendunter capillo maxime muliebri vel nervo fumes." See the article "Fermentum," in Smith's Dictionary of Greek and Roman Antiquities.—H. F. W.

**THE PREFIX "UG."**—Messrs. Kaltschmidt and Mason appear to follow the example of the old lady who looked everywhere for her spectacles, except on her nose, where they happened to be. If any one will turn to the word "ugly," in Johnson's "Dictionary," he will find that the present form was *uygll*, that there was a substantive *ugge*, horror; and a verb *ogan*, to dread. This being the case, what occasion can there be to search into the mysteries of ancient dialects to have, and it is now written plain Ugley, as any roadbook will show. Herr Kaltschmidt's numerous illustrations would apply to any short word beginning with a vowel, be its construction what it might. According to his theory, every brief prefix or terminative means water—ug among the rest. This is far too indefinite, and, moreover, the word water could scarcely be used as an adjective to brook, as in Lord Cafford's seat, Ugbrook. A similar objection applies to *uchel*: it is a different word from the one in question: and its Celtic origin renders it a very suspicious appendage to the Saxon thorpe. The great advantages of the old English Ugge or Uggyl over these is, that we can say, in adopting it—

Here shall the muse frame no excuse,
But frame the *thing* itself.

BERM.

### TO CORRESPONDENTS.

REVIEWS.—Dr. F., H. C., T. P. D. S., Henry A. Murray, Z., Mackenzie Walcott, An Inhabitant of Edgeware, Edward Cox, A. J. B., H. B. Sargent, P. M., Anti-Gary, Gradatim, A. K. E., R. H. Y., Nonconformist, J. H. Langshaw, Cambridge Lodge, D. F., Gloucester, A. R., Mario, C. A., Nicholas, An Old Subscriber, Dobbin, E. H., A. V. Sinfield, L. J., Cheriton, H. T., Alfred Kingsford, Ed. W. Godwin, Spes, N. G. W., Brown, Charles, Ignoramus, W. Trebble, S. Peyton, L. H. S., "530," J. A LISTER OF OLD THEOLOGY must be good enough to write the title of the work and the name of the author to which he refers more legibly. Neither in his present note is he distinct.

E. Y. S., Ely, will perhaps be good enough to intrust to us the original letter of Garrick of which he sent a copy. It shall be carefully preserved and speedily returned.

G. A. R.—"The soldier's book who pitch the pipe." What evidence have you of its antiquity?

ARCHBISHOP LAW.—A. T. L. may obtain the information required on the subject of his Query if he will send his name and address to the Editor.

## CHESS.

### TO CORRESPONDENTS.

I. K., Manchester.—Thanks for the games played in the late Tourney between Manchester and Liverpool. Some of the best are to be given in due course.

C. W., Sunbury.—The last Problem sent are now in the examiner's hands.

R. HERBEN and G. BOLTON.—It is four out of the five instances adduced of Problems admitting a double solution which have you sent right. 2 Your own Problem is ingenious, though very difficult, and we also endeavour to give it a place in the ILLUSTRATED LONDON NEWS.

LOUISA, B. S.—In the Evans' Gambit published in the number for February 16th, Black's 15th and 16th moves must have been transposed in taking them down or in printing them, as the White Queen, in the game as actually played, when moved to Q R 4th prevented the advance Q Kt from being moved.

D. T. W.—The consultation games at the St. George's Club are calculated to benefit the Club as materially that nothing it is to be said will interfere to stop them.

F. T., Derby; H. TUPTON, W. GAINSHAW, J. T., ENQUIRER; J. DOYLE, Oldham; W. H. WHITE.—Under consideration.

JAMES B.—The letters mentioned are simply the initials of the Pieces—as K for King, Q for Queen, R for Rook, or Castle, &c.

STUDENT.—The games played between Messrs. Anderssen and Harrwitz in the annexed [illegible] for 8st. 8. No such match was ever played.

J. S. HIES.—It shall be reported on immediately.

SOLUTIONS OF PROBLEM No. 626, by A. Cockburn, F. T., Enquirer, C. W., Sunbury, E. F., Norwood; J. E. Rees, of Scarborough; F. R., of Norwich; W. G. C., G. F. J., Yeaford; J. W., Dover; J. D., Manchester; Bodmin, Dereven, Alfred, Holloway, are correct.

SOLUTIONS OF PROBLEM No. 627, by Dereven, Bamish, Staddon, F. R., Norwich; J. Morley, Cheeknate, J. Barnett, J. N. A., Ames, Perth, W. H. D. E. D., Dr. Field, E. Lee, R. C. Wright, Wallace, Mrs. Pilkocky, J. L. B., Leuston, C. W., Sunbury, H. Whitton, Melrose, Mount Pleasant, J. B. J., W. H. W., Waltham, Mabie, C. M., G. F. J., Yoxford; SOLUTIONS BY ENIGMA, by Dereven, Singleton, Œdipus, Lynx, M. Moore, Dr. Field, Alfred, Holloway, Dan, Mor., by Delta, Anne Lovelace, Omega, B. F. W., Al. P., D. B. G. M., O. O., L. S. D., are correct. All others are wrong.

SOLUTION OF PROBLEM No. 627.

| 11. B takes Kt | P takes B | 26. P to Q 4th | Kt to Q B 4th |
| 12. Kt to Q 4th | P to K B 3rd | 27. Q B to K sq | Kt to K 5th (ch) |
| 13. P to K R 4th | Kt to K 3rd (*e*) | 28. K takes Kt | Q takes R |
| 14. P to Q B 3rd | B to Q R 4th | 29. Kt to K B 2nd | K to K B 2nd |
| 15. P to Q 4th | P takes K P | 30. Q to K 3rd | Q to K B 4th |

The remaining moves were not recorded, but the game was won by White. The score at the conclusion standing:—

| | | | |
|---|---|---|---|
| Messrs. Staunton and Barnes | ... | ... | 3 |
| Messrs. Lowenthal and Owen | ... | ... | 1 |
| Drawn | ... | ... | 1 |

(*a*) Playing out the Q's Knight, instead of the King's, is not a favourite way of beginning the game in this country. We have seen many games, however, played abroad, particularly those between Mr. Hampe, an amateur player of Austria, and various opponents, in which this departure from the routine has proved highly advantageous.

(*b*) The usual move is P to K B 3rd, but in this position it is likely to compel the second player to a very difficult and dangerous course of action.

(*c*) A good move undoubtedly, but the original one suggested, by White, *K B to Q B 4th*, which must evidently have given them a position eminently confined. If, in answer to K B to Q B 4th, they ventured to throw forward the Q Pawn, the consequences are pretty obvious—

| | |
|---|---|
| 5. | K B to Q B 4th |
| 6. P to Q 4th | Q R takes Kt |
| 7. Kt takes B (best) | B takes Q P, &c., &c |

(*d*) The best move, perhaps; and one not his upon without long consideration.

(*e*) The superiority of this play to mere moving the Kt to K Kt 4th will soon be manifest.

(*f*) Such an attack as White have now obtained must have proved decisive in a few more moves had they made the most of their opportunity. From over-confidence, however, they let slip their opportunity, and permitted their adversaries to recover themselves and make a long and excellent resistance.

(*g*) The only possible resource they had.

(*h*) A fault which cost them much time, and might have proved even more serious: while, by simply playing on the Q Pawn, they would have rendered Black's game hopeless. For example:—

| | |
|---|---|
| 23. | P to Q 7th (ch) |
| 24. Kt takes P (best) | Q to Q 6th |

(White have other ways of taking the Queen's Pawn, as this is quite conclusive, it is needless to examine further.)

| | | | |
|---|---|---|---|
| 25. Castles,* | | B to K 6th | |
| And the attack is manifestly irresistible. | | | |
| *25. P to K B 4th | B to K 6th | 1 26. Q to K R 3rd | Kt takes K B P |
| | And Black can no longer defend themselves. | | |

(*i*) Playing out the Q's Knight, instead of the King's, is not a favourite way of beginning the game in this country. We have seen many games, however, played abroad, particularly those between Mr. Hampe, an amateur player of Austria, and various opponents, in which this departure from the routine has proved highly advantageous.

CAMBRIDGE CHESS TOURNAMENT.—This tourney, which was open to all members of the University, was begun on Friday evening, the 15th ult. The contending players met as Mr. Skipworth's room, St. Catherine's Hall (Mr. S. being the hon. secretary of the University Chess-club), at seven o'clock, when they were paired by lot, and the several contests immediately commenced. Three prizes are to be given in chess-men to the three most successful combatants, and the winners of the first three games in the several parties to be declared victors. It is the intention, we hear, of the University Chess-club to establish annually this Chess Tripos (if we may so term it) open to all resident members of the University. This being the first year, the List is naturally a small one, but doubtless it will greatly increase when Cambridge theophilers will take that stand (if they do not already occupy it) in the chess world, which Cambridge mathematicians hold in the world at large.

## ART REFORM.—No. II.

### THE BURIED TREASURES OF HAMPTON COURT PALACE.

All the Attic facility and philosophy of Hume, and all the narrative powers of Macaulay—that *facile princeps* of the domain of journalistic talent—have not produced so clear an idea of the History of England as that which could be managed by a strictly chronological arrangement of the historical pictures of Hampton Court, with such additions as are, no doubt, from time to time, capable of being procured from the dispersion of private collections. Even without such additions we have a large and capital stock to commence with, whenever we choose to create order out of chaos by a simple rearrangement. We are told that difficulties stand in the way of such a project, from the principle of never altering the number of a picture; but after all the number was adopted for the picture, not the picture for the number; and, if chronological arrangement be preferable in the case of paintings having a merely pictorial value, it is still more so in the case of a historical series. One room is entirely devoted to naval scenes—an ostensible specimen of classification, but only productive of monotony. Curiosity is extinguished when we find smoke of cannon and sea spray in almost every picture; whereas, were they dispersed through the Historical Collection, they would have agreeably diversified the illustrations of our national life and action by scenes from a sphere peculiarly our own.

With Henry VII. the Middle Age may be said to close in England; not the barbarous age, but the so-called Gothic one, when the Pointed style of architecture attained its most elaborate perfection, and just before the period when Italian art shed a splendid halo beyond the Alps on the France of Francis I. and the England of our eighth Henry. Of this period we have several historical portraits attributed to Mabuse, comprising the children of Henry VII. in the costume of the epoch. But it is with the Holbeins of Henry VIII. that the series fairly commences. This remarkable artist had not a fine sense of the beautiful, and his productions contrast poorly with the high Italian ideal of his great Ultramontane contemporaries; but he was a genuine and conscientious artist; with a marvellous knack of hitting a likeness; fair as a colourist; masterly in handling, and possessing the force of truth, and of what the French critics call *naïveté*; consequently utterly free from all meretricious mannerisms. He was, therefore, the very artist to translate to canvas with fidelity and felicity the Court of the wayward blood-stained voluptuary, who in theology would strain at a gnat, and in morality swallow a camel. We have the man himself, at home and abroad, sitting amid the newly-reared Renaissance architecture, with his family, and Court-fool with ape on shoulder; or on the Field of the Cloth of Gold in knightly tourney. Here is the Earl of Surrey (306), also by Holbein, a noble work of art, notwithstanding a certain antiquated hardness of the lines. For truth, vitality, and brilliancy, this most interesting performance is far more worthy of a place in the National Gallery as a specimen of the German artist than the portrait lately purchased at so long a price. But, from the genius and misfortunes of this the most illustrious of all the Howards, its place would, on a rearrangement, be under the rubric of Henry VIII. Nor are inferior personages wanting to complete the panorama of an English Court under the Tudors. The professional jester, or clown, is now to be found in no part of Europe, except in Turkey, where the Albanian or Roumelian Deli is the paid and licensed joker of the great man of the locality at the festive board, at the chase, the joust, or the target practice; but how frequently and pleasantly the function itself in Old England has been embalmed by the observant and inventive genius of our great dramatists. Will Somers, the Court fool of Henry VIII., as in the Holbein mirror, is as indispensable an appendage of Royalty as page or yeoman; and we have him pleasantly grinning through the lattice, or in companionship with the ape in the sunny courtyard.

Elizabeth, too, comes before us in her distinct individuality—in grasp of intellect, strong as a man; in her foibles and vanities, weaker than womankind. Her brawny, gigantic porter—a Cyclops in vision as well as in stature—introduces us to this Court, whose portrait (No. 17), by Zucchero, is of a vigour, tone, and execution corresponding with the subject, and bears the distinct stamp of the golden age of the Cinque-cento. But the Zuccheros had not the inborn genius of Holbein. It was in the beginning of the sixteenth and seventeenth centuries that we find the artistic taste expand. Under Harry, Holbein painted, and the Renaissance in architecture took root. Under the Charles of the following century we had, at a corresponding period, the constellation of Rubens, Vandyke, and Inigo Jones. In the middle of these centuries we find a great derangement of the tranquillity indispensable to art by religious and political broils. From these latter sprang naturally two great poetical periods towards the close of both centuries. In the age of Elizabeth reason soared on the wings of imagination and fancy to the greatest elevation ever attained by northern genius. And nearly a century later the terrible excitements of intestine hostility—most nurses for a poetic child—drew forth the poetry of a Dryden and a Milton, who, although opposed to each other on every matter of Church and State, remained, in their best efforts, children of the strong feelings of the civil tempests. But both Courts both that of Elizabeth and of Charles II.—had the poetastry of gallantry and of the conceits of artificial society; the one with something of the ancient severity of English manners, the other with that exotic laxity which we find difficult to associate with the sobriety of the genius of the British nation.

In 283, 284, and 285 we have Elizabeth the Queen; in other numbers the Leicesters, the Walsinghams, and Bacons—the men of Courts, Camps, and Councils; but in 304—"Elizabeth in a Fancy Dress"—we have not the Queen, but the woman, standing to Federigo Zucchero; and Poetry, usually mated with Music, is, on this occasion, in a state of less-exciting union with Painting, for we read on a scroll:—

> The restless swallow fits my restless minde,
> In still revenge, still renewinge wronge.
> Her just complaint of cruelty unkinde
> Are all the musique that my life prolonges.
>
> With pensive thought my weeping steppe I drowe,
> Whose melancholy tears my cares expresse.
> Her teares in silence, and my sighs unknowne,
> Are all the physicke that my harmes redresse
>
> My onely hopes was in this goodly tree,
> Which I did plant in love, bring up in care.
> But all in vaine, for now to late I see,
> The *sauses* be mine, the kernels others are.
>
> My musique may be plaintes, my physique teares.
> If this be all the fruite my love-tree beares

Of the period of James I. there is not much illustration. We would, however, remark a representation of Sir Henry Wotton presenting his credentials to the Doge of Venice in the Ducal palace, at a period when this republic had its weight in the politics of Europe. In the portraits of James and of Christian of Denmark we have excellent specimens of Van Somer, who, without attaining the elegance of his great immediate successor Vandyke, had much of his force and that magical power of giving the electricity of vitality and intelligence to inorganic canvas and colour.

Under the rubric of Charles I. we have, of course, those charming Vandykes with which all are familiar; and we can only reiterate our regret that they are disjointed at Windsor and Hampton Court, instead of forming, with the other Honthorsts, Poelembergs, and Van Bassens, one grand whole illustrative of the reign of this most splendid, tasteful, and munificent patron of the arts, however greatly he may have misapprehended the letter of our laws and the genius of our people. Vandyke certainly was the greatest master of elegance of manner—that eminently courtly quality which pleases by a pervading harmony and moderation, without strong passion or emotion. The great equestrian portrait being in duplicate, the principal ornament of the Vandyke-room at Windsor may remain where it is without affecting our proposal.

Several other meritorious masters illustrate this reign. We have a sea-piece by Parcelles depicting his return from Spain after his sterile and romantic adventure in that quarter. Of his ill-fated sister, the Queen of Bohemia, we have (121) Gerard Honthorst's portrait. As illustrations of manners the companion pictures of Van Bassen, representing the dining in public, are curious and instructive. The architecture of the apartments is Royally magnificent—massive without heaviness; and leaving no doubt on the mind of the spectator that that portion of the age of Charles I. before the commencement of the Civil Wars was the period when internal architecture in England had attained the climax of solidity and elegance. There is a very clever picture (398), by Poelemberg, in which there is evidently a theatrical performance; the features somewhat resemble those of Charles I., and it is set down as probably his Majesty, in a moment of relaxation, acting apart. But is such vivacity and faculty compatible with the gravity and self-respect of the traditional character of Charles? We leave the professed historian to solve our doubts on this head. That the chief figure of the later years of James and first years of Charles should not be wanting may be well believed. We have here Buckingham with all his family (322) by Gerard Honthorst—that is to say, we have not only the favourite and his household, but an excellent picture by a celebrated artist—the friend of Rubens, and his colleague as Court painter—who, although far from possessing the genius of this master, is one of the few Northerns who has a high Italian reputation, partly in consequence of his system having coincided with that of the *realists* of the South. We think, however, that both Gerard and his patrons might have done better on this occasion. A little more *desinvoltura*, and a little less strait-lace, would have made posterity prize higher both subject and treatment. Chiaroscuro and impasto both delicious.

The illustrations of our Civil Wars—our Marstons and our Naseby—fail totally. It is not so with the Restoration, which begins with the beginning; and we sincerely compliment the Lords Commissioners of the Woods and Forests in procuring the very curious picture (1030) of King Charles II. taking leave of the Court of the Stadtholder and embarking at Schevening for Dover. Heinrich Heine says that the Dutch school of painting is a window opened upon the seventeenth century, and certainly neither Miaris nor Gerhard Douw gives a more ingenously-truthful glance at the outward Dutchman of this period. The pictures of Vandevelde show the reverse of the medal. Our long and terrible wars with this obstinate maritime republic—not the pageant on the coast, with sunlit sand and troops ranged on the "new model" but raging seas and raging fights with swell and spray. The pleasant cadences of Dorset's songs recur to the memory, connecting these smoke-obscured Vandevelde with the fair and frail beauties whom Lely limned with his voluptuous brush. All around harmonises; the trickling fountain glistening in the sun, the neat trim Dutch parterres in the foreground of the window views, and the symmetrical vistas of the fine-grown timber of those royally luxuriant gardens that nearly encircle this vast pile.

Hampton Court having been rebuilt by Dutch William, the collection abounds in illustration of his reign. We have, in 1028, 29, companion pictures, purchased by the Commissioners of her Majesty's Woods and Forests, representing his embarkation in Holland, and disembarkation in England; and Kneller's great allegorical picture-portrait (No. 18) of William landing in Torbay, in which is expended all his power, but without any very striking result. It was painted when the silver tone was in the height of the fashion, and allegory still dominant. This Roman in a flowing peruke, and this Neptune on dry land, appear ridiculous in our time, and contrast marvellously with the equestrian Charles I., by Vandyke, in his own costume, and minus all mythology; but we must remember the artist, his age, and its conventional style and colour, and then Kneller's picture has in our eyes a value entitling it to a prominent place in our historical gallery. Newton and Locke, by the same artist, preserve to us the features of the two men which the subsequent eighteenth century erected into demigods. Admiral Russell, and many others so brilliantly painted in Mr. Macaulay's recent history, are also to be found under the head of William, whose reign, style, and period are well represented both in court and camp.

Illustrations of the next reign are scant, and we miss something more abundant of the wits of Anne and the wars of Marlborough. Party spirit then ran too high for the arts to flourish luxuriantly. George II.'s period furnished Sir Robert Walpole—a vulgar portrait, belonging to a vulgar, inelegant, and inartistic period of material prosperity. The Constitution, cast from the fiery furnace of the Revolution, was cooling in its new mould, and Ruby Jollity held his jovial sway over society.

> Servior armis—luxuria incubuit.

From the foibles of a sensual society sprang the harvest of the satirist—the verse of Pope, the prose of Fielding, the comedy of the English dramatists of the eighteenth century, and the hard hits of Hogarth, whose portrait, as a work of art, besides his own pictures at Marlborough House, is, we think, still more worthy of a place among the great men of the eighteenth century at Hampton Court.

A remarkable picture closes the illustration of the reign of George II., and commences that of George III. West's picture of the "Death of Wolfe" is not only the masterpiece of this undeniably considerable artist, but it marked the revival of the military anecdotical style which Grey, in the beginning of the nineteenth century, carried to such splendour and magnificence. Sir Joshua's remarkable portrait of Elliot, with the Key of Gibraltar in his hand, however admirable as a work of art, ought clearly to be transferred from Marlborough House to Hampton Court; and the same distinction ought also to be given to Copley's "Death of Lord Chatham"—the end of the greatest civil figure of the period, which, although respectable as a work of art, is more essentially a picture of historical illustration.

Other materials for an illustration of the reign of George III. are most abundant both at Hampton Court and Marlborough House. In Beechey's "Review" (No. 166) the artist has surpassed his usual self in depicting the Royal personages and British military costume of the age of the Bonapartes and Nelsons. Hoppner's portrait of the younger Pitt ought certainly to pass to its place among the Sovereigns and statesmen of Hampton Court. But we doubt if Marlborough House would lose much by such an arrangement. West's "Peter Denying Christ," and the others of the same description, filling a large room at Hampton, ought to be keeping company with the "Lazarus" in Pall-mall, by the same master. Several other pictures ought also to go to Marlborough House; for instance, Gainsborough's "Colonel St. Leger" (662), one of the best specimens of his portrait manner; but the subject himself, not conspicuous enough to rank among our remarkable historical characters, ought to be cleared out from Hampton Court.

But should such a glorious historical collection for which we have such abundant materials stop short? We think not. If, for the sake of leaving undisturbed the new internal architecture of Windsor, we cannot have the Lawrences of the Waterloo period transferred to Hampton Court, we should above all pictures desire to see Landseer's "Visit to the Field of Waterloo," cost what it may, in the historical series.

Our own age teems with materials for a further continuation. Our union of science with industry, and of dominion with opulence, surely forms an Augustan age which posterity would willingly see reflected in the mirror of our national art.

## SAINTE CHAPELLE, AT PARIS.

This superb edifice has been characterised as one of the glories of Mediæval Paris, the remains of which are comparatively few.

Saint Chapelle occupies the site of an ancient chapel dedicated to Saint Nicholas, at the south end of the Pont Neuf. The history of its erection is ably narrated in the *Builder*, No. 664, whence we abridge the following details:—

In 1239, through the necessities of the reigning Emperor of Constantinople, Louis IX. ("Saint Louis") obtained possession of the Crown of Thorns. Two years afterwards other relics of the Saviour came into his possession, and he determined on building an edifice for their reception. He therefore instructed his architect, Pierre de Montereau, or Montreuil, to prepare a magnificent shrine, and himself laid the first stone in 1246. In three years—with the expenditure, it is estimated, of £40,000 Peter finished his noble work; and on the 26th of April, 1248, it was consecrated. Well did Pierre de Montreuil realise the wishes of his master, and in so doing he raised a monument to himself.

The building is in two stories, the lower chapel and the upper chapel. The extreme outer length, including the buttresses, is 118 feet; the extreme width, 55 feet; the width between the walls, 35 feet; the height from the ground externally, to the apex of the gable, 138 feet; the height of the upper chapel from the pavement to the crown of the vault, 67 feet; and the height of the spire from the ridge to the weathercock, 114 feet. The rose window was the work of a later period.

In the decoration of it internally, gilding, painting, enamel, and stained glass, were used lavishly, and all the resources of art were drawn upon. Royal marriages, betrothments, and coronations, took place in the Sainte Chapelle; and it was the starting point of numerous expeditions to the Holy Land. In 1791 it was given up to lay purposes, became the meeting-place of a club and a dépôt for flour, and was much injured.

Louis XVIII. and Charles X. showed their desire to bring it back to its original purposes and condition; but it was not till the reign of Louis Philippe, in 1837, that its restoration was decided on; the task being intrusted to M. Duban, architect, with Messrs. Lassus and Viollet-le-Duc as assistants. After twelve years' work it came wholly into the hands of M. Lassus, by whom it has been carried satisfactorily to completion.

The following details of the exterior (of which we give a View) are from the new edition of Galignani's *Paris Guide*:—

The building consists of an undercroft portico (once a parochial church), of three Gothic arches, intersected by buttresses reaching beyond those of a higher upper one, symmetrical with the former; two more lateral buttresses end in two attached spired towers, connected on the outside by a gallery and parapet crowning the upper portico. Between the towers is a crocketed gable, surmounting a splendid circular window contained by crocketed arches. The spires are octagonal, of the fifteenth century, and charged with tracery, crockets, and a crown of thorns at half their height. The southern side consists of four large pointed upper windows, in the Three-in-one style, with three narrow mullioned clear windows. The upper windows are surmounted by crocketed canopies, connected by a sweeping open-worked parapet crowning the whole. On this parapet stand eight statues of angels, cast in lead, by Geoffrey Dechaume. The northern side is blocked in part by the buildings of the Palais de Justice. The height of the edifice from the ground is 110 feet; its total length the same, and its breadth 34 feet. The roof is very sloping, and of excellent construction, and is surmounted by a lofty and beautiful spire, 120 feet in height, richly crocketed, and gilt. It was erected in 1853, to replace another 100 feet high, which was partly burned down in 1630, and removed a little before the Revolution of 1789.

The writer in the *Builder* thus comments upon the work of the restoration. It will be noticed that on the pinnacles of the turrets at the west end, on each side of the rose-window, the Crown of Thorns is represented above the Crown of France. The spire, which M. Lassus has erected with much skill and taste—adopting, nevertheless, the style of a later period than that of the building—is the fourth that has surmounted the Sainte Chapelle. The third of these, erected by Louis XIII., was destroyed in 1721. Around the octagon base of the spire are figures of the Twelve Apostles, larger than life. The figure of St. Thomas is a representation of the architect. M. Lassus; St. Philip is a likeness of M. Steinheil, glass painter; and various figures scattered about the spire represent the carver, the modeller, the lead-worker, and others immediately concerned in the restoration, and are inscribed with their names. With the exception of the cross and weathercock, which are of iron and copper, the whole of the ornamental work is of lead, formed with the hammer, and gilt: the ornamental work on the ridge, very large and elaborate, is also of lead. At the eastern termination of the ridge is the figure of an angel, nearly ten feet high, which revolves, by means of concealed work, with the sun. One hand holds a cross, and the other points to the position of the sun. Messrs. Durand, of Paris, by whom the works in lead were executed, deserve mention. "No hammered leadwork," says M. Froehe, "had been executed since the fifteenth century; this, then, is the first instance wherein for four centuries such work has been done, a circumstance we consider as a fresh and precious conquest for industry. We must, logically, infer that one of the unquestionable advantages of monumental restoration is to establish intelligent workmen, to elevate them in a degree, by bringing them nearer to the artist, and to create new resources for the arts and commerce." In this way restorations, and more especially this of the Sainte Chapelle of Paris, have revived branches of industry extinguished, or rather forgotten, for a long time, such as working in iron, painting on enamel, glass staining, repoussé work, and embroidery.

The interior glows with colour, gilding, and enamel: the windows are filled with stained glass, and every inch of the walls and ceiling is painted—on the whole, as it seems to us, very successfully. There is a prodigious quantity of stained glass, and the ancient portion is particularly valuable in the history of the art, because we know that, with the exception of that in the rose-window, is was there when the chapel was consecrated 1248. Much of the ancient glass was destroyed.

The windows consist mostly of a dark blue ground, with red and yellow upon it. The ceiling is blue, sprinkled with the everlasting goldstars, and there is a large amount of gilding amongst the colours on the stonework.

* In the "Itinéraire Archéologique de Paris," by M. Guilhermy, the cost is stated at 300,000 livres. But this must be an error; France must be meant, including the relics and the shrines to contain them, about £120,000 were spent

THE SAINT CHAPELLE, PARIS.—RESTORED.

MALTA, FROM A PAINTING BY J. W. CARMICHAEL.

## "MALTA."—PAINTED BY J. W. CARMICHAEL.

THIS fine picture was exhibited last year at the British Institution, where the painter, Mr. Carmichael, soon found a purchaser.

The Harbour of Malta has been often described; it is thus vividly pictured in the work just published with the attractive title of "Inside Sebastopol:"

In a few moments we came round the point, and the harbour of Valetta burst upon us as a thing of wonder. Two long deep bays run inland. The tongue of land between the two bears the town of Valetta, so that the streets are, for the most part, terminated by the sea at either end. But these terminations are by long flights of steps down the steep ramparts, for this tongue of land is abrupt, and the cliffs are crowned by continuous fortifications hewn in the soft stone, and built up high, with formidable embrasures, where silent cannon lurk unseen, or just peer forth at the sea.

The first blue bay we pass. It is the Quarantine Harbour; and happily we are not laither bound. We pass, also, the tip of the tongue of land on which the city stands, and that Castle of St. Elmo, which, nearly three centuries ago (1565) bore the first brunt of the attack of Mustapha Pasha, and was taken at last by storm. St. Elmo still guards the entrance to the two great harbours. But Valetta was not then. The tongue of land was, at that day, bare rock. We are within the harbour. Look to the left, to those deep creeks wherein, at that side is fastened, and whence is completed, the system of harbours run landwards. There is Bighi Bay, and Dockyard Creek, and the inlet which makes Sangleia an island. There is the Malta of history. Dockyard Creek is now crowded with shipping. Large white houses, which might be palaces, are shown by tall letters, rudely painted, to be appropriated to the carousals of English and French sailors. "The Golden Gun," with a bad effigy of a ship, and other announcements of similar import, give reason to suspect that a Wapping exists among that solid masonry; and that those towers and parapets look down on coarser scenes than they beheld towards the end of the last century, when Mr. Brydone saw the knights departing in their galleys to assist the French against the Bey of Tunis.

## THE MOTHERS-IN-LAW OF ENGLAND.

### MRS. GROSE

MR. JONES, you are pusillanimous as a mouse: we shall not be quiet and say nothing about Mrs. Grose, because it was at your request that we undertook this short series of papers. You know, and so does every one who has the honour of Mrs. Grose's acquaintance, that she is a woman of most irascible and violent; but, as you have not asked us to dinner for a month, and have expressed your determination not to do so for a much longer period *in futuro*, we shall tell the truth, the whole truth, and as much more beside the truth as we please, Mr. Jones. That you sold your marital freedom to Mrs. Grose for fifteen hundred pounds is as well known as the fact of your marriage. In the neat and appropriate speech you made in the front of your wedding-cake on "the happiest day of your life"—I declare those were your very words, whatever you may call it now—I say on that the happiest day of your life—I *shall* repeat it if I think proper—on that day you burst into tears of rapture when you announced the munificent gift of Mrs. Grose fifteen hundred pounds unexpected pounds, and declared that as long as memory held a seat in this distracted (you declared that as long as memory held a seat in this distracted (you forgot the text and laid your hand on a water-bottle)—you never could, would, or should forget the proud position which that moment had made you under the present circumstances of occupying the twofold relation of father and son, not father and son, but husband and son-in-law, with hip, hip, hurrah! and "she's a jolly good fellow." You never made such a speech as that? You did, Mr. Jones; for Tom Jollivet took it down in shorthand, intending to publish it for the use of bridegrooms in general. Well, then, you were a fool! We did not say so, however disposed we may be to subscribe to the opinion. The gift was clogged with a condition. You undertook to provide Mrs. Grose with board and lodging for the term of her natural life, and you'll have to do it. Meat breakfast, hot lunch, hot dinner, tea and supper, and something hot after supper. You don't mind that, we know; because you are fond of good living, and plenty of it. What do you object to? That Mrs. Grose is never satisfied, but always complaining of something, and drawing unfavourable comparisons between you and the late Mr. Grose. The butter they had in Mr. Grose's time: bought by that excellent man on his way home from the City—*You* never think of such a thing. The delicious bacon that Mr. Grose had in by the side:—but *you*, you will only have it in as you want it. Mr. Grose brushed his own hat and coat, thereby allowing the servant more time to attend upon her mistress. *He* never dawdled about the house till nine o'clock, but left by the half-past eight omnibus every morning, Sunday excepted. *He* never kept the dinner waiting, but remembered that he had a wife at home who could not begin without him. He never read after dinner, and fund much fault with people going to sleep. He never insulted any female by asking her if oxides combine with water? and, if so, do they present the same phenomena as alloxan and alloxtin? Mr. Grose never was mean enough to look at the housekeeping-book and require to know what was the meaning of "Sundries, £2 10s." *He* used to take his family to the play, and not leave his wife and her mamma to mope themselves to death. He never thought Ramsgate expensive; or that two nurserymaids were unnecessary to manage three children. He never allowed any one to beggar herself for him, and then treated her like a negro slave—that is if she would put up with such treatment. He never made his home so miserable that, but for his children's sake, their dead mother had better live on the interest of fifteen hundred pounds, Three-and-a-Half per Cents, which were her due according to all the laws of honour and morality. There she has you, Mr. Jones! You only thought of her money when you were wont to carney her and make her presents of preserved mangoes, and buffalo-humps, and all kinds of out-of-the-way condiments. You never cared a brass button for her, and yet you pretended that, much as you loved (Boah!) Maria, home would not be home without dear Mrs. Grose—and her fifteen hundred pounds. Mercenary Jones! You are justly rewarded for your avarice and duplicity. Mrs. Grose is your Nemesis; and it is to punish such sons-in-law that such mothers in-law are permitted!—M. L.

DECREASE OF EUROPEAN EMIGRATION.—According to the report of the New York Commissioners of Emigration, it appears that the arrivals of emigrants from Europe in the port of New York were to the 19th of December:—For the year 1854, 309,918; for the year 1855, 128,503: decrease, 174,415.

THE FALLS OF GARONNE.—We have received from the sketcher of a series of the picturesque falls, (reviewed in our journal of Feb 16) the following additional descriptive details.—"Low Bridge, the farthest, was about a mile from the junction of the streams. The stone arches were standing towards the south, where the river was deepest and widest. The dark shadow of which is in deep entire to the shining belt of water that extends into it. The detached arches, seen through the bold outlines of the nearer arches in the far fall, and the rich foliage on the rocks, were seen by the telescope at that distance, they are cold, and of fantastic and picturesque red masses, which were not, however, found on descending to the bed of the river below the falls. The water falls in rocket-like forms, covering the whole surface of the falls: masses of water, tons in weight, disappear in silvery, glittering forms. The descent to the bed of the river, by a zigzag path, is very difficult and dangerous; in many places ladders of ten or twelve feet are required to ascend and descend. Two parties are seen cooking their luncheon some splendid immense delicious trout, which have just been brought up from the stream below by the wild inhabitants of the forest. At the base of the Rocket Fall a huge jutting rock projects into the abyss, scattering the centre of the fall into a thousand sparkling streams, glittering in the golden rays of the sun, surrounded by magnificent rainbows, which baffle all description, either by pen or pencil."

SCIENTIFIC EXPLORATION OF CALIFORNIA.—The Boston *Atlas* announces that Mr. E. Samuels, an enthusiastic naturalist of that city, left New York in the California steamer of the 5th ult., on a pilgrimage of scientific research. He proposes to make a thorough exploration of Northern California, in all the departments of Natural History, and with that object will remain in that region one or two years, devoting all his time to making collections in its animal, vegetable, and mineral kingdom. His collections will be for the joint enrichment of the museums of the Smithsonian Institution in Washington and of the Boston Society of Natural History, of which last institution Mr. Samuels has been for some years the taxidermist.

## ANALYSIS OF SOME ENGLISH CASES OF POISONING.

### NO. III.—MARY ANNE BURDOCK.

So determinedly is the public mind bent on investigating the system of secret poisoning, which it is undeniable has existed for some years in this country, and on administering to some unscrupulous caterers for its appetite, whether healthy or morbid, in supplying it with food, that we are driven, as it were, to take up the painful subject, and extract from it some inferences which may tend at least to diminish its many attendant ills.

It is easy—very easy—to take life by poison; but by no means easy to do so without detection. Suspicion once aroused, and the beckoning of the hand of God duly obeyed by the children of science, detection becomes a matter of most perilous certainty. We shall, perhaps, be met in the front of this statement, by adducing a few examples, in which length of time has not baffled the investigations of science, in which, though the grave has closed over the victim of secret assassination, it has, at the call of justice, yielded up its silent yet convincing testimony of the irreparable wrong inflicted on its tenant.

In the month of April, 1835, Mary Anne Burdock, the subject of the present paper, was tried at the Bristol Assize, before the Recorder, Sir C. Wetherell, on a charge of poisoning Mrs Clara Anne Smith, by means of yellow arsenic (the arsenic sulphuret). We shall, presently, speak of this latter statement, by adducing a few examples, in which length of time has not baffled the investigations of science, in which, though the grave has closed over the victim of secret assassination, it has, at the call of justice, yielded up its silent yet convincing testimony of the irreparable wrong inflicted on its tenant.

In the month of April, 1835, Mary Anne Burdock, the subject of the present paper, was tried at the Bristol Assize, before the Recorder, Sir C. Wetherell, on a charge of poisoning Mrs Clara Anne Smith, by means of yellow arsenic (the arsenic sulphuret). We shall, presently, speak of this

*NEW BOOKS, &c.*

GUN ROOM.—MIDSHIPMENS' MESS, BREAKFAST, H.M.S. "CÆSAR."—BALTIC FLEET.

# THE ILLUSTRATED LONDON NEWS

No. 789.—VOL. XXVIII.] SATURDAY, MARCH 15, 1856. [WITH A SUPPLEMENT, FIVEPENCE.

## THE NEW EDUCATION SCHEME.

To Lord John Russell belongs something more than the merit of good intentions. If he be an unpractised diplomatist, unskilled in the chicanery which is taught and practised in foreign Embassies, and liable to be overreached by the wily adepts of that great Bamboozledom, the *corps diplomatique* of Europe, he is a man who in his time has done noble work in the cause of the people. There is a candid honesty about him, which, though it may unfit him to cope with the Nestors of Intrigue, gives him strength as a philosophic statesman. If, during his long and brilliant career, his performances have fallen short of his attempts, the fault lies not so much with him as with the opposition he has had to encounter, and—worse than all—with the potency of that great *vis inertia* of popular apathy with which it is the fate of all men who are wiser than their time to be beset or conquered. His last attempt to benefit his country by the introduction of his resolutions on the subject of the Education of the People cannot, whatever their immediate fate, be altogether unfruitful. It is necessary that from year to year—even from day to day the voices of those who can speak with power and authority, should be raised in behalf of the children of England, in order that all may be made sharers in the civilisation of our time, and that millions of citizens may not be suffered to reach adolescence and maturity without receiving the education which there seems to be the will, but not the machinery, to bestow upon them. Among these voices—including as they do those of the most thoughtful, the most earnest, the most able, and the most humane and enlightened men and women of the age—that of Lord John Russell has long been pre-eminent for the clearness of its tone, and the eloquence of its reasoning.

We shall not recapitulate either the statistics or the arguments of his Lordship, or of those who followed him in the important discussion of last week; but, in the little we shall have to say upon the subject, shall confine ourselves to the assertions of those excellent persons—those good friends of Popular Education who are too painfully alive to the difficulties caused by religious differences, to labour zealously in any project which shall either conciliate or override opposition. Lord John Russell is himself among the number; and is not yet so bold in the cause as we venture to predict that he will be, if life and health are spared him to fight this good fight. These good but timid friends of the poor trust entirely to voluntary effort to do what is needed. They point with pride to the schools which have been built, to the masters and mistresses who have been appointed—to the hundreds of thousands of infants of tender years who have been brought within the circle of their kindly and

THE SIEGE OF SEBASTOPOL.—INTERIOR OF THE REDAN.—FROM A PHOTOGRAPH BY ROBERTSON. (SEE NEXT PAGE.)

Christian operations. When it is alleged that England is either hostile or indifferent to public education, they point to the statistics which prove that, although there are three millions of children—between the ages of five and fifteen—(as stated by Lord John Russell on the authority of the returns prepared by Mr. Horace Mann for the Census of 1851)—who do not attend school, there are, nevertheless, two millions between these ages who are entered on the school books and receive instruction. They say that every year the number of scholars increases; that every year it will continue to increase. They assert that public attention is alive, that good men and rich men are bestirring themselves, that Coercion is impossible in this matter, and that Persuasion is doing all that can reasonably be expected in such a country as this, where there is perfect freedom of conscience and an almost infinite diversity of religious and political opinion. Far be it from us, or from any friend of Education, to undervalue these labours; but in such a cause we must not allow our judgment to be warped by deceptive arithmetic. While not one-half of those children who ought to be receiving school instruction are receiving it, voluntary effort, laudable and righteous as it may be, cannot be allowed to discourage or supersede the exertions of other and more active agencies. If we investigate more closely, and ask what kind of education Voluntaryism is able to bestow upon the 2,000,000 of children whom it has gathered into the fold, the answer is not satisfactory. A very large proportion of the two millions only attend school upon the Sunday. Better, infinitely better, is Sunday-school education than none; but will any sincere advocate of education put, his hand upon his heart and say that, as a friend of the children, or of his country, he ought to be satisfied with Sunday-school teaching? The child requires to be taught to write; but writing is forbidden in the Sunday school. It requires to be taught arithmetic; but arithmetic is secular, and profane in the estimation of Sunday-school teachers. It requires to know something of geography -of the world in which it lives and moves, and has to act its part; but the Sunday-school teacher forbids the child to study geography, on the only day which it has at command. He teaches it all about Jerusalem, about the Brook Kedron, about the Dead Sea, about Mount Ararat or Sinai; but London, Paris, New York, Constantinople, St. Petersburg, are not to be mentioned. The Thames, the Mississippi, the Danube, and the Volga, are unknown; and all the mighty interests of European civilisation —all the triumphs of our Arts—of our Arms—of our Literature —of our Commerce—are as untaught in Sunday schools if English infants were Japanese, or naked cannibals in New Zealand. It is but to delude ourselves with statistics, and to shut our eyes against the truth, to assert that this is Education. The time has gone by when we can frame excuses for our apathy, and sit down contented to say, "Let us alone; voluntary exertion is combating the monster evil of Popular Ignorance; its progress may be slow, but it is sure; and the day will come, without the aid of legislation, when every English child shall be fitted by sound education to play his proper part in this world—and to become a free and enlightened citizen of a free and a religious State." It is of no use to deceive ourselves. Voluntary effort cannot overtake the evil. The difficulties that beset the question must not be considered to be insurmountable. They must be met and combated; and, perhaps, like other giants or lions that block the way of timid men, they may prove to be less substantial than they appear. Sectarianism has been far too much flattered and encouraged in all the discussions that have taken place on this subject; and the time has come when true statesmanship must nerve itself to a work which may be inconvenient and arduous, but which is essentially Christian and patriotic.

Would it not be well if the House of Commons would affirm and promulgate a great principle in this matter? Our English law asserts that it is the right of every child born in England to its physical life, and to the food that shall maintain that life. A father may not wilfully starve his child. If he do, it is murder. If he cannot feed it, the parish must; and if the parish refuses, it is murder also. Why should we not assert a similar principle with regard to the intellectual life? The means of instruction are as abundant in England as the means of subsistence; and, if it be once decreed that it is as contrary to the English law to starve a child's mind and soul as to starve its body, a vast superstructure might be raised on the foundation of the principle. England cannot, and will not, afford to let her children die of hunger in the streets. Can she, or ought she to, afford to let them die morally and intellectually?

## INTERIOR OF THE REDAN,

FROM A PHOTOGRAPH BY ROBERTSON.

As a memorial of the War we engrave, from Mr Robertson's very effective photograph, the Interior of the hotly-contested work at Sebastopol known as the Redan, two Plans of which appeared at pp. 511 and 702 of the volume of the ILLUSTRATED LONDON NEWS last completed. Other views of the Storming and the Explosion of the Work, with the episode of the great struggle, will be found in the above volume; and the present Interior View completes our illustration of this important fortification. It has more than once been described by our own Correspondent, in his narrative of the war, as well as from other sources. The following details are from the work recently published under the title of "Inside Sebastopol," which has become popular from the graphic minuteness with which it describes the engineering works:—

Descending from Cathcart's Hill, we struck into the Woronsoff road, whereon we trotted jauntily, until we brought the Great Redan in view. The Redan is a portion of a line of natural mounds, which has its highest elevation in the Malakoff; and it is that portion which lies between two ravines (the Woronzoff-road ravine and the Karabelnaia ravine) that run from the Camp plateau down into the city. The fortifications connect these two ravines by a line of earthworks.

Small things are made great by events. The Cydnus, the Granicus, the Issus, and the Tchernaya, are ridiculously small rivulets, yet they are bigger in men's minds than the St. Lawrence or the Mississippi. Primrose Hill and Harrow Hill are infinitely higher than the Redan or even the Malakoff; and our old friend Holborn-hill would be quite as high, and nearly as steep, as the latter, seen from the besiegers' point of view. The Redan is a stony mound, the last undulation citywards of the table-land on which the besiegers sat down. It overlooks the descent down into the harbour of Sebastopol. Approaching it as we did from the south side, it appeared a very gentle elevation; but there were abundant evidences that it was an elevation very difficult to reach. For many hundred yards before we arrived at the foot of it the earth was scarred with trenches fortified with gabions, with heavy guns couched between them, allowing us just room to pass between their platforms and the rock.

## FOREIGN AND COLONIAL NEWS.

### FRANCE.

*(From our own Correspondent.)*

PARIS, Thursday.

THE French papers give at full length the ceremonies to be observed on the occasion of the birth of the expected Prince with a minuteness that leaves no grounds for mistake—supposing it be, indeed, a Prince—but making no provision whatever for such modifications as must necessarily be introduced in the event of the birth of a Princess. The Empress's health and looks continue to be wonderfully good, and she goes about as usual. It appears that, with the want of punctuality habitual in this country, certain details are yet required to complete the magnificent cradle we lately described, the curtains of point d'Alençon and portions of the woodwork being yet in progress. Magnificent preparations are being made for the illuminations to take place on this occasion, and a variety of fêtes are to be held in celebration of it.

The widow of Admiral Bruat is officially announced as the future *gouvernante* of the heir to the Imperial throne, with two *sous-gouvernantes* under her.

The *layette* or outfit of the Imperial infant is being daily visited by such crowds that only a certain number of persons are admitted at a time, and the rest are ranged in a line, like the carriages at a fête. It is said that the cost of the whole amounts to 250,000; the baptismal robe alone has cost 1000. The costume of the nurse forms part of the exhibition; it is that of the peasantry of her province, but composed of rich and costly materials. The Pope has accepted the office of godfather, but there is no talk of his coming, as was reported, to Paris to perform the baptismal ceremony, and we are assured that this possibility was never contemplated or requested by the Emperor. The christening (the infant will be baptised within a day or two of its birth) will not, we believe, take place before May or June, when the Legate charged by the Pope to perform the solemnity will be received in Paris with great pomp. The Queen of Sweden, daughter of Eugene Beauharnais, brother of the Queen Hortense, and consequently first cousin of the Emperor, is to be godmother.

The alarming illness of the Prince Jerome, from a violent attack of inflammation of the chest, is a cause of most serious apprehension to the Imperial family. The malady having, after the first day or two, taken a favourable turn, this uneasiness subsided; but the reappearance of the dangerous symptoms have renewed it. The Emperor and Empress have both visited the invalid. The Prince Napoleon hardly stirs from his room, where the Princess Mathilde also remains the greater part of the day.

The celebrated artist, Ary Scheffer, has just put the finishing touches to a portrait for which Mr. Dickens, during the intervals of his active literary labours, has been giving sittings through the winter. The work is worthy of the painter and of the sitter: nothing can be happier than the likeness: the remarkable expression of the original is seized with a vigour and a reality that are most striking; and, apart that there is a little too much of a coffee tint throughout the work, we can see no gro und for aught but the most favourable criticism.

A project exists at present for making of the foundling children of France an element for the colonisation of Algeria. It appears that the report mentioned in our last week's letter of creating in this colony a viceroyalty for the Prince Napoleon is at least premature. To establish this it is first necessary that the Imperial infant be a boy, and that his succession to the throne of Algeria be assured. The Prince talks of an excursion in the course of the summer to Norway and Sweden.

A great stir has been excited in the fashionable world by a sermon preached at St. Sulpice, by the Abbé Combalot, censuring in the most violent and unmeasured terms the extravagance of feminine attire in the present day. The Abbé has even gone so far as to apply a term seldom addressed to ears polite to such of his fair parishioners as indulge to the full extent in the ruling mania. The Abbé Ratisbonne, in a subsequent sermon, has endeavoured somewhat to soften the effect of the vehemence of this censure; but, whatever offence may be taken at the terms in which M. Combalot's zeal has clothed itself, no reasonable person can object to the subject of his discourse. Perhaps in no period has the insane rage for extravagance in toilet, extravagance both as to expense and as to effect, been carried to the same degree as at present. Women of less than moderate fortunes appear now attired in a style that double their means would but justify the cost of: who pays for this, or who suffers by the nonpayment, are questions that would reveal many painful and some disgraceful secrets.

Active measures are going on for the formation of new regiments of the Imperial Guard. Orders are given that the men for this select body shall be chosen equally from all the regiments in the army without distinction, thus avoiding the jealousies which are otherwise certain to occur.

The project of another new boulevard, on the left bank of the Seine this time, is talked of. This opening is intended to begin at the Chamber of Deputies, to proceed to the Luxembourg, and thence to the Jardin des Plantes. The scheme is, however, so enormous, and must entail such immense expense, that it will require no small degree of consideration ere it be ventured upon.

The students condemned to various degrees of punishment for the troubles on the occasion of M. Nisard's lectures have had their penalties reduced in severity. Among those engaged in these disturbances was the son of Madame Pauline Roland, whose death in exile in Algeria caused so strong and so painful a sensation. The personal circumstances that in this, as in some other instances, created so powerful a feeling a mong the student class form a certain excuse for these ebullitions; but none whatever can be found for the unmanly and disgraceful manifestations that on a late occasion took place at the Odéon on the appearance of a certain illustrious personage whose sex and position ought to have proved an abundant protection against such outrages.

It has been necessary to adopt the strictest surveillance and the most active measures to expel from the Bourse the female speculators in male attire who, urged by the activity caused in the movement of affairs by the immediate prospects of peace, have succeeded in penetrating into the building.

A new report states that Madlle. Rachel is about to enter into the marriage state with a rich financier; the rumour, however, is generally regarded with about the same degree of faith as that accorded to her last appearance. The appearance of Grisi in "Norma" has been hailed with vehement applause—*genuine* applause, with which the *claque* has had nothing to do. Lafontaine, one of the caricatyde of the Gymnase, joins the *troupe* of the Théâtre Français. The former theatre is to give Mdme. George Sand's "Françoise;" the latter her "Comme il vous plaira."

THE GREAT KUSTENDJEH CANAL.—Mr. Forbes Campbell, who proceeded to Constantinople in July last, as the representative of Mr. Thomas Wilson, of London, for the purpose of obtaining, in conjunction with the Count de Moruy and M. de Breda, the concession of the Kustendjeh Canal, arrived at Vienna a few days ago on his way back to England. The firman which, as already stated, the Porte has granted for this affair, contains a privilege highly advantageous to European commerce, and one which surpasses the provisions of the treaty of commerce (of 1838) now in force between Great Britain and Turkey. Under Art. III. of that treaty three per cent. duty is levied upon all foreign goods warehoused in Turkish ports, whereas Art. VII. of the Canal Concession "absolves the establishment of a free entrepôt at both extremities of the canal, and stipulates that grain and all other goods may be stored, re-exported, and transit piped, and may be carried through the canal without being subjected to any duty or imposition whatever." In token of his satisfaction the Sultan has, we understand, conferred on Mr. Campbell the order of the Medjidié, and the Sublime Porte has further accorded a separate concession, with a grant of land, for the establishment of an entrepôt and warehouses within the Golden Horn. This will be an immense boon to the shipping interests of all nations.

## THE WAR IN THE CRIMEA.

The latest despatches from the Crimea come no further down than the 28th ult., when the news had arrived at the English Camp of the armistice having been concluded. The Russians appear to have had the news first, by telegraph from St. Petersburg. On the morning of the 28th ult. a boat bearing a flag of truce put off from the north side of the harbour, and was met half-way across by one from the French. The Russians brought a communication of the armistice from General Luders, and the mati from Constantinople, which arrived the same day, brought its confirmation to the Allies. The English troops were generally well pleased that the suspension of arms is to be only until the 31st of March. Previously to that date little could be done in the way of military operations. Meanwhile, and as if to celebrate the armistice, the so-called White Buildings were blown up on the afternoon of the 28th ult.

The health of the English army continues highly satisfactory. That of the French soldiers is not so good, and the Russians are said to be suffering greatly from disease. A letter from St. Petersburg of the 3rd, in the *Débats*, says:—

Mournful accounts are constantly arriving from the Crimea, where epidemic diseases appear to be committing as many ravages as ever. Typhus fever has recently carried off several officers who were serving as volunteers in the Crimea, and who were not well prepared for supporting the fatigues which they have had to encounter. A great number of medical men, many of them foreigners, have also fallen victims to this malady. It is said that the ranks of the army have been thinned by disease that, even should peace be concluded, it will be necessary to keep all the militia, in order to fill up the blanks, so as to maintain the army even on a peace footing.

## THE FLYING SQUADRON IN THE BALTIC.

The latest accounts from Hamburg state that the flying squadron has proceeded on to the further part of the Baltic, and probably may extend its visit to the Gulf of Finland if not prevented by the ice, large quantities of which are floating about at a considerable distance from the coast, thereby rendering any passage for the vessels extremely dangerous.

There was a rumour that several Russian war-vessels had left Svenborg, and that the Grand Duke Constantine intended to have a fight with the English in the neighbourhood of Sveaborg or Cronstadt, preferring to run the risk of a defeat to prolonging the inaction of the naval forces of Russia for another year.

Later intelligence, however, contradicts the fact of the Russian vessels having ventured out.

## AMERICA.

The royal mail-steamer *Atlantic* which left New York on the 1st inst., arrived at Liverpool on Thursday afternoon last. Up to the time of her leaving no tidings of the *Pacific* had been received. Mr. Dallas, the newly appointed United States' Minister to the Court of Great Britain, has arrived in the *Atlantic*.

In the United States' Senate, up to the 24th ult., the proceedings were of an unimportant character. On the 25th Mr. Mason submitted a resolution requesting the President, if not incompatible with the public interest, to communicate to the Senate all the correspondence which may have taken place with this Government and that of Great Britain regarding the enlistment of soldiers in the United States to serve in the British army, accompanied by such evidence and documents as the President may deem proper, to show the connection of the agents or officers of the British Government with the violation of our laws and national rights. Mr. Mason said the statement of Lord Clarendon in the British Parliament in regard to this matter had recently appeared in the English papers, and unless the American side of the argument were likewise made known the community would be misled. It was, therefore, important that all the correspondence should at once be made public. Mr. Cass not only agreed heartily with every word which Mr. Mason uttered, but would go further than he had. He (Mr. Cass) would be happy to be able to say he had seen a statement so utterly contrary to fact as that of Lord Clarendon. He showed, from the evidence on the trial of the British agents for violating the neutrality laws, that the complicity of the British Government could not be successfully denied. Mr. Cass considered that the paying the passage of men to Canada, and then enlisting them, was a culpable violation of our neutrality laws. Mr. Chittenden thought the British Government had made all the apology that could be expected of it when it acknowledged its error, declared it unintentional, and promised that it should not again occur. He understood that, as soon as the British Government was apprised of the dissatisfaction of this Government on account of the recruiting operations, the work was promptly desisted from. This was the only satisfaction for such an injury, and no further apology ought to be demanded. Mr. Mason said that, whatever might have been the statements made across the water, no atonement had been offered by the British Government for its violation of our neutrality laws. After some discussion Mr. Mason's resolution was adopted.

On the 26th Mr. Bell, of Tennessee, spoke on Central American affairs. He did not apprehend that war would ensue unless those controlling the Governments of England and America lost their reason.

In the Senate, on the 27th ult., the Secretary of State laid on the table the important diplomatic correspondence between the Government of Great Britain and that of the United States upon the enlistment question.

The Washington correspondent of the *Boston Courier* writes, on the 25th, as follows:—

It is understood this evening that Mr. Crampton will be dismissed; in that case intercourse between England and the United States will be suspended, as England will, as soon as she learns that her Minister has been dismissed, also refuse to receive our Minister. Thus there will be no diplomatic intercourse for some time at least between the countries until there is an amicable settlement of our differences.

A letter from Washington, dated February the 23th, states that the rumour that the President had determined to dismiss Mr. Crampton immediately, and that a letter for that purpose had been written, is entirely unfounded.

This is not a mere assertion, but from an incontrovertible source. The ultimate determination of the Administration upon the subject will depend upon the tenour of the next foreign advices, unless Mr. Crampton should previously withdraw.

Accounts from Mexico state that Puebla was still in the possession of Haro Ytamarez. The leaders of the insurrection at the Castle of San Juan de Ulloa had been considered to be shot.

Letters from Havre of the 1st of February report that on the morning of that day a proclamation was published, and that the Hayden troops were on their way to their homes, by order of the Emperor, and that the invasion of Dominica had been abandoned.

## CHURCH, UNIVERSITIES, &c.

APPOINTMENTS.—*Rectories:* The Rev. A. Paris to Ludgvan, Cornwall; Rev. H. M Stowers to Walton, near Huntingdon; Rev. J. S. Hall to Dalby, Yorkshire; Rev. J. F. H. Mills to Hockerton, near Southwell; Rev. J. M. Nisbet to Deal, Kent; Rev. H. J. Ordern to Kingsdown, Kent; Rev. G. Fardell to Banham, near Attleborough; Rev. R. J. H. Thomas to Llanwnda, near Pwllheli. *Vicarages:* The Rev. T. H. Greene to Leominster, near Arundel; Rev. T. Hopkins to Newbyn, Cornwall; Rev. W. C. S. Addison to Hartpury, near Newent, Gloucestershire; Rev. G. Chute to Drayton-in-Hales, near Market Drayton; Rev. J. W. Heslop to Weaverthorpe, near Malton, Yorkshire; Rev. W. Leeper to All Saints, Lynn Regis; Rev. T. H. Kereley to Middleton, near Lynn; Rev. A. M. Parkinson to Helperthorpe, Yorkshire. *Incumbencies:* Rev. E. T. Scott to Stoke Ferry, Norfolk; Rev. G. E. Symonds to Tilty, near Thaxted; Rev. C. P. Phinn to Cowley, Somerset; Rev. R. Jones to Nerquis, near Mold, Flintshire.

THE REV. G. A. OLDHAM, M.A., of Trinity College, Cambridge, late Curate of Dorking, Surrey, has left the Church of England, and joined the communion of the Church of Rome. Mr. Oldham was formerly Curate of Godshill, Isle of Wight.

ST. MATTHEW'S, BRIXTON.—A salver and a set of robes have been presented by the ladies, and a purse of gold by the gentlemen, of St. Matthew's, Brixton, to the Rev. George Eastman, as a testimony of their respect and esteem on his leaving the Curacy.

MESSRS. STRAHAN, PAUL, AND BATES.—At the Court of Bankruptcy, on Tuesday last, Messrs. Strahan, Paul, and Bates passed their last examination. The proceedings were then adjourned, no date being fixed for the hearing of certificates; but it was intimated that if Mr. Bates should obtain a pardon from the Crown he can apply to the Court in the ordinary manner.

## NOTES OF THE WEEK.

THE Covent-Garden catastrophe continues to supply the chief theme of metropolitan discussion, and the investigation before the Coroner adds some new features to the lamentable story. The ruins are now the great object of curiosity in London. They have been visited by the Queen, who expressed the most earnest regret at the destruction of the beautiful building, the first stone of which was laid by her uncle, the Prince of Wales, in 1808. Various charitable individuals are already active in exertion for the benefit of the humbler sufferers by the loss. A performance is being organised by some first-class amateurs; and though two of the principal librarians (Messrs. Mitchell and Sams), at once repudiated any connection with the authors of a vulgar puff thrust forward with effrontery while the ruins were yet blazing—those gentlemen will receive subscriptions for the persons entitled to sympathy, described by *Punch* as

> those who weep
> Their tools—by no means cheap—
> In a charred and melted heap
> On yon floor.

The fate of the one house has naturally made the curators of the other great theatre doubly vigilant; and it would seem that their watchfulness has been with cause. A report that a portion of Drury-lane Theatre had been on fire was at first treated as a *canard*, and afterwards some uncharitable people suggested that some trumpery accident had been magnified into a fire, for the sake of one of those sensations which some managers do not always dislike. But we have seen a piece of unmistakable charcoal which was taken from one of the beams, and which could not have been produced without a long process of burning; and the public may reasonably be congratulated that Wyatt's building did not follow Smirke's even faster than Holland's followed Shepherd's. While alluding to the subject we may mention that M. Albano, the architect who almost reconstructed Covent-garden Theatre for operatic purposes, has published a statement that the cost of his work was not "extravagant," as had been stated, but was under £23,000. The extravagance of expenditure was in the mounting the operas so splendidly. Anybody who remembers the gorgeous scenes, crowded with mobs or armies, and will begin to estimate the cost of one tableau, taking a single suit of armour at £60 (which the well-informed *Musical World* states to have been the price paid by Mr. Delafield), will speedily see where the money went, without suspecting the architect of needless outlay—a charge which ignorant people are always specially fond of bringing against members of M. Albano's profession, whose work they are entirely incapable of estimating, either artistically or financially.

Parliamentary doings have not been very interesting. Government made a struggle on Monday night to show that its being defeated was not an unvarying rule, and carried the second reading of the County Police Bill; much modified, however. The plan for affording better accommodation for persons having to traverse St. James's Park is before the House, and the propo-ed openings seem advantageous. It ought, however, to be distinctly understood that the Park remains a park, that is to say, a pleasure-ground for the Queen and the people, and that it is not to be converted into a mere thoroughfare. Every kind of traffic, except that for passengers, must be rigidly excluded—carts, drags, waggons, vans, and every vehicle of commerce, must be shut out, or the Park is no longer a place of recreation. This should be at once made clear, for the sake of the thousands who find health and pleasure in the magnificent areas, and must not have their comfort destroyed by the turning the Park into a set of busy streets. Imagine the savage driver of a railway van bearing down upon the horrified mendicus car upon the nursery-maids and perambulators, and the poor children screaming in terror as they hurried off right and left under the fire of his execrations. The Park for the people, not for Pickford and Co.

The inquest upon the late Mr. Sadleir has resulted in a verdict with which no one can quarrel, but which is seldom found in these days, when almost any act of crime is held to imply a state of mind incompatible with moral responsibility. The verdict is "*Felo de se.*" What will be the verdict upon the poor Irishwoman whose husband "beat her to death," in his rage at the loss of some of his money sacrificed by the Sadleir operations—money which the poor creature had dissuaded him from taking out of the Tipperary bank? What will be the verdict in the case of many a heart that will be broken through the "speculation" of the devil-driven adventurer? It is stated that one way and another the amount of ruin may be calculated at little under a million. The other "speculator," Sir John D. Paul, has been before the Bankruptcy Court, and looked as "dejected" as any of the honest men whom he has sentenced to hard labour for the rest of their natural lives.

The Kars papers, which have been at length produced, will form the subject of a debate in the House of Lords; and, though it could be wished that the initiative were intrusted to a more competent person than Lord Malmesbury, he may be regarded as the junior counsel who opens the pleadings before a more able advocate rises. Lord Ellenborough, who will deal more worthily with the question, and who gave, months ago, a singular warning as to the fate of Kars, a prediction literally fulfilled, will, of course, deal with the case after the Forcible Feeble,—sometime Lord Derby's Foreign Minister, and Austria's,—has exhausted himself upon it. The documents are of a character which will defy the ingenuity of any official defender of Lord Stratford de Redcliffe; and the most honourable course which his friends can adopt will be to say that his Lordship has rendered, in his time, invaluable services both to Turkey and England, but that his inconceivably arrogant and petulant nature has at last betrayed him into conduct for which there is no excuse; but for which it is hoped that his prior services will be considered a recall will be deemed some atonement. Let us add that the bad news of the health of the gallant Williams has been followed by more satisfactory accounts. He was stated to be on his way to Moscow.

The great Turkish reform is to be rapidly followed up. We do not despair of seeing Constantinople rendered habitable by colonists from London and Paris. We shall soon hear of a metropolitan board of eminent Turks, meeting to consider the Bosphorus drainage question, and the appointment of two-legged scavengers in lieu of dogs, and the necessity of making camels keep their own side of the way instead of walking over people. The paper lanterns which one carries at night, to avoid tumbling over the above-mentioned dogs, the enlightened Ottoman company has been formed for lighting Oriental cities with gas, and some of its directors are on their way to Constantinople with all sorts of credentials, and with the view of obtaining a firman which will give them an exclusive privilege. A Turkish Gas Company! How the old-fashioned Turks will growl as they watch the lamplighter bring fire out of nothing, and broach their theories—for they are very Calvinistic—that the process will be hereafter repeated upon his unbelieving soul. A Protestant church, too, is talked of, which, it is to be hoped, will advance faster than the one at Alexandria. And as the Sultan, according to Mr. Leech, has learned the polka from some of "the deep-bosomed daughters of the Frank," and has acquired a taste for fancy balls, the Refuge of the World and Manslayer may, ere long, signify his royal wish for an Oriental Almack's, with six of the Lights of the Harem as the first ladies patronesses!—vouchers to be exchanged at the *Serai Bornou*. Are not we Anglo-Saxons converting the world?

THE RUGELEY POISONINGS.—True bills were found yesterday (Friday) against William Palmer, for the murder of Cooke, and for the murder of Ann Palmer. The bills were ignored in the case of Walter Palmer.

Some discussion having arisen as to whether Sisters of Charity should be admitted to the workhouse, Marylebone, the following resolution has been carried:—"That ladies being members of the Roman Catholic Church be admitted into the workhouse, subject to the same terms and conditions as other ladies of various religious denominations."

## *COUNTRY NEWS.*

### METEOROLOGICAL OBSERVATIONS AT THE HIGHFIELD HOUSE OBSERVATORY, NEAR NOTTINGHAM,

*The range of temperature during the week* was 23·8°.

*The weather* on the 5th and 6th dull; 7th, 8th, 9th, fine; 10th, dull; 11th, fine.

*The direction of the wind* was—on 5th, S.W., moving at 8h. 40m. a.m. to N., soon to N.N.E., 1h. 15m. p.m. to N. 6h. 45m. to N.N.W., 10h. p.m. to N.W.; on 6th, at N.W. at 12h. 30m. a.m., on the 6th, N. at 12h. 50m. a.m., N.N.W. at 1h. 45m., N. at 2h. a.m., N.N.E. at 3h. a.m., N. at 7h. a.m., N.N.E., at 2h. p.m.; becoming N.E. at 3h. a.m., on the 7th, E.N.E. at 11h. a.m., N.E. at 1h. p.m., N.N.E. at 2h. p.m., N. at 8h. p.m.; changed to W.N.W. at 3h. 15m. a.m., on 8th, W. at 9h. 30m. a.m., W.S.W. at 10h. 15m. a.m., S.S.W. at 3h. 30m p.m., moving at 4h. 15m. p.m. through S. to S.S.E.; passing at 12h. 30m. a.m., on 9th, through S. to S.S.W., became S.E. at 8h. a.m., on 10th, S.S.E. at 10h. 45m. a.m.; became E.S.E. at 8h. a.m., on 11th, S.S.E. at 10h. 45m a.m., S.E. at 11h. a.m., S.S.E. at 1h. p.m., S. at 9h. 15m p.m., in which quarter it remained. E. J. LOWE.

REPRESENTATION OF FLIGO.—The result of the Sligo election is the return of the Right Hon John Wynne, the Conservative candidate. The numbers at the close of the poll were—Wynne, 183; Somers, 109: majority, 40.

CAPTURE OF A RIBBON GANG.—A letter from Roscommon announces the capture on the 7th inst. of a band of fifteen Ribbonmen. They formed part of a gang who for some time past have been traversing the county, attacking houses, and demanding arms. Their arrest has caused great consternation among their associates yet at large, many of whom have fled the neighbourhood of their exploits.

DEATH BY A CRICKET-BALL.—On Saturday Henry Simpson, aged nine years, son of Mr. Joseph Simpson, inspector of ways, was on Parker's-piece, looking on at a game at cricket, when he was struck on the right ear by a ball from the bat of Mr. Remington, of Pembroke College, with such force as to produce insensibility. He was conveyed home, and every care bestowed upon him, but he died on Tuesday morning.—*Cambridge Independent.*

ALLEGED POISONING IN LANARKSHIRE.—Archibald Rollo, about thirty years of age, and his sister-in-law, Mary Smith, both lately residing at the farm of Blairmuckhill, parish of Shotts, have been committed for trial on the charge of poisoning the mother-in-law of the former and the mother of the latter. The deceased had a life interest in the property of Blairmuckhill, and resided with her two daughters; the elder of whom was married to Rollo, and has a family of four children. She died at the close of November last, and on the night of her death the relatives were summoned to her funeral for the day following—the reason ascribed for the hasty interment by Rollo being that the deceased had died of cholera. From rumours which began to spread, however, an investigation was instituted by the procurator fiscal of Airdrie; and on the 31st December, a month after the interment, the body of the deceased was exhumed. The stomach and other parts of the body were placed in a jar, and sent to Edinburgh for the purpose of being analysed. The result of this examination was, that arsenic, in considerable quantities, was detected in the stomach.—*Scotch Paper.*

SEIZURE OF ADULTERATED FLOUR AT GOOLE.—At the Goole petty sessions, on Saturday last, Messrs. Rhodes and Rockett, millers, carrying on an extensive business at Snaith and Goole, were charged with having a large quantity of adulterated flour and meal on their premises on the 1st inst. Mr. Superintendent Burke stated on that day he visited the defendants' premises, and on the millstone in the warehouse he discovered a piece of white clay. In the flour-mill he took samples out of one sack of each of nine lots of flour and meal. These samples had been submitted to Mr. Wood and Mr. Dresser, analytical chemists, who, Mr. Wood stated that in one lot which he had analysed he found three-quarters per cent of alumina, or white clay, which was equal to two per cent. of clay. More or less, he discovered the presence of the same foreign substance in every lot except three. The magistrates fined the defendants £10 and costs, and ordered the sixteen sacks of adulterated flour found upon their premises to be sold for feeding swine; the proceeds to be given to the Rector of Goole for distribution among the poor.

DARING ESCAPE FROM YORK HOUSE OF CORRECTION.—John Lyons, tried at the last York assizes and sentenced to penal servitude, effected his escape from York House of Correction the other day. The mode of exit was by the garden behind the governor's house. By means of a rope formed of handkerchiefs and a blanket, Lyons got over the outer wall. A ticket-of-leave convict, named Riley, in attempting to follow the example, fell upon the *chevaux de frize*, and thence to the ground, the iron spikes having entered the flesh of his left leg, and severely lacerated it, rupturing an artery. He was consequently seriously injured, and there was a considerable flow of blood from the wound. The prison surgeon stopped the wounds. On Lyons' escape being discovered, he was pursued, and traced towards Bishopthorpe, by the governor and others. On coming near him, seeing no other means of escape, he took to the river Ouse, where he swam about ten yards, and twice attempted to cross, but being exhausted he gave up the attempt, and returned to *terra firma*, where his pursuers were ready to receive him, and convey him back to his old quarters.

SINGULAR CONFIRMATION OF A DREAM.—The *Durham Chronicle* contains the following statement in reference to the Burnopfield murder, the trial for which Richard Rayne and John Cain was postponed on Thursday last, to the next Durham assizes:—"In reference to this case we have to place on record a circumstance of a very remarkable and affecting nature, which, however it may be accounted for or disbelieved, is nevertheless perfectly true. Mr. Stirling's gardener, who, it will be remembered, resided in Kirkintilloch, near Glasgow, have been in Durham during the assizes, attending the court, for the purpose of hearing the trial of the alleged murderer of their unfortunate son, and the statement which we subjoin is from Mr. Stirling himself. On the night of the 1st of November, the day on which the murder was committed, Mrs. Stirling had a remarkable dream, which she terms a fearful dream. She dreamt that some parties were outside of the house intending to break into it. In a short time a man with dark complexion and dark dress looked in upon her at the window, presented a gun, and discharged it at her. At this juncture she awoke in great trepidation; and since then the dream—most strongly impressed upon her mind by the fact of her son's murder, intelligence of which would not reach her until six or seven days later than the dream—has ever been vivid in her recollection. Mrs. Stirling accompanied her husband to Durham, for the purpose, as we have said, of being present at the trial. She expressed a great desire to see the two men who were accused of the murder, and for that purpose visited the prison on Wednesday. Several persons were walking in the yard at the time, including Cain, Rayne, a turnkey, and three or four others. Immediately on perceiving Rayne, without being told the name of any of the men, she recognised in him the features of the man whom she saw in her dream fire through the window at her, pointed him out, and burst into tears. Mrs. Turner still expresses her positive conviction with respect to Rayne."

POISONING OF A WIFE BY STRYCHNINE.—An inquest was held at Fleischman's Hotel, Leeds, on the 7th inst., on the body of Harriet Dove, aged twenty-eight, the wife of Mr. William Dove, a gentleman of independent means, residing in Cardigan-place, Burley, near Leeds, whose death had been caused by poisoning by strychnine. Mrs. Dove had been suffering from disorder of the nervous system since December, but was so far recovered at the end of last month that she was able to take out-door exercise. On the 22rd of February she became worse, and on the evening of the 29th ult. she died under circumstances which left little doubt as to her having been poisoned. From a careful post-mortem examination the presence of strychnine has been detected in the stomach. On the opening of the inquest, which has been adjourned till Monday next, it was ascertained that Mr. Dove had obtained strychnine on four separate occasions a few weeks before the death of his wife. Other evidence was given to affix guilt upon him having transpired, he has been taken into custody.

WARLIKE PREPARATIONS OF PERSIA.—The *Court Journal* of Teheran reports that the Shah's forces have been chastising some Afghan bandits. The heads of forty thieves were paraded lately in Teheran, "under the eyes of the Shah." The *Journal de Teheran* announces the death of the Minister of War of the Shah of Persia, and the arrest of the Khan of Baradachan. The journal announces further, that the Persian troops which had arrived at Bender-abouhir, with eight cannons, have occupied the Island of Kharak in the Persian Gulf.

## MR. GEORGE BIDDER ON MENTAL CALCULATION.

Two of the recent evening meetings of the Institution of Civil Engineers have been devoted to the hearing of addresses by Mr. George Bidder, the eminent engineer, conveying to the Members that process of reasoning, or action of the mind, which constitutes the power of Mental Calculation. The boyhood of Mr. George Bidder will be remembered among the few records we possess of this class of eminent mental calculators: his object in these communications was truthfully to submit the result of certain facts connected with his own training in Mental Arithmetic; in short, to detail the progress, as it were, of an experiment worked completely out upon himself, and to give a faithful record of the result. The interest excited by these communications has been so great, not only in scientific circles, but with the general public, that we propose to present to our readers an abstract of Mr. Bidder's *viva voce* addresses, as an accompaniment to his Portrait engraved upon the next page.

Mr. Bidder is convinced that mental calculation can be taught to children, and be acquired with greater facility and less irksomeness than ordinary arithmetic. Still the eminent mental calculators have been extremely few during the last two centuries, among whom Jedediah Buxton and Zerah Colborne were the most remarkable; but even their powers have not been usefully employed, in consequence of their not having subsequently had the opportunity of receiving a mathematical education. It has been commonly thought that Mental Calculation is an art naturally regarded upon peculiarly constituted minds, it has also been attributed to the possession of great powers of memory; and it has been generally thought that Mr. Bidder himself has been indebted to unusual powers of memory and a natural mathematical turn of mind for the celebrity he has acquired. Now, Mr Bidder emphatically declares it is not to have been the case; he has sought every opportunity of examining himself with boys and men who possessed this faculty, and, except so far as being carefully trained and practised in the cultivation and use of figures, he has not found that his memory was more than ordinarily retentive. In fact, while at school and at college, he had some difficulty in maintaining a decently respectable position in the mathematical class.

Mr. Bidder enunciates, as a principle, that there is not any royal or short road to Mental Calculation; the processes are, like all others, in arithmetical computation, to be performed serially, as whatever may be the number of figures employed in a calculation, they are only so many compounds, to be dealt with precisely as they would be in algebraic formulæ, with which the calculations may be considered as identical in point of fact, many of the processes of Mental Calculation, if proposed on paper, would appear most complex and complicated. They can, however, be accomplished mentally, in consequence of the faculty of occupying the mind simultaneously with the double task of "computing" and "registering." They would appear to require no executive or reasoning, and is that portion of the process which, while it is the most active, is not that which causes the greatest strain on the mind. The result is recorded by the second faculty, registering, which is the real strain upon the mind, and that by which alone the power of Mental Computation is limited.

Experience has shown that, up to a certain point, the power of receiving is as rapid as that of thought; but the difficulty increases, in a very high ratio, in reference to the number and extent of impressions to be registered, until a point is reached, the registration of which in the mind and by writing are exactly balanced. Below that point, mental registration is preferable: above it, that by writing will be as quick, and more certain. Therefore, the mental process, as compared with the operation of writing, is as the speed of thinking to that of an express train; and, if the power of registration could be maintained at all times upon a par with the executive faculty, there would be no difficulty in accomplishing with immense rapidity a table of logarithms up to ten places of figures.

All the rules employed by Mr. Bidder were invented by him, and are only methods of so arranging calculation as to facilitate the power of registration; in fact, he thus arrived at a sort of natural algebra, using actual numbers in the place of symbols. He believes it was in about the fifth year of his age that he began to deal with numbers; he had not then learned to read, and certainly long after that time he was taught the symbolical numbers from the face of a watch. His earliest recollection is that of counting up to ten, then up to 100, and afterwards to 1000; then, by intuitive process, he taught himself the method of abbreviating the labour of counting—arriving, in fact, at the natural multiplication of numbers into each other, attributing to each a separate and individual value.

In this manner the actual value of every number, up to 1000, was impressed upon the memory, and he then proceeded onwards, ascending, up to a million. It was his practice to count numbers practically with peas, marbles, or shots, to compose rectangles of various values, and, by counting them, the multiplication table was practically the result of actual experience and test, and thus he had attained an intimate acquaintance with numbers multiplied with each other, by a tangible process, divested of that formidable character under which it was generally brought before the young student.

In this way he learned to multiply up to two places of figures before he knew the symbolical expression for the process, or the meaning of the word "multiply," as, instead of the term "multiplying 27 by 73," he only understood the expression "27 times 73."

The 9 varieties of numbers up to a million, being represented by six different designations, or varieties of numbers, viz., units, tens, hundreds, thousands, tens of thousands, and hundreds of thousands, their permutations were but only eighteen in number. A boy, therefore, who knows his multiplication table up to 10 times 10 registered 50 facts in his mind, and with the permutations above mentioned has only to store 68 facts. The whole of the multiplication table of 12 times 12 gives him 72 facts to store, or 4 additional facts. The machinery, therefore, necessary to enable him to multiply to 6 places of figures consists of 4 facts less than that required to enable him to carry the multiplication table in his mind.

The application of this, when fairly acquired, may be thus illustrated; for example, multiplying 173 by 27, the following process is performed mentally—

| | | | |
|---|---|---|---|
| 100 × 27 | = 2700 | | |
| 70 × 200 | 21,000—60,700 | | |
| 70 × 70 | ... | +6,300=67,000 | |
| 70 × 7 | ... | 490 | 67 490 |
| 3 × 200 | ... | ... | 600 64,390 |
| 3 × 70 | ... | ... | ... 210 64,600 |
| 3 × 7 | ... | ... | ... ... =21 64 681 |

The last result in each operation being alone registered by the memory, all previous results being obliterated.

To show the aptitude of the mind by practice, he will know, at a glance, that 7 × 7 = 490 × 173 = 69,200

and then ... ... ... 3 × 173 = 519

the difference being ... ... ... ... = 68,681, as above.

In addition and Subtraction the same principle as already explained for Multiplication is applied—that of commencing with the left-hand side of the large numbers, and adding successively, keeping one result only in the mind.

Division is a far more complex arithmetic, much more difficult than multiplication, and must be a tentative process, and is only carried out by a series of processes of course, but no doubt, in the concept, the trained mind of the Mental Arithmetician gives the power of guessing to a greater extent than is usually admitted, and affords a corresponding facility in the process. Supposing, for instance, it is necessary to divide 7569 by 73, the following would be the process: Taking 70 as the first figure of the factor, it must be 100 or less known at once to be 17,000 subtracting that from 75,690, there remains 5690. It is perceived that 80 is the next number in the factor, because 1600 is the next figure of the product, but that 1700 is known at once to be 17,000 subtracting that from 75,690, there remains 5690. It is perceived that 80 is the next number in the factor, because 1600 is the next figure of the product, but that 1700 is known at once to be 17,000 subtracting that from 75,690, there remains 5690. It is perceived that 80 is the next number in the factor, because 1600 is the next figure of the product, but that it is immediately perceived, gives a remaining factor of 6, making in all 146. Thus only one result is retained in the mind at a time; but, as contrasted with mutually identical, it is necessary to keep registered in the mind two results which are always changing, viz., the remainder of the number to be divided, and the numbers of the factor, as they are determined; but if it is found, as in the present instance, that 70 is the exact factor, without any remainder, having got the first factor 100—which is perceived at a glance, it is known that there are only four numbers which, multiplying by 70, can produce a result terminating in 56—viz. 21, 46, 71, and 96; and therefore the immediate inference is that it must be 46, as 121 must be too little, and 171 must be too much, therefore 146 must be the factor. Thus, the only facility afforded by Mental Calculation to the greater power of guessing at every step towards the result.

Mr. Bidder then proceeded to make a few remarks on the Rule of Three, its application to money, weight, measure, and time—then on the Square and Cube Roots, Compound Interest, and Prime Numbers, with instances of their application to subjects connected with the profession of civil engineering; concluding with what would appear to be the true course of education in teaching arithmetic. Of the latter we quote a short resumé:—

"The first step that Mr. Bidder recommends, even before any knowledge of figures is symbolically acquired, is that the process of counting, to ten should be mastered, then up to 100, and subsequently to 1000; then the multiplication table up to 10 times 10, should be taught practically, by the use of peas, marbles, or shots, or any bodies of uniform dimensions, by placing them in rectangles and squares.

"Having thus introduced the student to teach himself the multiplication table, nothing will be more easy than to teach him to multiply up by 12, which will be 10 × 10 + 10 × 7; having accomplished this, the multiplication will easily follow, being 10 × 17 + 3 × 10 + 3 × 7. This being executed, it only remains for him to practise multiplication up to two places of figures. Concurrently with this should be taught the permutations of 100, 1000, &c., into each other, and thus will be laid the basis of Mental Calculation, for whatever extent the individual may desire to carry it to; but the early training should be such as to enable the student to rely upon his own resources for framing his rules for any other branch of arithmetic. In order to do this, however, his mind must be stored with a certain number of facts, which must be completely at his command; and advantage should be taken of the mode of giving him an insight into natural algebra and geome-

MR. GEORGE P. BIDDER, C.E.—FROM A DAGUERREOTYPE BY MAYALL.

try. With this view, the training should be extended, and there would be no difficulty in conveying to young minds the knowledge of certain leading facts connected with the sciences, long before they are capable of comprehending the beautiful truths of reasoning by which their truths were established. There is no difficulty in impressing, permanently, an appreciation of the relative proportion of the diameter to the circumference of a circle, of the beautiful property of the square of the hypothenuse of a right-angled triangle being equal to the squares of the two sides containing the right angle, or of the equality of the areas of triangles on the same base, contained between the same parallel, and many others which must occur to all geometricians

The same with respect to the properties of several series of numbers—for instance, $1+2+3$, &c., or $1+2+3$, &c., or $(1)+(1\times6)+(1+2\times6)+(1+6\times6)$, &c

The task proposed having been accomplished, Mr. Bidder concluded by addressing to the Institution a few remarks of a more personal nature.

## ROYAL DUBLIN SOCIETY—FOUNDATION OF THE NEW MUSEUM OF NATURAL HISTORY.

THIS interesting ceremony was performed on Friday week, the 7th inst., by his Excellency the Lord Lieutenant, in presence of a highly numerous and distinguished assembly, upon the lawn of the Royal Dublin Society's premises, Merrion square, the intended building, when completed, being designed to form a wing of the main edifice, and to present a corresponding façade to the Dargan Institute, or Irish National Gallery, which is in contemplation also shortly to erect at the opposite or northern extremity of the lawn. The day was remarkably fine, and the gathering was numerous and brilliant. A company of the 2nd Somersetshire Regiment of Militia, with band and colours, were drawn up at the grand entrance to the Royal Dublin Society's premises; and a guard of honour, consisting of a troop of the 18th Lancers, escorted the Viceregal cortège to the principal gate. His Excellency arrived at three o'clock, accompanied by Lady Fanny Howard, Mr. F. Howard, Lieut.-Col. Udney, Lieut.-Col. Baring, Captain Willis, Captain Fitzroy, Dr. Hatchell, Captain Williams, Captain Ellis, Cornet Gore, and other members of the Viceregal Staff; and, having been received by the Marquis of Kildare, V.P., Mr. Weld, V.P., and the members of the Council, was conducted to the board-room, where the presidential chair was taken by the Earl of Carlisle, in virtue of his office of Viceroy.

Mr. Foot, Honorary Secretary to the Society, then read to his Excellency an address, recapitulating the progress of the Museum of the Royal Dublin Society, from its origin to the Treasury grant in 1853, in aid of founding "the National Museum of Ireland," the first stone of which his Excellency was about to lay. The proposed building, according to the plans and elevation of Mr. Frederick V. Clarendon, architect, will be 225 feet in length, 45 in breadth, and 55 in height, ornamentally faced with cut stone.

The Lord Lieutenant returned an eloquent reply, concluding by expressing a hope "that the building about to arise on the spot already connected with high ancestral recollections of Ireland may, with its kindred departments, furnish ever-increasing accommodation for the pursuits of useful knowledge and humanising accomplishments, and open for the coming generations worthy temples of science, art, and learning, at whose shrine they may be taught how most to reverence their Creator, and how best to benefit their fellow-creatures."

His Excellency, having been duly furnished with a mason's apron, then proceeded to the future site of the Museum, when a glass vase, containing coins of the realm, medals of the Society, and a medal struck expressly for the occasion, was deposited in a cavity in the foundation; which having been hermetically closed up, his Excellency, plied the handsome silver trowel, mallet, and plumb-line with considerable dexterity, and said, amidst loud applause, "I declare the first stone of this building well and truly laid," and called for three cheers for the new Museum. These having been cordially given,

Mr. Henry Kemmis, Vice President of the Society, then, on the part of the Royal Dublin Society, thanked the Lord Lieutenant. His Excellency replied, and concluded by mounting the block of granite, and called upon the assembly to give "three cheers for her Majesty the Queen." The call was enthusiastically responded to, his Excellency setting the example. The Viceregal party then took their departure, amidst the same ceremonies as observed upon their arrival. The general company, however, induced by the fineness of the day and the presence of the band, remained for a considerable time afterwards.

## PICCO, THE SARDINIAN MINSTREL.

THIS young man, who has been astonishing the Parisian musical world by his performances on an instrument of the humblest possible kind—a little pipe or flageolet, no better than a child's penny whistle—has arrived in London, and had a concert at the Hanover-square Rooms on Saturday evening last, when the effects which he produced by means of his poor little instrument were at once so marvellous and so beautiful that a large audience, among whom were many of our most distinguished musicians and *dilettanti*, were filled with wonder and delight.

Picco is a young man, the son of a Piedmontese shepherd blind from his birth, and destitute of any musical education. Some time in the year before last, as we are told, his extraordinary attainments were discovered by accident. A sportsman, wandering among the Apennines, was struck by hearing at a distance a singular strain of music, and found that it proceeded from a country lad, playing on the rude instrument we have mentioned. Charmed and astonished, he accompanied the youth to his father's cottage; and the result was that the old man was persuaded to allow his son to be taken to Milan, with the view of making something by his talent. In December, 1854, young Picco obtained an engagement to perform at the theatre of La Scala, where his playing created such a sensation that his fame spread over Italy, and he was engaged at all the principal theatres, from Milan to Naples. At Rome he was made, by a formal diploma, a member of the Academy of Saint Cecilia, in that city. From Naples he went to Paris, and appeared at the Théâtre Italien, in December last; and the impression he made on the public was described in glowing language by the *Journal des Débats*, the *Presse*, and other leading journals of the French metropolis; and it was made apparent by his performance at the Hanover-square Rooms last Saturday that their accounts were by no means exaggerated.

On that occasion the audience were much interested by Picco's appearance and manner. He was in the picturesque attire of an Italian mountaineer with an open, intelligent face, and a simple, modest deportment. His instrument was precisely what it had been described to be—a mere child's toy of the rudest construction, about three inches long, and so minute that, while he was playing, it was almost hid by his fingers. It has only three holes, and yet he contrives to produce from it, by means which we confess our inability even to imagine, a complete chromatic scale of three octaves, with every semitone perfectly in tune. The tones which he draws from it are clear, sweet, and brilliant, and he executes the most rapid passages with a freedom and fluency which could not be exceeded by the most skilful performer on the violin. But, beyond these mechanical attainments, which must have been gained by ingenuity and application, he possesses the more precious gifts derived immediately from nature—taste, refinement, and feeling. He has a powerful imagination and an inventive genius—the faculties necessary to make a composer as well as a performer. He is able to extemporise on a given subject with great brilliancy, and in a style entirely his own. At the concert on Saturday he played two pieces, the "Casta Diva," from "Norma," and the "Carnaval de Venise," with variations, partly Paganini's, and partly his own. His performance of Bellini's celebrated air was exquisitely beautiful; quite vocal in its effect, and full of expression. His "Carnaval de Venise" was absolutely marvellous, and quite indescribable: it must be heard to form any idea of it. It contained the wildest and most fantastic flights of Paganini, whose variations he must have learned from some of the great violinists whom he may have heard in the course of his Italian travels—none of whom, however, could have surpassed him in brilliancy of execution. The only defects in his performance are those which could not possibly be avoided by any degree of skill. The first is the high pitch of his instrument and its want of low notes; and the second is the piercing shrillness of the very highest sounds of his scale. Both are necessary consequences of the minuteness of his tiny plaything, which, in any other hands, could not have been called an instrument. But they detract much less than might have been expected from the power and beauty of his playing.

His concert, we must add, was exceedingly well got up and interesting, even independently of his performances. The admirable band of the Orchestral Union, under their able conductor, Mr. Alfred Mellon, played several fine pieces; and songs by Miss Lascelles and Signor Veroni gave additional variety to the concert. We advise our musical readers to hear this Italian youth; their astonishment will not be greater than their pleasure.

PICCO.—FROM A PHOTOGRAPH BY JOHN WATKINS.

THE LORD-LIEUTENANT LAYING THE FOUNDATION-STONE OF THE NEW MUSEUM, AT DUBLIN.

DINNER GIVEN BY FRANCES MARCHIONESS OF LONDONDERRY TO MINERS ON CHILTON MOOR.

THE occurrence of festivals of various kinds is from time to time illustrated and recorded in our pages; but a great festal meeting of between three and four thousand pitmen in the north, which we have now to chronicle, is, indeed, a most extraordinary event, and altogether worthy of occupying a place in page of our Journal.

The vast gathering took place, on Saturday, the 1st instant, on Chilton Moor, the centre of that great colliery district which Frances Marchioness of Londonderry brought to her husband as the heiress of the Vane-Tempest family, and to which, and to the development of its resources, the late Marquis of Londonderry devoted his energies. This is the largest colliery property in England in the hands of one individual. It extends over an area of 12,000 acres, lying between Sunderland and Seaham on the coast, and extending inland as far as the city of Durham, producing an average approaching one million tons of coal per annum. One of the proudest compliments ever paid to an individual was addressed to the late Lord Londonderry by Sir Robert Peel, when that great Statesman attended the opening of Seaham harbour, and congratulated his Lordship in the name of his country, on the accomplishment of a gigantic and patriotic work which had cost his family an expenditure of £250,000. Nor did the efforts of the late Marquis stop at this point, for, by carrying out a railway connecting the two ports of Sunderland and Seaham, he has made his family the only one in England possessing, as their exclusive property, a line with passenger traffic. To these great works and the extensive duties connected with their management, daily important, she has added many thousands of persons. Frances Marchioness of Londonderry has exceeded [illegible] in proving their respective value herself not unequal to the task. He [illegible] determined upon enlarging Seaham harbour at an outlay of £100,000, and, with a [illegible] the immense importance of that already thriving seaport town, [illegible] with great foresight and judgment, taken extensive [illegible] mines in the Cleveland district of Yorkshire, whence the inter-secting railways will bring the ore to the coast at Seaham, where blast-furnaces on a large scale are to be erected.

Meetings, such as that on Saturday week between coalowners and their men are not unprecedented; but they have usually been confined to assemblies at the mouth of each separate pit, and even these of late years have fallen into disuse. It has remained for Lady Londonderry to restore this ancient custom, and to enhance its value by making it an aggregate assembly, a general meeting of the employer and the employed, as well as to mark it by a festival which will long be remembered in the county Durham. A finer body of men than the [illegible] sturdy pitmen who turned out at the bidding of their noble mistress could not have been assembled in any agricultural or manufacturing district in the kingdom. Their all looked clean, well fed, and manly. And even during their hours of labour, when they were well clothed, and in intelligence were certainly superior to many working men who are conventionally called upon as their superiors. The assemblage on Chilton Moor for the assemblage arose from the circumstance of the being the central point of that great colliery district owned by Lady Londonderry, and from the fact of a building existing there, the property of Mr. [illegible], admirably adapted, in the vicinity of Lord Londonderry's [illegible], but now for an eminent manufacturer, in which ample accommodation could be afforded for the large number of persons invited. The building was [illegible] festival. The walls were hung with coloured drapery and ornamented with appropriate banners and mottoes. There were three tables in the building, each of which was capable of seating 600 men. The first was in the centre of the building, facing the entrance, and opposite was a gallery which afforded to 500 female spectators an opportunity of witnessing the gratifying sight.

The men from the various collieries arrived by special train and otherwise during the morning and at twelve o'clock took their places under the banners inscribed with the names of their respective pits.

Lady Londonderry occupied the chair, having her noble mother on his right hand, and the [illegible] Vane upon her left. The Marchioness was supported by Mr. Hugh Taylor, chairman of the Coal Exchange, and on the dais were the Mayors of Durham, Sunderland, Mr. Mowbray, M.P., Mr. Hudson, [illegible], Chief Agent to the Londonderry [illegible], the Mayor of [illegible], Seaham, and several influential residents in the county.

After the having been [illegible] the enjoyment of the good things provided, the Chairman claimed silence for grace, which was very [illegible] sung by the Durham Minstrels, and to the accompaniment of the privileged party received from the guests the unexpected compliment of a rattling round of applause.

The healths of the Queen and Royal family were then given, after which the noble Chairman solicited on behalf of her mother, their attention for a few moments. Lady Londonderry was very anxious to express her great gratification at meeting them, and he was sure they would listen to what she had to say.

The Marchioness rose, and, at first, spoke in a voice tremulous with emotion; but, as she warmed with the subject, her mode of utterance gained strength and she proceeded with emphasis and marked feeling to address the meeting as follows:—

My friends,—I have invited you all to dinner to-day that we may become better acquainted—that you may hear from my own lips an assurance of the deep interest I feel in your welfare, and that I may have an opportunity of expressing the pride and satisfaction I have in presiding over so large a body of so intelligent and well-conducted people. I have asked all in my calling to participate in that pride, and I bid you all a friendly welcome. But I confess myself principally to the parents, many of whose fathers worked under my predecessors. It is pleasing to trace back this bond of union, which I fondly hope may extend to the next generation, and that their children may continue to serve under mine. I regret that since the management of these great concerns has devolved on me I have not had health or strength to visit you underground as I could have wished. I plead I have never been able to persuade Mr. Elliot to promise to take me down, and I am afraid I should hardly succeed in finding my way alone. But I hope, nevertheless, I may be permitted to say, without vanity or presumption, that no collieries are more carefully looked after. Your workers, your houses, and your schools, have been anxiously watched over. The latter have long enjoyed a proud pre-eminence; and, although I have refused to place them under Government inspection and supervision, I know that they are well managed; and it is your own fault if you take your children away too soon, and thus deprive them of the benefit of the good education I am provided for them. You well know how necessary that is for success in after life. We need not travel beyond the precincts of this building for instances of persons who have been the architects of their own fortunes. It is too pride and boast of your head viewer that he was reared and nursed a baby in these pits, and it must be encouraging to look at and this great mining company and see the many instances of men who have risen by the way to wealth and fame by labour and perseverance. On the other hand, I am proud to say you have set an example to the whole trade. You were the first to return to the old-fashioned system of "bonding" coal, and you have worked on and viewers, and have let me endeavour to impress strongly upon your minds how much depends on your own prudence and care. I would I could find words or all eloquence to make this warning emphatic for, I regret to say, the reports I receive of recklessness fill me with pain and alarm; and I know that Mr Elliot has lately had occasion to visit most severely some fearful instances of negligence with the safety-lamp, that might have caused fearful results. You see that, although I have not been down, I am well informed of what passes below. You are all aware of the circumstances I allude to, and that those careless people have been punished—some by law, some by dismissal. Let me implore, I beseech you, that you will be careful and watchful; and remember, each of you, that not only your own lives, but those of hundreds, hang upon a thread—upon the safety of your lamps—he shutting of the opening of a door. And, while I ask for God's blessing on your undertaking, fail not to do all in your humble power to deserve it. I advise you to frequent and support your schools, your mechanics' institutions, your temperance societies, and to avoid the public-house—to be orderly, industrious, and religious. I speak not of men's creeds. They rest between a man and his Maker. Nor do I presume to dictate on this momentous subject beyond expressing my anxious hope that you will all view the Sabbath, and each attend your own place of worship. That duty paid, you will better enjoy the rest and recreation of Sunday afternoon and evening for your wives and your families (Cheers). As a friend of religious liberty, I have not refused sites for chapels of different persuasions, where the numbers have justified my doing so; and I open in a few months one which at New Seaham will be fit and suitable for the mining population residing there. I wish you were nearer to Wynyard, which was lately visited by 600 members of the Stockton Mechanics' Institute, who applied to me for permission to see the House. They expressed themselves highly gratified, and were most orderly, quiet, respectable, and well-conducted. And now, my friends, I will not detain you longer than to tell you how much pleasure it has given me to see you all here, and to express my hope that you will remember and heed my words. I feel deeply the responsibility of my position, and I have thought it right to advise and counsel you to the best of my humble power; and I hope that, while I am permitted to preside over you, we may each individually and collectively continue to endeavour to do our duty in that state of life to which it has pleased God to call us

At many points of this speech, address-ing itself so particularly to the homely sympathies of her hearers, the Marchioness was interrupted with loud applause, which, at the termination of her address, swelled into a perfect clamour of cheers, followed by an ebullition of sympathy such as is seldom witnessed in a public meeting. Amidst this the Marchioness resumed her seat, but it was some time before the assembly had returned to its former order. Upon silence being restored,

John Cuthbertson, a coal-hewer, then rose from the body of the assembly, and addressed the Marchioness as follows:—

My Lady, I rise with feelings of the greatest diffidence to propose your Ladyship's good health. Being one of your Ladyship's coal-hewers, and having been born and passed all the days of my life under you, I have been honoured by the choice of this vast assemblage of my fellow workmen to present to you our dutiful and sincere thanks for your condescending and unrivalled kindness which your Ladyship has so strikingly manifested time after time to us who are employed by you, and for this present extraordinary display of your Ladyship's good feeling and generosity; and entertaining, as I do, and must ever entertain a grateful sense from your Ladyship, to which we have all listened with feelings of extreme delight. In that address your Ladyship has made particular mention of the schools existing throughout your collieries, and the advantages which the rising generation, and which have been established and are entirely supported by your Ladyship. We regard the great privileges of these schools will ever be commanded among us, and will be handed down from sire to son as an inestimable boon to each of the untiring zeal and interest which your Ladyship has manifested for the religious and secular improvement, and for the general comfort of all those employed by you. For which we workmen, we are thankful, and glad that we live in so bright an age—an age of light and of intellectual improvement, characterised as it is by every facility for acquiring information. The most useful and important knowledge is not now confined to the higher walks of life—to the affluent circumstances. Those days have passed away, and a brighter and more luminous age has burst upon our pathway; and we all we know and feel that your Ladyship has taken an extremely active part in bringing it about. Your Ladyship has also referred to the "buildings" For my own part I can say, and I think it is the general opinion of my fellow-workmen, that we prefer the yearly engagements. For these engagements are a direct preventive of many evils to which we have been overlong exposed. For instance, the dividing of families—the non-civilization of that portion of land which is allotted, free of charge, to every workman employed by your Ladyship—the temptation to accumulate debt and going away without settling or agreement with the creditors. These, and many other evils to whom I might refer, if not entirely removed by the engagements, are in a great degree curtailed. And I believe your Ladyship was the first who endeavoured to bring back to us the valuable boon—our lost inheritance. These are a few of the many benefits of the humble proofs we have had of your Ladyship's extraordinary benevolence and most abundant kindness, manifested to all of us who have the good fortune to be employed by you. It would be well for the people of Staple-d if so happy a country an example worthy of imitation. I would be well-indeed, if the acts of charity and benevolence I have adverted to were imitated by every lady and gentleman connected with the mineral interest. Your Ladyship will be among us to-day, and we observe there is recorded among you have acquired during us. That is written in indelible characters on the tablets of many a grateful heart. It is enshrined in the memory of living thousands, and will be handed down to our posterity with delight. Ladies and gentlemen on the platform, and ladies and gentlemen in the gallery, I call upon you to join my fellow-workmen in the vast assemblage with these humble lines and thanks again to Lady Londonderry's good health, and long life and happiness to her!

The speaker delivered this address in a plain, str- [illegible] manner. He evidently felt what he said, and the manner in [illegible] was received by his mates showed that it was a true reflection of the sentiments that he proposed, as a matter of course, was received with tumultuous applause.

The Durham choristers here sang "The Women of England;" after which

Lady Londonderry rose and said—

My friends, on an occasion like the present I cannot ask my son to respond on my behalf (Cheers). Overpowered as I am by his feelings to which such a scene as this must naturally give rise, I can only respond to your kindness by considering myself as the head of a great family, and saying to you all, My children, I thank you from the bottom of my heart.

The Marchioness delivered this expression of her feeling with much emotion, which was evidently shared by the great majority present

The noble Chairman then proposed "The Health of our Visitors, and Success to the Mining Interest in the county of Durham; coupling with the toast the name of Mr. Bowbray, upon whose character he observe he should enlarge, who has kindly honoured this meeting with his presence." The toast was drunk with enthusiasm, and Mr. Hugh Taylor returned thanks

John Potter, a coal-hewer employed on the estate more than fifty years, next rose. After expressing his own gratitude, and that of his comrades, for the many kindnesses shown to them, he proposed, in a few appropriate words, "The Health of the Earl Vane, Chairman of the Day"

The noble Chairman returned thanks

Mr. Hugh Taylor then proposed "The Health of the Agents of Lady Londonderry;" which, being drunk, was acknowledged by Mr. George Elliot, head viewer.

Mr. Mowbray, M.P., then proposed "The Health of the Countess Vane."

Earl Vane acknowledged the compliment paid to his wife, and as a parting word gave them, "Sweethearts and Wives—the single married, and the married happy."

This happy sentiment put the whole assemblage into the greatest possible good humour and, during the merriment which succeeded, Lady Londonderry retired from the hall amidst the long continued cheering of its occupants. And thus ended this most remarkable meeting.

The arrangements of the *fête* were under the direction of Mr. Elliot, who was ably assisted by his Hentenants—Mr. Green and Mr. Craig. Not the slightest accident occurred, and everything passed off with the greatest possible success.

### CALENDAR FOR THE WEEK.

SUNDAY, March 16.—Palm Sunday.
MONDAY, 17.—St. Patrick.
TUESDAY, 18.—Princess Louise born, 1848.
WEDNESDAY, 19.—Sun rises 6h. 5.m., sets 6h. 11m.
THURSDAY, 13.—Maunday Thursday.
FRIDAY, 21.—Good Friday
SATURDAY, 22.—Southey died, 1843.

### TIMES OF HIGH WATER AT LONDON-BRIDGE,

## THE ILLUSTRATED LONDON NEWS.

*LONDON, SATURDAY, MARCH 15, 1856.*

A veil of impenetrable secrecy shrouds the proceedings of the Paris Conferences. The rumours of each day differ from the rumours of the day preceding. At one time there is "*hausse*" on the Bourse, at another there is "*baisse*;" and both the rise and the fall are unwarranted by anything better than the conjectures of speculators and jobbers;—which in their turn are based on nothing more substantial than a smile from Lord Clarendon, a shrug of the shoulders from Count Orloff, or a nod from Count Buol, as impenetrable and solemn a personage as the *Lord Burleigh* of the play. At the end of last week it was feared that there was a "hitch" in the Conferences, and the Funds went down. During the present week hope is in the ascendant, and the Funds have obeyed the favourable impulse. But nothing is known, nor will be, until the Conferences close, when the result will be formally and officially proclaimed. Most people believe that peace will be the result of the negotiations, Yet it is to be feared that the peace will not be of a character to satisfy the British people, however much it may accord with the notions of those who hold the reins of Government in London and Paris. If one thing were needed to confirm the people of this country in their misgivings, it has been supplied by the announcement which has been simultaneously forwarded from Vienna and Berlin, that Prussia has been invited by the French Government to appoint a Plenipotentiary, or Plenipotentiaries, to attend the Conferences, and that Prussia has accepted the invitation. We are loth to believe that the Governments of Great Britain and France have lent themselves to such an act of political cowardice. Yet it is to be feared that the statement is true, and that the Allies have voluntarily—we will not say treacherously descended from their high and dignified position, and admitted into their councils a secret foe, whose dastardly neutrality prolonged and embittered the war; whose aid and advice are not needed for justice, and still less for honour; and who has neither legal nor moral right to exercise a voice in that settlement of Europe which he has done nothing to expedite and simplify, but very much to retard and complicate. The admission of Prussia to the Conferences is only justifiable upon one supposition;—that the Allies will attempt a perfect settlement and adjustment of the affairs of Europe, inclusive of Poland. Upon that supposition, and the consequent disgorgement by Prussia of her share of the plunder of that unhappy country, it may be right that Prussia should have a vote in what so greatly concerns her. Upon no other can we imagine that the Allies have acted rightly in admitting to their councils a Power who wilfully abdicated her high functions as a leading State of Europe when there was work to be done, and a broad path of duty to be honestly and courageously trodden. We shall be glad to learn that the affairs of Poland have entered into the serious consideration of the Conferences; and that on this account alone the representatives of Frederick William have been summoned to Paris. If not, we wonder if the Prussian Envoy will be able to look in the face the Sardinian Ambassador without a blush, and what account the British Government thinks it will have to render to the British people for so needless, if not so dishonourable, a subserviency to Russian influences, and for so flagrant a bonus upon political cowardice. If any considerations of a personal character connected with the young Prince of Prussia have entered into its calculations in this matter, the public displeasure will only be the more vehement. The mere announcement has already shaken faith in the Conferences; and, if the report be true, will shake faith in persons nearer home who have permitted, if they have not encouraged, the degradation.

For the first time during the eleven years that the Income-tax has been in operation, the Board of Inland Revenue has put forward a pretension to levy the tax on the annual interest of moneys deposited with banks. This demand has been made on a country bank in the north of England, and may be considered as an attempt to insert the small end of the wedge; for, if this novel claim is in conformity with the legal interpretation of the Act of Parliament, it must in justice be extended to all banks in the United Kingdom, to all discount-houses, and to all bill-brokers. From the letter issued by the Board, and signed "Thomas Keogh," we make the following extract, showing the construction now put upon the Act by the Government:—

It is expressly enacted that in estimating for assessment the amount of profits or gains arising from any business no deduction shall be made on account of any annual interest payable thereout, but that the person carrying on the concern shall be charged with the whole amount of the profits or gains without distinguishing such interest, and that he shall be entitled on payment of interest to deduct the tax thereon. By making the return on the erroneous plan adopted by you the recipients of the interest have escaped their liability to the tax. The Board must, therefore, require you to furnish their surveyor with an amended return of assessment for the current year of the profits of your bank, including the whole of the annual interest which you pay, in order that you may charge the several persons entitled to such interest with the proportion of the tax to which they are liable pursuant to the provisions of the Act.

The bank to which this application has been made objects to the demanded payment, and expresses astonishment that this new interpretation should be given to the statute. It argues that, as money is deposited at call, it may only remain a month, a week, or any other uncertain period, even a single day; so that the allowance made on deposits cannot, under such cases, be treated as "annual interest." It denies that the law will bear the construction put upon it by the Board of Inland Revenue; but, if it does, complains of the invidious selection of a single establishment in a single town to test the validity of a claim hitherto left in abeyance.

This question is one of great importance. The Joint-Stock Banks allow interest on deposits at rates varying with the fluctuation of the Money-market, and according to the period during which it is arranged that the deposits are to remain. Men having spare capital, but who are disinclined to speculate, are content with moderate profits derived from such investments, because they know them to be safe from experience; but, if the Income-tax were to ride over the low rate of interest they are content to receive, it is very probable they would withdraw from the banks and seek some private channel concealed from the prying eye of Government. The favourite character of this form of investment is proved from the enormous amount of deposits intrusted to the London Joint-Stock Banks, which, in December, 1855, reached the prodigious sum of £30,093,114. Undoubtedly the full pressure of taxation ought to weigh on banking-houses, as on other mercantile firms; but, if the new rule be enforced against them, it ought to be of universal application. Every house of discount, every bill-broker, and every attorney, should fall within its operation. It appears to us that every house of deposit would have to keep two distinct sets of books—one to show their own profits, the other to show the profits of their depositors. We have called attention to this subject because it has come unexpectedly before the public, and in a very partial and obscure manner; and it is to be hoped that some independent member of the House of Commons will ask the Chancellor of the Exchequer or the law officers of the Crown whether the course adopted by the Board of Inland Revenue is legal.

### THE LATE ELECTION FOR BOSTON.

Instead of indulging in any remarks of our own upon the result of the late election for Boston, we prefer to borrow the following from a local journal the *Boston Guardian*:—

We have inaugurated a new era in political life—we have sent a real "representative man" to a house of nonentities—we have discarded and refused to be served by more of that "special pleading" of which that House is but the most exalted arena, and in bidding defiance to the thousand-and-one influences of bribery, intimidation, and corruption, we have torn the last crutch from the tottering hands of Toryism and have cleared the field as far as in us lies for a new order of things, and have opened up a brighter prospect for the fortunes of our country

We have returned a man pledged to advocate the Ballot,—forty more such men in the House, and very clear notice shall, without let or hindrance, help the progress of reform.

We have returned a man whose great desire and whose peculiar interest, too, lies in the immediate enlargement of secular education,—education, that invigorating draught, ever close to our lips, and ever dashed aside by the "short-armed ignorance of theological bigotry."

We have returned a man pledged to support a reform in his country's service, both civil and military; pledged to open the doors of state preferment to all merit, wherever it shall be found; to open up to our sons and sons' sons the rewards of talent, of genius, and of valour, and we find in our member's own career the most hearty assurance that he will redeem his pledge.

We have returned a man, the influence of whose Journal is weekly felt in every quarter of the civilised globe; and that influence has always been exercised in the attainment, for the people, for the glory of his native land.

Above all, we have returned an honest man, a plain, blunt-spoken Englishman, and we feel that, if this were all, in these days of professions and of shams, of false patriotism and of secret self-seeking, we have established some little claim as a constituency to the attention of our common country, and have, to the best of our limited capacity, "done the State some service."

But while these are considerations for the friends of Liberalism, wherever they may be found, we have another duty, as editor of the *Boston Guardian*, to perform, and it is therefore contemplate this great victory from a local point of view, [illegible] the temper of the time which we ought to be, and to pay open to our readers the exact [illegible] case in our own borough of such a triumph as the success of Mr. Garnett [illegible] day has been "a soldiers' victory," the working men of Boston may call this day their own, they have chosen for themselves a man sprung from their own ranks—a man of work, a man of energy, a man whose name is associated with the thought of material good to all of them, and their strong arms have lifted him high aloft on the shield of victory, and their determined voices have proclaimed him the leader of their choice.

We call this a noble result of a noble effort. Not by intimidation, not by corruption, not by treating, have the working men of Boston been induced to prostitute the franchise; but by intelligent [illegible] and by loyal action, have they returned a man of the people as a lawgiver. For this we honour them; for this we respect them, and for this we promise them that, if the working man shall persevere in the path, disdaining corruption and progressing forward to the development of his native worth, he shall reach a happier period in the world's history than as yet has ever dawned [illegible] for [illegible] or his [illegible] material prosperity for his children and himself, and the glorious independence of every man who has earned the proud lesson of self-respect.

To conclude—we have won the day, the field is ours, the future is ours also; we have established the great principle of the old song "The right man for the right place," and no great principle ever yet was barren of fruit. We have only to persevere as we have begun, and we shall shortly send to the Commons House of Parliament a man worthy to be the colleague of him who, sprung from the humblest rank of life, declared on Friday last, on the hustings of his native town, that, standing there on the site of his father's house, he pledged himself to remember what he was, and what he represented, and to do his duty.

## METROPOLITAN NEWS.

The Dulwich College Charity Meeting at the Adelphi Theatre.—A very large gathering of the theatrical profession took place on Thursday last, at the Adelphi Theatre, to memorialise the Secretary of State for the Home Department to insert in the Report of the Charity Commissioners the proposition of Sir Benjamin Webster—to admit a certain number of actors and actresses, and actors' children, to the benefit of "God's Gift," at Dulwich, founded and endowed by Edward Alleyn, the friend of Shakespeare. Alleyn was himself an actor, and proprietor of the Fortune Theatre; and endowed Dulwich College during his lifetime with the large sum of £800 a year. The income of "God's Gift" has increased very largely of late years, being now about £2000 per annum; and it has been proposed by Mr. Webster that, in the redistribution of the funds about to take place, under the direction of the Charity Commissioners, the poor player should be considered to the extent set forth in the annexed resolutions. Mr. Charles Dickens, with his usual kindness, took the chair, and we regret the space at our disposal this week does not allow us to report in full the excellent address, which delighted his auditors. Mr. Webster detailed at length the history of the charity and grounds upon which he proved the claim of the actor to a share in "God's Gift." The resolutions were carried unanimously; and the meeting, which was composed of nearly all the leading actresses and actors in the metropolis, thus showed the great interest felt by the members of the theatrical profession in the success of Mr. Webster's applica ion. A memorial has also been presented to the Charity Commissioners, signed by upwards of seventeen hundred London and provincial performers. The resolutions were as follows:—

Proposed by Mr. Keeley and seconded by Mr. Buckstone—

1. That this meeting has before it the following proposition made by Mr. B Webster to the Commissioners of Charities:—That one actor and actress, as inder pensioners. That one actor and actress as out-door pensioners. That four children of actors and actresses be placed upon the foundation of the upper school. That four children of actors and actresses upon the foundation of the lower school. And that the selection of the most deserving claimants to be made by the committee of the Drury Lane, Covent Garden, General Theatrical Fund, and General Benevolent, Equestrian, and Musical Sick Fund Association, as most likely to be acquainted with the merits of the applicants; and that this meeting is of opinion that such proposition involves a just, reasonable, and moderate recognition of the claims of poor players to participate in the great extension of Dulwich College proposed by the said commissioners.

Proposed by Mr. Harley and seconded by Mr. T. P. Cooke—

2. That a memorial be presented to the Right Honourable the Secretary of State for the Home Department, praying that Mr Webster's proposition, already appended by the Commissioners of Charity to their report, with their recommendation in its favour, be embodied as part of any Act of Parliament that may be prepared for carrying into effect the recommendations of the Commissioners of Charities in reference to Dulwich College.

Proposed by Mr. Robert Bell and seconded by Mr. Albert Smith—

3. That the memorial mentioned in the last resolution be couched in the following terms (see Resolution 1), and that Messrs. Webster, C. Kean, Buckstone, and A. Wigan be requested to present it.

Proposed by Mr. Creswick and seconded by Sir Joseph Paxton—

4. That the following gentlemen be appointed a committee to communicate with members of Parliament known to be interested in the drama or dramatic literature, interesting them to support the object of this meeting, when the introduction of any Act of Parliament on the subject of Dulwich College shall and afford them that opportunity:—Messrs. Webster, Keeley, Wigan, Buckstone, and T. P. Cooke.

Proposed by Mr. Phelps and seconded by Mr. A. Wigan—

5. That the thanks of this meeting are cordially tendered to the conductors of the public journals for their generous advocacy of the claims of the actor to participate in some of the advantages derivable from Dulwich College.

We propose next week to give a fuller report of the meeting and an Engraving of the scene it presented.

Dinner to the American Minister at the Mansion-House.—A grand dinner was given on Tuesday evening at the Mansion-house, London, to a numerous party, including the American Minister, Mr. Buchelan. A large number of members of Parliament were present. After the usual loyal toasts, the Lord Mayor proposed "The Health of the Minister of the United States," who was about to take his departure from this country, his successor being on his way to England In expressing his pride at having Mr. Buchanan as his guest, he said he looked upon the interests of the Republic of America and of England to be identical, America being an offshoot of this great country, of which both people ought ever to be proud. Mr. Buchanan replied in a friendly speech, in which he expressed a confident belief that the two countries would be able to settle the temporary differences which now existed between them.

Excursion Tickets.—On Saturday last, in the Southwark County Court, an action was brought against the South Western Railway Company by Mr. Mogg, a gentleman residing in Albion-street, Hyde-park, to recover the sum of £5 under the following circumstances:—The plaintiff stated that, on the 15th of August last, he took a first-class ticket at the Waterloo station by the Southampton Railway throughout to Paris, *viâ* Southampton and Havre, for which he paid the advertised price (28s.), his intention being to go to witness the reception by the Emperor of the Queen of England. When the train arrived at Southampton there was no conveyance provided by the company to take him to the steam-boat, and he was obliged to pay for the omnibus himself. When he got on board the vessel he found it so crowded that there was no bed for him, and though the steward offered him a mattress on the floor he could not be in such a place, and went on deck, where he stayed all night in one of the boats. This gave him a severe illness, and compelled him, when arriving at Havre, to stay two days at the hotel there before he could proceed to Paris. On the French side of the water he was also obliged to pay for the conveyance of himself and luggage to the railway station. For these various disbursements, want of accommodation, trouble, and annoyance he had been put to, he brought the action to recover £5. His Honour said the case was one of vast importance to the public. He thought the railway company were bound to take the passengers throughout to Paris, according to their contract, and there should be no outlay on the part of the passengers for travelling expenses beyond the 28s. Whether every passenger was entitled to a bed he could not say, but certainly every one was entitled to proper shelter; and, under all the circumstances, he should give a verdict for the plaintiff for the whole amount claimed.

Statistical Society.—The paper for next Monday evening will be on "The Bank of England, its present Constitution and Operations." By W. C. Jellicoe.

## NAVAL AND MILITARY INTELLIGENCE.

Her Majesty and his Royal Highness the Prince Consort, and the Princess Royal, attended by Lady Churchill, Major General Buckley, and Captain the Hon. Dudley de Ros, went to Woolwich, on Thursday, to witness the arrival of the officers and men of the Royal Artillery Siege Train direct from the Crimea. The Queen was received at the Royal Artillery Barracks by his Royal Highness the Duke of Cambridge, Viscount Hardinge, and Lieutenant-General Sir Hew Ross. The Duchess of Cambridge and Princess Mary were likewise present to meet her Majesty and Lord Panmure. At four o'clock the officers and men of the Siege Train, in number about 200, marched up from the Arsenal, where they were disembarked, headed by the Royal Artillery band, and passed by her Majesty. They were then formed in line on the Common, and the Queen passed down the ranks for the purpose of minutely inspecting their appearance. The whole having marched past in quick time, wheeled into line and presented arms. The Queen and the Royal party then returned to London, and arrived at Buckingham Palace at a quarter before six o'clock.

The Queen has sent to the Commander of the Forces, ten portable boxes of a library for the use of the troops. These books are trusted, by her Majesty's desire, to the honourable keeping of the soldiers, who will remember that less or damage hurts their comrades and their own good name. They will be distributed, in turn, to each division.

The *Great Western* left Southampton for the East on Wednesday. She took out an artillery force, also some Sappers and Miners and Royal Engineers, and a quantity of siege tools for the Sappers. The *Budapest* left it at port on Sunday. She took out an artillery force with a few sergeants belonging to the Connaught Rangers.

On Saturday last Messrs. Scott and Sons, of Greenock, launched another of the mortar boats which that firm is building for the Government. Like the former, this vessel is constructed in the most substantial and even ponderous manner She is 600 tons burden, and her magazines will contain 1500 shells, with the requisite store of powder, &c.

The preparations for war continue at Woolwich undiminished. Last week so great was the number of Artillery which started thence for the Crimea, that twelve special trains, independently of the ordinary departures, were dispatched from the Arsenal station to Southampton direct. Two trains were occupied with gun-carriages, and one train conveyed the baggage alone. The horses numbered 680.

A large number of mortars have recently arrived at the Royal Arsenal, Woolwich, from the works of Messrs H. and M. D Grissell, Regent's Canal These mortars weigh five tons and a half, are one foot thick, and will propel a shell a distance of two miles and a half.

A brass mortar was cast in the Royal Arsenal on Saturday last which, when finished, will weigh no less than seven tons, and is calculated to propel a 13-inch shell This is stated to be the largest brass mortar ever cast, and several of a similar description are to be manufactured.

## TOWN AND TABLE TALK ON LITERATURE, ART, &c.

There was a great gathering on Wednesday last at the annual general meeting of the Literary Fund. Public notice had been given of an important motion for the reformation of the society—a motion emanating from a well-known number of literary gentlemen, well-wishers to the fund when it was conducted on the principles of its founder, but active and openly-expreered opponents to it "as now conducted." For the first time since the formation of the society notices were issued to its members of the annual general meeting of the fund. About sixty gentlemen attended, and fifty one remained to vote. The reformatory motion was lost by a majority of 21; the numbers being—for Mr. Dickens and his friends, 30; for Mr. Murray, of Albemarle-street, and h his friends, 51. All the booksellers, printers, and stationers present voted with Mr. Murray; all the authors present (Mr. Robert Bell excepted) with Mr. Dickens. Mr. Dickens and his friends are desirous that the management of the Literary Fund should be intrusted entirely to literary men. Mr. Monckton Milnes opposed any change of the kind, and met the arguments put forward by Mr. Dickens by a circumstance within his own knowledge. An author of eminence, to whom the society has occasionally granted relief, observed to him that, if he had to lay his case for relief before his brother authors, he would rather starve than do so. This, perhaps, is a little over-sensitive. And yet this author by profession has been, and is, in the habit of submitting his claims for relief to a committee on which publishers are allowed to sit, and do sit—the very men to whom he would sell his writings; and who, of course, will not think the better of him because he is in need, or offer him more for his MS. because he is in want. Publishers and booksellers are the very last men who should be allowed to form a part of the committee to whom the relief of distressed authors should be intrusted. They do not admit authors into the Company of Stationers—the only London company entirely restricted to members of its own craft. There is no entry for authors into that mysterious company—no poet can invest his little savings in that rich, restricted society, and receive his thirty per cent. on the sum he has invested. Publishers will not believe that authors are *now* as perfectly capable of attending to their own class as publishers themselves. But they are. Mr. Dickens will finally triumph in this good cause.

The trustees of the British Museum submitted the names of two persons to her Majesty for the vacant office of Principal Librarian and Secretary to the British Museum. The names submitted were those of Mr. Panizzi, the present Keeper of the Printed Books in the British Museum, and of Mr. John Mitchell Kemble, son of Charles Kemble, the actor, and himself a very celebrated Saxon scholar. Great interest, we are told, was used for both parties. Her Majesty finally selected Mr. Panizzi, who has accordingly received the appointment. As we have previously hinted, Mr. John Winter Jones will succeed Mr. Panizzi as Keeper of the Printed Books; and another highly-deserving officer, Mr. Watts, will succeed Mr. Jones. These promotions will, we are glad to hear, give Mr. Bullen a lift. Indeed, the whole arrangement is received with satisfaction in the Printed Book Department, and by the public generally. Mr. Panizzi may now recover some lost popularity by improving the salaries throughout the Museum—all very much too small; and Mr. Winter Jones, by giving us a printed catalogue of any portion of the Library, may confer a public benefit that scholars will be thankful for. Could not the trustees, it is asked, find a suitable place in the British Museum for so accomplished a scholar as Mr. Kemble? Parliament never grudges a vote for the Museum; and Mr. Kemble deserves well of his country. The situation should be one that is well paid, and with a duty attached to it for which Mr. Kemble's studies peculiarly fit him. The whole establishment of the Museum requires to be remodelled.

A speech and paper war is waging between the architect of the Royal Exchange, London and the architect of the Town-hall at Hamburg. The scene of their spoken contest is the Royal Institute of British Architects—the theatre of their written war is the columns of the *Builder*. The point in dispute is whether Classic or Gothic architecture is the best adapted for the requirements of the Church of England. Mr. Tite is for the Classic style, Mr. Scott for the Gothic style. Both find glaring examples of ill-contrived edifices, and both exhibit a little temper in conducting their controversy. In the midst of the argument Mr. Petit enters the lists and deals some heavy blows against Gothic architecture as now practised. Indeed, he abandons his once-loved style in a way that has startled all who remember how ardent he was in the Gothic cause.

Lord Stanhope has carried his motion in the Lords, and one of the three estates of the realm has sanctioned the formation of a collection of portraits consisting, as far as possible, of the most eminent persons in British history. The proposition is one that deserves to be carried out, but the sum asked for—five hundred pounds a year—is surely too small. Lord Stanhope was perhaps afraid of asking for a larger sum. He had the fear of the Chancellor of the Exchequer before him, and doubtless thought that a thousand pounds would be refused where five hundred would be conceded. His speech was sensible and to the point.

Readers of British history who go with Lord Stanhope in this movement are hoping that his Lordship will not restrict his collection to persons eminent by their virtues, their mental attainments, or by actions of public utility alone. The careful reader of English history will desire to see Guy Fawkes, Felton, Titus Oates, and Judge Jeffreys. Will his Lordship admit such peculiar worthies? We hope he will. He might have, like Madame Tussaud, a Chamber of Horrors. A gallery of portraits is always instructive and agreeable. Remember the series of portraits at Rainham of the Low Country soldiers who fought under Sir Francis Vere—pictures actually painted for Vere himself. Remember the Windsor Beauties of Sir Peter Lely, and the Hampton Court Beauties of Sir Godfrey Kneller Of a like interest is the series of portraits of the Kit-Kat Club now at Bayfordbury. At Greenwich may be seen the portraits of the English Captains who fought the Dutch under Van Tromp and De Ruyter—a series painted for King James II. when Duke of York. And who that has ever been at Windsor has forgotten the Waterloo Gallery? We shall watch the progress of Lord Stanhope's plan with a lively interest.

The sons of the late Samuel Williams, the eminent designer and engraver on wood, have just presented to the Trustees of the British Museum a large number of fine proofs from the works of their late father; showing the progress of the untaught genius in his art from almost boyhood to his later years.

The Raglan Memorial.—A meeting of the subscribers to the "Raglan Memorial" was held on Thursday in the Theatre of the United Service Institution, for the purpose of presenting to the present Lord Raglan the title-deeds of an estate near Raglan Castle, purchased by subscription, as a testimonial of the respect and esteem in which the private character of the late noble Lord was held; as also for the vast renown he had achieved as a military commander. The meeting was numerously attended by the subscribers, amongst whom were the Duke of Cambridge, the Duke of Richmond, Major-General the Earl of Cardigan, and several other general officers lately serving in the Crimea. The Duke of Richmond, who was called to the chair, read a statement drawn up by the committee expressive of the feeling of the subscribers in presenting the testimonial as an heirloom to his Lordship. Lord Raglan expressed his grateful thanks to the subscribers for the honour conferred on him.

Fire at Mr. Scott Russell's Shipyard, Millwall.—On Wednesday afternoon a fire broke out on the ship building premises of Mr. Scott Russell, Millwall, Poplar. Notwithstanding the most active exertions of the firemen, the whole of the workshops connected with the mills, the joiners' and painters' houses, as well as the mills themselves, were totally destroyed, with their contents. The loss is very heavy. The origin of the disaster is not known. This makes the third serious conflagration which has taken place in the yard since 1854 The leviathan ship now building was, fortunately, not injured.

## EPITOME OF NEWS—FOREIGN AND DOMESTIC.

The Queen has forwarded £20, and the Prince Consort £10, to the fund now being raised for the addition of a swimming bath to the other advantages of the Royal Naval School at New Cross.

The French Emperor has conferred the Grand Cross of the Legion of Honour on General Count Lavenbielm, who for nearly forty years has filled the post of Envoy and Minister Plenipotentiary of the King of Sweden and Norway at Paris, in consideration of his services.

A letter from Berlin, of the 6th inst., says:—"Prince Frederick William, only son of the Prince of Prussia, and heir presumptive to the crown, will pay a visit to England in May next, and it will be of some duration."

The confirmation of her Royal Highness the Princess Royal will take place in her Majesty's Private Chapel, in Windsor Castle, on Thursday, the 20th inst. The King of the Belgians (who is godfather to her Royal Highness), the members of the Royal Family, and a select circle have been invited to be present at the ceremony.

A solemn service and requiem were performed on Monday at the chapel attached to the Bavarian Embassy, in Warwick-street, for the late Duke of Norfolk. The service was attended by most of the Roman Catholic nobility in town, and by several distinguished foreigners.

The Emperor Francis Joseph returned on the 2nd to Vienna from Prague.

At the Union (Oxford), on Monday last, the question for discussion, "Has Lord Aberdeen merited the esteem and gratitude of the country?" was lost on a division, by a majority of 28, the numbers being—ayes, 8; noes, 36.

Count Chreptowitsch, the present representative of Russia at Brussels, is spoken of as the future Minister of Russia at Paris after the conclusion of peace. M. de Kisseleff will, it is generally understood, proceed to Rome, and it seems equally certain that Baron Brunow will not return to London.

After many years' retirement from public life, the Duke of Buckingham appeared at Aylesbury, on Friday, to preside at a spousal meeting of the Royal Bucks Agricultural Association, founded in 1833, under his auspices.

The Bishop of Ripon was at Berlin last week, for the purpose of confirming the children of English residents there.

Count Orloff and Count Buol continue to show marked coldness in their intercourse with each other. At an official soirée last Monday night they were not seen to speak, or even to bow as they met.

The Legislative Assembly of Nova Scotia has placed 150 guineas at the disposal of the Government to present a sword to General Williams, who is a native of that province.

A Secret Consistory is reported to have been summoned at Rome on Monday next, at which Prince Lucien Bonaparte is to be admitted a Bishop *in partibus*.

The eleventh anniversary festival of the Royal General Theatrical Fund takes place on Monday next, under the presidency of Lord Panmure.

The Russian Chancellor of State Jakowleff, who is the proprietor of large metallurgical works in that country, has given the Government about 40,000 poods (the pood is about 40lbs.) of metal for the extraordinary wants of the army and navy.

Mr. Hindley, M.P., is to be presented with a testimonial, consisting of his portrait, at the Town-hall, Ashton, on Easter Monday, the 24th instant.

The *New Prussian Gazette* announces that Prince Peter of Oldenburg has been named Governor of the Russian provinces of the Baltic.

Gustavus Heine, the brother of Henry Heine, who lately died at Paris, is about to erect to the memory of the latter a monument which will cost 10,000 f.

The annual dinner of the Artists' General Benevolent Institution will be held at the Freemasons' Tavern this day (Saturday); Lord Stanley in the chair.

A marble monumental tablet in memory of the late Colonel Yea, who died so nobly before Sebastopol last summer, has been erected in the parish church of St. James's, Taunton.

The indictment in the case of the Rev. Mr. Benson, the clergyman charged with solemnising matrimony between parties previously married under the Dissenters' Marriage Act, will not be tried at the present Oxford assizes.

On Monday last the President of Police, Berlin, Herr Von Hinckeldey, was shot in a duel by Herr Von Rochow, whom he had felt obliged to challenge.

Mr. Francis Russell, advocate, is appointed private secretary to the Lord Advocate of Scotland.

Mr. Saunders, of the Western Circuit, and Recorder of Devonport, has been appointed to the Recordership of Plymouth, in the place of Sir William Carpenter Rowe, now Chief Justice of Ceylon.

The property of the Marquis Georgio Pallavino, lately under sequestration, has been restored to him by the Government, in execution of the late decree revoking the sequestrations laid on the property of political refugees.

The University of Dublin has conferred the degree of Doctor of Medicine, *honoris causa*, upon Dr. Andrew Smith.

The latest news from St. Petersburg is that General Williams had left Tiflis for Moscow in recovered health.

It is understood that the trial of William Palmer, of Rugeley, will be fixed for the May session at the Central Court, under the new Criminal Bill, which will shortly become an Act of Parliament.

The Chamberlain and Treasurer of the Bristol Corporation, who filled that office for fifty years, is said to have unapprehended the Corporation funds to the extent of £4000.

Mdlle. Rachel has received numerous visits from distinguished personages since her return to Paris. Notwithstanding the losses which she is said to have sustained by her visit to America, will continue to the embellishments of her hotel in the Rue Trudon on the most expensive scale.

The Great Beer Question again occupies a prominent place among subjects awaiting the attention of the Bavarian Legislature. There are no less than eleven bills, motions, and resolutions before the Chamber of Deputies at Munich for improving the terms on which the subjects of King Max may drink their beer.

The Committee of the Crystal Palace intend to devote a portion of the building to form a gallery for the exhibition of pictures. They are to be the works by living painters of all the schools in Europe.

The Russian Government is about to establish journals, as organs of its views, in the various capitals of Europe. *Le Nord* is said to have been a failure.

The Governor of Vienna has given notice to the journals of that capital not to publish any articles unfavourable to the Concordat, or any attacks against the establishment of the Lloyd's of Trieste for the navigation of the Danube.

The Lord Lieutenant of Ireland has offered a reward of £100 for the conviction of the murderers of Mr. O'Callaghan.

The Supreme Council of Denmark has decided on the establishment of a journal to give short-hand reports of their proceedings, and the admission of the public to their sittings. The speeches will be reported in the language in which they are delivered.

Some English agents have arrived at Madrid commissioned to purchase between 4000 and 6000 mules for the army.

A special commission for Cavan to try the persons charged with the murder of Miss Hinds will be opened the first week in April.

The *Madrid Gazette* contains an official denial of the statement that the French Government has established a remonstrance to that of Spain on the internal state of the latter country.

Quartz rocks impregnated with gold have been discovered in Argyllshire. In the specimens exhibited the gold particles are seen most distinctly imbedded in the quartz and they exactly resemble the auriferous specimens from Australia.

The customary annual performance of Handel's "Messiah" by the Sacred Harmonic Society, on the Wednesday in Passion Week, takes place on the 26th of March.

All works of art intended for exhibition at the Royal Academy this year must be sent in on Monday the 7th and Tuesday the 8th April next.

The Austrian Minister of Justice has announced that Jews may be henceforward admitted to exercise the functions of avocat.

A corporal of a line regiment stationed at Calais has inherited a fortune of 75,000,000 of francs.

George Jones, convicted of the wilful murder of Mr. Hope, the surgeon of the convict hulk at Portsmouth, will be executed at Winchester on the 22nd inst.

A sum of £50 sent by Mazzini to some friend at Rome has been seized at the Post-office and applied to the fund for raising a statue to the immaculate Virgin

Letters from Hamburg mention a commercial crisis in Norway. At Bergen twenty-five houses have suspended payment.

THE PEACE CONFER

EARL OF CLARENDON. BARON BRUNNOW. COUNT DE CAVOUR. COUNT ORLOFF.

T PARIS.—(SEE NEXT PAGE.)

## THE PEACE CONFERENCES.

THE diplomatists met on Saturday last, and again on Monday and Wednesday, but nothing has transpired as to the result of their deliberations. The sitting of Monday is said to have produced no sensible progress in the negotiations, the whole of the day having been occupied in discussions of a general character. This is now the third week of the Conferences, and those who prefer to be acquainted with what is going on affirm that little progress has been made. The French Emperor is beginning to grumble at the waste of time, and insists on their getting on more energetically.

A despatch from Berlin, dated Wednesday evening, says that "Prussia has been invited, in the name of the Congress, and for reasons of European interest, to send representatives to the Paris Conferences, and she will accept the invitation."

On Monday Count Walewski gave a grand diplomatic dinner, at which the members of the Congress were present. In the evening there was a concert, supported by MM. Mario, Bonnehée, Roger, Zucchini, and Mesdames Grisi, Borghi-Mamo, and Cabel. The *salons* of the Ministry of Foreign Affairs were blazing with light till past one o'clock on Tuesday morning.

Upon the two preceding pages we have engraved a sitting of the Peace Conference. Of the Plenipotentiaries—the Earl of Clarendon and Baron de Bourquency—memoirs appeared in the ILLUSTRATED LONDON NEWS of last week; of Count Walewski, in No 688; Count Buol, in No. 739; Baron Brunnow, in No 686; and Count de Cavour, in No. 772.

Lord Cowley may be said to have been cradled in diplomacy; his father, the first Peer of that title, having, as Sir Henry Wellesley, distinguished himself at nearly every Court in Europe during the last great war. His Lordship commenced his official career in 1824, as an Attaché to the Embassy at Vienna, and in 1828 was promoted to the Hague as paid Attaché. From this period his promotion was regular, and proceeded with his diplomatic education and experience. In 1852 he succeeded Lord Normanby as Ambassador to the Imperial Court of France. The specialties of Lord Cowley have been displayed in the joint Plenipotentiary to the Conferences on the part of Great Britain, will tend to facilitate the proper settlement and co-ordination of many arrangements which must necessarily succeed any agreement upon the great points under discussion.

ALI PACHA commenced his career in an humble employment in the public offices of the Sublime Porte, and, by dint of a severe application to serious studies, he has raised himself through all the intermediate steps to the Grand Viziership. He bears also the reputation of being the most erudite scholar of his nation.

COUNT ORLOFF, Aide-de-Camp General, General of Cavalry, Commander of the Military Household of the Emperor, and member of the Council of the Empire, is still in the prime of age, and is still active and healthy. He took part in almost all the wars at the beginning of the century. Wounded at Austerlitz and at the battle of Borodino, he was made Aide-de-Camp to the Emperor Alexander I. In 1825 he had reached the rank of General, and in that quality commanded the regiment of Horse Guards which on the 26th September first hastened to repress the *émeute* at St. Petersburg. On that occasion he displayed great courage and devotedness, which secured him the friendship of the Emperor Nicholas. In 1828 he commanded in Turkey the Division of Light Horse. In 1829 he was combated Plenipotentiary, and signed the treaty of Adrianople. In 1833 he was at the head of the expedition which saved Constantinople from the victorious army of Ibrahim Pacha, and he signed the treaty of Unkiar-Skelessi. Since 1842 he has replaced the late Count de Benkendorff as chief of the third section of the private chancellery of the Emperor, and as head of the gendarmery of the empire. This place gives Count Orloff free access at every hour of the day to the Emperor, and the right to speak to him of every person and of every event.

## *IMPERIAL PARLIAMENT.*

### HOUSE OF LORDS. MONDAY.

The Earl of MALMESBURY gave notice that, on the expiration of Armistice, he should call their Lordships' attention to the fall of Kars.

LEASE AND SALE OF SETTLED ESTATES BILL.—On the motion for going in to Committee on this bill, Lord ST. LEONARDS drew the attention of the House to what had been done by the Government to amend the law and its administration. The noble Lord also stated the principles lately submitted to Parliament for the reform of these laws, particularly that relating to the transfer of the Encumbered Estates Court of Ireland to the Court of Chancery in Ireland—The LORD CHANCELLOR having replied to Lord St. Leonards, the bill passed through Committee.

### HOUSE OF COMMONS. MONDAY.

MR. HERBERT INGRAM took the oaths and his seat for Boston.
